SUBJECT-MATTER INDEX.

	Page.
Construction of claims, restriction of, in view of prior art, **Weber Electric Company *v.* E. H. Freeman Electric Company	631
Decisions of the Patent Office, tribunals, unanimous on question of operativeness, not disturbed on appeal, error not being apparent, *Wright *v.* Halle *et al.* Wahl *v.* Barrett *et al.* Barrett *v.* Wahl *et al*	207
Delay in copying claims disclaimed in prior patent, *De Ferranti *v.* Harmatta	205
Disclosure of invention, sketch relied upon as proof of disclosure held to show the invention, *Jenks and Perry *v.* Geiger	208
Estoppel, foundation of rule limiting two years within which claims may be taken from a patent, *De Ferranti *v.* Harmatta	205
Interference, affidavits filed showing inoperativeness of device constructed in accordance with senior party's disclosure, not sufficient to overcome prior constructive reduction to practice, *Wright *v.* Halle *et al.* Wahl *v.* Barrett *et al.* Barrett *v.* Wahl *et al*	207
Amendment of preliminary statements to allege earlier dates, * Earles and Lowe *v.* Gomber	207
Delay of twenty months in copying claims, applicant not estopped to contest interference, *Ransdall *v.* Jahns	206
Diligence by junior party on device not in issue not sufficient to overcome senior party's reduction to practice, *Clement *v.* Roberts	829
Judgment on the record, *Wright *v.* Halle *et al.* Wahl *v.* Barrett *et al.* Barrett *v.* Wahl *et al*	207
Intervening rights, question of arising from delayed reissue application not available in interference proceedings, *Earles and Lowe *v.* Gomber	207
JUDICIAL NOTICE will be taken of Patent Office records disclosing date of Commissioner's retirement. ª Mattullath Aeroplane Company *v.* Newton, Commissioner of Patents	831
Patentability, changes in size either in length or diameter not invention, *In re* Pruden	206
Old process applied to new use not invention, *in re* Braselton	431
Particular patents, Weber, No. 743,206, incandescent-electric-lamp sockets, not infringed, **Weber Electric Company *v.* E. H. Freeman Electric Company	631
Reissues, application delayed more than two years after opposing party put device on market does not operate as an estoppel to first inventor, *Earles and Lowe *v.* Gomber	207
Right to make claims, comparative efficiency not a test, *Ransdall *v.* Jahns	206
SUITS IN EQUITY under section 4915, petition for reinstatement of suit against Commissioner of Patents filed too late, defendant having ceased to be an official. ª Mattullath Aeroplane Company *v.* Newton, Commissioner of Patents	830
Trade-marks, mere arguable differences between marks not sufficient to warrant registration, *The Coca-Cola Co. *v.* Chero-Cola Co	432
The compound word "Chero-Cola" refused registration on prior use of the words "Coca-Cola," for goods of same descriptive properties, *The Coca-Cola Co. *v.* Chero-Cola Co	432
"Hay-Po" with portraits surrounded by a circle, for hair-dressing, refused registration on prior use of the word "Poro" with similar portraits, *Hay *v.* Malone, doing business under the style and name of Poro College	431
The words "Mail Order," for paper, refused registration on the word "Mail" and representation of a mail-box with the word "Mail," **in re* Taylor-Logan Co., Papermakers	433
Test of identity, no difficulty in apprehending difference when placed together, *The Coca-Cola Co. *v.* Chero-Cola Co	432

DIGEST

OF THE

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS.

JULY, 1921.

[Decisions of the Court of Appeals of the District of Columbia are indicated by a star (*) of the Supreme Court of the District of Columbia by the letter (ª); and of the Supreme Court of the United States by two stars (**).]

AFFIDAVITS.

See Reduction to Practice.

AMENDMENT TO PRELIMINARY STATEMENT.

INTERFERENCE.

Amendments moving back the dates alleged in preliminary statements, after an adversary's dates have been disclosed, should not be allowed unless the interests of justice plainly demand it.

[* Earles and Lowe *v.* Gomber, 207.

ANALOGOUS USE.

COMMON ASSIGNEE.

See Estoppel.

CONSTRUCTION OF CLAIMS.

See Particular Patents.

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

LIMITATIONS—INFRINGEMENT.

The Weber patent, No. 743,206, for improvements in incandescent-electric-lamp sockets, claim 4, the words "telescopically received" and "telescopically applied," in view of the prior art, the file wrapper and a second patent to the same patentee and others, No. 916,812, *Held* restricted to a direct longitudinal movement or thrust of the sleeve into the cap, which is not infringed by the device or Patent No. 927,344, which locks by a rotary movement.

[** Weber Electric Company *v.* E. H. Freeman Electric Company, 631.

CONSTRUCTION OF STATUTES.

See Suits in Equity Under Section 4915, 1, 3.

COPYING CLAIMS.

See Estoppel; Interference, 1, 2.

DATE OF FILING APPLICATIONS.

See Interference, 4.

DEDICATION TO THE PUBLIC.

See Delay in Filing Applications for Reissue, 2.

DELAY IN FILING APPLICATIONS FOR REISSUE.

1. INTERVENING RIGHTS.

Presumptive intervening rights arising from a delay of more than two years in filing an application for reissue with broadened claims is a question not available in interference proceedings.

[* Earles and Lowe *v.* Gomber, 207.

2. ESTOPPEL.

Delay in filing a reissue application for more than two years after knowledge by applicant that his rivals in interference proceedings had placed the device on the market does not operate as an estoppel under the rule announced in *Wintroath* v. *Chapman* (C. D., 1920, 465; 272 O. G., 913; 252 U. S., 126) where he himself had placed the device on the market before the filing date of the opposing applicants or their invasion of the market, the reissue applicant being the first inventor and the first to place the device on the market. Long delay might bar the reissue application on the ground of dedication to public use; but the question could not be raised in an interference proceeding.

[* Id.

DELAY IN MAKING CLAIMS.

See Estoppel; Interference, 2.

DILIGENCE.

INTERFERENCE—INVENTION NOT IN ISSUE.

Where the issue of an interference related to an invention for use in a semi-automatic as well as in a full automatic telephone system, diligence by the junior party from January, 1905, to September, 1905, on a device to be used in a full automatic system is insufficient to overcome the senior party's constructive reduction to practice on August 31, 1905, as diligence was not exercised on the invention in issue, but on another invention.

[* Clement *v.* Roberts, 829.

DISCLAIMERS.

See Estoppel.

DISCLOSURE OF INVENTION.

See Interference, 4; Reduction to Practice.

PROOF—SKETCH.

A sketch relied upon as proof of disclosure of the invention of a side bearing for railway-cars considered and *Held* to show the invention.

[* Jenks and Perry *v.* Geiger, 208.

DIVISIONAL APPLICATIONS.

See Estoppel.

ERROR.

See Priority of Invention.

ESTOPPEL.

See Delay in Filing Applications for Reissue, 2; Interference, 1, 2.

COPYING CLAIMS OF A PATENT DISCLAIMED IN A PRIOR PATENT.

Where in an interference between an application of H., filed in 1903, and a patent of R., granted in 1900, both owned by a common assignee, priority was awarded to H. and a patent was issued to him in 1912, including the interfering claims, after which the counts of that interference were disclaimed in the patent to R., a third party who filed an application in 1911 as a division of one filed in 1904 is estopped from making in 1913, in the divisional application, the claims disclaimed by R., the claims having been copied more than four years after the grant of R.'s patent, although within two years after the grant of H.'s patent.

[* De Ferranti *v.* Harmatta, 205.

INFRINGEMENT.

See Construction of Specifications and Patents; Particular Patents.

INTERFERENCE.

See Amendment to Preliminary Statement; Delay in Filing Application for Reissue; Diligence; Disclosure of Invention; Estoppel.

1. ESTOPPEL BY DELAY—FOUNDATION OF RULE.

The limitation of two years within which claims may be taken from a patent arises from the application of a sound principle of public policy for the prevention of the undue extension of monopoly by procrastination in the assertion of adverse rights against one already in possession. This situation is not different by analogy from a reissue case, where the public is in adverse possession. In both instances the applicant has stood by and permitted others to assert rights which he now negligently seeks to monopolize for himself.

[* De Ferranti *v.* Harmatta, 205.

2. SAME—COPYING CLAIMS.

An applicant is not estopped to contest an interference with a patentee because he delayed copying the claims of the patent almost twenty months after the patent issued and fifteen months after he had notice of the patent, as he was well within the two-year period fixed by the Supreme Court in *Chapman* v. *Wintroath*, (C. D., 1920, 465; 272 O. G., 913; 252 U. S., 126; 272 O. G., 913.)

[* Ransdall *v.* Jahns, 206.

3. RIGHT TO MAKE CLAIMS.

Although the device of one party to an interference may be less efficient than that of his rival, so long as it comes within the issue and is operative the objection is not one upon which it may properly be held that he is not entitled to make the claims.

[* Ransdall *v.* Jahns, 206.

4. JUDGMENT ON RECORD.

The junior parties having failed to overcome in their preliminary statements the filing date of the senior party and the Office tribunals having held that the senior party's disclosure is operative, the judgment of priority was correct and is affirmed.

[* Wright *v.* Halle *et al.* Wahl *v.* Barrett *et al.* Barrett *v.* Wahl *et al.*, 207.

INTERVENING RIGHTS.

See Delay in Filing Applications for Reissue, 1.

INVENTION.

See Diligence.

1. CHANGE IN SIZE.

It being old to mix comminuted fuel with air by means of currents of air directed transversely to the path of travel of the fuel, there is no invention in making the mixing-chamber of greater length.

[* *In re* Pruden, 206.

2. DOUBLE OR ANALOGOUS USE.

It involves no invention to apply an old process for coating metal, paper, glass, fabric or the like, consisting in depositing the coating material in the form of a spray by means of a blast of air, to the coating of shoes with a thin film of metal. (*Brown* v. *Piper*, 91 U. S., 37.)

SUITS IN EQUITY UNDER SECTION 4915.

1. TIME FOR FILING.

Under section 4894, Revised Statutes, one year from the date of a decision by the Court of Appeals of the District of Columbia is allowed in which to bring a suit in equity under section 4915, Revised Statutes, (*Gandy* v. *Marble*, C. D., 1887, 413; 39 O. G., 1423; 122 U. S., 432;) but this time runs from the date of the decision of the court affirming the decision of the Commissioner of Patents and is not suspended or extended by a motion for rehearing, since no provision for rehearing in such cases is found in the rules of the Patent Office, the court of appeals, or in any statute.

[* Mattullath Aeroplane Company *v.* Newton, Commissioner of Patents, 830.

2. REINSTATEMENT OF SUIT—PETITION FILED TOO LATE.

Where a suit in equity under section 4915, Revised Statutes, was dismissed because brought more than a year after the date of the decision by the Court of Appeals of the District of Columbia, a petition to reopen the final decree dismissing such suit and reinstate the suit filed after the time when an appeal could have been taken and long after the end of the term of the court at which the final decree was entered, denied.

[* Mattullath Aeroplane Company *v.* Newton, Commissioner of Patents, 831.

3. AGAINST U. S. OFFICIAL—ABATEMENT.

Where a suit in equity under section 4915, Revised Statutes, against the Commissioner of Patents was dismissed because brought more than a year after the date of the decision of the Court of Apeals of the District of Columbia, petition to reopen the final decree and reinstate the suit denied where it appeared that defendant had ceased to be an official of the Patent Office and his successor was not substituted within a year thereafter, as required by the act of Congress of February 9, 1899. (30 Stat. L., 822.)

TEST.

See Reduction to Practice; Trade-Marks, 4.

TESTIMONY.

See Priority of Invention.

TRADE-MARKS.

1. SIMILARITY—PORTRAITS WITH THE WORD "HAY-PO"—SIMILAR PORTRAITS WITH "PORO."

Opposition to registration of a mark for hair-dressing, comprising portraits representing "before" and "after" use, with the word "Hay-Po" above, all inclosed within a circle, sustained in view of the prior use by opposer of substantially the same portraits with the word "Poro" above, all inclosed within a circle.

[* Hay *v.* Malone, doing business under the style and name of Poro College, 431.

2. SAME—"CHERO-COLA" AND "COCA-COLA."

The words "Chero-Cola" held not entitled to registration in view of the prior adoption and use of the words "Coca-Cola" for goods of the same descriptive properties.

[* The Coca-Cola Co. *v.* Chero-Cola Co., 432.

3. SAME—MERE ARGUABLE DIFFERENCES.
Mere arguable differences between marks are not sufficient to warrant registration of the last to adopt and use. [* Id.

4. SAME—TEST OF IDENTITY.
That there would be no difficulty in apprehending the difference between two marks when they are placed together, or when attention is in some other way directed to them, is not a proper test of identity, as ordinarily a prospective purchaser does not carry more than a faint impression of the mark he is looking for, is governed by a general glance, and acts quickly. [* Id.

5. SAME—"MAIL ORDER"—"MAIL" AND REPRESENTATION OF A MAIL-BOX WITH THE WORD "MAIL."
The words "Mail Order," for paper, held deceptively similar to the word "Mail" printed in a special manner and to a mark consisting of the representation of a mail-box with the word "Mail" thereon, the word "Mail" being the principal element of each mark. [* In re Taylor-Logan Co., Papermakers, 433.

Adhesion of Bulgaria to the International Convention of Paris for the Protection of Industrial Property.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1921.

The following note addressed to the Secretary of State by the Minister of Switzerland is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

LEGATION OF SWITZERLAND,
Washington, D. C., June 4, 1921.

Mr. Secretary of State:

By direction of my Government, I have the honor to inform your excellency that, by a note dated April 30, 1921, the Government of Bulgaria gave notice to the Swiss Federal Council of its decision to adhere to the International Convention of Paris, of March 20, 1883, for the Protection of Industrial Property, revised at Brussels, December 14, 1900, and at Washington, June 2, 1911, with its final protocol (see article 18 of the Convention.)

The above-named Government adds that, with regard to its quota in the expenses of the International Bureau, Bulgaria wishes to be placed in the fifth class.

In accordance with article 16, paragraph 3, of the revised Convention of Union of Paris, the aforesaid adhesion will take effect one month after the sending of the notification by the Swiss Government to the other countries of the Union, that is to say, on and after June 13, 1921.

I beg your excellency kindly to take note of this adhesion and take this opportunity to renew to you, Mr. Secretary of State, etc.

MARC PETER,
Minister of Switzerland.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 27, 1921.

Fred Hollender & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Hinckley & Schmitt, 420 West Ontario street, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 29, 1905, No. 45,804, to Fred Hollender & Co., 115–119 Elm street, New York, N. Y., and a notice of such declaration sent by registered mail to said Fred Hollender & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Fred Hollender & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 6, 1921.

Amédée Castaing, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Spiros C. Markatos, 456 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered January 29, 1907, No. 60,225, to Amédée Castaing, 518 West Thirtieth street, New York, N. Y., and a notice of such declaration sent by registered mail to said Amédée Castaing at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Amédée Castaing, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

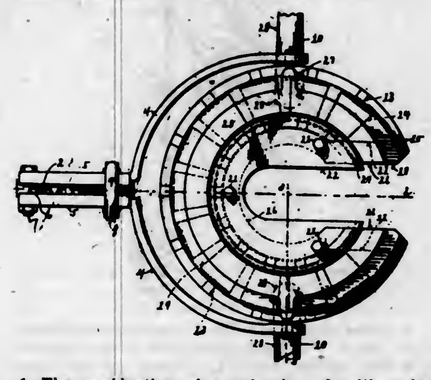
THOMAS E. ROBERTSON,
Commissioner.

Amendments.

In order to insure the prompt delivery of amendments to the proper examining division, applicants are requested in their actions on applications to give the division number and the room number appearing on the last Office letter, as well as the date of such letter.

4701

APPLICATIONS UNDER EXAMINATION.



Condition at Close of Business June 25, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Feb. 7	Feb. 26	677
126	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Oct. 7	Dec. 6	1,500
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 13	Oct. 8	746
234	4. Conveyers; Conveyors, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Aug. 9	Mar. 16	1,486
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 21	Nov. 22	711
218	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Jan. 24	Apr. 7	860
312	7. Games and Toys; Optics; Photography; Velocipedes	Jan. 21	Mar. 11	1,457
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Mar. 24	May 8	623
231	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 13	Apr. 20	774
235	10. Land-Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Jan. 10	Apr. 21	1,146
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Mar. 18	Mar. 29	402
222	12. Machine Elements	Nov. 9	Apr. 2	1,065
220	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Sept. 3	Mar. 22	1,577
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Sept. 14	Apr. 25	897
308	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 17	Dec. 2	1,504
111	16. Radiant Energy; Telegraphy; Telephony	Aug. 26	Dec. 9	1,458
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 16	Mar. 11	819
229	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Oct. 2	Dec. 15	1,531
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 4	Jan. 3	860
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Feb. 15	Feb. 12	1,140
212	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 29	Apr. 6	503
249	22. Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices	Mar. 21	Apr. 29	400
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Nov. 6	Apr. 12	714
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Dec. 17	Mar. 30	880
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	Apr. 29	May 13	252
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Dec. 8	Jan. 19	761
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Feb. 3	Apr. 1	1,084
225	28. Internal-Combustion Engines	Dec. 1	Feb. 25	1,202
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Dec. 1	Apr. 13	697
153	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Feb. 2	May 5	1,020
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Aug. 10	Oct. 20	1,989
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Sept. 13	Mar. 24	1,097
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Jan. 5	Mar. 7	752
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	May 2	May 19	292
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicator Telltale	May 13	May 23	490
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Jan. 21	Jan. 22	1,510
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Dec. 21	Dec. 27	1,906
378	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Feb. 3	Feb. 7	1,030
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Aug. 14	Sept. 17	1,671
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 13	Jan. 21	1,929
135	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Dec. 8	Mar. 16	835
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Oct. 7	Oct. 27	2,008
382	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Sept. 11	Dec. 17	1,295
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Oct. 20	Apr. 18	537
279	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Dec. 2	Apr. 4	1,018
322	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 16	Feb. 25	853
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Nov. 5	Feb. 1	1,016
	Oldest new case, July 17; oldest amended, Sept. 17.

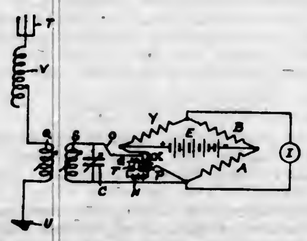
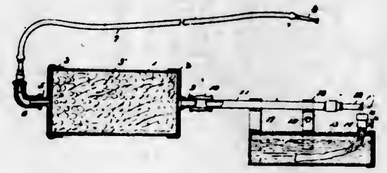
PATENTS



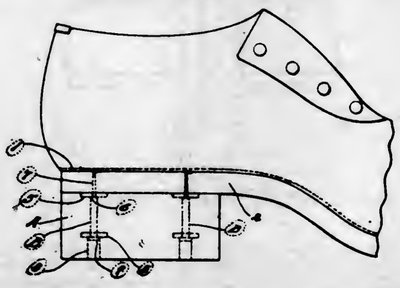
GRANTED JULY 5, 1921.

1,383,274. SAFETY ROLLER-BEARING SWIVEL-WRENCH. BENJAMIN H. ARENATHY, Tulsa, Okla., assignor of one-third to Walter S. Lee and one-third to Ralph Maines, Tulsa, Okla. Filed Apr. 15, 1920. Serial No. 374,216. 3 Claims. (Cl. 81—119.)



1. The combination of a yoke formed with a lever handle and means for suspending same, a head pivotally mounted in the yoke and formed with an annular channel opening upwardly, pins mounted in said head and spanning the channel, tapered bearing rollers mounted on said pins, a jaw member formed with a vertical central opening and a gap thereto and also formed with an annular channel opening outwardly, said head revolubly fitting within said channel of said jaw member, the under surface of the upper wall of said last named channel being tapered and being supported on said rollers, a clamping plate mounted on the top of said jaw member, cap-screws securing said plate to said jaw member, said plate being formed with a slot for receiving and supporting a drill bit and being also formed with an exterior annular rabbet, and a safety ring having an annular lip engaging in said rabbet and rotatably mounted on said jaw member and also formed with handles and with a gap, said head being also formed with a gap.

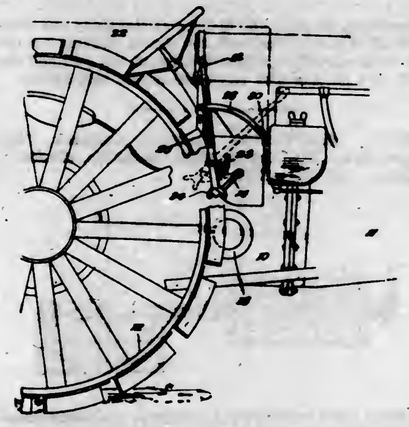
1,383,275. AMPLIFIER. SAMUEL E. ADAIR, New York, N. Y., assignor to International Radio Telegraph Company, a Corporation of Delaware. Filed Aug. 14, 1919. Serial No. 317,394. 3 Claims. (Cl. 179—171.)



1. Apparatus for amplifying electrical currents, comprising a Wheatstone bridge having a tri-electrode device connected by its plate and filament electrodes in one of the branches of said bridge, with the circuit carrying the current to be amplified connected between the grid and filament, and an indicator connected across said bridge.

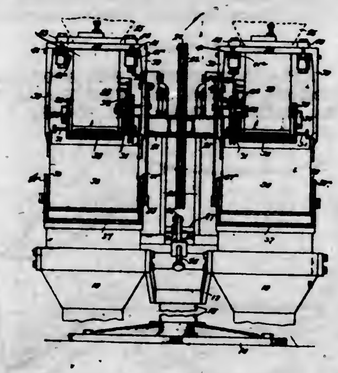
1,383,276. BLOWTORCH. JAMES A. ANDERSON, Chickasha, Okla. Filed Oct. 29, 1920. Serial No. 420,550. 1 Claim. (Cl. 158—27.5.)

A blow torch comprising a container containing absorbent material impregnated with liquid fuel, a tube communicating with one end of the container to supply air under pressure through the absorbent material, a rigid tubular nipple extending from the opposite end of the container, a coupling connected to the nipple, a stiff tubular element extending from and connected to the flexible coupling, a burner at the end of the stiff tubular member, a liquid container provided at one end with a burner disposed adjacent to and spaced from the burner on the stiff tubular element, a pair of connectors on the liquid container, each connector having a bearing through which the stiff tubular member passes to form a support for said member, one of said members having a screw and coöperating nut whereby to removably clamp the connector to the tubular member to provide for the adjustment of the liquid container lengthwise said member and in parallelism therewith to thereby set the burners in relative adjusted positions.



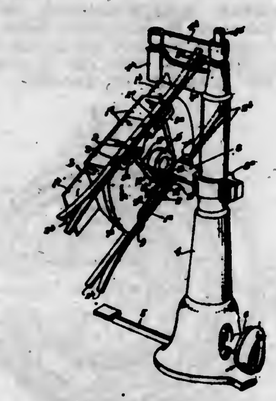
1,383,277. ATTACHING DEVICE FOR SHOE-HEELS. JOHN ANDERSON, St. Louis, Mo. Filed Mar. 14, 1921. Serial No. 452,011. 5 Claims. (Cl. 36—59.)

1. A shoe-heel having a nail-receiving opening enlarged at its lower end to form a pocket for the head of a nail, said heel being provided with a lower abutment at the top of said pocket and an upper abutment at the upper end of



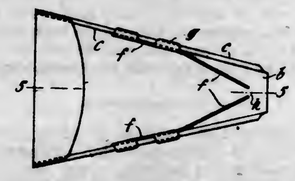
said opening, and a nail having a head engaging said lower abutment, said nail also having a shoulder engaging said upper abutment and a reduced extension projecting through said upper abutment.

1,383,278. CLUTCH-LOCK. NILS ANDERSON, Yutan, Nebr. Filed Apr. 17, 1920. Serial No. 374,549. 3 Claims. (Cl. 74—81.)



1. The combination with a tractor having a movable clutch pedal provided with a laterally projecting foot-engaging portion, of a lever having its lower portion forked for engagement with an end of the laterally projecting portion of said clutch pedal to hold the clutch released and permit engagement of the pedal by the operator's foot at the side of the lever to permit the clutch to be engaged, and means pivotally supporting the said lever intermediate its ends.

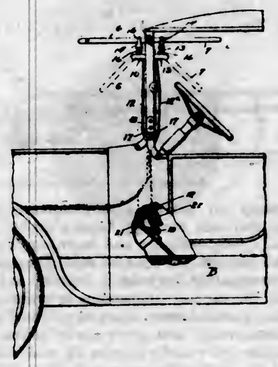
1,383,279. AUTOMATIC WEIGHING-MACHINE. GUSTAVE ALMBERG, Chicago, Ill. Filed Dec. 15, 1919. Serial No. 344,792. 12 Claims. (Cl. 249—46.)



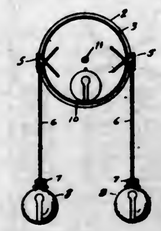
1. In a weighing machine, a material feed trunk, a pair of pivoted gates controlling the trunk outlet, a slidable member supported by the sides of the trunk and having cam recesses, outstanding pins on the gates seating in the recesses, said recesses being shaped to open the gates when the slidable member moves in one direction and to close the gates when moved in another direction, means for operating the slidable member, a latch mechanism for holding the gates open, a weighing receptacle into which the trunk discharges, and a pivoted scale beam carrying said receptacle, said scale beam having means for controlling the latch mechanism.

1,383,280. APPARATUS FOR MAKING BASKETS. WILLIAM E. ASPLIN and HUGO WISANDER, West Park, Ohio; said Wisander assignor to said Asplin. Filed Dec. 26, 1919. Serial No. 347,507. 10 Claims. (Cl. 147—48.)

1. A basket making machine, comprising a support, a stapling device, a movable basket form in operative relation to said stapling device, and having end and lateral surfaces exposed to receive and form the sections of a basket mat when folded thereon, means for clamping said basket mat to the end and lateral surfaces of said form when rotated to predetermined positions relative to said stapling device, and means for releasing said clamping means and basket at a predetermined position of rotation of said form.



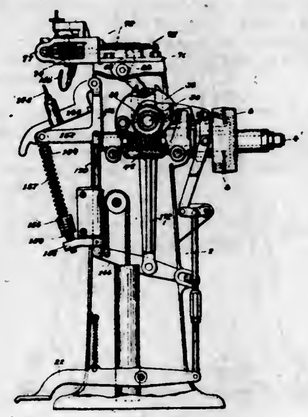
1,383,281. DEVICE FOR DISTRIBUTING SEED AND THE LIKE. JOHN JAMES BAILEY, Harpenden, England. Filed Dec. 15, 1919. Serial No. 344,987. 3 Claims. (Cl. 275—1.)



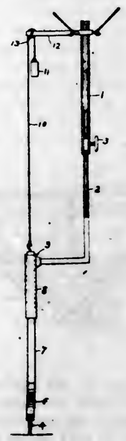
3. In a distributer device, the combination of a sheet-metal body, turned-down side walls converging toward the mouth of the device, flexible baffles extending from opposite sides of the device, and clips on said baffles for adjustably securing them to the said sides, substantially as described.

1,383,282. AUXILIARY SHIELD FOR MOTOR-VEHICLES. DOSABHOY E. BHARUCHA, Bombay, India. Filed June 11, 1920. Serial No. 388,181. 2 Claims. (Cl. 296—95.)

1. The combination with a supporting frame having a windshield mounted therein, of a protector for use in connection therewith comprising a pair of hingedly connected members mounted over said shield one to open downwardly on one side of said shield, and the other on the other side thereof, bars arranged transversely of said frame to move vertically, members carried by said bars and slidably engaged with said hinged members whereby the raising and lowering of said bars operates to open and close said hinged members, springs for normally holding said bars elevated, and means under the control of the driver for lowering said bars to bring the protector into operative position.



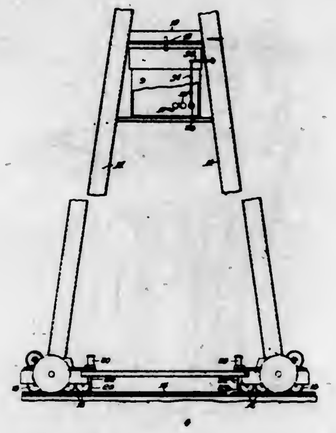
1,383,283. WHIRLING-BELL TOY. WILLIAM F. BLAKE, Toledo, Ohio. Filed Feb. 18, 1919. Serial No. 277,832. 1 Claim. (Cl. 46—14.)



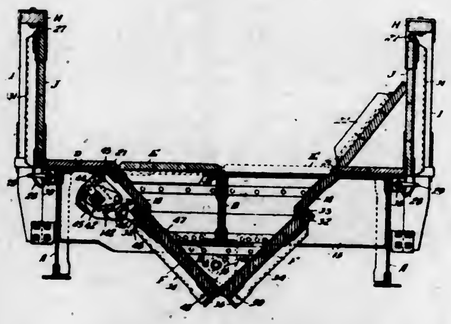
In a whirling bell toy, the combination of a drum rotatably mounted on a pivot on a handle, loose bells contained in said drum, bells elastically attached to the periphery of said drum, and means for making said bells rotate in the same plane as said drum.

1,383,284. LAST-PULLING MACHINE. MICHAEL F. BROGAN, Lawrence, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 24, 1917. Serial No. 192,954. 65 Claims. (Cl. 12—1.)

1. A machine of the class described, having, in combination, a shoe holder, a last holder, mechanism for relatively moving said shoe holder and said last holder to effect relative movement of a last and its shoe, to separate said last and shoe, and auxiliary means coöperating with said mechanism effective to cause lengthwise relative thrust of the last heel and shoe counter and subsequently effective to augment said lengthwise relative thrust to relieve strain upon the forepart of the shoe upper.

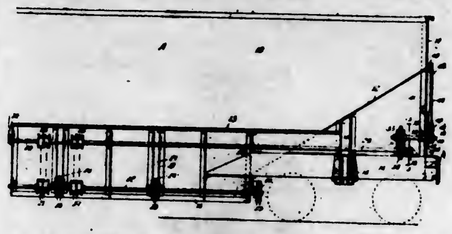


1,383,285. SAW-GUARD. JOSEPH H. BURKE, Portland, Me. Filed May 22, 1920. Serial No. 383,380. 2 Claims. (Cl. 143—159.)



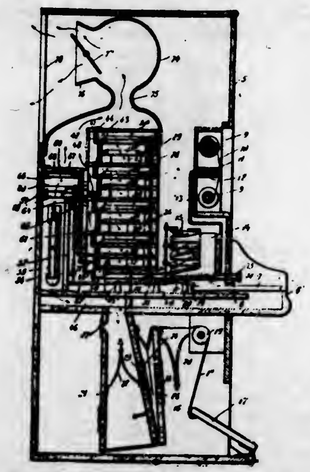
1. In a saw guard mechanism, the combination of a depending post, a rod slidably and rotatably connected with its lower end, said rod having a lateral offset at its lower end, a vertical socket on said offset, a sliding bar in said socket, a hood carried by said bar and means for partially counter-balancing the weight of said bar and guard.

1,383,286. AUTOMATIC BRIDGE CONTROL. CARL O. BURTON, Duluth, Minn. Filed Dec. 7, 1918. Serial No. 265,753. 28 Claims. (Cl. 105—61.)



1. In combination, a bridge of the class described, and means for automatically righting the position thereof when the opposite ends of the bridge have moved in opposite directions a given amount.

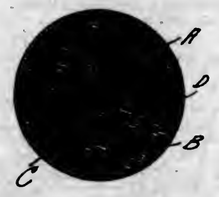
1,383,287. CONVERTIBLE GONDOLA BALLAST-CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,203. 13 Claims. (Cl. 105—243.)



2. A convertible car of the character described, said car having: an underframe including side girders, a relatively deep single center sill, and diaphragms of substantially the same depth as said center sill; side walls; permanent end floor sections at each end of the car; a hopper section intermediate said end floor sections and between the trucks; removable end walls; longitudinally extending floor doors pivoted along their outer edges and adapted to form either a part of the floor or to be inclined upwardly and outwardly against the side walls to form part of a hopper; sets of oppositely swinging pivoted hopper doors hinged along their upper edges at points between the center sill and respective side girder; and operating mechanism for the hopper doors.

1,383,288. DUMP-CAR AND DOOR-OPERATING MECHANISM THEREFOR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1920. Serial No. 406,265. 3 Claims. (Cl. 105—255.)

1. In a dump car having a longitudinally extending central ridge and side dumping hopper doors: the combination with a longitudinally and horisontally extending shaft disposed beneath the apex of said ridge, one end of said shaft terminating between a bolster and end sill at one end of the car; of connections between said shaft and the doors; a second short shaft at said end of the car extending horizontally, said short shaft having its outer end terminating above and adjacent to said end sill and its other end longitudinally overlapping the adjacent end of said first shaft; means at the outer end of said second shaft adapted to lock the latter; pawl and ratchet mechanism, including a lever, for rotating said second shaft, said lever normally extending upwardly from said second shaft and operable by the user when the latter is standing on said end sill; and reduction gearing operatively interposed between said overlapped portions of the shafts.

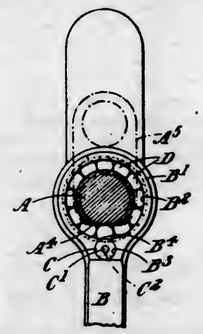


1,383,289. REED-ORGAN. WILLIAM AUGUSTUS COOK, Brooklyn, N. Y. Filed Jan. 17, 1920. Serial No. 352,178. 5 Claims. (Cl. 84—351.)

1. In a reed organ, the combination of a plurality of vertical banks of reeds, means for inducing the passage of air through the reeds, means for controlling the passage of air through the individual banks of reeds, a plurality of swells each controlling the volume of tone from a plurality of reeds, and means for manually and simultaneously adjustably actuating the swells.

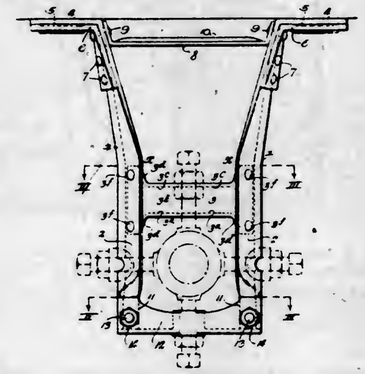
2. In a reed organ, the combination of a plurality of vertical banks of reeds, means for inducing the passage of air through the reeds, means for controlling the passage of air through the individual banks of reeds, a plurality of swells each controlling the volume of tone from a plurality of reeds, means for manually and simultaneously adjustably actuating the swells, an amplifier through which the sound is directed from the organ, and a damper in the throat of the amplifier.

1,383,290. PROCESS OF PRODUCING CONFECTIONS. JOHN A. CREMSEY, Dallas, Tex. Filed July 28, 1919. Serial No. 313,919. 4 Claims. (Cl. 107—54.)



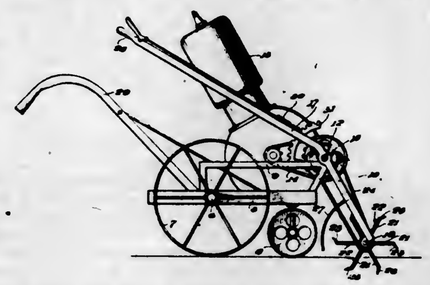
4. The herein-described method of producing a new article of manufacture which is edible throughout, which consists in molding dough into a pair of relatively thin curved casing sections and baking the dough crisp so that it possesses a porous or grain appearance, molding an edible filling to fit snugly within the pair of casing sections, applying the casing sections to the molded filling to inclose the same, applying cement which is edible to the edges of the casing sections and allowing the cement to harden, and forming a seam upon the casing sections whereby the completed article simulates a ball used in playing games.

1,383,291. FIRE-TUBE CLEANER. IGNAZIO DIVIRGLIO, Pitcairn, Pa. Filed Jan. 15, 1921. Serial No. 437,413. 1 Claim. (Cl. 83—64.)



A tube cleaner comprising a head formed solid throughout its diameter and length and tapered toward its front end and provided at its rear or large end with a device adapting it to be engaged with one member of a universal coupling, the surface of said head being grooved both longitudinally and annularly to form a multiplicity of pyramidal radial projections which are arranged in alinement both circumferentially and longitudinally of the tool.

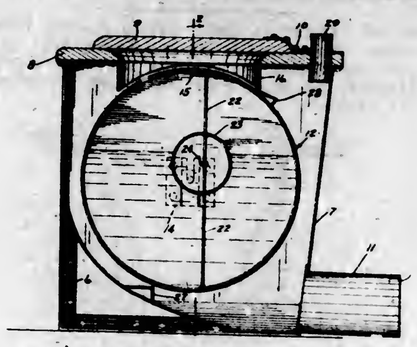
1,383,292. ROLLER-BEARING. WILLIAM DOUGLAS, Kingswood, Bristol, England. Filed Mar. 4, 1919. Serial No. 280,557. 2 Claims. (Cl. 64—39.)



1. In a roller bearing for a crank and connecting rod the combination with the rollers, of the crank pin having an annular recess of a width and depth to receive the rollers with a working clearance, the eye of the connecting rod having formed therein a race with a gap provided in one of the side flanges of said race, said gap being adapted to be registered with a gap provided in one of the side-walls of the said annular recess so as to provide an opening of a size readily to admit the rollers, and a disk adapted to be placed in said recess for closing the gap in the side flange of the said race thereby preventing endwise movement of the rollers.

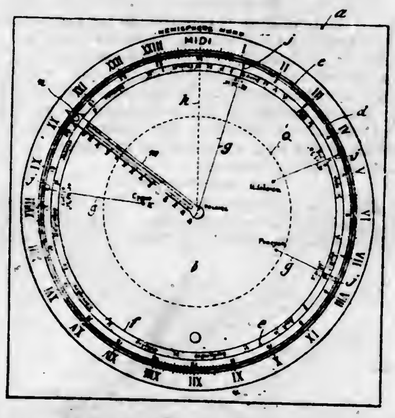
1,383,293. SHAFT-HANGER. HARALD F. GADE, Philadelphia, Pa., assignor to Standard Pressed Steel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1916. Serial No. 137,008. 3 Claims. (Cl. 64—14.)

1. A shaft hanger comprising a pair of legs made of standard or commercial metal V-shape in cross-section with the sharp edges outwardly disposed, each of said legs having its upper terminal end flattened and bent to form a foot disposed at right angles to the vertical plane of the hanger and the opposite and lower terminal end reshaped into channel form in cross-section, with the major portion of the original V-shape metal unchanged in cross-sectional character intermediate said terminal ends, a cross member at the lower part of the hanger having extremities embracing the channel-shaped lower terminals of said legs, and means for connecting the cross member to said leg terminals.



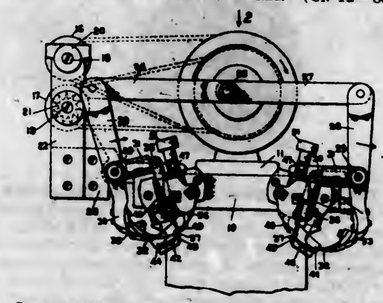
1,383,294. AGRICULTURAL IMPLEMENT. CHARLES H. GARDNER, Jr., Oakland, Calif. Filed November 20, 1919. Serial No. 339,339. 5 Claims. (Cl. 97—25.)

2. In an agricultural implement, the combination of an operating shaft, a lever supported thereby, a forwardly and downwardly extending arm on said lever, a second forwardly and downwardly extending arm pivotally carried by said shaft, a tool carrying shaft supported by the lower ends of said arms, a plurality of radially extending



earth working tools detachably carried by said tool carrying shaft, said lever adapted to be rocked upon said operating shaft as a fulcrum for varying the elevation of said earth working tools.

1,383,295. CLOSET. WILLIAM H. GAUSEWITZ, Minneapolis, Minn., and HOWARD B. CUMMINGS, Prescott, Wis.; said Cummings assignor to said Gausewitz. Filed Aug. 27, 1919. Serial No. 320,119. 5 Claims. (Cl. 4—20.)

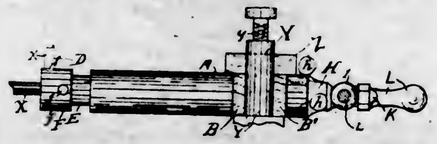


1. A closet of the kind described comprising a cover-equipped casing, a discharge conduit leading from the casing, a receptacle mounted in the casing for movement to and from an emptying position, and an agitating blade in the receptacle.

1,383,296. STAR-TRANSIT CALCULATOR AND INDICATOR FOR MARINERS. HENRI LOUIS VICTOR DÉSIRÉ GIOT, Le Hâvre, France. Filed Dec. 1, 1917. Serial No. 204,822. 1 Claim. (Cl. 35—3.)

A planisphere for navigators' use comprising, in combination, a plate having a circular aperture therein, a disk revoluble within the said aperture, a pivot disposed at the center of the said disk and a revoluble pointer mounted upon the said pivot, the said pointer containing a graduated scale in degrees of altitude counting from the equator, the said plate containing upon the edge of the aperture thereof a circular graduated scale representing a day divided into 24 hours and the subdivisions of the hours, the said disk having represented upon its surface a map of the heavens and near the periphery thereof a graduated time scale of like nature to that of the said plate as well as two concentric graduated scales representing the year divided into 365 days according to the actual time and the mean time respectively, the same disk also having represented upon the surface thereof the declination of the principal stars at a given period of time as well as the annual variations of the declinations, substantially as described.

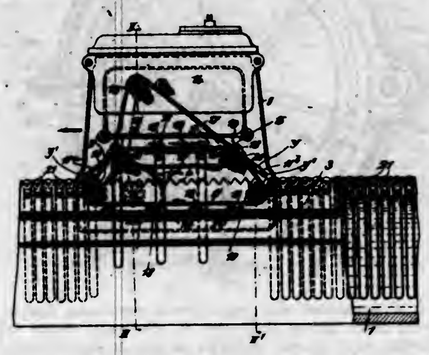
1,383,297. EDGE-TRIMMING MACHINE. EPHRAIM GODIEN, Marlboro, Mass., assignor of twenty per cent. to Existe Bouthillette, Marlboro, Mass. Filed July 20, 1920. Serial No. 397,650. 5 Claims. (Cl. 12—85.)



1. In a machine for finishing the trimming of the edge of a boot or shoe sole, the combination with an edge trimming finishing knife and a transverse cutting knife working substantially in the plane of the breast of the heel, of a stop for engaging the side of the heel, means for positioning said stop, means for yieldingly pressing said stop toward the heel, means for limiting its motion in that direction, and means for adjusting said limiting means.

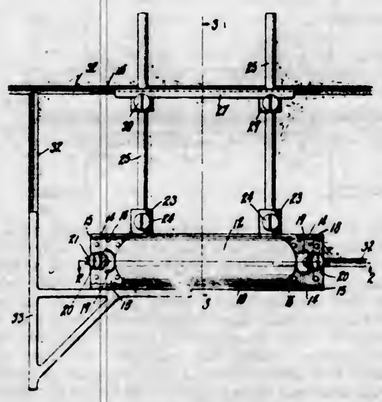
1,383,298. PENCIL-TIP AND PENHOLDER. HOMOBONO GONZALES, Paranaque, Philippine Islands. Filed July 8, 1919. Serial No. 309,320. 4 Claims. (Cl. 120—84.)

4. In a pencil tip and pen holder, the combination of a tubular body having one end enlarged for mounting upon an end of a pencil, pen retaining means carried by said body, a sleeve slidably mounted upon said body and positioned upon the small portion of said body in such manner that the exterior of said slidable sleeve is lodged in substantially the same plane as the exterior of said enlarged portion of the body, said sleeve provided with a longitudinally extending slot and a pair of oppositely extending arcuate outstruck portions at spaced ends of the slot, an outstruck knob formed upon said body near the end remote from the enlarged end and adapted to ride in said longitudinal slot upon sliding movement of the sleeve and to be moved into the recess formed by either of the outstruck portions to retain the sleeve in adjusted position for housing or unhousing the pen point.



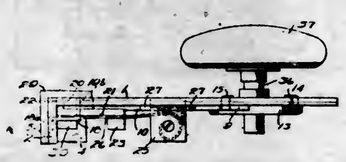
1,383,299. COMPOUND TOOL REST AND HOLDER FOR LATHES. WILLIAM S. GOODING, Chicago, Ill. Filed Mar. 15, 1920. Serial No. 365,987. 2 Claims. (Cl. 29—96.)

1. In a compound tool rest, a shell, parallel abutments on said shell, and said shell provided with a longitudinally



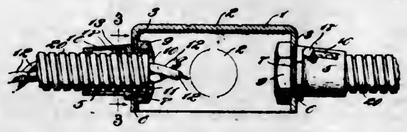
extending passage-way therethrough, a member longitudinally movable in said passage-way, and provided with an axially extending screw threaded well, a member rigidly attached to one end of said shell, a screw threaded member rotatably mounted in said last member, said screw threaded member corresponding with the screw threads in said well, and engageable therewith, and means to manually rotate said screw threaded member, all combined as set forth.

1,383,300. TREATING HANKS OF YARN WITH LIQUID. HEINRICH HABLÜTZEL-FREI, Zurich, Switzerland. Filed Feb. 4, 1921. Serial No. 442,459. 3 Claims. (Cl. 8—19.)



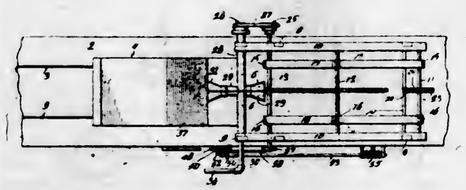
1. In an arrangement for treating hanks of yarn with a liquid contained in a trough, a frame movable over the trough, a pair of endless flexible conveying members provided with double hooked members and forming inclined slopes for lifting and lowering the hank carriers engaged by said hooked members, and means provided in front of said slopes for lifting the hank carriers off the hooked members and the conveying members and for placing them at some distance from the descending slope.

1,383,301. IMPLEMENT FOR FORMING GROOVES IN PLASTIC MASONRY. JOHN D. HENDRICKS, Miami, Fla. Filed Nov. 29, 1919. Serial No. 341,354. 8 Claims. (Cl. 72—138.)



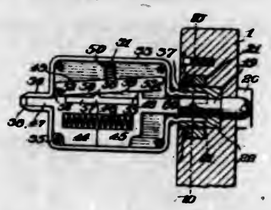
1. A hand implement for forming grooves in plastic surfaces comprising a body, a handle therefor, bits secured at each end of said body and being of materially less width than said body, both of said bits having their active ends extended below the bottom and beyond the ends of the body whereby both bits may be brought into action simultaneously in forming a single groove in plastics.

1,383,302. LATCH. LUTHER WATSON HOLLAND, Pleasant Hill, Mo. Filed May 20, 1920. Serial No. 382,946. 9 Claims. (Cl. 292—173.)



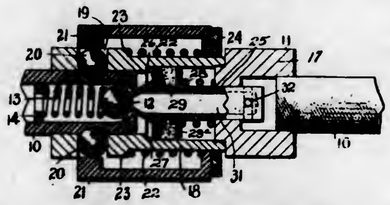
1. The combination with a strike plate having a latching lug, of a latch having a casing provided with an opening arranged to receive the lug, a movable latching dog having a portion arranged to enter between the lug and the casing of the latch, and a movable handle having a portion arranged to engage said latching dog to move it out of engagement with the lug, said dog being adapted to move relatively to said handle, and a spring for forcing said lever into engagement with the latching dog.

1,383,303. COUPLING. JAMES T. HONEN, Cleveland, Ohio, assignor to The Grabler Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1919. Serial No. 283,839. 9 Claims. (Cl. 247—25.)



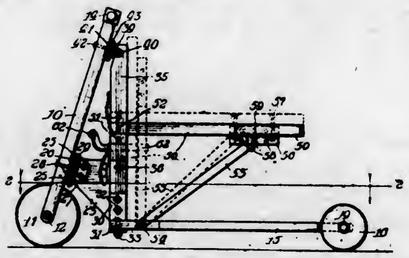
1. A device of the character set forth consisting of a sleeve designed for attachment to a receptacle in register with a wire admitting aperture thereof, and means carried by said sleeve permitting the easy introduction of the end of a conduit into the sleeve and acting automatically to lock the conduit against withdrawal therefrom.

1,383,304. FEEDING MECHANISM FOR PLATES AND THE LIKE. THOMAS B. HUGHES, WILLIAM J. DAVIS, and DAVID DANIEL HUGHES, Granite City, Ill. Filed Apr. 27, 1920. Serial No. 376,935. 2 Claims. (Cl. 271—28.)



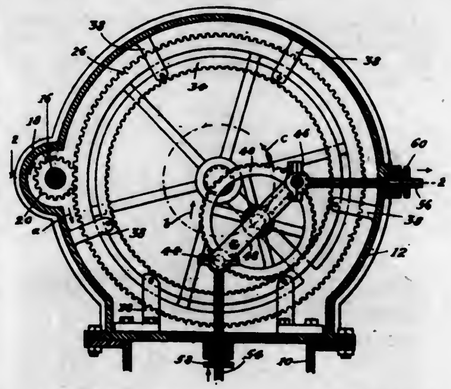
1. A plate handling machine comprising means for supporting a stack of plates, and rotatably and slidably mounted oppositely disposed connected suction funnels for alternately engaging a plate to convey it to a place of deposit.

1,383,305. PHOTOGRAPHIC EXPOSURE MECHANISM. DAVID M. HURLBURT, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 5, 1917. Serial No. 166,571. 9 Claims. (Cl. 95—31.)



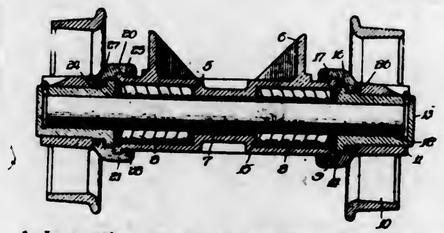
1. In a photographic camera, the combination with means for shifting sensitive material in the focal plane of the camera and a shutter controlling mechanism, of a lock for the said mechanism and a removable key for sequentially operating the lock and the shifting means.

1,383,306. CONNECTOR FOR LUBRICATING APPARATUS. RAYNALDO P. JACQUES, Woonsocket, R. I. Filed Aug. 23, 1920. Serial No. 405,349. 2 Claims. (Cl. 284—19.)



2. A connector for lubricating apparatus having, in combination, a nipple having a recessed outer surface, a nozzle having radially movable locking elements co-acting with said recessed nipple and manual releasing means normally holding said elements in locking position, said nozzle having a spring pressed plunger with an axially extending passage therethrough for the lubricant and having a conical outer end yieldingly engaging the edge of the axial opening in the nipple and forming a tight connection therewith.

1,383,307. VEHICLE FOR CHILDREN. LUTHER JOHNS, Oak Park, Ill. Filed Mar. 26, 1920. Serial No. 368,880. 14 Claims. (Cl. 208—165.)

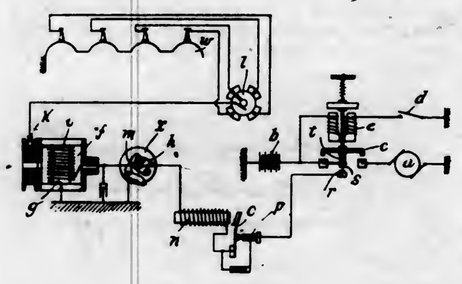


1. A vehicle of the class described comprising a steering post and a wheel operatively mounted therein, rear wheels, an intermediate member pivotally connected to the steering post and extending rearward and its rear end portion supported by the rear wheels, a bracing member secured to the intermediate member and extending upward therefrom and pivotally connected to the steering post at a higher elevation than the pivotal connection for the intermediate member, and a seat secured to said bracing member.

1,383,308. MECHANICAL MOVEMENT. EDWARD E. JOHNSON, St. Paul, Minn. Filed June 14, 1919. Serial No. 304,193. 3 Claims. (Cl. 74—34.)

1. A mechanical movement device comprising two external gears having their axes in alinement, means for rotating said external gears in unison, a fixed internal gear mounted with its center in alinement with the axes of said external gears, a spur gear carried in an annular path by said external gears, said spur gear meshing with said internal gear and having a diameter one-half that of said internal gear, crank pins secured to said spur gear at different angular positions with their centers at the same radial distance as the pitch line of said spur gear, and rods journaled on said crank pins for movement in diametral lines of said internal gear.

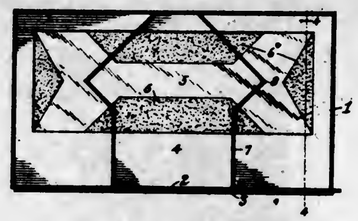
1,383,309. MINE-CAR WHEEL. FRANK E. JOHNSON, Salt Lake City, Utah, assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 10, 1919. Serial No. 336,956. 2 Claims. (Cl. 295—45.)



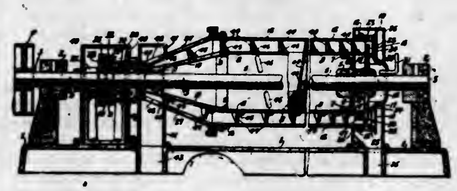
1. In a mine car, in combination, a loose axle, a housing for supporting said axle on the car, bearings for said axle supported within said housing, wheels adapted for removable association with said axle, a wheel being formed with the hub portion hving a flange on the end adjacent said housing, said housing having flanges at the ends thereof which flanges are of greater diameter than the hub flanges, means for removably retaining said wheels on said axle including a ring composed of several segments, said ring having a groove formed in its interior for receiving the flange on the housing to prevent bodily movement longitudinally thereof and provided with an annular shoulder for hooking engagement with the flange on the wheel.

1,383,310. COLLAR-BUTTON. ROGER ALOYSIUS KAHL, Wallingford, Conn. Filed June 7, 1920, Serial No. 387,150. Renewed May 19, 1921. Serial No. 470,949. 2 Claims. (Cl. 24—101.)

1. A collar button comprising a base, a shank formed on the base and having a pair of notches formed in one longitudinal edge thereof and another pair of notches formed in the other edge thereof, the notches of the first pair being arranged in staggered relation with respect to the notches of the other pair, and transversely extending grooves formed on the opposite sides of the said shank at points coinciding with said notches.



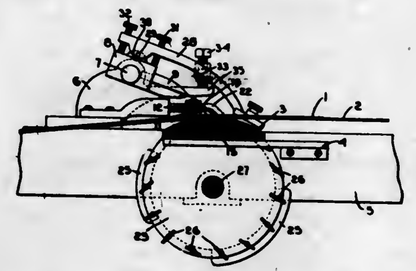
1,383,311. STARTING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FRANZ KRATZ, Stuttgart, Germany, assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1915. Serial No. 20,166. 2 Claims. (Cl. 290—37.)



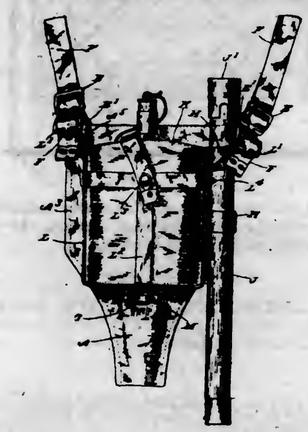
1. The combination with an internal combustion engine having spark plugs, and a starting motor for the engine; of a combined starting and running ignition system comprising a magneto geared to the engine for supplying ignition currents to the spark plugs during the running period; a buzzer connected to the magneto to supply vibratory currents thereto; a source of power supply; and a controlling member, which in a single operation, connects the source to the motor to start the engine and renders the buzzer effective to cause the magneto to supply ignition currents to the spark plugs during the starting period, and which, in the reverse operation, disconnects the source from the motor and renders the buzzer ineffective so that the magneto by itself supplies the ignition currents to the spark plugs.

1,383,312. AUTOMOBILE-SIGNAL. CLARK H. LANDIS, Bowling Green, Ohio. Filed Oct. 30, 1919, Serial No. 334,441. Renewed Mar. 10, 1921. Serial No. 451,331. 2 Claims. (Cl. 177—329.)

1. A signal of the character described, comprising a housing having its forward and rear walls provided with openings, a sign carrying plate covering each opening and marked to provide a longitudinally extending indicator having a head at each end, transversely extending partitions positioned vertically in the housing and dividing the same into a central compartment and end compartments and at points intermediate their height off-set to intersect the heads of the indicators upon the cover plates, a partition carried by the transverse partitions and extending longitudinally of the housing in the upper portion thereof, and means for connecting lighting elements with the lower edge portion of the longitudinally extending partition for selectively lighting the central and end compartments of the housing.

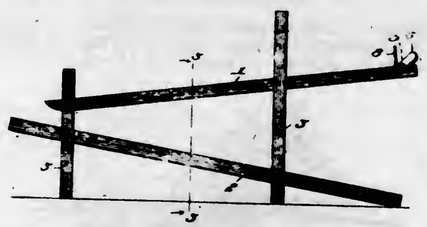


1,383,313. CENTRIFUGAL APPARATUS. CLARENCE P. LANDRETH, Philadelphia, Pa. Filed June 24, 1920. Serial No. 391,346. 6 Claims. (Cl. 233—7.)



1. Centrifugal apparatus comprising an inner drum and an outer drum co-axial with said inner drum, converging co-axial extensions on adjacent ends of said drums, means for rotating said drums and extensions in the same direction at different rates of speed, means for feeding material between said drums, and means for advancing said material between said drums to said extensions and between said extensions toward the smaller ends thereof at a progressively increasing rate.

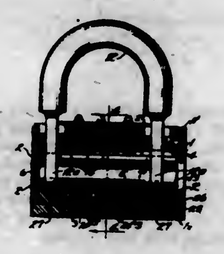
1,383,314. PAPER-RULING-PEN UNDERLIFT. CAMILLE J. LA VIGUEUR, Beachmont, Mass. Filed Sept. 13, 1920. Serial No. 409,828. 8 Claims. (Cl. 33—39.)



1. In combination with a paper ruling machine comprising paper feeding means, a pen beam, a series of pens mounted thereon and means for supporting the pens in operative relation to the paper, under-lifting means for said pens comprising a rocker, a clip underlying one of said ruling pens and formed with clamping means detachably engaging said rocker, and means for operating said rocker to cause said clip to raise the pen engaged by it from the paper.

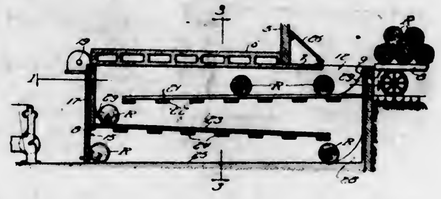
1,383,315. MILITARY EQUIPMENT. ALBERT ALEXANDER LETHBEN, London, England, assignor, by mesne assignments, to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 29, 1917. Serial No. 198,945. 1 Claim. (Cl. 224—8.)

In military and the like equipment, the combination with brace or suspender members, and a pocket having at its top oppositely located buckles which adjustably and detachably engage the extremities of said members, of a carrier having at opposite sides of its top buckles also engaging similarly with the said extremities, and separate means for connecting the lower portion of the carrier with the pocket, comprising a strip and buckle, one thereof connected with the pocket and the other with the lower portion of the carrier, and adapted to be disengaged from each other without other fastening means being disturbed.



1,383,316. TOY. JEROME G. LIEBERT, Highland, N. Y., assignor to Robert Raymond Riordon, Highland, N. Y. Filed Feb. 15, 1921. Serial No. 445,148. 1 Claim. (Cl. 46—61.)

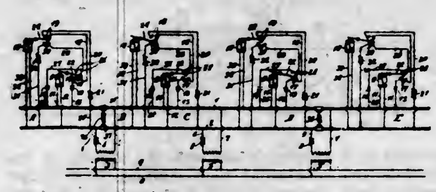
A toy comprising upper and lower platforms reversely inclined relative to each other, each platform having a plurality of parallel tracks thereon, the tracks on the lower platform being vertically alined with the respective tracks of the upper platform, a plurality of tumblers adapted to travel over the platforms, each tumbler running in one track, and removable means for temporarily restraining all the tumblers at the upper end of the upper platform.



1,383,317. COMBINATION-PADLOCK. WILLIAM S. MCADOO, Chicago, Ill. Filed Aug. 2, 1920. Serial No. 400,724. 9 Claims. (Cl. 70—113.)

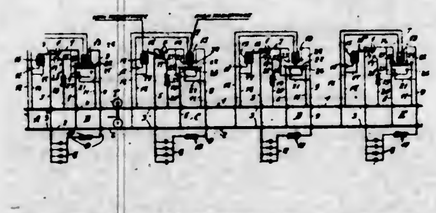
1. A combination padlock comprising a body portion or barrel having a central bore and being provided with transverse slots, a bushing disposed in said bore, wheels or rings disposed in said transverse slots and arranged to rotate on said bushing, said wheels being countersunk beneath the outer surface of said body portion, a reinforcing casing arranged to slip over said body portion, said casing, said body portion and said bushing having

registering openings, a shackle having ends provided with openings arranged to enter said registering openings, and a pin adapted to pass through the openings in the ends of said shackle and into the interior of the bushing for holding said shackle in position when said rings are in predetermined positions.



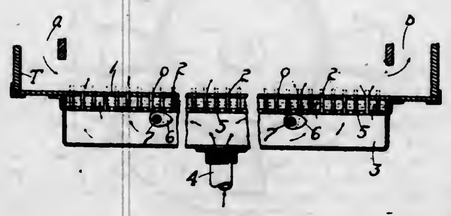
1,383,318. PAPER-ROLL STORAGE AND DELIVERY GALLERY. ROBERT R. MCCORMICK, Chicago, Ill. Filed Sept. 29, 1919. Serial No. 327,261. 2 Claims. (Cl. 193—43.)

1. A building having a basement extended out in front of one of the outer walls thereof, and a platform built out from said wall over the extended portion of said basement and having a hatchway therein, in combination with a gallery built from under said hatchway into said basement within said building and having a floor inclined from its end under said hatchway to its inner end, runways each consisting of two separate shelves arranged in the same horizontal plane and secured to and projecting from the side walls of the gallery, the upper most of which extends from under the hatchway toward but terminates before it reaches the inner end of the gallery, an intermediate runway which extends from the inner end of the gallery toward but terminates before it reaches the outer end of said gallery, and means at the inner end of said incline to prevent the discharge of objects therefrom.



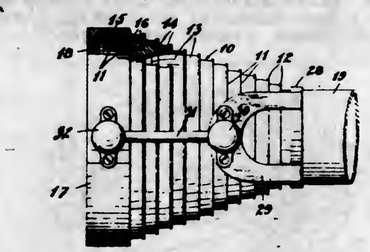
1,383,319. TRACK-CIRCUIT SYSTEM. WILLIAM W. MACFARLANE, Elkins Park, Pa., assignor to Macfarlane Communications Corporation, New York, N. Y., a Corporation of Delaware. Original application filed May 4, 1916, Serial No. 95,305. Divided and this application filed Sept. 20, 1917, Serial No. 192,299. Renewed Nov. 11, 1920. Serial No. 423,488. 11 Claims. (Cl. 246—33.)

11. A system of train control comprising: a track divided into insulated blocks, means for continuously supplying current of a certain characteristic to the rails of each block, a track relay for each block normally energized by said current, and means controlled jointly by the relay in a given block and the relay in the block next in advance



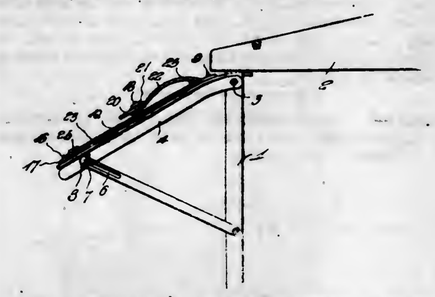
for supplying current of a different characteristic to the rails of the given block to control the passage of a train therethrough.

1,383,320. TRACK-CIRCUIT SYSTEM. WILLIAM W. MACFARLANE, Elkins Park, Pa., assignor to Macfarlane Communications Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 8, 1916, Serial No. 82,861. Renewed Mar. 10, 1919, Serial No. 281,816. Divided and this application filed Sept. 20, 1917, Serial No. 192,296. Renewed Nov. 26, 1920. Serial No. 426,609. 4 Claims. (Cl. 246—45.)



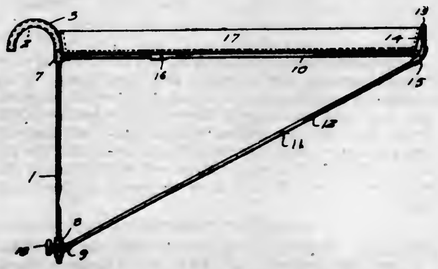
2. A track circuit system comprising: track rails divided into sections, means for supplying current to the rails of each section, a pair of relays for each section controlled by current from said current supplying means of their own section, a circuit reversing device in each section operated by one of said relays of the preceding section, the other of said relays being adapted to modify the current supplied to the next adjoining section to thereby control the circuit reversing device operating relay of the second adjoining section.

1,383,321. FLOTATION APPARATUS. FRANK E. MARCY, Salt Lake City, Utah. Filed Mar. 24, 1919, Serial No. 284,700. Renewed Oct. 13, 1920. Serial No. 416,774. 37 Claims. (Cl. 261—121.)



1. A flotation cell provided with a bottom having air inlet openings, and means within the confines of the openings forming suitable passageways with the walls thereof for the passage of air into the cell.

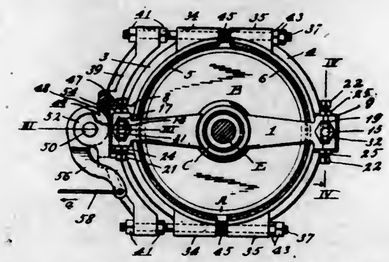
1,383,322. FLEXIBLE JOINT FOR DIVING-ARMOR. ARTHUR PHELPS MABE, Brooklyn, N. Y., assignor to Oceanic Salvage Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1919. Serial No. 324,404. 3 Claims. (Cl. 61—70.)



1. A watertight flexible joint comprising a plurality of rings, portions of the inner and outer surfaces of which comprise spherical zones, and means to prevent the rings from becoming jammed.

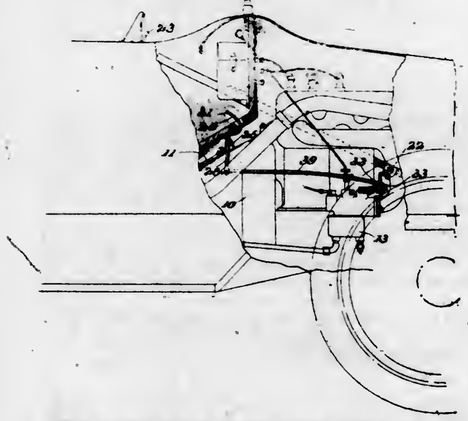
1,383,323. WINDSHIELD-SHADE. WILLIAM RALPH MARSH, Muskogee, Okla. Filed July 1, 1920. Serial No. 393,286. 5 Claims. (Cl. 296—95.)

1. In a windshield shade, supports adapted to decline from a windshield, a pliable shade secured at its upper end to said supports, means for detachably connecting the lower end of said shade with said supports, posts rising from said supports between their ends, said shade having eyes through which said posts project, straps secured to the upper end of the shade and adapted for holding the same in rolled position, and fasteners on the front ends of said straps for engagement with the upper ends of said posts when the shade is either rolled or unrolled.



1,383,324. PORTABLE RACK OR FRAME. CHARLES B. MARTELL, New Orleans, La. Filed Sept. 16, 1920. Serial No. 410,676. 5 Claims. (Cl. 224—29.)

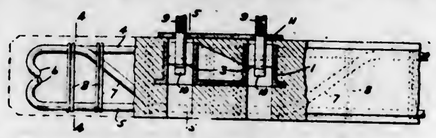
3. A portable rack comprising uprights having their upper ends bent to form attaching hooks, sleeves journaled on said uprights, means connecting said sleeves, a tray supporting member pivoted to the lower sleeves and ex-



tending upwardly and outwardly therefrom, and folding tray supporting arms pivoted to the upper sleeves and to the upper end of said frame and adapted to permit the frame to be folded in the direction of the uprights.

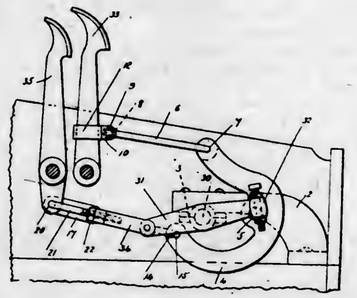
1,383,325. BRAKE MECHANISM. LOUIS MASCHEK and JAMES A. NIBLO, Kansas City, Mo. Filed Apr. 1, 1919. Serial No. 286,656. 4 Claims. (Cl. 188—75.)

2. In combination with a wheel, shoes arranged to engage said wheel, means to adjust said shoes vertically and independently of the wheel, a support for the shoe adjusting means, a member disposed adjacent one of said shoes, elements connecting said member and the shoe most remote therefrom, the adjacent shoe being slidable upon said elements, and means to force said member and the adjacent shoe in opposite directions to cause the shoes to engage the wheel.



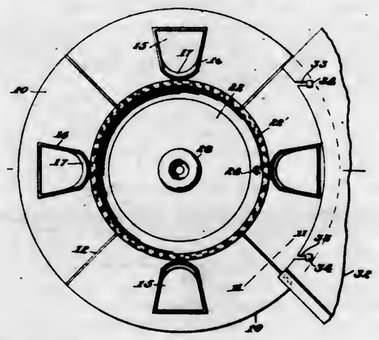
1,383,326. ACCELERATOR. JOSEPH H. M. MICHON, Baltimore, Md. Filed Oct. 24, 1919. Serial No. 332,991. 7 Claims. (Cl. 74—39.)

1. The combination with a motor vehicle provided with a throttle control rod having an arm fixed thereto, of an accelerator including a foot lever, a connection between said lever and the throttle valve of the vehicle engine carbureter, and a connection between said valve and the throttle control rod free of the arm but held thereby against shifting in opposite directions along the rod for movement by the arm as well as movement independently thereof.



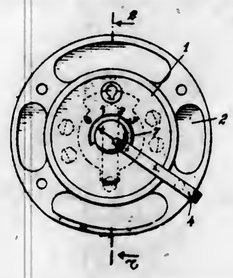
1,383,327. CONCRETE RAILWAY-TIE. GUIDO MISRAOCCHI, Philadelphia, Pa. Filed Dec. 14, 1920. Serial No. 430,705. 1 Claim. (Cl. 238—92.)

The combination of two metal box-like structures each of T-shape in plan and each having clear through it rectangular openings of two dimensions at different levels and of which the bottoms of the openings at the lower level constitute angular seats, a reinforced concrete tie in which the two structures are embedded and which is



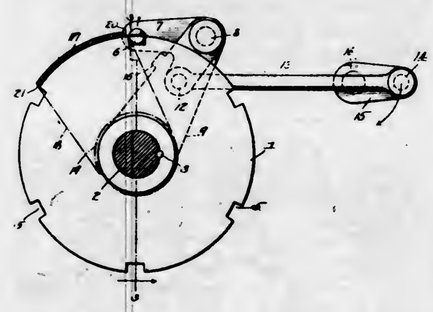
provided with openings alined with the openings in the structure, and bolts having heads engaging the seats and passable clear through the tie from both the top and bottom thereof.

1,383,328. CLUTCH-RELEASE. JOSEPH MUELLER, Terre Haute, Ind. Filed Mar. 11, 1920. Serial No. 365,191. 1 Claim. (Cl. 74—81.)



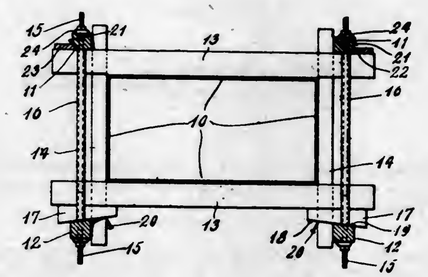
In an automatic clutch release, a stationary support, a lever having its middle part pivoted to the support, a rod pivoted to the upper end portion of the said lever, a strap for engaging a brake lever, said strap being pivoted to the said rod, a screwthreaded rod pivoted to the lower end portion of the said lever, a longitudinally slotted block adjustable on the said screwthreaded rod, and a connecting-rod for engagement with the clutch lever, said connecting-rod having a laterally projecting pin at one end which is slidable in the slot of the said block.

1,381,329. OIL-BURNER. WILLIAM D. MURRAY, Norfolk, Va. Filed Apr. 1, 1919. Serial No. 286,718. 18 Claims. (Cl. 158—91.)



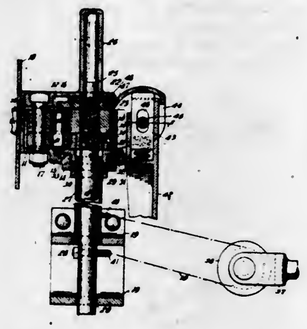
6. A bed-plate for oil burners formed of a plurality of independent segmental units so disposed as to provide a central open area, one at least of said units having draft-tube seats formed therein.

1,383,330. ELECTRIC SWITCH. JAMES MYRVEN NAUL, Pittsfield, Mass., assignor, by mesne assignments, to American Bosch Magneto Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1917. Serial No. 186,159. 10 Claims. (Cl. 200—44.)



3. In a single switch structure for controlling the lighting and ignition circuits on an automobile or the like, a plurality of switch studs connected to the lighting circuits, a switch arm having a position in which said studs are disengaged and having other positions in which said studs are engaged, a switch stud connected to the ignition circuit, a grounded member movable with the switch arm and engageable with the stud connected to the ignition circuit when the switch arm is in the said position in which it is disengaged from the studs connected to the lighting circuits, and locking mechanism, including a removable member, for locking said switch arm in any of said positions.

1,383,331. INDEX MECHANISM. ELOF NORDSTROM, Newark, N. J., assignor, by mesne assignments, to American Dan Bottle Seal Corporation, a Corporation of Delaware. Filed Mar. 24, 1919. Serial No. 284,649. 1 Claim. (Cl. 74—54.)

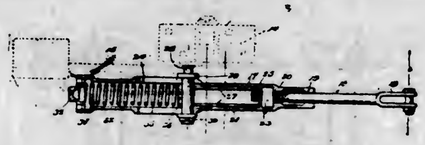


The combination with a rotary table provided with peripheral notches, of an arm oscillatable about the axis of said rotary table, a bell crank lever pivoted on the outer end of said oscillatable arm, a pin carried by one arm of said bell crank lever and adapted to fit said notches, a plate arranged adjacent the periphery of said table, said plate having a length substantially equal to the distance between two adjacent notches, said pin being confined between said plate and one of said notches during each movement of the table and means connected to the other arm of said bell crank lever for imparting movements to said bell crank lever to move said pin into and out of engagement with a notch and through said bell crank imparting the oscillatory movements to said arm.

1,383,332. FORM-CLAMP FOR CONCRETE COLUMNS. SAMUEL O. NYSTROM, Harrison, N. J. Filed Aug. 19, 1920. Serial No. 404,521. 4 Claims. (Cl. 144—291.)

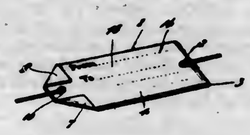
1. A clamp for concrete forms having intersecting side and end bars arranged respectively in pairs and in parallel planes, uprights arranged in the exterior angles formed by the extremities of said bars, tie bolts transversely connecting the uprights and spacing sleeves fitted upon said tie rods and in terminal engagement with the facing surfaces of the uprights.

1,383,333. HAND-BRAKE FOR RAILWAY-CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed May 26, 1920. Serial No. 384,440. 7 Claims. (Cl. 74—120.)



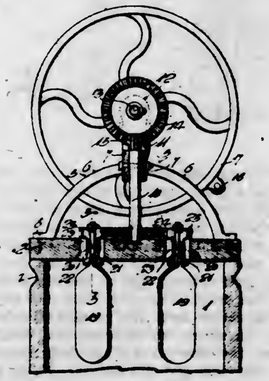
1. In a hand brake adapted for railway cars, the combination with a rotatable staff; of a concentric rotatable sleeve, said staff and sleeve being each adapted to have one end of a common flexible connection attached thereto and wound therearound, said staff being supported from said sleeve; a pawl and ratchet mechanism for effecting rotation of the staff directly and of the sleeve indirectly by reason of the friction arising from the staff being supported by the sleeve until the tension of said flexible connection on the sleeve overbalances the effect of the friction between the sleeve and staff; and independently acting devices for preventing rotation of the staff and sleeve in an unwinding direction.

1,383,334. CONNECTING-ROD FOR SWITCH-THROWS. CHARLES H. PARTINGTON, Cincinnati, Ohio, assignor to The Cincinnati Frog & Switch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 6, 1921. Serial No. 467,427. 9 Claims. (Cl. 246—821.)



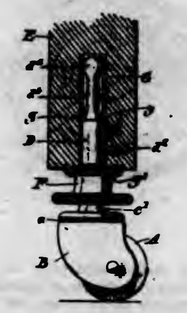
1. A switch throw rod including slidably connected rod sections, means for slidably supporting the rod for bodily

longitudinal movement, and yieldable means between one of the sections and the first means for resisting longi-



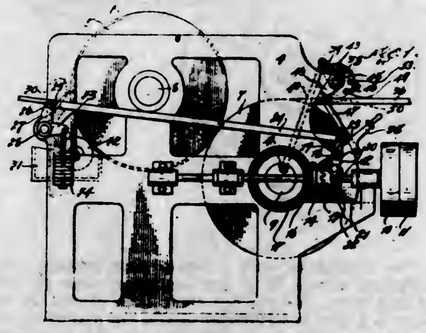
tudinal movement of the rod as well as sliding movement of one section relative to the other common to both movements.

1,383,335. SHIPPING-TAG. STANLEY PENKSA, Long Island City, N. Y. Filed Oct. 25, 1920. Serial No. 419,287. 5 Claims. (Cl. 40—6.)



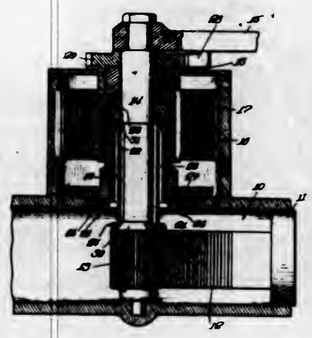
5. A shipping tag formed in duplicate and connected together, said tag being formed of a longitudinal member folded upon itself to provide said duplicate parts, eyes provided at both ends of said tag, one of said duplicate parts having bevels formed on one end thereof and the other of said parts having its corners folded over said beveled portions, address forms provided on the outer exposed surface of one of said parts and on the inner surface of the other of said parts.

1,383,336. CHURN. ROBERT H. PHILLIPS, Madisonville, Ky. Filed Dec. 27, 1920. Serial No. 433,378. 6 Claims. (Cl. 74—7.)



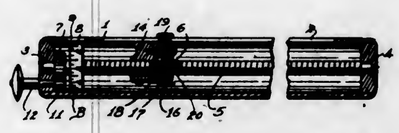
1. In a churn, a cover, a frame carried by said cover and having releasably connected side sections, including bearing forming portions, a driving shaft and a driven shaft extending between the sections and rotatably mounted in bearings formed when the sections are connected, means for transmitting rotary movement from the driving shaft to the driven shaft, bearings carried by said cover and extending through the same, sockets rotatably mounted in said bearings, means for transmitting rotary movement from said driven shaft to said sockets, and operating elements releasably held in engagement with said sockets and positioned beneath said cover.

1,383,337. CASTER. ROBERT M. POST, Chetek, Wis. Filed Feb. 11, 1921. Serial No. 444,184. 3 Claims. (Cl. 16—4.)



2. The combination of a tubular socket member having a yielding rib between its upper and lower ends, and a caster comprising a roller, its frame, a spindle connected with the frame and which has a threaded lower portion, an unthreaded intermediate portion which closely fits the socket member, a headed upper end which closely fits the socket member, and an intermediate portion of reduced diameter between the head and the unthreaded intermediate portion, and a nut carried by the threaded portion of the spindle.

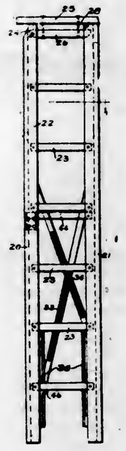
1,383,338. AUTOMATIC SCRAPER CONTROL FOR ROTOGRAVURE-PRINTING PRESSES. CARL G. PRITCHARD, Warren, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed May 29, 1917, Serial No. 171,613. Divided and this application filed Nov. 26, 1920. Serial No. 426,382. 12 Claims. (Cl. 101—157.)



1. In a printing-press having printing and impression members, inking devices for said printing member, means for removing surplus ink from said printing member, means for driving said members, clutch means for connecting or disconnecting said driving means in relation to said members, and means actuated by said clutch means for changing the relation of said ink removing means to said printing member.

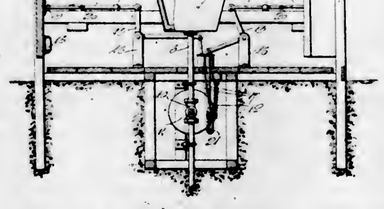
1,383,339. LIQUID DOOR-CLOSER. WALDO D. PUTNAM, Winnetka, Ill. Filed Sept. 27, 1920. Serial No. 413,241. 8 Claims. (Cl. 16—88.)

7. A door check construction comprising a dashpot chamber for the fluid under pressure, having an opening therein, an oscillatable shaft extending through said opening, means for preventing liquid from escaping through said opening, comprising a flexible, twistable sleeve, surrounding said shaft, and having one end secured to rotate with said shaft, and a spring drum acting on said shaft and surrounding said flexible sleeve.



1,383,340. MEASURING DEVICE. EDWARD P. ROBBINS and SAMUEL S. MATTHES, Mansfield, Ohio. Filed Feb. 10, 1919. Serial No. 276,015. 2 Claims. (Cl. 33—141.)

1. A measuring device comprising a casing, a screw threaded shaft therein, a disk provided with a scale on its periphery secured on the shaft within the casing, an opening in the casing exposing a portion of the scale, a reading line on the casing to coöperate with said scale, a slide within the casing normally engaging the threads of said shaft and having a reading line to coöperate with a scale on the casing, a spindle rotatably mounted in one end of the casing and parallel with the shaft, a tracing wheel secured to the outer end of the spindle, means connecting the opposite end of the spindle to the shaft whereby rotation of the wheel is transmitted to the shaft thereby to impart longitudinal movement to the slide relatively to the casing, and means whereby the slide and shaft may be disengaged for resetting the slide.

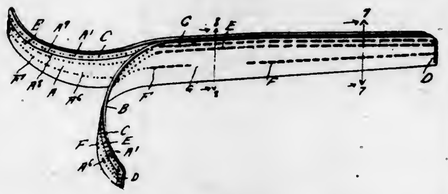


1,383,341. LADDER. FRANK M. DE SAUSSURE, Jr., Greenville, S. C. Filed Nov. 16, 1918. Serial No. 262,848. Renewed Nov. 26, 1920. Serial No. 426,605. 3 Claims. (Cl. 228—37.)

1. A step-ladder comprising folding stiles having channeled inner faces, rungs, certain of which are pivotally mounted at their ends within said stiles, the uppermost rung pivoted at one end only within a channel and rigidly secured to a batten, said batten pivotally secured within the opposite channel, a top step rigidly connected with

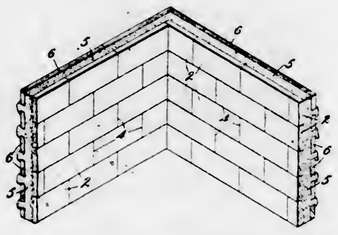
said batten, and means for rigidly holding the stiles, rungs and top step in unfolded position.

1,383,342. WATERING-TROUGH. CHRIST SCHMIDT, Everett, Wash. Filed Sept. 13, 1920. Serial No. 409,840. 3 Claims. (Cl. 119—75.)



1. A structure of the character described comprising an inclosure having an entrance, inwardly opening doors hingedly mounted at the entrance and terminating in spaced relation when closed to permit of free passage of the head of an animal between the closed doors, a water receptacle within the inclosure having a feed pipe and a drain pipe, valves for the pipes, and actuating means for the valves operatively connected with one of the doors whereby movement of the door will impart movement to the valves to open and close the same.

1,383,343. COLLAR-BAND. CHARLES FRED SCHWARZ and CORNELIUS L. SHADER, Troy, N. Y. Filed May 22, 1920. Serial No. 383,473. 1 Claim. (Cl. 2—41.)

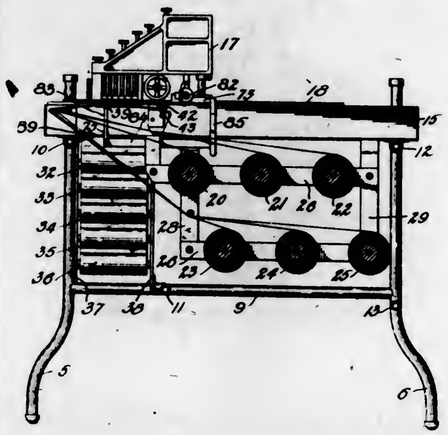


As a new article of manufacture, a neck band adapted to be attached permanently by stitching to the neck opening of a shirt, said band consisting of two similarly shaped blanks, each having its upper edge and its ends turned in upon the body of the blank, and each folded longitudinally on itself with its edges in abutting engagement with each other, and stitches passing through the inturned portions uniting the blanks at their upper edge, and a

second line of stitches passing through the blanks at a distance from the lower edges of the blanks, whereby an opening is provided for the insertion of the edge of the

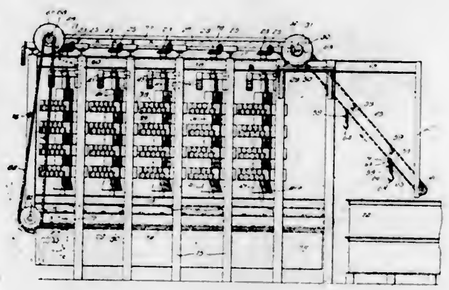
neck opening of the shirt, said stitches limiting the distance to which the edge of the neck opening may be inserted within the opening in the neck band, and constituting a guide for positioning the band in the neck opening.

1,383,344. WALL OR SURFACE FOR DEADENING SOUND. JOHN K. SHAW, Minneapolis, Minn., assignor to B. G. Dahlberg, St. Paul, Minn. Filed May 23, 1918. Serial No. 236,159. 1 Claim. (Cl. 20—4.)



A sound deadening wall comprising a supporting structure; plaster applied to said structure; a surfacing material in the form of blocks ornamented in keeping with their surroundings and provided with pores applied to said plaster while in its green state, said plaster adhering to said blocks and entering said pores; said blocks being each composed of four sets of fibers differing in coarseness to such an extent that their specific gravity is less than four-tenths and a large proportion of air is entrained in their body portions to impart to said blocks unusual sound deadening qualities, substantially as described.

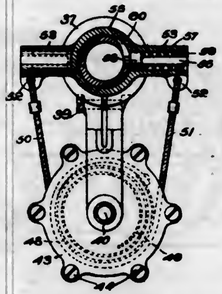
1,383,345. CASING-SPEAR. WALTER JAMES SHEEHAN, Santa Paula, Calif. Filed Apr. 16, 1920. Serial No. 374,406. 7 Claims. (Cl. 294—96.)



1. The combination with a casing spear including a body having casing gripping devices longitudinally movable thereon for effecting radial adjustments thereof, of means for adjustably limiting the movement of said gripping devices in a direction to effect radial expansion comprising an axially rotatable ring provided with a plurality of radial spirally arranged openings, and a radially movable key carried by the spear body and adapted to selectively engage said openings.

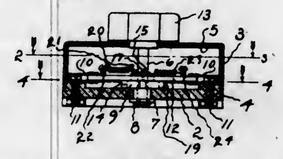
1,383,346. MANIFOLDING DEVICE FOR TYPEWRITING-MACHINES. WALTER C. SHOUP and WALTER E. OLIVER, Hoboken, N. J. Filed Apr. 11, 1918. Serial No. 227,909. 13 Claims. (Cl. 197—126.)

1. The combination, with a typewriter, of a platen therefor located outside the frame thereof but movable therewith relative to the work sheet for line-space movement.



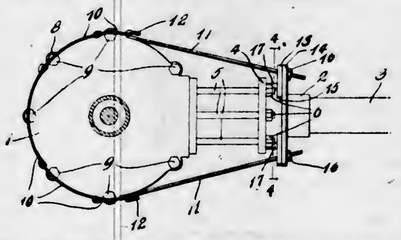
1,383,347. HOG-SCRAPING MACHINE. GRANVILLE H. STALLMAN, Chicago, Ill., assignor to The Mechanical Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1920. Serial No. 403,644. 13 Claims. (Cl. 17—11.)

1. A machine of the character described embodying mechanism for removing the hair and for cleaning the carcass, said mechanism embodying spaced vertical shafts between which the carcass is conveyed, a plurality of sets of flexible scrapers connected with each of the shafts and rotatable therewith to engage and move across the carcass, some of the scrapers of each set operating in a plane inclined to the plane of operation of others of the scrapers of the same set and to the axis of rotation of the shaft.



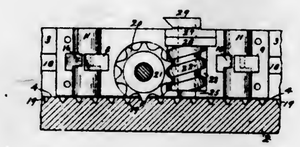
1,383,348. STEERING-POST-POSITIONING MEANS. CHARLES P. STANBON, Lynn, Mass. Filed Apr. 6, 1918. Serial No. 227,117. 8 Claims. (Cl. 74—39.)

2. In steering post positioning means a steering column, a steering post, tension posts on the latter radially positioned, tension members on the column operatively connected with the tension posts and normally effective in



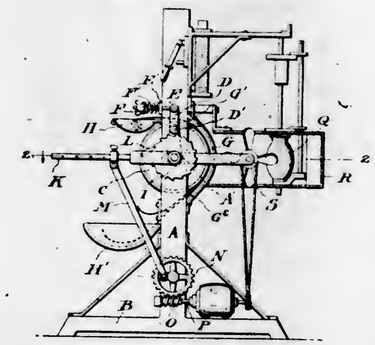
opposite directions, one tension member yielding its effectiveness while the opposite member increases its effectiveness as the steering post is turned.

1,383,349. ELECTRIC SWITCH. CLARENCE C. STIRLING, Hartford, Conn. Filed Sept. 26, 1918. Serial No. 255,738. 1 Claim. (Cl. 200—66.)



An electric switch comprising a detent having notches in its periphery, a turnable spindle coaxial with and extending through the detent, a switching member having a longitudinal slot through which the spindle turns, the switching member being capable of turning movement relatively to the spindle and also for movement in an endwise direction, and being provided with a catch to normally enter a notch in the detent, a block on the switching member and through which the spindle extends, the block having opposite flattened faces, pins on the switching member, normally engaging opposite faces of the block, a coiled spring connected respectively with the block and with the switching member in an endwise direction to carry the catch out of the notch it occupies, at the same time to stretch said spring and also to move the pins free of the flat faces of the block, the stretched spring when the catch is out of the notch imparting a snap movement to the switching member, and a second coiled spring connected with the block and also with the switching member, to move the catch into a second notch after the switching member has turned a predetermined distance.

1,383,350. VIBRATION-ABSORBING DEVICE. MONROE J. TEEL, Anadarko, Okla. Filed Aug. 16, 1920. Serial No. 403,821. 5 Claims. (Cl. 74—56.)

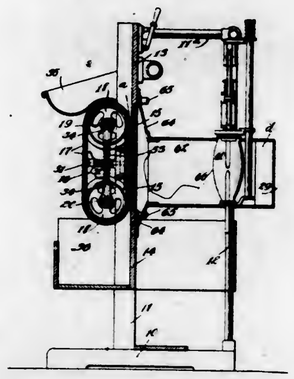


4. A brace of the character described comprising a chain of elongated pivotally-connected links, disks for fitting upon a sleeve, and draw-rods having connection with the chain and passing through openings in said disks.

1,383,351. PRINTING-PLATE HOLDER. FREDERICK M. TUACK, East Orange, N. J. Filed July 24, 1918. Serial No. 246,508. 4 Claims. (Cl. 101—388.)

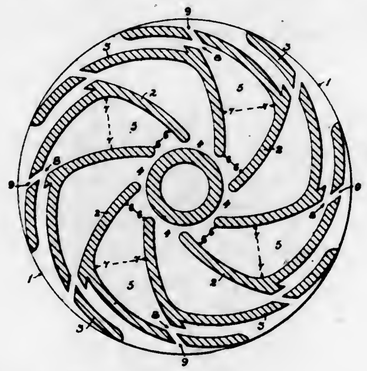
1. The combination in a printing-plate holder, of a guide-bar transversely slidable therein, a latch recess in said guide-bar having opposite side lugs adapted to be engaged for the projection and retraction thereof, an operating shaft pivotally mounted in the holder and extending across the part of said guide-bar, and a latch member formed on said shaft and disposed to enter the recess of said guide-bar and engage the opposite side lugs thereof and at its opposite extremes of movement to present a bearing face for said lugs extending transversely of the path of said guide-bar.

1,383,352. ELECTRIC BLUE-PRINTING MACHINE. JAMES H. WAGENHORST, Akron, Ohio. Filed June 21, 1916. Serial No. 104,984. 1 Claim. (Cl. 95—75.)



The combination with a transparent medium, of a source of light upon one side thereof and spaced therefrom, a flexible apron contacting with the opposite side of said medium, variable pressing means contacting with said apron, means for moving said apron step by step, and means for varying the distance of each step.

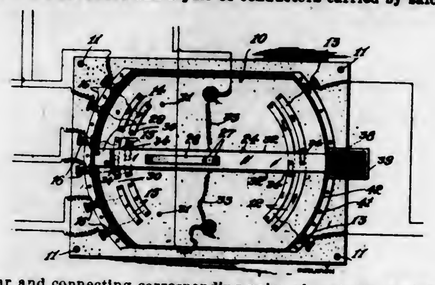
1,383,353. ELECTRIC BLUE-PRINTING MACHINE. JAMES H. WAGENHORST, Akron, Ohio. Filed Jan. 26, 1918. Serial No. 213,860. 8 Claims. (Cl. 95—73.)



1. In a device of the kind described, the combination with a flat transparent plate of an endless fabric apron having a series of strips connected thereto, spring pressed

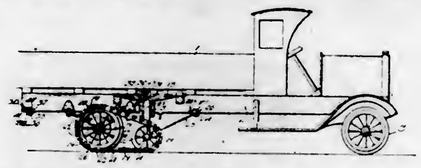
means adapted to contact with said strips and hold said apron in contact with one face of said glass, a source of

light upon the opposite side of said glass, and means for moving said endless apron step by step.



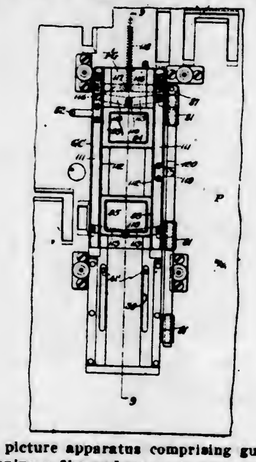
1,383,354. IMPELLER FOR CENTRIFUGAL PUMPS. JAMES WAREING and ADAM HILL, Rochdale, England. Filed Feb. 17, 1921. Serial No. 445,792. 1 Claim. (Cl. 170—141.)

An impeller for a centrifugal pump, comprising two disks having principal vanes and supplementary vanes arranged between them and at an angle to each other, the outer end portion of each supplementary vane being arranged to overlap the inner end portion of the supplementary vane next behind it, thereby forming a delivery passage, each supplementary vane being provided with an additional delivery passage at the angle formed between its middle part and the principal vane next behind it.



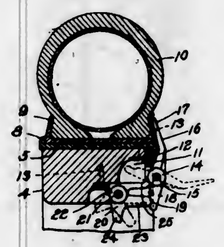
1,383,355. SWITCH FOR TELEPHONE-LINES. CHARLES WALTER WATKINS, Dorranceton, Pa. Filed Aug. 21, 1920. Serial No. 405,063. 7 Claims. (Cl. 200—5.)

1. In a switch of the type described an insulating base, a bar pivotally connected intermediate its ends with the base to swing in either a vertical or horizontal plane, pairs of contacts carried by said base upon opposite sides of said pivot points and pairs of contacts carried by the ends of said bar adapted to selectively engage the pairs of contacts on said base and a pair of conductors carried by said



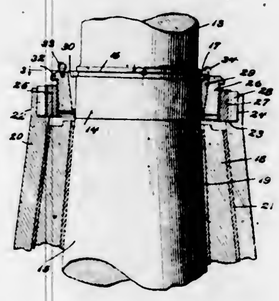
bar and connecting corresponding pairs of contacts carried thereby.

1,383,356. DETACHABLE MOTOR-TRUCK CRAWLER. JACOB J. WEIER, Chicago, Ill., assignor of one-third to Frank J. Heitmann and one-third to William A. Klatte, Chicago, Ill. Filed Nov. 25, 1918. Serial No. 264,043. 5 Claims. (Cl. 305—3.)



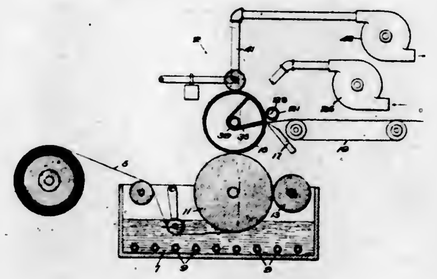
1. In a device of the kind described, a vehicle provided with driving wheels, in combination with auxiliary wheels carried by the vehicle in alinement with the driving wheels, said auxiliary wheels each being mounted upon a vertically movable standard pivotally connected to its coöperating parts, said pivotal axes being parallel to the journal axes of said auxiliary wheels, and means for swinging the auxiliary wheels on their pivoted support upward out of engagement with the road bed, or permitting them to extend vertically downward to contact therewith.

1,383,357. MOTION-PICTURE CAMERA. WILLIAM BURTON WESCOTT, Wellesley, Mass., assignor to Kalmus, Comstock & Wescott, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 11, 1916. Serial No. 119,377. 32 Claims. (Cl. 88—17.)



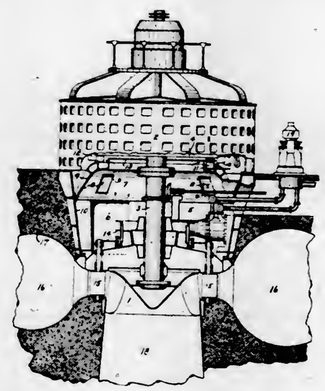
1. Motion picture apparatus comprising guides for laterally positioning a film and means to cause said guides to move equally and oppositely in a lateral direction and to prevent relative movement of said guides in a longitudinal direction.

1,383,358. RIM FOR VEHICLE-WHEELS. CARL G. WESTERBERG, Monessen, Pa. Filed July 27, 1918, Serial No. 247,046. Renewed Nov. 23, 1920. Serial No. 426,105. 3 Claims. (Cl. 301—29.)



1. The combination with a felly, of a felly rim having an abutment, a demountable rim surrounding said felly, a rim engaging said abutment, a plurality of pivotally mounted levers on said felly, the upper ends of said levers engaging said demountable rim, and bell cranks mounted on said felly, one of the arms of said bell cranks engaging the lower ends of said levers below the pivotal points of said levers and on the inner sides thereof.

1,383,359. FASTENING MEANS FOR THE HEAD OF GYRATORY CRUSHING-MACHINES. WILLIAM S. WESTON, Columbia, S. C. Filed May 19, 1920. Serial No. 382,621. 13 Claims. (Cl. 64—48.)

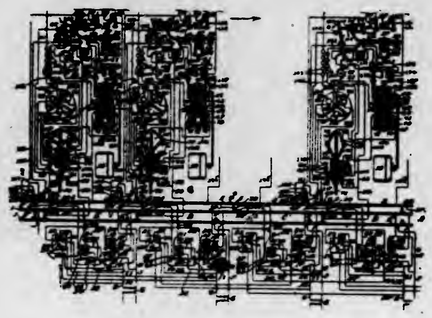


1. In a device of the class described the combination with a crusher shaft having the usual tapered portion, a crusher head on said tapered portion, two concentric members freely separable by longitudinal movement in one direction having transversely extending spiral engagement against movement in the other direction surrounding said shaft at the upper portion of said head, the outer member being positioned for and adapted to bear downward against a portion of said head, detachable means for connecting said outer member and the portion of the head against which it bears against relative rotation, and separate wedging means securing said inner member to said shaft against rotation thereon and against movement longitudinally of the shaft away from said head, the spiral connection of said members being such that any tendency of the outer member to turn in the inner member in the direction of gyration will tend to cause the outer member to move downward on the inner member against said head.

1,383,360. PAPER-CRINKLING APPARATUS. WILLIAM M. WHEILDON, Ashland, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Aug. 6, 1920. Serial No. 401,743. 6 Claims. (Cl. 92—69.)

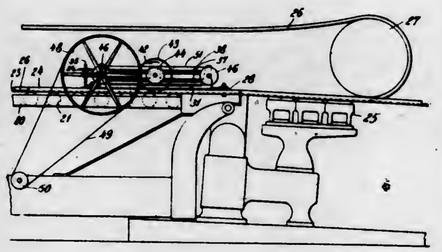
1. Paper crinkling mechanism comprising a paper-receiving roll and a coöperating crinkling element, in combination with means for directing a blast against the roll to hold the paper thereagainst as it advances to said element, the roll having grooves to permit the escape of air from beneath the paper.

1,383,361. ENERGY-TRANSLATING DEVICE. WILLIAM MONROE WHITE, Milwaukee, Wis. Filed Sept. 5, 1918. Serial No. 253,110. 22 Claims. (Cl. 290—52.)



8. In combination, an energy translating device, an energy absorbing device associated with said translating device, a brake for said devices, said brake comprising a plurality of braking elements coactable directly with one of said devices, an upright wall forming an inspection pit between said devices, and a single brake support secured to said wall and extending laterally therefrom to sustain all of said brake elements.

1,383,362. TRAIN SIGNALING AND STOPPING MECHANISM. FRANK C. WILLIAMS, Philadelphia, Pa., assignor to The Safety Block Signal Company, a Corporation of Delaware. Filed Oct. 21, 1916. Serial No. 126,872. 27 Claims. (Cl. 246—31.)



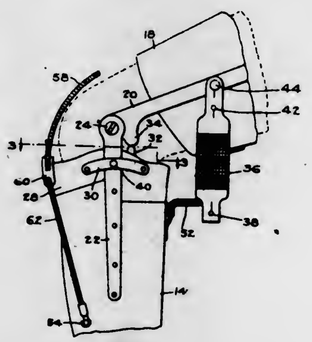
1. The combination of a circuit for supplying the driving energy to a train in a system and operating a train

stopping mechanism carried by the train, said circuit including certain train stopping sections, means to energise

or deenergize said stopping sections from said main propulsion line and block controlled circuits for controlling said means.

1,383,363. FIBER-CROSSING APPARATUS FOR PAPER-MACHINES. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y., assignor to Union Bag and Paper Corporation, a Corporation of New Jersey. Filed Apr. 14, 1919. Serial No. 289,859. 13 Claims. (Cl. 92—44.)

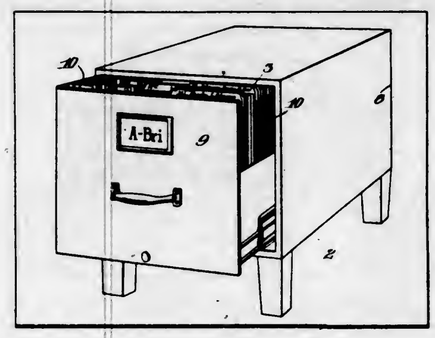
1. A fiber deflecting apparatus for paper machines comprising means lying in the pulp stream at a point whereat a large quantity of the water has been removed and extending obliquely to the direction of travel of the stream for producing a substantially permanent crossing effect upon the fibers as they pass by said means.



1,383,364. ARTIFICIAL LIMB. OSCAR E. WORMAN, Minneapolis, Minn. Filed Mar. 8, 1920. Serial No. 364,082. 35 Claims. (Cl. 3—3.)

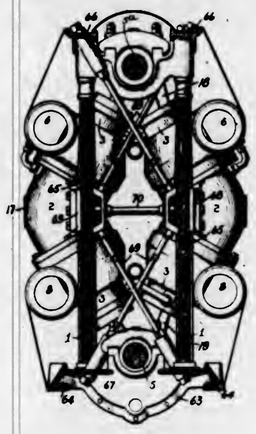
2. An artificial limb comprising a shank member and a thigh member pivoted together to form a knee joint, a non-elastic member attached at its upper end to the knee portion of the thigh member, a roller secured within the front portion of the shank member, said non-elastic member extending over said roller, an elastic member secured at one end to said non-elastic member, a bracket secured within the rear portion of the shank member, a slidable member mounted on said bracket, the other end of said elastic member being attached to said slidable

member, and means operable from outside the shank member for adjusting the tension of said elastic member.



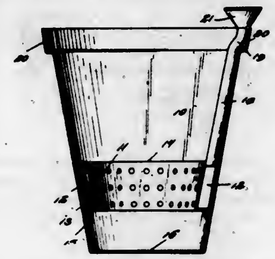
1,383,365. ARTIFICIAL LIMB. OSCAR E. WORMAN, Minneapolis, Minn. Filed Mar. 8, 1920. Serial No. 364,083. 20 Claims. (Cl. 3—3.)

1. An artificial limb comprising a shank member, a slip-socket, means for supporting said socket for vertical movement in the upper end of said shank member, knee joint straps secured to said shank member, and transverse strips attached to said socket, said strips passing over said knee joint straps whereby said socket is guided.



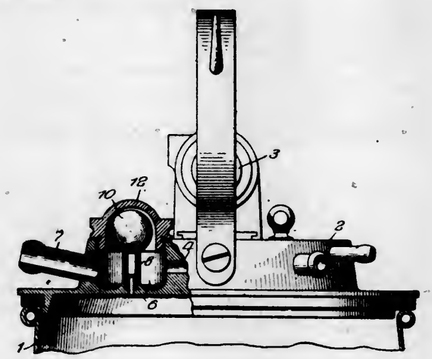
1,383,366. BOOK OR FOLDER. ELBERT B. M. WORTMAN, Rochester, N. Y., assignor to Yawman and Erbe Mfg. Company, Rochester, N. Y., a Corporation of New York. Filed July 10, 1918. Serial No. 244,161. 4 Claims. (Cl. 283—1.)

1. A book or folder having a plurality of pages collectively representing the guides and subdivisions of an office filing system, each page comprising a base portion and a profile portion, the profile portion bearing a repre-



sentation of one or more units of the system and being coincident in outline with said representation.

1,383,367. INTERNAL-COMBUSTION ENGINE. LEON WYGODSKY, Baltimore, Md., assignor to Baltimore Oil Engine Company, Baltimore, Md., a Corporation of Delaware. Filed Aug. 22, 1917. Serial No. 187,662. 26 Claims. (Cl. 123—58.)

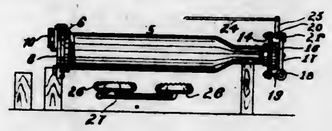


1. An internal combustion two-cycle engine, comprising two crank shafts, a cylinder structure comprising two pistons working in the same cylinder structure and connected one to one crank shaft, and the other to the other crank shaft, said pistons arranged to approach each other within the cylinder structure closely, at the inboard limits of their strokes, the cylinder structure comprising inlet and outlet ports arranged to be uncovered, the one by the one piston, and the other by the other piston, and comprising also means for introducing air within said cylinder structure between said pistons and means of introducing fuel at a determined point of stroke between said pistons, and means for insuring synchronous rotation of said two crank shafts.

1,383,368. SELF-WATERING FLOWER-POT. WILLIAM THOMAS AMBROSE, Memphis, Tenn. Filed June 5, 1920. Serial No. 386,693. 1 Claim. (Cl. 47—19.)

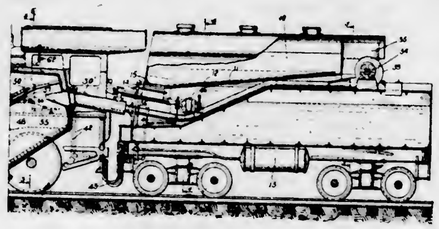
A water container of the character described including spaced inner and outer continuous walls, a bottom and a top, said inner wall being perforated and a filling tube communicating with said container and projecting from the top thereof.

1,383,369. MILKING-MACHINE. HENRY B. BABSON, Chicago, Ill., assignor to Pine Tree Milking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,342. 3 Claims. (Cl. 31—101.)



1. A milking machine having a milk pail provided with a cover having an eduction passage for the exit of the air from the pail and a chamber from which said passage leads, a tube leading from the under side of the cover to a point considerably above the floor of said chamber, and a floating check valve detached from its surroundings and resting upon the top of said tube.

2. A milking machine having a milk pail provided with a cover having an eduction passage for the exit of the air from the pail and a chamber from which said passage leads, a tube leading from the under side of the cover to a point considerably above the floor of said chamber, a ball resting upon the top of said tube, and means for holding said ball loosely upon said tube.



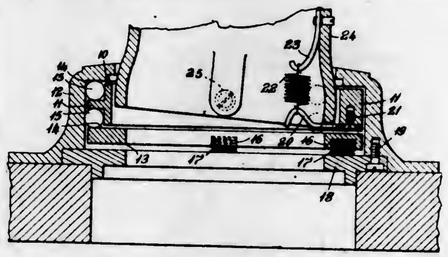
3. A milk trap for the pail covers of milking machines having a chamber in the cover and an eduction passage leading from a point near the floor of said chamber, a tube in said chamber spaced from the walls thereof, said tube communicating with the inside of the pail and terminating considerably above the floor of the chamber, a ball resting upon the upper end of said tube and a concave cap at the top of the chamber spaced from the ball sufficiently to permit it to move relatively to the tube and being close enough to prevent the center of gravity of the ball from falling outside the outer diameter of the tube.

1,383,370. PROCESS OF SPLITTING MICA. GEORGE J. BANCROFT, Denver, Colo. Filed Mar. 4, 1919. Serial No. 280,570. 5 Claims. (Cl. 125—24.)

1. The herein described disintegrating process, consisting in heating water-soaked material in a closed container until the desired pressure is attained, and opening the container to release said pressure suddenly.

1,383,371. APPARATUS FOR BURNING PULVERIZED FUEL IN LOCOMOTIVES. HENRY R. BARNHURST, deceased, Catasauqua, Pa., by Henry G. Barnhurst, administrater, and Harry R. Collins, Allentown, and Henry G. Barnhurst, Catasauqua, Pa., assignors to Fuel Savings Company, Allentown, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1914. Serial No. 827,201. 27 Claims. (Cl. 110—104.)

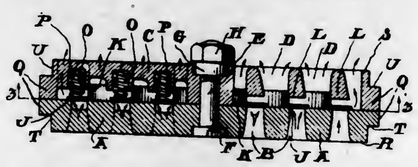
4. In a system for burning pulverized fuel in locomotives, the combination of a burner tube carried entirely by the locomotive, fuel supplying means and air supplying means both carried entirely by the tender and both discharging directly into said burner tube but being free from mechanical connection therewith, thereby permitting relative movement of tender and locomotive.



8. In a furnace for burning comminuted fuel, the combination of a combustion chamber having a plurality of its bounding walls inwardly sloped, said combustion chamber having an opening at the top for the discharge of products of combustion and a fuel and air supply twyer discharging downwardly into said combustion chamber from the upper part thereof, and adjacent to said top opening.

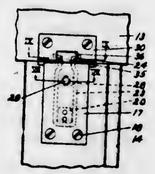
17. In a furnace for burning comminuted fuel, the combination of a combustion chamber having a plurality of its bounding walls downwardly and inwardly sloped for the major portion of their extent, and which is unobstructed and open at top for the discharge of products of combustion, and a fuel and air supply twyer discharging downwardly thereinto from the upper portion thereof.

21. In an apparatus for burning pulverized fuel, the combination of mechanism for conveying pulverized fuel for delivery to a boiler furnace, mechanism for supplying a blast of air to said fuel, power-operated means for independently actuating said mechanisms, means for exhausting the gases of combustion, and manually-operable means for independently controlling the operation of said conveying and supplying mechanisms and said exhausting means.



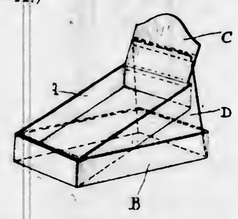
1,383,372. BALL-BEARING DEVICE. SHULAR BAUM, Utica, N. Y. Filed May 21, 1920. Serial No. 383,100. 6 Claims. (Cl. 64—49.)

4. In a ball-bearing, in combination, an upper stationary member, an intermediate stationary member, a revolvable member having an annular flange positioned between the upper stationary and the intermediate stationary member and forming race-ways therewith, a tone-arm carried by the revoluble member, a lower stationary member and resilient means between the intermediate stationary



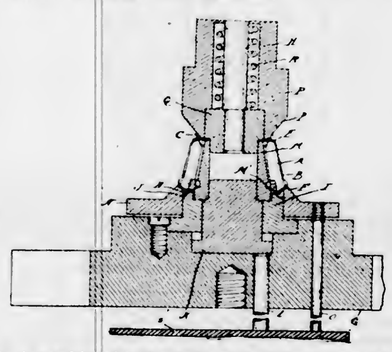
member and the lower stationary member whereby the upper stationary member, the revoluble member, the flange and the intermediate stationary member will be maintained in constant abutment with balls within the race-ways.

1,383,373. VALVE. LEWIS CONDICT BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 6, 1920. Serial No. 394,192. 5 Claims. (Cl. 251—144.)



1. A valve construction comprising a valve seat having an annular port, a valve constructed of one piece of sheet metal and comprising a body portion consisting of a flat ring, adapted to seat over said port and having one edge formed at right angles to the body portion to constitute a guide flange, a guard for the valve, and continuous guiding means on the guard located over the body portion of the valve and coöperating with the said guide flange to guide the valve and limit its lift.

1,383,374. VEHICLE-BODY. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1917. Serial No. 172,740. 6 Claims. (Cl. 296—45.)

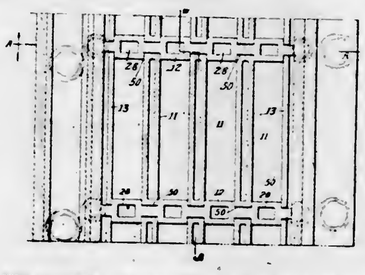


1. In a vehicle body provided with a body portion and a top portion, the combination therewith of a demountable pillar detachable from the body and top portions by a bodily lateral movement relative thereto without tilting movement of the pillar, and means to secure said pillar in tensioned position between said body and top portions, comprising an element of a separable fastener secured to said body and top portions, respectively, a coöperating element secured to either end of said pillar, and an operating member for forcing said coöperating elements into engagement with the elements on the body and top portions, said coöperating elements being constructed and arranged to automatically move out of such engagement when released by said operating member.

1,383,375. DISPLAY-BOX. GEORGE M. BILGER, Tyrone, Pa. Filed Nov. 4, 1919. Serial No. 335,052. 2 Claims. (Cl. 206—44.)

1. A display box comprising a box portion, a cover for the box, a card hinged along one edge portion to the free edge portion of the box, a support greater in length than the card, one end of the support being adapted to engage the cover when the cover is disposed beneath the box, the entire opposite end of the support being hinged to one face of the card and adapted to be folded inwardly of the box and upon the card beneath the cover.

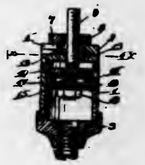
1,383,376. MACHINE FOR CLENCHING ROLLER-BEARING CAGES. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 4, 1917. Serial No. 194,678. 5 Claims. (Cl. 153—21.)



1. A machine for the purpose described, comprising a bed, an annular conical die member supported thereon, a work support arranged concentric with said annular die member above the same, a resilient yieldable bearing for said work support, an upper conical die member arranged concentric with said lower die member and work support, means for holding the work in place and movable relative to said bed, and means for depressing said work holding means and upper die member, whereby the work is clamped in place and an operation is first performed on the upper portion of the work and the latter with its support is then carried downward to perform an operation on the lower end of the work.

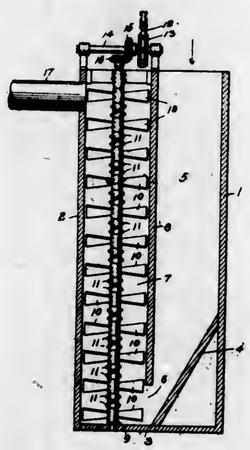
1,383,377. PEN-EXTRACTOR. EUSTON E. BLACK, Alligator Pond, Jamaica, British West Indies. Filed Aug. 17, 1920. Serial No. 404,044. 1 Claim. (Cl. 120—97.)

A pen extractor including a barrel equipped with a pivotally mounted clamping lever, means mounted on the barrel to normally hold the lever from movement, means mounted on the barrel to engage the penholder for preventing relative movement of the barrel and holder, and means to facilitate movement of said barrel on said holder at the option of the user.



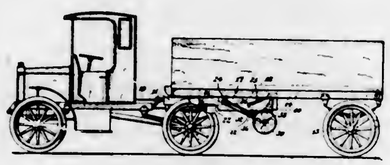
1,383,378. CELL FOR RING-FURNACES. JAMES D. BLACK, Badin, N. C., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 9, 1920. Serial No. 357,133. 5 Claims. (Cl. 25—134.)

1. The process of assembling a furnace having end walls and longitudinal partitions, which comprises interposing solid material between the ends of said partitions and said end walls, and removing said material by the application of heat.



1,383,379. GREASE-CUP. JOHN B. BLAIN, Rochester, N. Y. Filed Apr. 27, 1918. Serial No. 231,219. 1 Claim. (Cl. 184—45.)

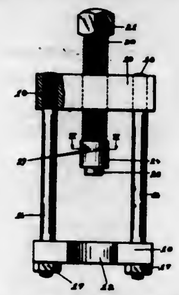
In a grease cup, the combination of a cylinder, a piston mounted to slide in said cylinder, a packing carried on the under side of said piston, an expansible packing ring having a conical opening and being angularly split at one side thereof mounted below said packing, a conical disk adapted to engage into the conical opening in said packing ring, a stem passing through said conical disk and means to prevent the movement of said disk on said stem away



from said packing ring, said disk being adapted to be forced to slide on said stem into the conical opening in said packing ring by the grease contained in said cylinder on the compression thereof by said piston.

1,383,380. SLIME-PUMP. SAMUEL L. BOGGS, Ivanhoe, Va. Filed Feb. 27, 1920. Serial No. 361,697. 2 Claims. (Cl. 253—182.)

1. In a flotation machine, the combination of an inclined bottom, a vertical casing situated at the foot of an inclined bottom and having an opening adjacent to the base of said incline, a shaft in the casing, paddles on the shaft adapted to lift the liquid through the casing, and means to actuate the shaft.

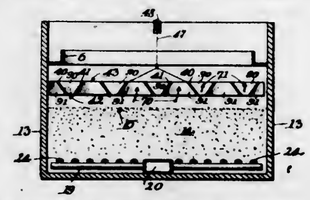


1,383,381. SEMITRAILER. ANDREW J. BORST, JR., Buffalo, N. Y. Filed June 19, 1919. Serial No. 305,287. 32 Claims. (Cl. 280—33.1.)

1. A supporting mechanism for trailers, comprising a supporting element, and slidable mechanism connected to said supporting element and adapted to be actuated by a tractor to move said supporting member into non-supporting position when connecting the trailer to the tractor.

1,383,382. STEERING-WHEEL-SPIDER PULLER. CARL P. BROCKWAY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 5, 1917. Serial No. 194,906. 4 Claims. (Cl. 29—85.)

1. A device of the class described, comprising a base member provided along its edges with a plurality of notches, a bar provided with a screw threaded therein, and means for supporting the bar in such a manner as to

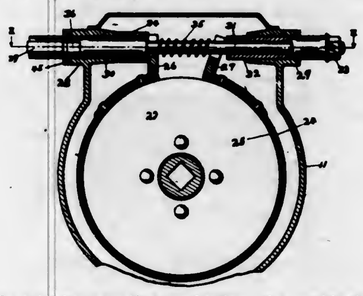


position the screw in line with any one of the various notches.

1,383,383. CARRIER OR TROLLEY. FRANKLIN D. BROGA, Syracuse, N. Y. Filed Oct. 7, 1919. Serial No. 329,176. 7 Claims. (Cl. 105—151.)

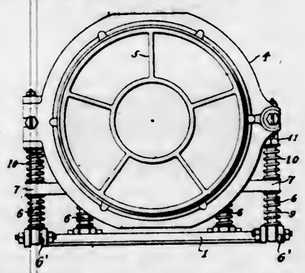
1. A carrier comprising a frame, a load carrying member depending from the frame and movable relatively thereto, and means for holding the trolley wheel on the track, said means being operable by the movement of said member, substantially as and for the purpose specified.

1,383,384. FILTER. CHARLES A. BROWN, Lorain, Ohio, assignor of one-third to Geo. G. Earl and one-third to Albert B. Wood, New Orleans, La. Filed Aug. 25, 1916. Serial No. 116,775. 17 Claims. (Cl. 210—130.)



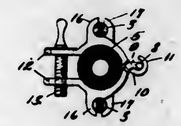
11. In a filter, the combination of a filter bed composed of particles of sand or like material having a normal filtering level below the top of the filter, means for introducing at or near the bottom of the filter bed a supply of wash water under conditions under which in passing upward through the filter it carries with it part of the way

at least the particles composing the filter bed and any impurities contained therein, means located above the normal filtering level of the filter bed comprising a plurality of passages for the wash water, some of which are contracted and some of which are expanded from bottom to top in the line of flow of wash water through the filter, said passages being alternated so that on each side of each contracting passage there is an expanding passage, and on each side of each expanding passage there is a contracting passage, a wash trough in said filter and means to convey the wash water from the wash trough away from the filter.



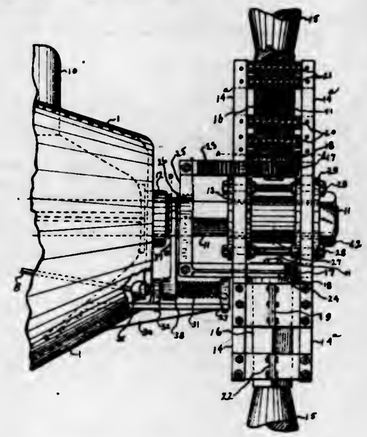
17. In filtering apparatus, a box, a bed of sand therein, a wash trough above said bed, conduits in said bed, means for admitting water above said bed and for withdrawing it through said conduits, means for sending wash water in a reverse direction through said conduits and said sand, a plurality of spaced troughs arranged between said bed and said wash trough with the apices extending downwardly, said troughs having narrow slits in the apices, the walls of adjacent troughs forming passages that converge upwardly, whereby the major part of the wash water passes through said passages and deposits the sand in said last mentioned troughs.

1,383,385. TRANSMISSION-BRAKE-OPERATING MECHANISM. GARNET C. BROWN, Dayton, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 9, 1918. Serial No. 253,239. 15 Claims. (Cl. 188—77.)



1. In a brake operating mechanism, the combination of a support, a brake member, a gripping element for said brake member, and means reversible upon the support for effecting operation of the gripping member in opposite directions.

1,383,386. MOUNTING FOR HEADLIGHTS. FRANK BUCHANAN, Syracuse, N. Y. Filed Aug. 27, 1919. Serial No. 320,083. 4 Claims. (Cl. 240—90.)

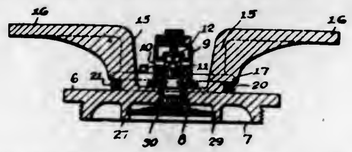


1. A mounting for headlights comprising a base having a plurality of upright posts pivoted thereto and connected to the body, and spring means supporting the body and arranged to yieldingly resist pivotal movement of the posts, substantially as and for the purpose specified.

1,383,387. BRUSH AND MEANS FOR ATTACHING SAME TO HOSE OR HANDLES. EDWIN S. CALKINS, Solvay, N. Y., assignor to Milton E. Davis, Canastota, N. Y. Filed May 22, 1920. Serial No. 383,554. 1 Claim. (Cl. 306—1.)

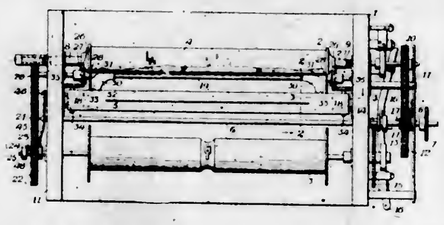
The combination of a brush having a pair of rearwardly extending arms, and a clamp for attaching said arms to a part serving as a handle, the clamp comprising a body mountable on said part, and having three lugs on each of two opposite sides thereof, for providing a passage for one of said arms, two of such lugs being spaced apart in a direction lengthwise of said arms, and the other being opposed to the space between the said two lugs, the lugs being clenched onto the arms, substantially as and for the purpose described.

1,383,388. ADJUSTABLE PITCH AND REVERSIBLE PROPELLER FOR AIRPLANES AND OTHER LIGHTER-THAN-AIR SHIPS. SAMUEL W. CARTER, Omaha, Nebr. Filed Nov. 13, 1920. Serial No. 423,965. 2 Claims. (Cl. 170—163.)



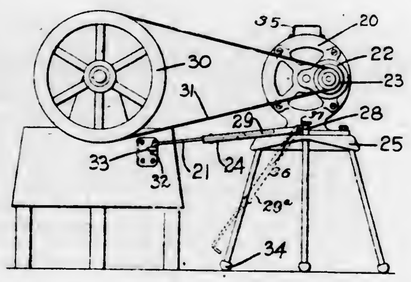
1. The combination with an airplane having a propeller drive shaft, of adjustable propeller blades therefor, said adjustable propeller blades comprising a frame rigidly secured to the propeller shaft, a portion of said propeller shaft between the frame and the fuselage being rectangular shaped, propelled blades carried by said frame, said propeller blades having their inner end rotatably mounted in spaced antifrictional bearings carried by the frame, the inner ends of said propeller blades being provided with gears, a frame slidably mounted on the rectangular portion of the propeller shaft, rack bars carried by said frame and meshing with the gears on the propeller shafts, and means for moving the slidable frame carried by the rectangular shaped portion of the propeller shaft from a point within the cock-pit.

1,383,389. TANK CLOSURE AND VENT. AUGUSTINE DAVIS, Jr., Covington, Ky. Filed Apr. 3, 1919. Serial No. 287,218. 5 Claims. (Cl. 220—44.)



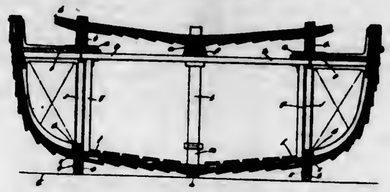
3. A screw closure for tank filling-openings comprising a disk having a central aperture with a vertical upwardly-

projecting vent-plug therein, a circumvallation integral with the disk about the base of the vent-plug, and reversely-disposed horn-handles rising integrally from said



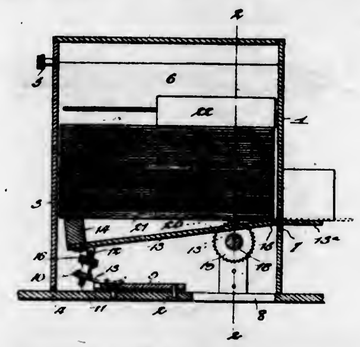
circumvallation at opposite sides of the vent-plug, said circumvallation being interrupted at one or more points to afford escape ports for the area around the vent-plug.

1,383,390. AUTOMATIC TRACKING DEVICE. WILFRED DUPRÉ, Worcester, Mass., assignor of one-half to Frederick A. Moore, Foxboro, Mass. Filed Apr. 1, 1918. Serial No. 225,986. 9 Claims. (Cl. 84—137.)



1. The combination with a tracking device for a perforated traveling music sheet and a tracker bar, of means for controlling the lateral deflection of the music sheet as it is moved over the tracker bar, comprising a rotatable shaft extending lengthwise the tracker bar and parallel therewith, means for rotating said shaft during the playing of a piece, means actuated by the lateral deflection of the music sheet for imparting a longitudinal movement to said shaft, and means actuated by the rotation of said shaft for restoring the normal relation of the music sheet and the tracker bar.

1,383,391. PORTABLE POWER UNIT. ERNEST DICKEY, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 26, 1917. Serial No. 157,564. 17 Claims. (Cl. 64—52.)

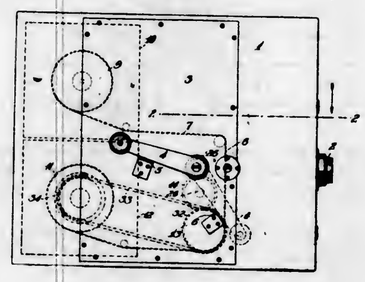


1. In combination with a power device, of a spacing and belt tightening device comprising spacing members, one of said members adapted to be attached to a work machine while the other is pivotally mounted on the power device permitting the spacing device to extend in a plurality of directions from said power device; and means for securing said spacing members together.

1,383,392. BOAT AND THE LIKE. FRANK JAMES ELVY, Catford, London, England. Filed Nov. 4, 1920. Serial No. 421,635. 4 Claims. (Cl. 9—8.)

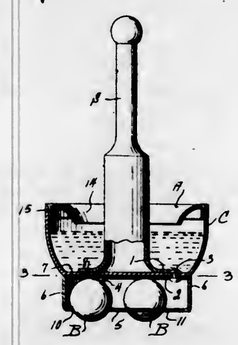
1. A boat having a central keel, side keels extending fore and aft in vertical planes and downwardly at least as far as the level of the bottom of said central keel, keelsons above each of said side keels, thwarts, supports vertically above each of said side keels, said supports being secured between said keelsons and said thwarts and adapted to transmit directly to said keelsons any weight on said thwarts.

1,383,393. TICKET-DISPENSING APPARATUS. IRVING J. FARROW, New York, N. Y., assignor of one-half to Arthur J. Koehler, New York, N. Y. Filed Oct. 4, 1920. Serial No. 414,712. 1 Claim. (Cl. 211—20.)



In a device of the class described, the combination of a frame adapted to contain a pair of parallel columns of tickets, and a ticket feeding device adapted to be operated by the withdrawal of a ticket of one of said columns for effecting the partial ejection of a ticket of the other of said columns.

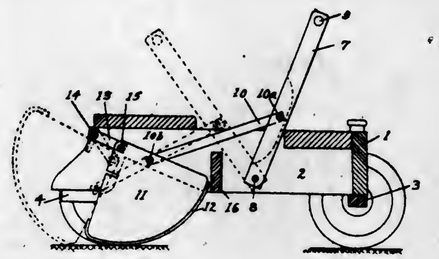
1,383,394. BOX FOR CONTAINING FACE-POWDER OR THE LIKE. ADA FISHER, London, England. Filed Apr. 30, 1920. Serial No. 378,009. 1 Claim. (Cl. 132—82.)



A toilet powder receptacle comprising a box proper and a puff receptacle adapted to normally rest upon the upper surface of the powder contents of the box, said puff receptacle comprising a sieve having a peripheral frame of a diameter less than the inside diameter of the said box, a puff retaining rim or frame permanently secured to said sieve frame, so as to constitute a receptacle having a perforated base which receptacle is a tight sliding fit within the said box, substantially as specified.

1,383,395. PHOTOGRAPHIC EXPOSING APPARATUS. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 8, 1919. Serial No. 270,109. 4 Claims. (Cl. 95—34.)

1. In a camera, the combination with a film feeding roll and gearing including a ratchet for turning said roll, of a shaft having an operating crank thereon, a pawl on said shaft coöperating with the ratchet to drive the feed gearing intermittently in one direction, a shutter mechanism, and a shutter winding and releasing member driven in two direction by the operating shaft but adapted to wind and then to release the shutter during its movement in only one of said directions.



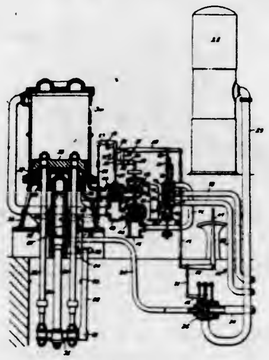
1,383,396. CASTER. JACOB J. FRIEND, Everett, Mass. Filed Oct. 19, 1920. Serial No. 418,077. 6 Claims. (Cl. 16—45.)

5. A caster comprising a body member, a plate underlying said body member and provided with a flange disposed toward the body member, headed members depending from the body member, the free marginal portion of the flange of the plate being provided with an inwardly directed flange having notches through which the headed members are adapted to extend, said headed members underlying the second named flange upon partial rotation of the plate, and a ball partially extending through the plate.

1,383,397. TOY VEHICLE. CLAUDE J. GORDON, Saginaw, Mich. Filed May 7, 1920. Serial No. 379,488. 3 Claims. (Cl. 208—38.)

1. In a vehicle of the class described, a wheeled body comprising side members spaced apart, a suspension link pivotally secured at one end to said body, a propelling cam pivoted at its upper end to the other end of said link, a thrust link pivoted to said cam, and means for actuating

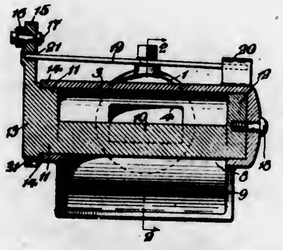
said thrust link, whereby to force said cam rearwardly and downwardly on the rearward stroke of said thrust link and to lift the cam forwardly and upwardly on the forward stroke.



1,383,398. EXHAUST SYSTEM FOR SUBMARINE VESSELS. HUGO E. GRIESHABER, Groton, Conn., assignor to Electric Boat Company, a Corporation of New Jersey. Filed Aug. 14, 1920. Serial No. 403,578. 7 Claims. (Cl. 114—16.)

1. A submarine boat having a hull, an internal combustion engine therein, an exhaust passage for the engine leading outside the hull, a movable intermediate section in this exhaust passage designed to be moved out of alinement with the rest of the passage, and a closure designed to close the end of the exhaust passage when the movable section is moved out of alinement.

1,383,399. STEAM HYDRAULIC INTENSIFIER. THOMAS WILTON HAND, Sheffield, England, assignor to Davy Brothers, Limited, Sheffield, England. Filed Feb. 26, 1919. Serial No. 279,395. 8 Claims. (Cl. 138—17.)

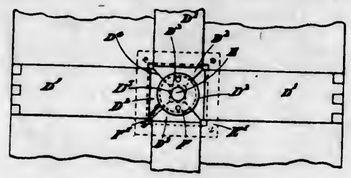


1. A steam hydraulic intensifier comprising a steam cylinder, a piston movable therein, hydraulic means connected with said piston, an inlet for live steam to said cylinder, an exhaust outlet therefrom, a steam connection between opposite ends of said cylinder, whereby the steam pressure upon opposite sides of said piston is equalized during the return stroke thereof, and means for com-

pressing exhaust steam on the working side of said piston during completion of the return stroke thereof, whereby

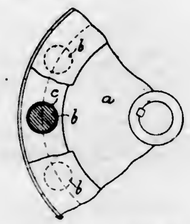
such compressed exhaust steam is met by the live steam admitted to the cylinder for the next working stroke of the piston.

1,383,400. CUT-OUT FOR INTERNAL-COMBUSTION ENGINES. HENRY W. HARTEL, Philadelphia, Pa. Filed June 9, 1917. Serial No. 173,705. 2 Claims. (Cl. 251—105.)



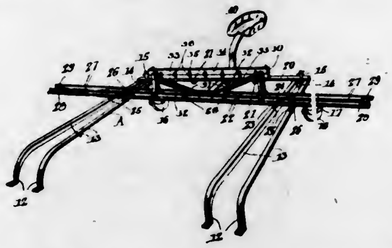
1. A cut-out for internal combustion engines, comprising a casing having an inlet and an outlet, an exhaust port, an exhaust deflector in proximity to said port, and a cylindrical bore, one end of which is closed and the other open, a valve having a head at each end and its body portion forming a segment of a cylinder, a fastening device passing through the closed end of the bore and connected with the juxtaposed valve head, and means to actuate said valve.

2. A cut-off for internal combustion engines, comprising a casing having an inlet and an outlet port, an exhaust port and a cylindrical bore, one end of which is open and the other end of which is closed, a rotatable valve in said bore having an inner and an outer valve head and the portion therebetween forming the segment of a cylinder, means passing through the closed end of said bore and connected with the juxtaposed valve head to retain the valve in position, said outer valve head having an arm projecting therefrom, and a spring bar one end of which is connected to said arm and the other end of which engages a fixed portion of the casing.



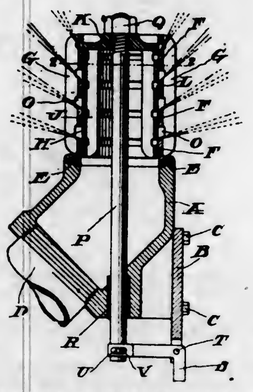
1,383,401. PACKING-CASE. LIONEL WORSLEY HUGHES, London, England. Filed Feb. 8, 1921. Serial No. 443,428. 4 Claims. (Cl. 217—56.)

1. A packing case comprising a body and a lid, a metallic strengthening band secured to the said body, fastening strips hinged to the upper ends of said band, tapered plates on the ends of said strips adapted when closed down on the lid to leave a space between them, a threaded rod on the lid coinciding in position with the space left between the tapered plates, and a cap screwed on the



threaded rod and overlapping the free ends of the tapered plates and provided with means for securing it against accidental loss.

1,383,402. TOOTHED GEARING. LEMUEL JONES, Aylesbury, England. Filed July 30, 1920. Serial No. 400,042. 3 Claims. (Cl. 74—41.)



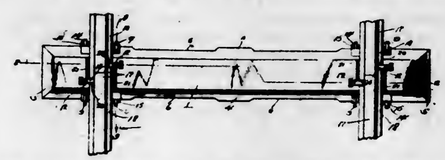
1. A method of forming the engaging surfaces of and mounting a toothed element to mesh with a roller-toothed element, consisting in generating the crown parts of the engaging surfaces of said teeth by rolling a generating circle of the diameter of said rollers along a line tangential with the pitch line of said toothed element with the center of said generating circle constantly on a remoter line equivalent to the pitch line of the axes of said rollers of the roller toothed element, and mounting said toothed element with its pitch line tangential to the pitch line of the axes of said rollers.

1,383,403. DRAG-HARROW CLEANER. GEORGE KENDEL, McNutt, Saskatchewan, Canada. Filed Apr. 19, 1920. Serial No. 375,031. 4 Claims. (Cl. 55—91.)

1. A harrow cleaner consisting of a truck frame having pairs of angle bars converging toward each other, the front of the bars being designed to be secured to the draw bar of a harrow, an adjustable bar connecting the rear ends of the angle bars, wheels located at the rear end of the angle bars, a pair of spaced transverse bars adjustably mounted on the angle bars, a frame on the transverse bars, guide means on the frame, and flexible means extending over the guide means adapted to be connected to the harrow sections, as and for the purpose specified.

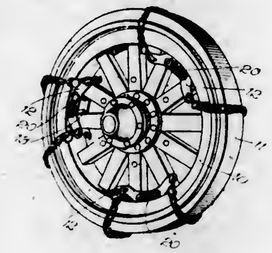
1,383,404. SPRAY-HEAD. JOHN F. KIRGAN, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 13, 1920. Serial No. 409,913. 2 Claims. (Cl. 299—136.)

2. A spray head for spraying liquids, comprising an outer shell composed of separated rings connected by longitudinal outwardly extending ribs, an inner longitudinally movable body also composed of separated rings connected by longitudinal inwardly extending ribs, and means for adjusting said inner body longitudinally in the shell to simultaneously regulate the quantity of liquid issuing in streams through the discharge openings formed between the said rings.



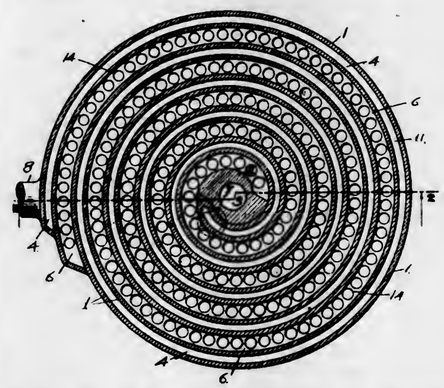
1,383,405. VEHICLE-WHEEL. KARL G. KNAPPEN, Seattle, Wash. Filed Aug. 7, 1920. Serial No. 401,868. 6 Claims. (Cl. 301—64.)

1. A wheel comprising a rim, a center having two sets of spoke members diverging toward the hub, a hub having a bearing for one set of spokes, a hub sleeve for the other set of spokes carried upon and adjustable lengthwise of the hub, and open at its outer end, said bearing member being provided with means for engaging the spokes to positively move them in both axial directions to thereby expand and contract the wheel center for engagement and disengagement with the rim, and being threaded at its outer end for the reception of a hub cap.



1,383,406. RAIL-CLAMP AND METALLIC TIE. SAMUEL KRISKA, Lore City, Ohio. Filed Apr. 20, 1921. Serial No. 463,087. 2 Claims. (Cl. 238—59.)

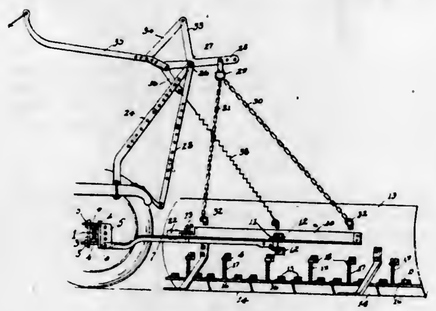
1. A rail anchor comprising in combination with a metallic tie having spaced transversely disposed key ways or channels and provided with diagonally disposed vertical pockets intersecting the channels, rail anchor members engaging the pockets and having heads overlying the base of the rail to hold the rail in position, and keys or wedges passing through the key ways or channels and intersecting



the anchors to hold them in the pockets, and means for holding the keys in the channels or key ways, fish plates for connecting two adjacent rails, said fish plates having notches to be engaged by the heads of the anchors, to prevent longitudinal movements of the rails.

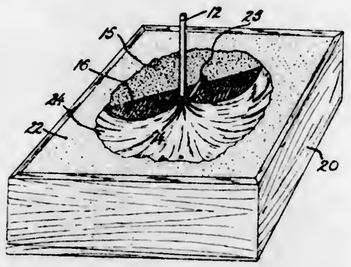
1,383,407. ANTISKID DEVICE FOR VEHICLES. WILLIAM H. KRUG, Oshkosh, Wis. Filed Jan. 31, 1919. Serial No. 274,161. 5 Claims. (Cl. 152—14.)

4. Means for securing one end of an antiskid chain to a wheel, comprising a clamping bar, having a slot extending longitudinally thereof for receiving a clamping bolt, a bolt extending through said slot, a nut for said bolt, and a single means co-acting with said bar and said nut for positively locking said nut to said bolt, and for positively preventing said bolt from shifting in said slot.



1,383,408. STEAM-GENERATOR. BENJAMIN H. LEISTER, San Francisco, Calif. Filed Nov. 7, 1918. Serial No. 261,731. Renewed Feb. 19, 1920. Serial No. 359,848. 6 Claims. (Cl. 122—261.)

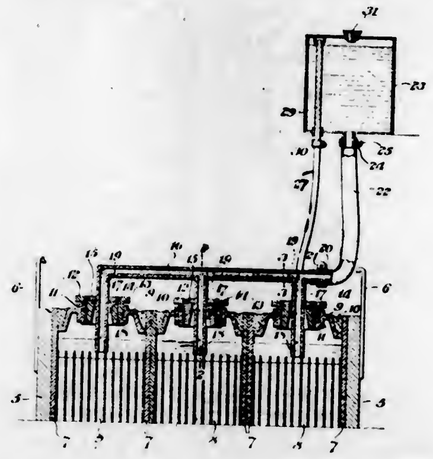
1. A steam generator comprising parallel convolute walls arranged to provide alternate parallel water and



heat passages; means within the convolute water passage for providing continuous alternating channels from one end of said passage to the other; and means for trapping water at one end of said channel.

1,383,409. SNOWPLOW. MICHAEL VOLNEY LIDDELL, Springfield, Ill., assignor to Baker Manufacturing Company, Springfield, Ill. Filed Sept. 23, 1918. Serial No. 255,319. 3 Claims. (Cl. 37—49.)

1. In a device of the class described, a scraper comprising a body; a plurality of blades pivoted to the body for independent rearward swinging movement when any blade encounters a fixed and prominent obstacle, the blades presenting a substantially continuous scraping surface when in normal position; spring means for returning each blade, independently of the others, from a rearwardly swung position to a normal position; a vehicle; and means for assembling the scraper with the vehicle.

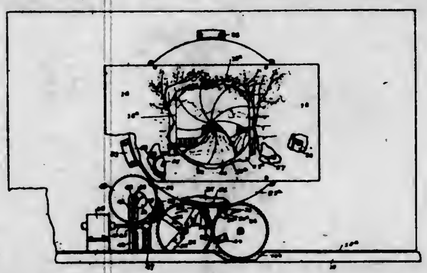


1,383,410. GARDEN-SEAT AND PROCESS OF PRODUCING SAME. LOUIS F. LIEBHARDT, Denver, Colo. Filed Jan. 20, 1921. Serial No. 438,658. 7 Claims. (Cl. 25—155.)

1. A molded seat having its upper face in the design of a leaf of a water plant, and having a standard anchored therein for support of the same.

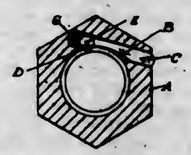
1,383,411. BATTERY-WATER-REPLENISHING DEVICE. JAMES RUSSELL LONGSTREET, Philadelphia, Pa. Filed Dec. 10, 1920. Serial No. 429,663. 5 Claims. (Cl. 137—68.)

1. The combination with an electric storage battery in which a constant level of electrolyte is to be maintained, of a vent cap having an aperture extending therethrough, a device having a branch extending through said aperture in said vent cap, said device having a passageway for liquid extending through said branch, and a separate passageway for air having an outlet in said branch located at the level of the fluid to be maintained in said battery, a



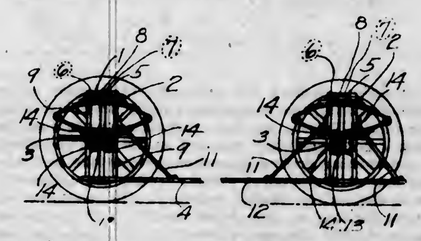
closed reservoir adapted to contain the replenishing fluid, a pipe or hose connecting the liquid passageway to the bottom of said reservoir, and a separate pipe or hose connecting the air passageway to said reservoir.

1,383,412. VEHICLE-BODY. CHARLES W. MCKINLEY, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1917. Serial No. 172,715. 8 Claims. (Cl. 296—45.)



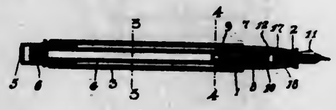
8. In combination, a body, a top, a removable pillar, slotted plates secured to the top and body, respectively, and located in the plane of said pillar when the latter is in operative position, members carried by the pillar in the plane thereof and projecting at opposite ends thereof adapted to extend within the slots formed in said plates, and means connecting the inner ends of said members operable to draw said members into engagement with the plates to clamp the pillar between the top and body.

1,383,413. ADVERTISING DEVICE. GEORGE E. MCMASTER, Bellingham, Wash. Filed Feb. 28, 1921. Serial No. 448,699. 4 Claims. (Cl. 40—30.)



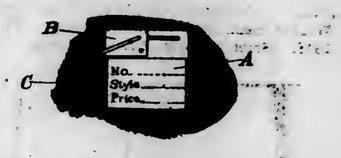
1. In an advertising device in combination, an advertisement-display board having advertisements displayed thereon, a scenic stage located on said display board, a plurality of stationary, scenery flies set on said stage having artistic designs thereon, a plurality of protractile and withdrawable scenery carriers on said stage having artistic designs thereon which blend with the designs on said stationary flies, and means to automatically protract and withdraw said scenery carriers into and out of view at recurrent intervals with intervening periods of pause.

1,383,414. NUT-LOCK AND THE LIKE. WALTER HENRY MANSELL, Grays, England. Filed Aug. 7, 1920. Serial No. 401,852. 1 Claim. (Cl. 151—25.)



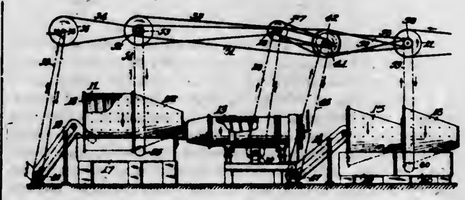
A locking device for nuts, comprising, in combination, a nut provided with a channel at a tangent to and intersecting the threaded portion of the nut, a plunger slidable in said channel in contact with the wall thereof, said plunger being bifurcated at its inner end, a locking disk mounted for rotation between the bifurcations of said plunger, a helical spring in engagement with the inner end of the plunger for normally retaining said disk in locking position, the outer end of the channel being upset into direct engagement with a portion of the plunger thereby to limit the movement of the plunger under the action of the spring, and the outer end of the plunger projecting beyond the end of the channel whereby the depression of the spring and releasing the locking disk may be accomplished from the exterior of the nut.

1,383,415. VEHICLE-BODY HANGER. ALVA MONTEL, Claypool, Ind. Filed Jan. 19, 1921. Serial No. 438,268. 1 Claim. (Cl. 280—106.5.)



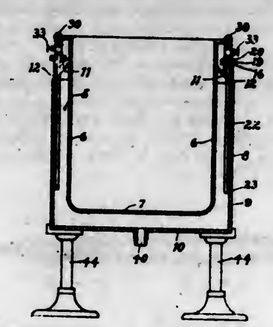
A method for suspending a vehicle body upon full elliptic springs at the ends of the axles, consisting in cross plates hingedly connecting the springs at the tops thereof; braced hangers depending from the cross plates near their ends to the sides of the axles; side bars connecting the lower ends of the hangers; brackets attached to the axles outwardly of the hangers; four rods extended between the brackets and within the hangers and parallel to the axles with two rods at each side of each axle and in vertical alinement; and rollers mounted on the rods and adapted to serve as bearings for the inner faces of the hangers.

1,383,416. DOUBLE-FLOW FOUNTAIN-PEN OR RESERVOIR-PEN. YUJI MUKOJIMA, Minowa, near Tokyo, Japan. Filed Aug. 3, 1920. Serial No. 400,988. 1 Claim. (Cl. 120—42.)



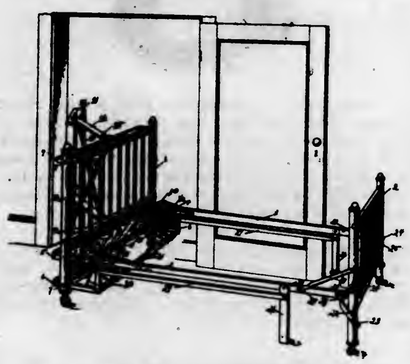
A fountain pen comprising an inner reservoir tube, an outer tube, and a head at the front ends of said tubes and comprising front and rear members pivotally connected together, said front member having a nib-receiving opening and also having conduits leading from the nib to the rear member, and said rear member having conduits respectively communicating with the interiors of said reservoir tubes, the conduits of said members being so arranged as to enable said front member, by a partial turning movement thereof, to cause ink to alternately flow from either of the reservoirs to the nib, or to be cut off therefrom.

1,383,417. MARKING-TAG. JOSEPH DARWIN NAGEL, Jr., New York, N. Y. Filed May 13, 1920. Serial No. 381,154. 12 Claims. (Cl. 40—25.)



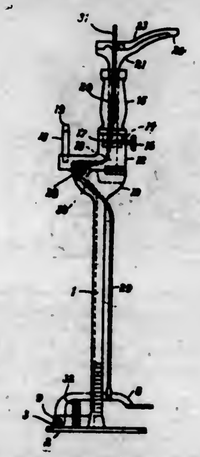
7. A marking tag comprising a body portion and an extension foldable thereon, and attaching devices consisting of a piece of wire, the ends of which comprise pins located upon one side of the tag while the central portion extends through the tag and across the opposite side thereof, and is foldable with said extension in order to separate the points of the pins.

1,383,418. MECHANISM FOR TREATING METAL ARTICLES. WILLIAM H. NEEDHAM, Worcester, Mass., assignor to Boston Pressed Metal Company, Worcester, Mass., a Corporation of Maine. Filed Oct. 20, 1919. Serial No. 332,059. 7 Claims. (Cl. 266—7.)



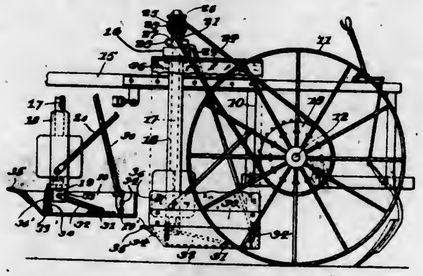
1. A mechanism for treating metal articles, comprising a rotary furnace, means to clean and deliver articles to said furnace, and means to receive, cool, oil and deliver articles from said furnace, the operation of the entire mechanism being continuous and automatic.

1,383,419. HEATING AND COOLING APPARATUS. NIELS D. NIELSEN, Elyria, Ohio. Filed Sept. 19, 1917. Serial No. 192,113. 7 Claims. (Cl. 257—212.)



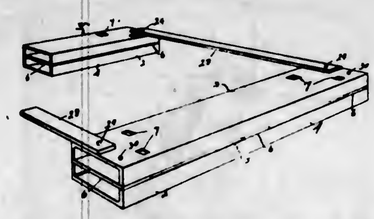
5. In apparatus for spraying a tank or vat with a fluid the combination with said tank of an apron about said tank provided with a plurality of openings, stud pipes vertically mounted about said openings, a flange about the top of each stud pipe, a tube vertically mounted in each stud pipe and extending downwardly therethrough and beyond, each tube provided with a plurality of groups of perforations, a fastening head for each tube provided with an opening into which a tube tnreads, means to removably fasten said head to said flanges, a feed pipe and means to connect said feed pipe to said tubes, and a valve controlling the supply from the feed pipe to each of the tubes.

1,383,420. NARROW-DOORWAY WALL-BED. GEORGE WILLIS PEEK, San Francisco, Calif. Filed May 29, 1918. Serial No. 238,594. 2 Claims. (Cl. 5—18.)



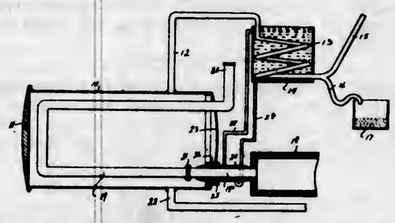
1. In a collapsible bed, the combination with a pivoted up-ending bed-frame, a lower U-shaped bed-stead support having forward extensions, vertical members attached to said extensions, a transverse bar connecting said extensions, a resilient counter-balancing mechanism comprising a toggle-joint connection on opposite side of said up-ending bed-frame and pivotally connected therewith, the lower links on said toggle-joint connections being pivotally attached with and adjacent to the outer corners of said lower U-shaped support, lateral extensions on the lower links of said toggle-joints forming brackets, a transverse bar connecting said brackets, tension springs between the oscillating and rigid transverse bars, means for restricting the movement of said up-ending bed-frame beyond a vertical position, said means comprising a transverse headboard engaging with said oscillating transverse bar.

1,383,421. SHOEMAKER'S JACK. WILLIAM PISKURAN, Elyria, Ohio. Filed Dec. 6, 1919. Serial No. 342,098. 1 Claim. (Cl. 12—123.)



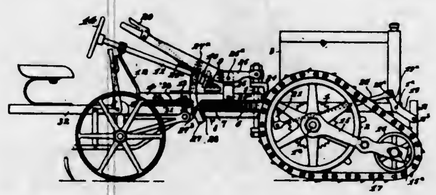
In a cobbler's jack, a channel-shaped standard, a base attached to the standard, said standard having a vertical slot adjacent the base, a reinforcing web around said slot, a plurality of teeth in the side of said web, a lever pivoted adjacent to said base and having a catch adapted to engage said teeth, a hollow L-shaped support hinged to said standard at the top, a hollow post detachably secured to said support and adapted to rotate therein, said post having openings in two sides, a last support fitted to said post, a last detachably secured to said last support, a strap extending from said lever to a point adjacent said openings, and a loop extending from the strap through said openings and adapted to pass over a shoe placed on said last and last support.

1,383,422. BOLL-WEEVIL CATCHER. ALEX PLOCH, Carpenter, Tex., assignor of seven-eighths to Theodula Ploch, Carpenter, Tex. Filed Oct. 15, 1920. Serial No. 417,182. 1 Claim. (Cl. 43—142.)



An insect catching and destroying attachment for an agricultural machine comprising a beam having depending legs carried thereby, vertical shafts disposed through the beam, a horisontal shaft mounted on the beam and driven by the machine, driving connections between the horisontal and one of the vertical shafts, driving connections between the vertical shafts, certain of said depending legs having bearings to support the lower ends of the vertical shafts, flexible elements carried by the depending legs, and insect receiving pans suspended by said flexible elements below the legs, rotary beaters carried by the vertical shafts, and plant guards carried by the pans.

1,383,423. STEEL TIE AND RAIL-FASTENER THEREFOR. WILLIAM F. PRICE, Broad Mountain, Pa. Filed Oct. 8, 1920. Serial No. 415,473. 1 Claim. (Cl. 238—72.)



A tie comprising two opposed channels and separators positioned between the adjacent edges of said channels, said edges and separators being welded together.

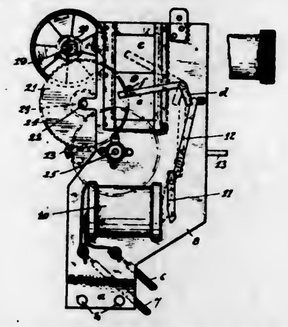
1,383,424. PROTECTOR FOR THE HEATING-PIPES OF RETORTS. EDWIN E. QUINKER, Valdosta, Ga. Filed Feb. 13, 1920. Serial No. 358,450. 6 Claims. (Cl. 122—6.)

2. The combination with a wood distilling retort, a furnace spaced therefrom and a heating pipe extending from the furnace into the retort and through the wall thereof, of a water jacket entirely surrounding said heating pipe and extending through the wall of the retort, and a stuffing box carried by the wall of the retort and through which said water jacket passes, said stuffing box permitting the movement of the heating pipe and water jacket relative to the retort wall.

1,383,425. TRACTOR. ALBERT D. RAY, Cleveland, Ohio. Filed Jan. 26, 1920. Serial No. 353,969. 2 Claims. (Cl. 180—9.1.)

1. In a tractor, the combination of a supporting frame, a motor carried on said frame, main traction wheels mounted on the frame and adapted to be driven by the motor, rocker arms journaled on the axes of the main traction wheels and extending radially therefrom, auxiliary wheels journaled in said rocker arms, driving connecting means between the main traction wheels and the auxiliary wheels, compound lever mechanism connected with the frame and the rocker arms for vertically oscillating said rocker arms, rack and pinion mechanism for operating said lever mechanism, a reach member horizontally swiveled to the frame, means connected with said reach member for actuating the said rack, and coacting means connected with said reach member and the frame for horisontally oscillating the frame.

1,383,426. DRENCHING-BOTTLE. ELIJAH RHODES, Huntington, W. Va. Filed Sept. 24, 1919. Serial No. 325,966. 1 Claim. (Cl. 128—223.)

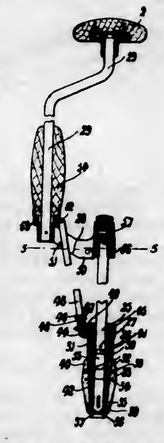


As an article of manufacture, a drenching bottle comprising an arcuate tubular member, the diameter of said member being the same at any point longitudinally thereof, whereby the contents of said member may pass unrestrictedly therethrough, a coupling threaded on one end of said tubular member, a nozzle carried by said coupling, said nozzle being slightly smaller than the tubular member, and a plug for closing the other end of the tubular member, said plug being in continuity with said arcuate tubular member.

1,383,427. POLISH FOR VARNISHED SURFACES. CHRISTIAN ROSENTHAL, Detroit, Mich. Filed Feb. 5, 1921. Serial No. 442,814. 5 Claims. (Cl. 134—24.)

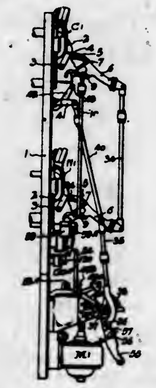
1. A polish comprising a wax, a solvent therefor, banana oil, and an ingredient for rendering said banana oil miscible with the solvent.

1,383,428. ATTACHMENT FOR MOVING-PICTURE MACHINES. BYERS GILLESPIE ROSS and OLIVER BRINDLEY, Pittsburgh, Pa. Filed Sept. 18, 1919, Serial No. 324,537. Renewed Mar. 18, 1921. Serial No. 453,480. 2 Claims. (Cl. 88—17.)



1. The combination of a pair of picture machines, each of which is provided with a magnetically controlled aperture shutter, a magnet mounted on each of said machines, means to alternately simultaneously energize one of said magnets and deënergize the other and means operated by said magnets to control said shutters.

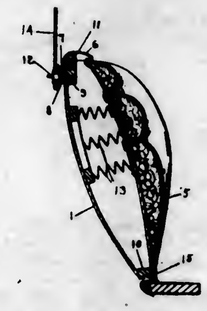
1,383,429. SCREWDRIVER. FREDERIC WILLIAM RUSSELL, Redditch, England. Filed Aug. 29, 1919. Serial No. 320,703. 7 Claims. (Cl. 145—50.)



1. A screw driver comprising a spindle having a driving blade at one end, a sleeve slidably mounted upon the said spindle adapted to support the screw head, a handle loosely and slidably mounted upon said spindle and connected to said sleeve to control the relation between the sleeve and the spindle, a fixed abutment upon said sleeve, a pair of radially displaceable jaws pivotally mounted and having a limited sliding movement upon said sleeve, projections upon said jaws adapted to normally engage with the said abutment to lock the jaws against radial displace-

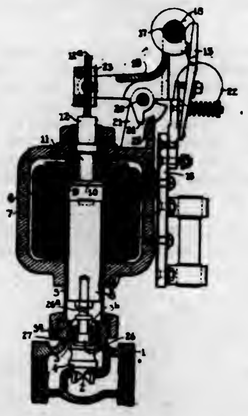
ment, and inwardly directed ends upon said jaws projecting within said sleeve to support the shank of the screw and adapted to be engaged by the screw head first

to move said jaw free of the said abutment and subsequently to radially displace said jaws to allow the screw head and driving blade to pass beyond the jaws when required.



1,383,430. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin township, Chester county, Pa. Original application filed Aug. 29, 1917, Serial No. 188,717. Divided and this application filed Nov. 16, 1918. Serial No. 262,802. 45 Claims. (Cl. 200—92.)

1. The combination with an electric switch, of a motive device for actuating the same in one direction, means for causing said switch to move in opposite direction, a switch controlling the circuit of said motive device moved to position to prevent energization of said motive device when said first named switch is moved in said opposite direction, and means independent of said motive device and said first named switch for actuating said second named switch to position allowing energization of said motive device.

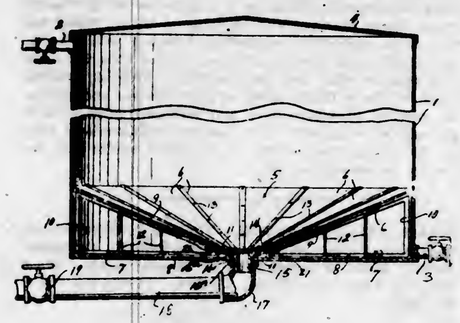


1,383,431. UPHOLSTERY DEVICE. HARRY L. SHEPLER, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 1, 1915. Serial No. 11,127. 5 Claims. (Cl. 155—184.)

1. In a seat structure, the combination of a seat back panel, a frame member having a padded roll secured to one edge thereof, an upholstered cushion spaced from the frame member at its upper side and having a flexible strip secured to the upper edge thereof, said cushion being supported independently of the padded roll to relieve the

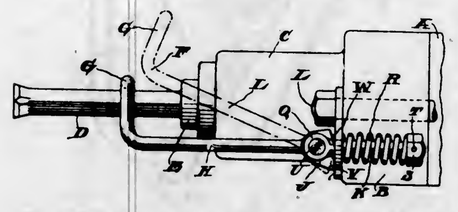
strain on the strip, the said strip being provided with a pocket extending longitudinally thereof, a bar disposed in said pocket, and means for readily securing said bar to said frame member whereby the flexible strip will extend over said padded roll.

1,383,432. SOLENOID-OPERATED VALVE AND THE LIKE. ARTHUR SIMON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 23, 1916. Serial No. 127,221. 8 Claims. (Cl. 137—139.)



2. The combination with a device to be operated, of an operating solenoid therefor, an operative connection between said device and the plunger of said solenoid providing for initiation of the movement of said device during the latter part of the stroke of said plunger, said connection including means adapted to store energy prior to initiation of the movement of said device and to effect continued movement of said device upon initiation of movement thereof and a protective device for said solenoid operable thereby but only after a substantially full stroke of said plunger.

1,383,433. SEDIMENT RECEIVING AND DRAWING-OFF DEVICE FOR TANKS. GEORGE W. SMITH, Garber, Okla. Filed Jan. 22, 1921. Serial No. 439,221. 6 Claims. (Cl. 210—51.)

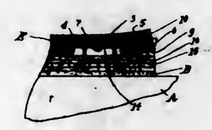


1. A sediment or refuse pan, comprising a conical false bottom for a fluid tank, radial frames engaging the bottom

of the tank and supporting the false bottom, and a drawing off pipe passing through and connected to the bottom

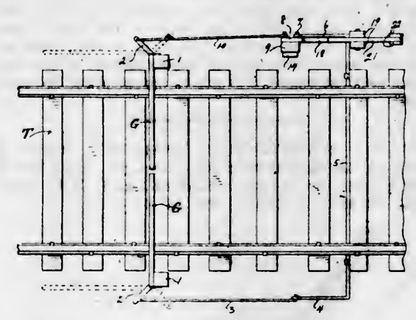
of the tank and to the false bottom, whereby the refuse or sediment may be easily and quickly removed.

1,383,434. DRILL-STEEL RETAINER. WILLIAM A. SMITH, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,358. 2 Claims. (Cl. 121—32.)



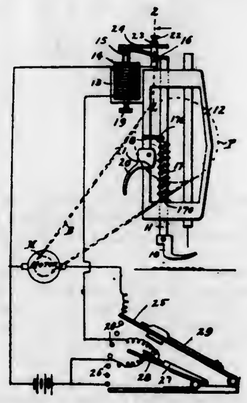
1. A drill steel retainer for rock drills comprising a curved plate adapted to partially encircle the nose piece of the front head of the machine and secured to the front head by the side bolts, said plate extending outwardly at the sides beyond the front head, retainer bolts passing rearwardly through the outwardly extending portions of said plate, with the heads of the bolts in front of said plate, springs on the shanks of said bolts and securing devices to hold the springs on the bolts, a yoke retainer pivotally connected to the heads of said bolts and having a looped portion adapted to partially encircle the drill steel shank, and means for clamping said yoke in position to retain the drill steel.

1,383,435. BALL-BEARING RIM-LUG. WILLIAM J. SMITH, Eolia, Mo. Filed Sept. 7, 1920. Serial No. 408,568. 1 Claim. (Cl. 301—20.)



A ball-bearing rim-lug, comprising a base-plate having an integral rim-engaging lug projecting from its inner side, and provided with an annular ball-race upon its outer side; balls in said ball-race; a bolt having screw-threads; and a nut threaded on said bolt and having a ball-race upon its inner face seated on said balls.

1,383,436. DETACHABLE SHOE-HEEL. STANLEY SOLARZ, St. Paul, Minn. Filed Mar. 3, 1921. Serial No. 449,281. 4 Claims. (Cl. 36—36.)

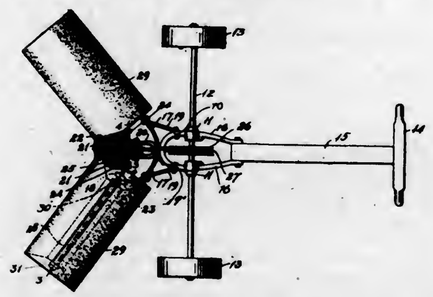


1. In an interchangeable heel and means for attaching the same to shoes, the combination with a fixed heel forming part of the shoe, of a flat shallow circular hollow member secured to the surface of the fixed heel and having a thin plate extension lying flat on the fixed heel and extending forwardly to the breast thereof, a rectangular opening in the forward part of said plate extension, an elongated opening cut through the center of the top wall of the circular hollow member and disposed longitudinally of the fixed heel, a heel normally fitting over said fixed heel and having a projecting lug adapted to engage said rectangular opening when said heel is in normal position, a recess in the heel to the rear of said lug, a T headed stud extending from the bottom of said recess, the head thereof disposed transversely of said heel and projectable through said elongated opening and adapted to interlockingly engage the top wall of the circular hollow member when it is inserted in and turned so as to be positioned at right angles to said elongated opening, and a circular wall for said recess concentric with said T headed stud, said wall slidably peripherally surrounding said circular hollow member, so that said heel may be bodily rotated on the latter and normally held against lateral displacement.

1,383,437. RAILWAY-GATE. THEADORE M. SPURLOCK and JAMES A. SPRAGUE, Sitka, Ark. Filed July 31, 1920. Serial No. 400,310. 1 Claim. (Cl. 246—125.)

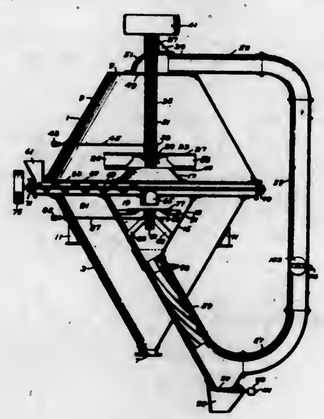
The combination with a pair of gates supported for swinging movement in a substantially horizontal path, of an arm movably supported adjacent said gate, a shank carried by said arm, a stationary arm having a slot extending longitudinally thereof and through which the shank of the movable arm is directed whereby said arm is capable of both endwise and swinging movement, means for imparting upward movement to the movable arm, and means being adapted to return the movable arm to its normal position upon release of said first means, and an operative connection between said arm and the gates whereby the gates are swung toward each other upon movement of the arm in one direction, and away from each other upon movement of the arm in the opposite direction.

1,383,438. SEWING-MACHINE. SAMUEL F. STEIN, Williamsport, Pa. Filed July 19, 1918. Serial No. 245,781. 7 Claims. (Cl. 112—239.)



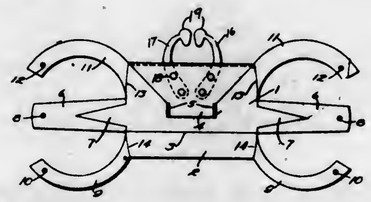
1. A sewing machine having a presser foot, a motor for driving the machine, and automatic means for depressing the presser foot associated with the motor control mechanism.

1,383,439. ADVERTISING-SIGN. DAVID STEINBERGH, Reading, Pa. Filed Dec. 29, 1919. Serial No. 347,960. 1 Claim. (Cl. 40—125.)



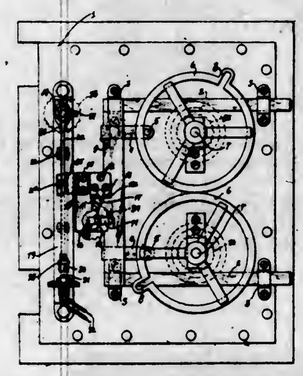
A sign comprising a main board in the form of a segment of a circle and bearing the representation of a fixed background, and a coöperating board to the rear of said main board representing an object in motion, said coöperating board being located approximately at the axis of said segment and at a height to appear above the main board.

1,383,440. ROTARY-BRUSH SWEEPER. ORRIN R. STROME, Melfort, Saskatchewan, Canada. Filed May 3, 1919. Serial No. 294,514. Renewed Jan. 8, 1921. Serial No. 435,988. 1 Claim. (Cl. 15—17.)



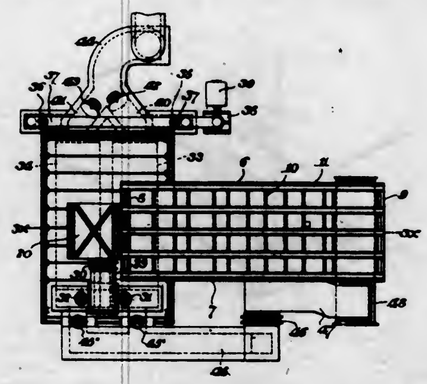
In a sweeper, the combination with a handle having a grip at its front end, bars pivoted to its rear end, a loop having spaced bearings to which said bars are connected, the sides of the loop having longitudinal slots, a main shaft journaled through the bearings and having ground wheels at its ends, and a driving wheel fast on said shaft between such bearings; of a yoke carried by the loop and having bearings in its arms, a counter shaft journaled through these bearings and carrying a driven wheel between them, operative connections between said wheels, brush shafts connected by universal joints with the ends of the counter shaft and carrying roller brushes, bearing collars for these shafts between said brushes and joints, arms pivoted to said collars and leading alongside said yoke, and bolts through such arms and adjustable in said slots for varying the position of the brush shafts with respect to the counter shaft.

1,383,441. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 16, 1920. Serial No. 358,983. 13 Claims. (Cl. 83—40.)



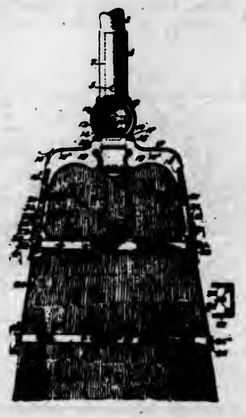
1. An air separator for grading materials, comprising, in combination, a casing having a separating chamber and a collecting chamber therein, a fan for causing an air current to move upward through the separating chamber into the collecting chamber, a pipe for conducting the air current from the collecting chamber to the separating chamber, means for feeding materials down into the separating chamber, a rotary distributer for receiving the materials from said feed means and delivering the same into the path of the upward moving air current, and a fan rotated by said air current for rotating said distributer.

1,383,442. CALF-WEANER. CARL J. SUNDSTROM, Mud Butte, S. D. Filed Aug. 27, 1920. Serial No. 406,425. 2 Claims. (Cl. 119—132.)



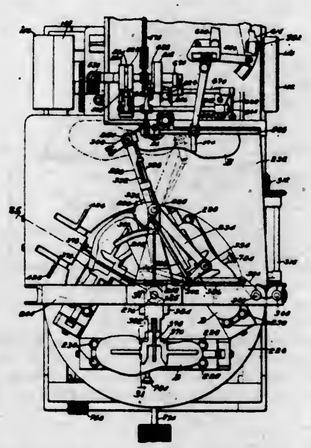
1. In a calf weaner, a plate, a lip disposed at an angle to said plate, shields disposed laterally of said plate and lip and approximately at right angles thereto, oppositely disposed tongues projected laterally from said plate, an apron formed integral with said plate and bent back thereupon, spaced prongs formed integral with said apron and disposed at right angles thereto, and handles carried by said plate, one of said handles being capable of manual adjustment.

1,383,443. SAFETY-LOCK. MACIEJ SZYMKIEWICZ, Jersey City, N. J. Filed Dec. 1, 1920. Serial No. 427,463. 1 Claim. (Cl. 70—53.)



In a device of the class described, a door, bolts slidably mounted on said door, wheels rotatably mounted adjacent said bolts, slotted radial projections on said wheels, a member connecting said bolts, lugs projecting from said member, pins on the ends of said lugs lying within the peripheries of said wheels, said pins being adapted to register with said slotted lugs, an extension on said member, a slot in said extension, a shaft extending through said slot and rotatably mounted in said door, a stem rigid with said shaft, a projection on said extension, having a recess therein, said stem having contact with said projection through said recess, a second projection on said extension, means normally lying in the path of said second plate, and means for removing said first-named means from the said path.

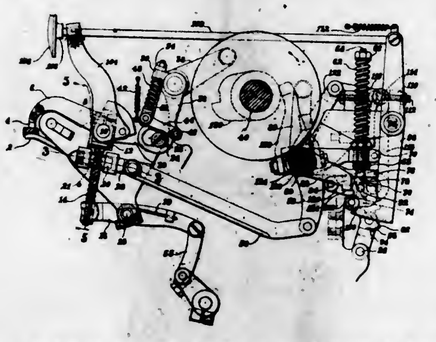
1,383,444. METALLURGICAL FURNACE. BENJAMIN TALBOT, Solberge, North Allerton, England. Filed Mar. 29, 1920. Serial No. 369,510. 16 Claims. (Cl. 263—33.)



1. A tilting furnace provided with means for the introduction of fuel gas thereto at one end thereof on one side of its axis of oscillation in combination with means for discharging waste gases and means for discharging the metal therefrom at the other end thereof on the other side of said axis.

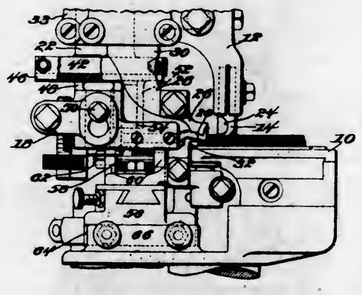
1,383,445. BROOM. STEPHEN G. WILSON, Philadelphia, Pa. Filed July 20, 1918. Serial No. 245,856. 9 Claims. (Cl. 15—19.)

1. In a broom, a broom head having depending portions to engage opposite edges of the broom and flanges to engage opposite faces of the broom, a band engaging the lwer ends of said depending portions, straps depending from said depending portions and engaging the edges of the broom, and a lower band connecting the lower ends of said straps.



1,383,446. AUTOMATIC SOLE-MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 20, 1916. Serial No. 126,685. 46 Claims. (Cl. 12—27.)

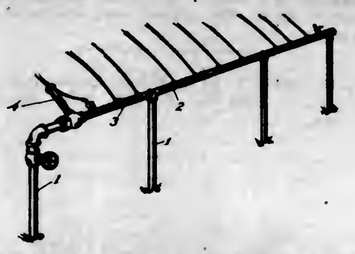
27. A sole-machine having, in combination, a tool for operating upon the marginal portion of a sole-shaped blank; means for feeding the blank relatively to the tool to transfer the point of operation around the curved marginal portion of the blank; means for holding a stack of sole shaped blanks; means for receiving the sole shaped



blanks in a stack after operation thereon by the tool; and transfer-mechanism for transferring blanks, singly, first from the stack-holding means to the feeding-means and then from the latter to the blank-receiving means.

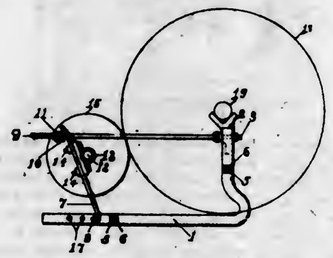
1,383,447. SEWING-MACHINE. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Boston, Mass., a Corporation of New Jersey. Filed May 23, 1919. Serial No. 299,222. 24 Claims. (Cl. 112—61.)

1. A sewing machine having, in combination, a work support, a presser foot, and mechanism for actuating the presser foot comprising a longitudinally movable bar, a presser foot lever pivoted on one end of the bar, means for actuating the bar to cause the presser foot to engage the work yieldingly, and means for locking the bar to maintain the presser foot in engagement with the work.



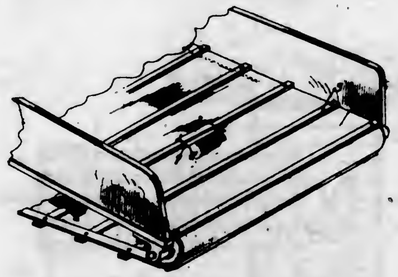
1,383,448. SOLE-CHANNELING MACHINE. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 7, 1919. Serial No. 302,577. 12 Claims. (Cl. 12—27.)

1. A sole channeling machine having, in combination, a channel knife, a shoulder knife, and means for moving one of said knives across the line of feed toward and from the other without altering the depth of cut.



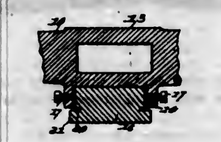
1,383,449. OVERHEAD IRRIGATING DEVICE. WALTER H. COLES, Troy, Ohio. Filed July 2, 1919. Serial No. 308,085. 4 Claims. (Cl. 299—72.)

1. In an overhead irrigating system for sprinkling a fixed area regardless of wind variations, the combination of a sprinkling element adapted to spray a plurality of fine jets of water parallel to each other for covering such area in the absence of wind deflection, and a sprinkling element adapted to normally direct its spray outside of the



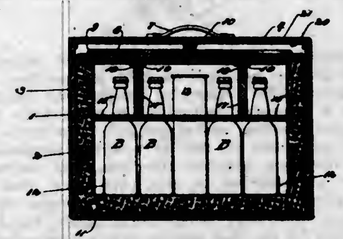
area desired to be covered, at an angle to normal jets and on a line calculated to bring the spray from said element within said area upon wind deflection.

1,383,450. FRICTION-DRIVEN AUTOMOBILE POWER-JACK. CHARLES E. CURTISS, Clinton, Wis. Filed Mar. 8, 1919. Serial No. 281,533. 3 Claims. (Cl. 74—106.)



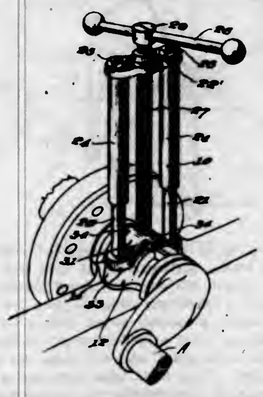
3. In a friction driven automobile power jack, a knock-down frame comprising two side pieces of similar form and dimensions, each made from a single piece of structural steel separated by two pipes and secured together by two nuts and bolts, the latter passing through the pipes and side pieces, said side pieces each having a bearing portion and a supporting portion substantially at right angles to each other, said portions being connected by a reverse curve and the supporting portion terminating in a seat well within the base of support.

1,383,451. CONVEYER-SLAT SPLICE. BURTON W. DALRYMPLE, Glasco, Kans. Filed July 2, 1919. Serial No. 308,086. 1 Claim. (Cl. 287—111.)



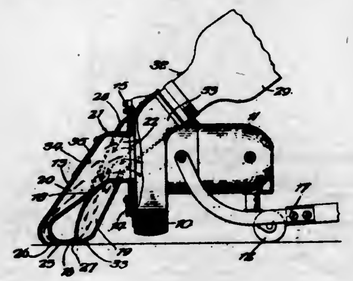
A slat splice comprising a relatively flat member provided at its longitudinal edges with inwardly directed flanges spaced from the intermediate portion of the member, and a member comprising a flat intermediate portion and upstanding side walls occupying substantially parallel planes, the said side walls being provided at their free longitudinal edges with outwardly laterally directed flanges slidably engageable with the flanges of the first-mentioned member, said flanges being adapted to be bent against said side walls to securely clamp the slat.

1,383,452. HAMMER. LEWIS DICKINSON, Jacksonville, Fla., assignor of one-half to J. Q. Dickinson, Jacksonville, Fla. Filed May 19, 1920. Serial No. 382,464. 2 Claims. (Cl. 145—29.)



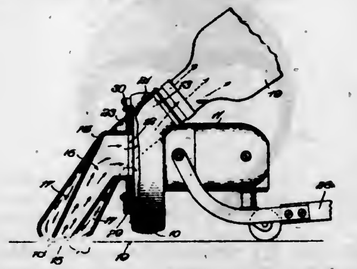
2. A hammer head having a side seat, a cushioned impact block fitted in said seat, a split reinforcing band embracing the block and having in-turned flange engaging the surfaces thereof, and set screws arranged in the walls of the seat for terminal impingement against the exterior surfaces of the band for locking the block in the seat.

1,383,453. RECEPTACLE FOR BOTTLES AND THE LIKE. BRUCE DOUGAN, St. Louis, Mo. Filed Feb. 4, 1921. Serial No. 442,523. 10 Claims. (Cl. 217—19.)



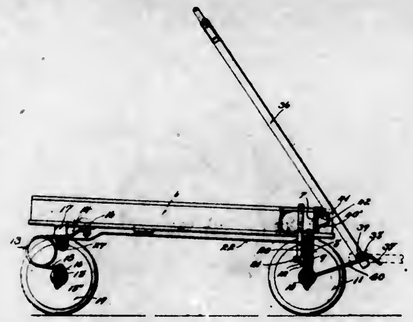
1. A receptacle having a closure, a pressure member movably mounted in the receptacle and adapted to engage an object contained therein, and means whereby pressure is transmitted from said closure to said pressure member so as to secure the object in the receptacle, said means including an adjustable member through which the pressure is transmitted and said adjustable member being adjustable relative to the closure and pressure member.

1,383,454. BEARING-FITTING TOOL. BARTHOLDIA DYMOND, Charlottesville, Va. Filed Aug. 15, 1919. Serial No. 317,775. 7 Claims. (Cl. 29—1.)



1. In a bearing fitting tool, the combination, of a pair of guide and attaching rods provided with openings extending therethrough near their lower ends, a locking key extending through said openings, a pressure member carried by said rods and means for moving said pressure member into and out of pressing position.

1,383,455. CLEANING APPARATUS. WILLIAM W. FARNSWORTH, Littleton, Colo. Filed May 5, 1919. Serial No. 294,672. 10 Claims. (Cl. 15—60.)



1. A cleaning apparatus nozzle adapted to be moved over the surface to be cleaned and provided with a continuous narrow inlet slot adapted to be closed by the surface and having an outlet opening, a blast inlet passage in the nozzle having an inlet opening adjacent one end of the nozzle, said passage having a narrow discharge outlet opening extending along one side of the said slot and said discharge passage diverging from the outlet thereof toward the inlet thereof, the said outlet opening and the said inlet of the blast passage being offset from each other in directions lengthwise of the nozzle.

1,383,456. CLEANING APPARATUS. WILLIAM W. FARNSWORTH, Littleton, Colo. Filed July 5, 1919. Serial No. 308,697. 3 Claims. (Cl. 15—60.)

1. A cleaning apparatus embodying a nozzle adapted to be moved over the surface to be cleaned, and having a comparatively narrow slot adapted to be closed by said surface, there being narrow discharge outlet slots arranged along both of the lateral edges of the first recited slot for directing blasts of air against the said surface and in directions toward the first recited slot, the height of each of the outlet passages decreasing in directions from one end to the other end of the nozzle, an air moving element having a suction side and a blast side, the first recited slot having communication with the suction side of the said element, means forming communication between the blast side of the said element and the said discharge outlet slots, and means whereby the air moved by the said element will have a continuous and uninterrupted circulation across the said surface from the outlet to the inlet slot, the said air currents being maintained against rarefication during their passage across the said surface.

1,383,457. TOY WAGON. CASPER FAUST, Oshkosh, Wis., assignor of one-eighth to Herbert Nolte, St. Paul, Minn., one-eighth to Jeremiah B. Pushee, Milwaukee, Wis., and one-eighth to Frank J. Stopper, one-eighth to Walter H. Faust, and one-eighth to Francis J. Faust, Oshkosh, Wis. Filed July 15, 1919. Serial No. 310,999. 1 Claim. (Cl. 188—195.)

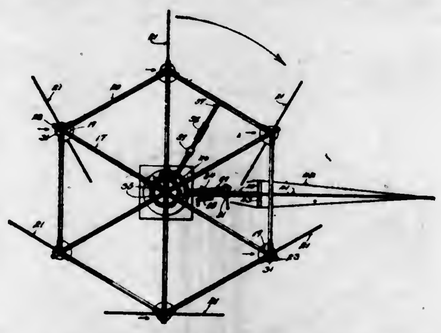
In a toy vehicle having a body provided with a wheel carrying front axle and a spring connected rear floating axle provided with disk wheels; the combination of brake blocks arranged to engage the inner faces of the disk wheels at varying distances, between the periphery of the wheel and the axis thereof, and manually actuated toggle link connections for the brake blocks and adapted to cause the latter to move longitudinally of the wheel axle against the inner faces of the disk wheels.

1,383,458. PNEUMATIC TIRE. TRUMAN D. FRAZIER, Martins Ferry, Ohio. Filed July 24, 1919. Serial No. 312,885. 1 Claim. (Cl. 152—113.)

A pneumatic tire composed of a relatively thick and unitary carcass having a channel formed circumferentially thereof in its tread portion, a pad in the channel partially filling the same, and a unitary separable tread having a concave inner face formed with a small channel conformably fitted to the pad and having lateral convex portions seated in the channel of the carcass on opposite sides of the pad.

1,383,459. METHOD OF MAKING PAVEMENTS. WILLIAM E. FICKLEN, Norfolk, Va. Original application filed Feb. 12, 1910, Serial No. 543,592. Divided and this application filed Apr. 12, 1916, Serial No. 90,780. Renewed Nov. 6, 1920. Serial No. 422,363. 6 Claims. (Cl. 94—18.)

1. The method of making pavements or the like of settable, shrinkable material which consists in preparing a suitable bed or foundation, forming expansion joints by supporting in position templets running lengthwise of said joints and by supporting against the upper faces of said templets anchored strips for armoring the upper edge of the joint, the shrinkable material below said strips being exposed whereby the templets mold the material



below said strips, and as the shrinkable material begins to set permitting said metal strips to shrink away from said templets.

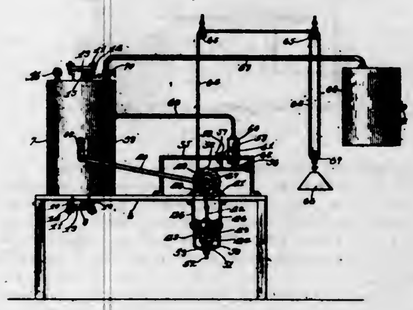
1,383,460. COLOR PHOTOGRAPHY. WILLIAM FRIESE-GREENE, London, England, assignor to Colour Photography Limited, London, England. Filed Jan. 31, 1921. Serial No. 441,496. 5 Claims. (Cl. 88—164.)

1. A two-color photographic process which consists in preparing pairs of negatives on successive portions of a single light-sensitive surface by exposing the negatives of a pair in succession respectively to direct white light and through a yellow color-screen of a color value substantially equivalent to that of a screen composed of flavazin, preparing positives therefrom, and thereafter exhibiting the positives in color, the color from the positive prepared from the negative which was exposed directly to white light being approximately blue-green and the color for the other positive being approximately of a reddish shade.

1,383,461. WIND-MOTOR. FRANKLIN B. GIESLER, Milwaukee, Wis. Filed May 26, 1919. Serial No. 299,866. 11 Claims. (Cl. 170—25.)

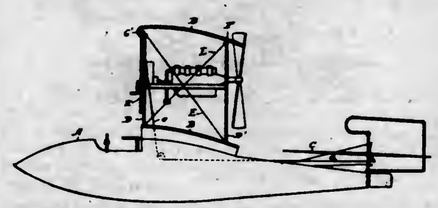
1. A fluid motor of the class described comprising a rotatable head frame, sails carried by said frame and rotatable with respect thereto, a pivoted rudder, a gear connected with the rudder for rotation upon pivotal movement of the rudder, planetary gears carried by the head frame and meshing with said first gear, connections between said planetary gears and the sails for procuring planetary rotation of the sails upon rotation of the head frame, and means for interrupting the connection between the first named gear and the rudder to permit said gear to rotate independently of pivotal movement of the rudder.

1,383,462. DRY-KILN TRUCK. HERBERT B. GILLETTE, Grand Rapids, Mich. Filed Apr. 5, 1920. Serial No. 371,447. 9 Claims. (Cl. 280—61.)



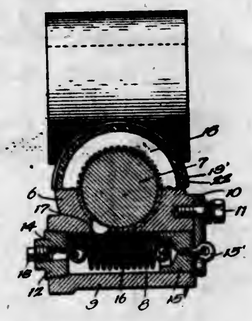
1. A dry kiln truck, the body of which is formed integrally in channel form from a sheet of metal with the sides parallel, with strengthening beads rolled at the edges, transverse axles disposed therethrough, wheels on the said axles, with roller bearings for said axles interposed between the said sides, the end wheels being flanged, and longitudinal locking rods disposed through the ends of the said axles outside of the sides of the said body, all coacting substantially as described for the purpose specified.

1,383,463. GRAIN-CLEANING MECHANISM. AARON P. GOULD, North Wilkesboro, N. C., assignor to W. C. Meadows Mill Company, a Corporation of North Carolina. Filed Apr. 20, 1918. Serial No. 229,744. 5 Claims. (Cl. 83—30.)



2. In cleaning mechanism for grain mills, a rotary beater having elongated radial beater blades of different widths, inclined vanes extending laterally from the outer edge of the wider blades and a cylindrical casing surrounding said beater.

1,383,464. ACETYLENE-GAS AND PRESSURE GENERATOR. AUGUST F. HABENICHT, Tinley Park, Ill. Filed Mar. 18, 1920. Serial No. 366,755. 2 Claims. (Cl. 48—51.)

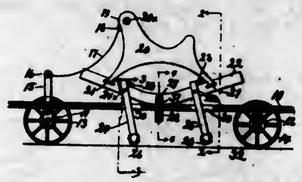


2. In an apparatus of the class described, the combination with a generating tank adapted to hold water in its lower portion and having an inlet and an outlet therefor, of a carbid receptacle mounted within the upper portion of said tank and having an outlet in its lower portion, a feeding slide mounted below said outlet, a rotary drum located near said tank, connections uniting the feeding slide and drum and eccentrically connected to the latter, means to rotate the drum, means eccentrically connected to the drum to regulate the speed thereof, said last named means including a valved cylinder and a plunger therein operable by said drum, and means operable by the pressure within the tank to stop the movement of the drum.

1,383,465. AEROPLANE. CHARLES FRANCIS JENKINS, Washington, D. C. Filed July 9, 1919. Serial No. 309,722. 6 Claims. (Cl. 244—29.)

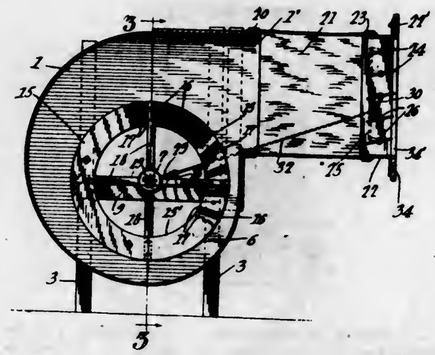
1. The combination with a suitable aeroplane body, of a main supporting plane connected to the body extending equally on each side thereof and arranged to swing upwardly as a whole about an axis near its own rear side, a tail vane arranged to swing similarly in unison with the plane, and means whereby an operator may prevent and permit such swinging.

1,383,466. BEARING. GEORGE C. JETT, Milwaukee, Wis., assignor, by mesne assignments, of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed Mar. 28, 1919. Serial No. 285,782. 16 Claims. (Cl. 64—24.)



1. A bearing housing having, in combination, a grease compression and storage chamber disposed in the body of the housing transversely of the axis of the bearing and provided in its side wall with a grease conducting groove leading directly to the bearing, together with means whereby grease may be stored in said chamber under pressure.

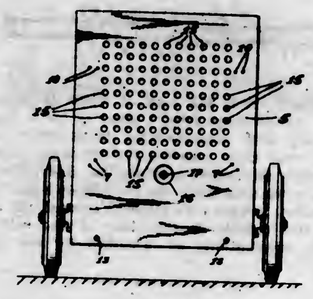
1,383,467. WIRE-WHEEL RIM AND METHOD OF MAKING SAME. FRED R. KLAUS, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Jan. 9, 1919, Serial No. 270,371. Divided and this application filed June 9, 1919. Serial No. 302,867. 3 Claims. (Cl. 301—58.)



1. A wire wheel rim having a plurality of spoke sockets each socket having a counter depression in the convex side thereof.

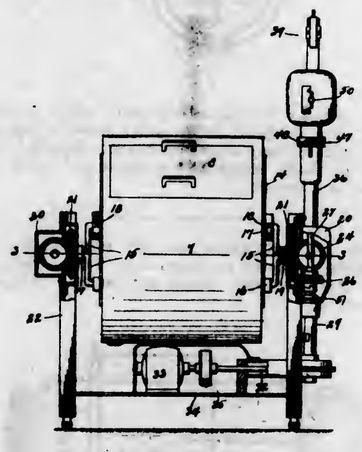
1,383,468. ROCKING-HORSE. FERDINAND LAGELBAUER, St. Paul, Minn. Filed Sept. 29, 1920. Serial No. 413,512. 5 Claims. (Cl. 208—38.)

1. In a rocking horse, the combination with a platform and wheels supporting it, of a pair of rockers arranged to rock upon the platform and a seat representing the body of a horse mounted on the rockers; said platform having apertures near the middle of the rockers and the rockers having pivotally suspended guides slidable up and down in the apertures.



1,383,469. VENTILATOR. FRED C. LARSEN, Creighton, Nebr. Filed Feb. 7, 1920. Serial No. 356,874. 6 Claims. (Cl. 98—27.)

5. A ventilator for auditoriums and the like comprising a casing, a fan provided with a plurality of blades rotatably mounted in said casing, an air conduit secured to and communicating with the interior of the casing, a nozzle secured to the air conduit and communicating with the auditorium to be ventilated, a plurality of shutters secured within said nozzle, and means connected to the shutters and coöperating with the fan for obtaining synchronous changes in position of said shutters upon variations in speed of rotation of the fan to deflect the air expelled from the nozzle at an angle thereto.

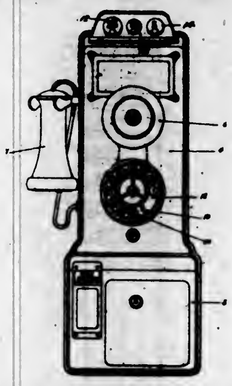


1,383,470. BUMPER FOR MOTOR-VEHICLES. THEODORE E. LIND, Seattle, Wash., assignor, by mesne assignments, to Hood Tractor Company, Seattle, Wash. Filed Nov. 30, 1920. Serial No. 427,270. 2 Claims. (Cl. 293—54.)

1. In combination with a motor vehicle of a bumper comprising a rectangular plate adapted to be secured to the forward end of the chassis frame of said vehicle in spaced apart relation with respect to the radiator of said

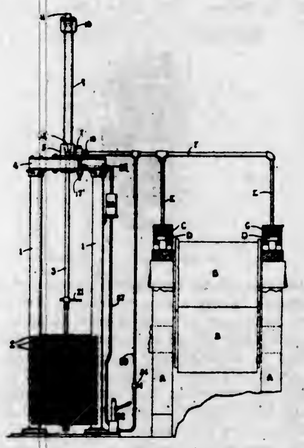
vehicle, said plate having a plurality of holes disposed therein, and supports adapted to secure said plate to the forward end of said vehicle.

1,383,471. WASHING-MACHINE. CHESTER ALFRED LINTON, Kansas City, Mo. Filed Dec. 20, 1919, Serial No. 346,334. Renewed Dec. 13, 1920. Serial No. 430,549. 3 Claims. (Cl. 74—14.)



1. A washing machine comprising a receptacle and means for imparting thereto a longitudinal swinging movement in a path having a general figure 8 outline, said means including crank elements supporting said receptacle, and means for mechanically rotating said crank elements at the opposite ends of the receptacle in opposite directions.

1,383,472. AUTOMATIC TELEPHONE PAY-STATION. GEORGE A. LONG, Hartford, Conn., assignor to The Gray Telephone Pay Station Company, Hartford, Conn., a Corporation of Connecticut. Filed May 25, 1920. Serial No. 384,040. 5 Claims. (Cl. 179—6.3.)



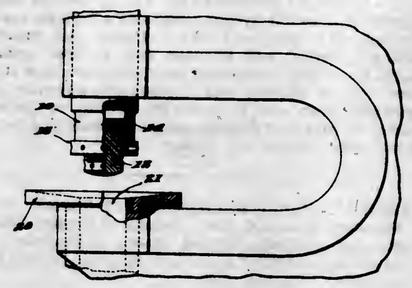
1. A telephone pay-station comprising a telephone having a transmitter and a receiver, the station also involving a calling dial associated with the telephone, the telephone being normally inoperative by a subscriber for the transmission of intelligence to another subscriber, coin

operated means at the station, for rendering the telephone operative and for rendering the calling dial operative to

make a local call to said other subscriber, and means for effecting the action, by coins of different denominations, of signals of different characters.

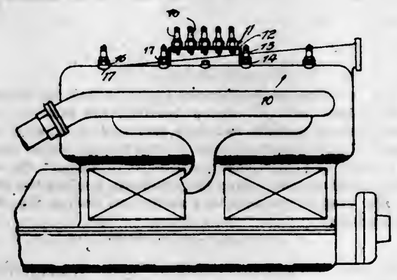
1,383,473. HYDRAULIC APPARATUS FOR CRUSHING-MILLS. LOUIS EDWARD LORTZ, St. Louis, Mo., assignor to Fulton Iron Works Company, St. Louis county, Mo., a Corporation of Delaware. Filed Aug. 19, 1918. Serial No. 250,582. 3 Claims. (Cl. 103—45.)

1. In an apparatus of the character described, a vertical weight carrying rod, a weight on said rod, a piston movable with said rod, a cylinder in which said piston operates, a conductor for a hydraulic medium in communication with said cylinder, an outlet device in communication with said conductor, a vertically movable relief valve in said outlet device, a vertical operating stem depending from said valve, an abutment carried by said vertical rod for engaging said vertical stem and opening said relief valve, and means for returning the hydraulic medium from said relief valve to said conductor.



1,383,474. FISHHOOK FISHING-MACHINE. GEORGE W. LUCAS, Kansas City, Mo. Filed Mar. 7, 1921. Serial No. 450,394. 6 Claims. (Cl. 43—15.)

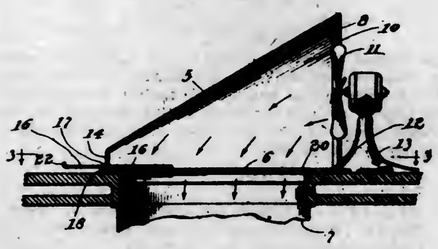
1. A fish hook fishing device, comprising a casing having a catch, a rack-bar extending longitudinally of the casing and provided within the latter with a head, and when "cocked," having a tooth engaging the catch, a trigger fitted flatly against the rack-bar and slidably connected thereto for simultaneous movement under the pull or jerk of a fish, away from the head and upward toward



the toothed edge of the rack-bar and against the catch to trip the rack-bar from engagement with the catch, and a spring within and bearing against the casing and the head of the rack-bar for projecting the latter and the trigger further within the casing when the rack-bar is tripped by the trigger.

1,383,475. METHOD OF COLD-DISHING SHEET METAL. HUGH MCCABE, Lawrence, Mass. Filed July 8, 1919. Serial No. 308,514. 5 Claims. (Cl. 153—35.)

1. The method of cold dishing circular metal plate having the characteristics of boiler plate which consists in successively depressing and stretching different portions of the plate to form a circular dish of uniform curvature, whereby the diameter of the circular plate remains substantially unaltered.



1,383,476. COMBINED SPARK-PLUG HOLDER AND TESTER. JULIUS H. MARQUARDT, Lombard, Ill. Filed May 8, 1920. Serial No. 379,881. 3 Claims. (Cl. 175—183.)

2. A combined spark plug carrier and test-rack, comprising a current conducting member provided with a plurality of spaced threaded openings, and formed at its ends with

integral downturned attaching feet that are adapted to rest on and to be secured to the frame of an explosion motor

1,383,477. COLD-AIR-SUPPLY DEVICE FOR HEATERS. RUDOLPH W. MENK, Joliet, Ill., assignor to The Excelsior Steel Furnace Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1920. Serial No. 418,242. 3 Claims. (Cl. 126—110.)

1. A device for introducing air into the cold-air return register of a heating system comprising a portable boxlike structure to be positioned over a register, said structure having a vertical wall provided with an inlet opening, means for forcing air through the opening into said structure, and an inclined wall extending downwardly and rearwardly from said vertical wall, whereby the inclined portion of said wall provides means for directing the air downwardly through the register.

1,383,478. WIND-UP MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 11, 1919. Serial No. 316,548. 7 Claims. (Cl. 139—60.)

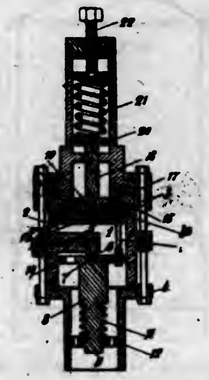
1. A wind-up mechanism for looms having, in combination, a draw roll, means for rotating the same, a loom frame having upright members arranged to support said draw roll and rotating means, a wind-up roll, slides mounted in said upright members arranged to support the ends of the wind-up roll, means for yieldingly holding the slides in their upward position, and means for moving the slides downwardly.

1,383,479. COMBINED FILTER AND WATER-SEPARATOR. WILLIAM WASHBURN NUGENT, Chicago, Ill. Filed June 23, 1916. Serial No. 105,350. 21 Claims. (Cl. 210—43.)

1. In a separating device, the combination with a casing, of an overflow pipe, a receiver having two compartments one open at both ends and the other open at its upper end but closed at its lower end, a curved edge for

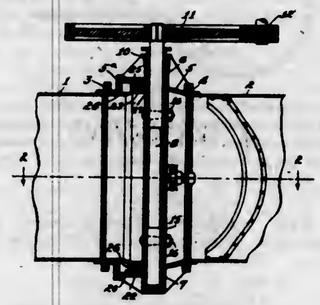
the upper end of the partition separating the said compartments, and a pipe for directing liquid from the upper portion of the compartment closed at its upper end.

1,383,480. IMPULSE-STARTER. PONTUS OSTENBERG, Los Gatos, Calif. Filed Nov. 15, 1918. Serial No. 262,656. 2 Claims. (Cl. 123—149.)



1. An impulse starter for electric generators including a driven member having a stop thereon, a driving member yieldingly connected to said driven member, a detent mounted externally of and independently of said members and adapted to automatically engage said stop when said members are slowly revolved, means operated by said driving member for rendering said detent inoperative, means operated by the peripheral movement of said driven member for maintaining said detent in an inoperative position, and means operatively mounted with relation to said detent to substantially counterbalance the same.

1,383,481. PRESSURE-REGULATOR. ANDERS ANDERSEN PINDSTOFTE, Copenhagen, Denmark. Filed Aug. 28, 1919. Serial No. 320,525. 1 Claim. (Cl. 50—23.)



In a pressure regulator, the combination of a spring-loaded plunger; a casing wherein the plunger is guided; a disk loosely mounted in the casing; a diaphragm mounted in said casing between said plunger and disk and free of positive connection with both of them, the upper surface of the diaphragm loosely contacting with the head of the plunger; a second disk loosely mounted in said casing beneath the first-named disk, one of said disks having a central vertical bearing member with which the other disk is engaged; a second spring-loaded plunger guided in the casing below the second disk and having its head spaced from the same and provided with a valve seat; the head

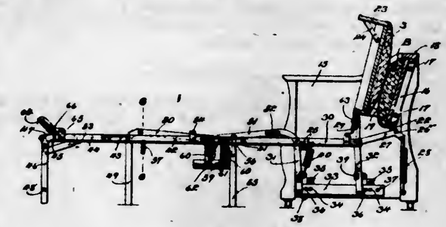
of the second plunger and the second disk constituting companion parts, one of which is provided with adjustable, vertically-projecting members engaging the other

part to regulate the distance between the two parts; and an inlet tube for the fluid to be regulated having an open end coöperative with the valve seat.

1,383,482. VALVE. HARRY E. POPP, East Cleveland, Ohio. Filed Apr. 20, 1918. Serial No. 229,714. 8 Claims. (Cl. 251—12.)

1. In a valve of the character set forth, the combination of a casing, a disk pivotally supported within the casing on an axis extending transversely thereof, and an auxiliary annular valve movable within the casing longitudinally of the axis thereof into engagement with the periphery of the disk, thereby to close the joint between the disk and casing.

1,383,483. WEED-CUTTING ATTACHMENT. CHARLES F. PRATT, Plymouth, Wis. Filed Jan. 12, 1920. Serial No. 350,921. 4 Claims. (Cl. 56—102.)



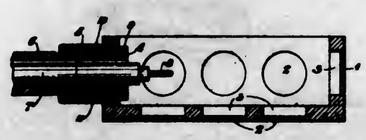
1. The combination with a cutter including a pair of forwardly projecting fingers, and a blade movable therebetween, of guard arms yieldably mounted across the space between said fingers and deflecting means extending rearwardly from the arm toward and below said blade, whereby to direct materials away from the blade.

1,383,484. SHUTTLE. ROBERT REINER, Weehawken, N. J. Filed Nov. 8, 1920. Serial No. 422,466. 2 Claims. (Cl. 112—234.)

1. In a shuttle having an incision in one of its walls and a cover frictionally engaging said wall and resting in said incision, means on the inner face of the opposite wall of the shuttle to limit the extent of the depression of said cover when the latter tends to slip out from said incision.

1,383,485. DAVENPORT. JOHN M. RICHARDSON, Milwaukee, Wis. Filed Dec. 23, 1919. Serial No. 346,954. 3 Claims. (Cl. 5—51.)

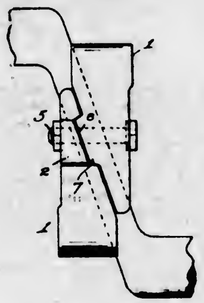
1. A structure of the class described comprising a main frame including end walls, a seat member pivoted at its rear portion in the main frame between the end walls and movable upwardly from its normal seat position, a foldable bed structure connected with the main frame and adapted to fold under the seat member, a facing plate member carried by and depending from the normally forward edge portion of the seat member, braces connecting said facing plate member and the seat member, and brackets carried by the end walls and provided with recesses adapted to receive portions of said braces in normal seat position of said seat member.



1,383,486. ART OF MANUFACTURING HUB STRUCTURES. HENRY T. ROBERTS, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,737. 13 Claims. (Cl. 29—158.)

1. In the art of manufacturing hub-structures, the method of forming a hub-structure which consists in uniting together in alining condition, to form a unitary structure, sections of metal which when joined together in alining condition form the hub.

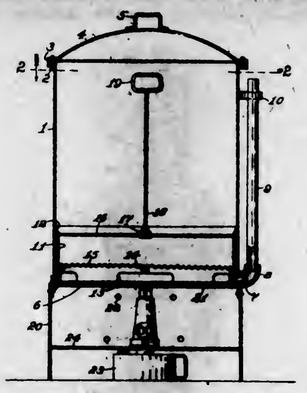
1,383,487. OUTLET-BOX. JAMES J. RUTLEDGE, Pittsburgh, Pa. Filed Apr. 10, 1919. Serial No. 288,921. 2 Claims. (Cl. 247—25.)



1. The combination with an outlet box having a wall provided with continuously flat outer and inner faces and

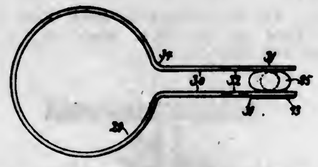
a circular opening therethrough, of an integral one piece hollow coupling connection extending through the circular opening provided with an inner laterally extending flange engaging the inner flat face of the box around its opening and an outer threaded portion extending through and beyond the opening, a conduit in alinement with said coupling abutting thereagainst and having an inner threaded connecting terminal, an interiorly threaded sleeve coupling engaging the threads of the flanged coupling and of the conduit respectively, and having an inner annular shoul-

dered recess extending backwardly from one end providing a comparatively thin contacting end portion for tight engagement against the outer face of the box, and a spiral locking spring inserted in said recess bearing by one end against the shoulder of the recess and by the other end against the flat face of the outer wall of the box and compressed to its maximum limit when the sleeve coupling is screwed up tight against the box and with the flange of the coupling connection in corresponding tight engagement with the inner face of the box.



1,383,488. CRANK-SHAFT BALANCE. MARTIN R. SCHAFFER, Reading, Pa. Filed Sept. 25, 1920. Serial No. 412,891. 2 Claims. (Cl. 74—5.)

1. In a crank shaft balance, the combination of a shaft, a pair of balance members adapted to be secured to said shaft in opposed relative relation, one of said members having a pair of depressions and the opposite member having a pair of lugs adapted to register with said depressions when the two members are placed in proper position on the shaft.

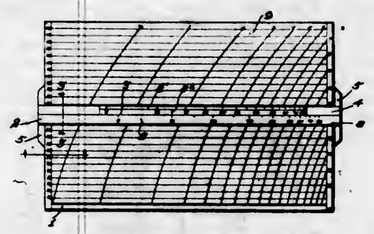


1,383,489. APPARATUS FOR PREPARING AND DISCHARGING FEED. FRETS C. SCHEVE, Sumner, Iowa, assignor of forty-five one-hundredths to Creno P. Bettenga, Waterloo, Iowa, and five one-hundredths to Fred W. Bathke, Sumner, Iowa. Filed July 19, 1920. Serial No. 397,357. 1 Claim. (Cl. 126—47.)

In combination, an orificed housing containing heating means, a container removably positioned upon said housing, a reticulated strainer removably mounted in said container spaced above the bottom thereof and having a raised rim spaced from the inner circumferential wall thereof with a sharpened top scraping edge inclined toward and contacting with said wall, a delivery-spout in communication with the bottom part of said container, mounted to rock from a raised to a lowered position, and a resilient clip mounted on said container and adapted to

receive and releasably hold said spout when the latter is in its raised position.

1,383,490. AUTOMOBILE-BRAKE ATTACHMENT. ADOLPH G. SCHINDLER, Stillwater, Minn. Filed May 21, 1920. Serial No. 383,150. 3 Claims. (Cl. 188—196.)

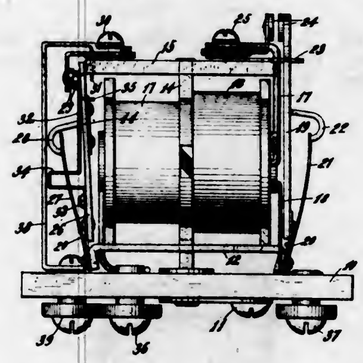


1. The combination with a spreading brake in the wheel hub of an auto vehicle, of a cam for spreading the brake into braking position, and a device of flat metal detachably secured to the hub and projecting as a lining between the cam and the brake.

1,383,491. GARMENT. ARTHUR FRANCIS SECREST, Wichita, Kans. Filed July 31, 1919. Serial No. 314,415. 4 Claims. (Cl. 2—144.)

4. A garment consisting of a body portion, trousers associated therewith and a seat flap on said trousers having two triangularly formed extensions extending outwardly and upwardly from the center of said flap and adapted to be attached to the body portion, substantially as and for the purposes set forth.

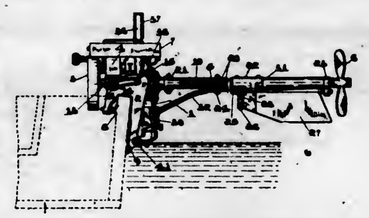
1,383,492. CALCULATING DEVICE. FRANK HOWARD SMELY, Oakland, Calif. Filed Feb. 14, 1920. Serial No. 358,749. 1 Claim. (Cl. 235—89.)



A device of the character described comprising a supporting base having enlarged end portions provided with guiding grooves within the outer surfaces thereof, a freely slidable main rule adapted to move over said base, and a guide block secured to each end of said rule having projections riding within the recesses of the enlarged ends of the base, said rule having its upper surface formed to provide a raised graduated surface and a space bordered by said raised graduated surface, a movable rule positioned within said space of a length less than the length of the main rule and having its upper surface lying flush with the surface of the raised graduated portion of the main rule, said movable rule being graduated and slidable relative to the main rule.

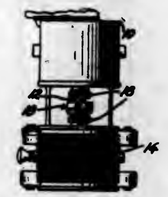
1,383,493. OINTMENT. JOHN P. SHEPHERD, Chicago, Ill., assignor, by mesne assignments, to Shepherd Chemical Company, a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,816. 5 Claims. (Cl. 167—9.)

1. An ointment comprising a small amount of free iodin and a preponderating proportion of free cholesterin.



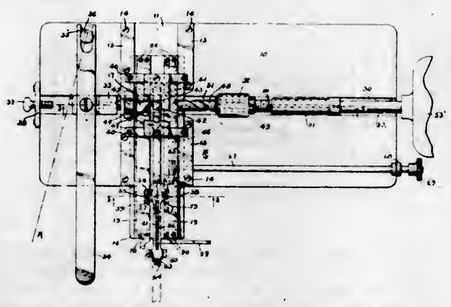
3. An ointment comprising approximately 4% free iodin, 4% potassium iodid, 4% water, 9% petrolatum and 79% cholesterin.

1,383,494. REGULATOR. EDGAR M. SORENG, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 25, 1916. Serial No. 116,762. 10 Claims. (Cl. 171,313.)



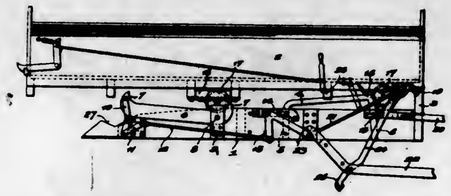
2. In a regulator for storage battery charging systems of the type employing a cut-out magnet and a vibrator magnet, a metal rod constituting a core on which both magnet coils may be wound, a metal partition on the rod between the magnet windings, plates secured to the metal partition and constituting pole pieces for both magnets, and contact-controlling armatures disposed between the pole pieces and adjacent the ends of the core.

1,383,495. OUTBOARD-MOTOR FOR BOATS. HARRY W. SPENCER, Toronto, Ontario, Canada. Filed July 19, 1920. Serial No. 397,423. 11 Claims. (Cl. 115—18.)



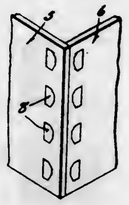
1. In an outboard motor for boats the combination of a frame adapted to be secured to a boat; an inverted vertical internal combustion motor connected to said frame, the cylinder of the motor being located below the upper part of the frame; and a propeller shaft driven by said motor.

1,383,496. PISTON-ROD LUBRICATOR AND NUT-RETAINER. OLOF SWANSON, Denver, Colo. Filed Nov. 3, 1919. Serial No. 335,539. 12 Claims. (Cl. 286—7.)



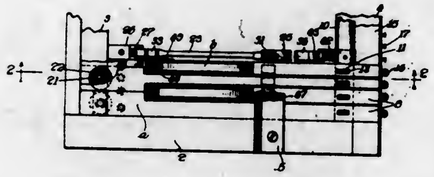
1. A piston-rod lubricator, comprising a pair of members adapted to fit about the rod and carry lubricant, and means to retain said members on the rod, each member having an inner wall with a slot in said wall adjacent the top thereof and spaced from the bottom thereof.

1,383,497. PELLET-INSERTING MACHINE FOR PIANO-KEYS. SEYMOUR SYLVESTER, Brooklyn, N. Y., assignor to Bass Bros. Incorporated, New York, N. Y. Filed Oct. 26, 1920. Serial No. 419,625. 21 Claims. (Cl. 144—2.)



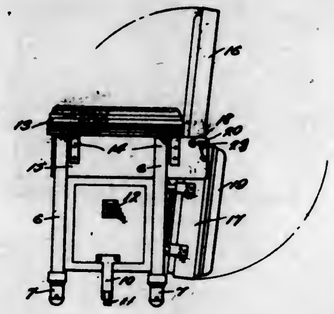
1. In mechanism of the character described, a piano key balance member, means for determining the position in which a weight is to be inserted in said key, and means for inserting a weight at said predetermined position.

1,383,498. DUMPING MECHANISM FOR TRUCKS. BLAKE TAYLOR, Roanoke, Va. Filed Feb. 12, 1921. Serial No. 444,504. 12 Claims. (Cl. 298—14.)



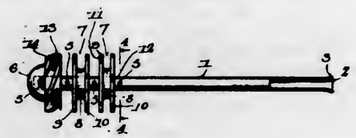
1. A dump truck comprising sills, a dump body superposed thereover, wheels journaled on the under side of the body, tiltable tracks pivoted adjacent one end to the sills for supporting the wheels and formed with means for arresting the wheels at normal position in approximate vertical alinement with the pivotal mounting for the tracks, and means for tilting the tracks.

1,383,499. BOX-CORNER CONSTRUCTION. WILLIAM TISCH, Milwaukee, Wis. Filed Aug. 18, 1919. Serial No. 318,163. 2 Claims. (Cl. 217—69.)



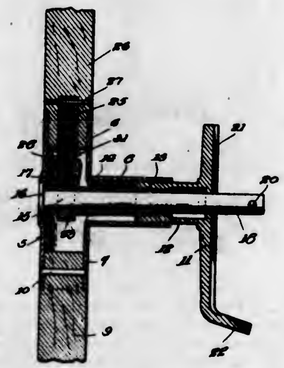
1. In a box structure, a pair of box sections disposed in angular relation, an elongated connecting strip longitudinally bent to provide an angular cross section and engaged against the edge portions of the inner faces of the box sections, and tongues extending from the edge portions of said strip through the box sections, said tongues having their outer portions bent to lie against the outer faces of the box sections.

1,383,500. MUSICAL INSTRUMENT OF THE STRING TYPE. JOSEPH N. VASEY, Brookfield, and BERNARD R. KIESSIG, Chicago, Ill., assignors to Vocaltone-Pianotina Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1919. Serial No. 341,510. 7 Claims. (Cl. 84—238.)



1. In a musical instrument of the class described, the combination of a key, a string, striking mechanism controlled by said key, a damper pivoted to rotate, a key engaging pad on said damper, a spring tending to swing said damper to hold said pad against said string, a cam projection on said damper and an arm extending from said key for engagement with said cam projection to cause rotation of said damper and release of said string when said key is struck to actuate the striking mechanism.

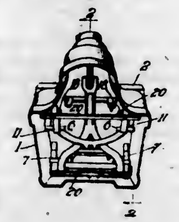
1,383,501. SOFA-BED. EDMOND VERSTRAETE, Belleville, N. J. Filed Nov. 6, 1919. Serial No. 336,061. 1 Claim. (Cl. 5—47.)



In combination with a main frame having elevated rests at each end, facing boards parallel with the rests extending beyond the back of the frame, an auxiliary frame pivotally mounted between the facing boards having an integral extension, said auxiliary frame capable of swinging to a horizontal position, lowering the upper end upon the main frame between the rests, and elevating the extension on a plane with the upper end, and means for supporting the extension.

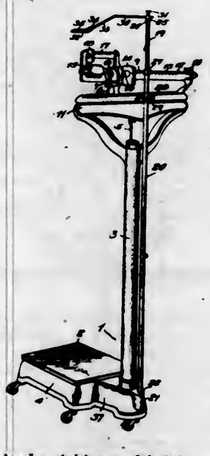
1,383,502. VAGINAL SYRINGE. CHARLES F. L. VULTEE, Milwaukee, Wis. Filed Sept. 3, 1920. Serial No. 408,005. 8 Claims. (Cl. 128—245.)

3. A nozzle for a vaginal syringe comprising a perforated tube, and pistons arranged thereon in spaced relation.



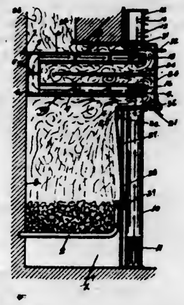
1,383,503. SAW-HANDLE. BAZEL R. WATSON, Everett, Wash. Filed Oct. 7, 1919. Serial No. 328,059. 3 Claims. (Cl. 145—111.)

3. In a saw handle, the combination of a T shaped housing the interior of which is unobstructed throughout,



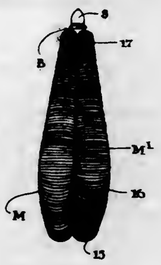
a guard constructed to engage the end of a saw blade and having a nipple extending within the lateral branch of the housing, a sleeve disposed within said branch of the housing and operatively engaging said nipple whereby to move the guard into or out of engagement with the saw blade, a fastening member extending through said sleeve to secure the blade, a handle member fixed to one longitudinal branch of the housing, a second handle member rotatably fitted to the end of the other longitudinal branch of the housing, and a telescopic locking device disposed within the housing and connecting said second handle member and the outer end portion of said sleeve.

1,383,504. WEIGHING-SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed May 13, 1920. Serial No. 381,014. 5 Claims. (Cl. 265—71.)



1. In a weighing scale having a beam or lever provided with transversely separated bearing projections, supporting rings surrounding said projections and a guard bar secured to and extending across said beam from side to side in substantial alinement with said projections, the ends of said guard bar bent to extend close to the outer free ends of said projections.

1,383,505. WEIGHING AND MEASURING DEVICE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1920. Serial No. 385,108. 6 Claims. (Cl. 265—55.)

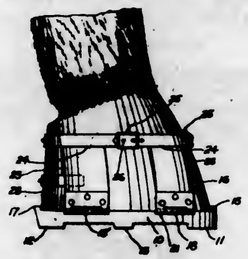


1. In a combined weighing and height measuring device, a base, a platform on the base upon which the person stands to be weighed and measured, a standard rising from the base adjacent to the platform and carrying on its upper end suitable weight indicating means suitably connected to the platform, a telescopically extensible measuring device rising from the base at the rear of and secured to said standard and provided with a horizontally extending arm at its upper end adapted to extend over said weight indicating means for contact with the top of the head of the person being measured.

1,383,506. HEATER ATTACHMENT FOR GRATES AND STOVES. CHARLIE WESTERLUND, Birmingham, Ala., assignor of one-third to F. W. Bostrom, Chicago, Ill. Filed June 10, 1919. Serial No. 303,230. 10 Claims. (Cl. 126—121.)

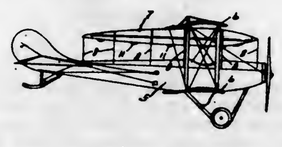
1. An air heating grate attachment for fire place opening comprising a relatively thin air conducting casing adapted to conform to the horizontal cross section of the fire place opening and to be mounted as a baffle in the top portion of the fire place opening only, a front member disposed across and in front of the top of the fire place opening and adapted to direct the products of combustion about the outer edge of the heater casing, air conduits connected to the heater casing at its front corners and disposed to set in front of the chimney, and a top radiator disposed above and in front of the chimney and having communication with said casing, substantially as described.

1,383,507. HORSE-COLLAR. BENJAMIN CATESBY WINSTON, Orr, N. D. Filed Dec. 29, 1920. Serial No. 433,843. 5 Claims. (Cl. 54—19.)



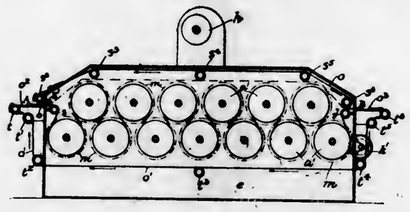
1. A horse collar comprising, a pair of coiled contractile springs arranged side by side, means for connecting the springs to each other, and coacting fastening means carried at the ends of the springs for maintaining them in collar formation.

1,383,508. HORSESHOE. MITRO WITUSHEN, Milwaukee, Wis. Filed Mar. 28, 1920. Serial No. 368,086. 3 Claims. (Cl. 168—22.)



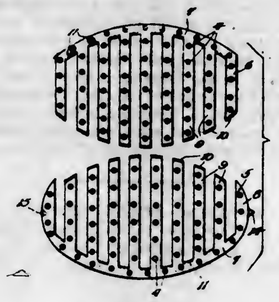
1. A horseshoe comprising a shoe proper, a front pair of straps and a rear pair of straps hinged to said shoe, and

transversely extending straps carried by the said hinged straps, said transverse straps being adapted to be joined end to end to completely encircle the hoof of the horse,



and a supplementary pair of straps secured to the rear pair of the first-mentioned straps and adapted to be passed around the rear of the hoof and joined together.

1,383,509. AEROPLANE. JAMES A. ALLARDICE, Minneapolis, Minn. Filed Mar. 8, 1920. Serial No. 364,143. 2 Claims. (Cl. 244—5.)

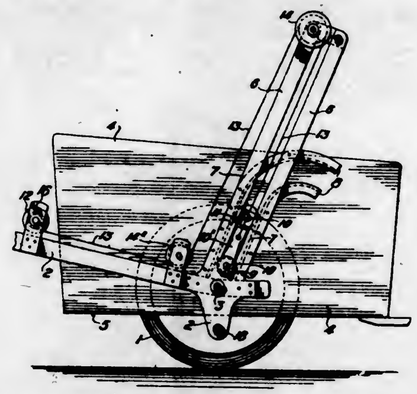


1. The combination with a biplane of the ordinary type comprising a fuselage and planes, of a cigar shaped tank containing a buoyant gas, said tank having pointed ends and having its longitudinal axis parallel to the longitudinal axis of the fuselage, said tank being disposed immediately under the top plane and being firmly secured in position to said plane and fuselage and being of a length substantially the same as the fuselage.

1,383,510. APPARATUS FOR DRYING YARN OR THE LIKE. GREENWOOD BAILEY, Bradford, England, assignor to Herbert Foster Anderton, Bradford, England. Filed Jan. 31, 1917. Serial No. 145,661. 1 Claim. (Cl. 34—12.)

In apparatus for drying hanks of yarn, a chamber, cylinders mounted in said chamber, supports for one end of each of said cylinders, means for rotating said cylinders, guide rolls mounted in said chamber, guide rolls mounted outside said chamber at the feeding end, guide rolls mounted outside said chamber at the discharge end, endless tapes passing over said cylinders and guide rolls, slots in the walls of said chamber to allow ingress and egress of said tapes, a heating chamber adjoining said chamber, a heating device in said heating chamber, slots in the walls of said chambers opposite to said cylinders, and means for circulating air through said chambers.

1,383,511. HAIR-BRUSH. KATHERINE T. BARAL, New York, N. Y. Filed July 24, 1920. Serial No. 398,626. 4 Claims. (Cl. 15—29.)



1. In combination, a brush back having a facial recess, a brush head removably seated in said recess and comprising sections having coöperating side members forming a marginal brush head rim, transversely extending spaced interfitting members carried by the side members, and bristle tufts on said side and interfitting members.

1,383,512. PRINTING-INK AND PROCESS OF PRODUCING SAME. HARRY A. BARMIER, Chicago, Ill. Filed Nov. 22, 1919. Serial No. 340,059. 9 Claims. (Cl. 134—36.)

2. A printing ink comprising gilsonite, fuel oil and coloring matter combined in fluid consistency.

1,383,513. TIP-VEHICLE. WALTER BARNETT and JAMES FLORENDINE, Rugby, England. Filed Dec. 28, 1920. Serial No. 432,716. 3 Claims. (Cl. 298—5.)

1. In tip carts and like vehicles, the combination of a framework, road wheels carried by said framework, guide members fixed to said framework upon opposite sides thereof and extending upwardly therefrom, a cart body, rollers extending from opposite sides of said body to engage with said guide members and normally resting in the bases of the guideways of said guide members, means connected to said body whereby said body and said rollers carrying said body can be raised upwardly in said guide members to distance said body substantially vertically from the ground, and means by which upon the continued lifting of said body by said mechanical lifting means said body is caused to turn about the axis of its rollers to the necessary tipping angle to discharge its contents.

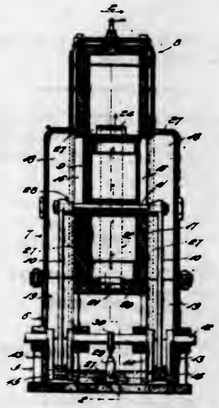
1,383,514. CUFF OR SLEEVE FOR SHIRTS. EMIL BAUMBLATT, Jr., Philadelphia, Pa. Filed Mar. 31, 1920. Serial No. 370,360. 2 Claims. (Cl. 2—79.)

1. A detachable sleeve portion for shirts, comprising a pocket along the upper edge thereof, a band secured along one inside face of said pocket, members of snap fasteners secured to said band, a second band secured along the other inside face of said pocket, coöperating members of said fasteners secured to said second band, registering with said first named members, in combination with a shirt provided with a fixed sleeve portion having a band shaped to fit inside said pocket and provided with holes registering with said members.

1,383,515. AUTOMOBILE-BUMPER. LEROY BAUMGARTL, Chicago, Ill., assignor to Ramspring Bumper Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1921. Serial No. 461,875. 7 Claims. (Cl. 293—55.)

6. A bumper impact member of sheet metal stamped and pressed to form parallel longitudinal portions, and transverse end and intermediate portions, all having a channel-shaped section by the formation of marginal flanges which merge at the junctions of the several portions into continuous reinforcing members surrounding the periphery and internal spaces of the impact member.

1,383,516. SAFETY-RAZOR. COLUMBUS A. BENTON, Houston, Tex. Filed Mar. 10, 1920. Serial No. 364,662. 1 Claim. (Cl. 30—12.)



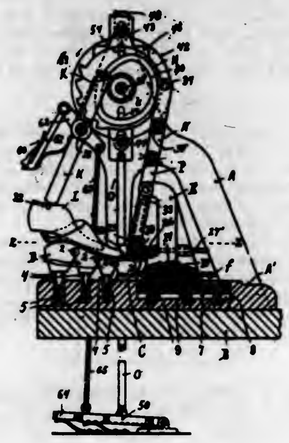
A safety razor, including a handle, a plate-like blade support fixed to said handle, and having a smooth upper face and a downwardly curved free edge, end bosses carried by said support, a double edged blade having end notches which receive said bosses when the blade is placed on said uper face, a blade guard formed to clamp said blade on its support, and having a flat extension which lies on said blade, shoulders projecting upwardly from the ends of said support, and lateral extensions carried by the guard which abut against said shoulders to hold said guard spaced from the corresponding edge of the blade.

1,383,517. CASTING AND PROCESS OF TREATING CASTINGS AND THE LIKE. FRED K. BEZZENBERGER and MALCOLM N. RICH, Cleveland, Ohio, assignors to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 24, 1919. Serial No. 340,406. 8 Claims. (Cl. 91—70.)

1. The method of rendering porous metallic articles impervious to fluids which comprises the formation of silica within the pores of the said article and the partial dehydration of the silica.

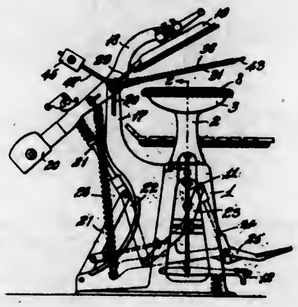
7. As a new article of manufacture, a metallic article the pores of which are stopped with silica.

1,383,518. TWO-CYCLE UPRIGHT GAS-ENGINE. CHARLES E. BISER, Selma, Ala. Filed Mar. 10, 1919. Serial No. 281,657. 3 Claims. (Cl. 123—74.)



1. An upright internal combustion engine comprising lower and intermediate and upper main sections superposed and joined to one another by substantially horizontal surfaces, the lower section comprising crank-shaft supports, the intermediate section comprising passages and also comprising the lower cylinder-head between said passages, the upper main section comprising chambers, said chambers registering with said passages of the intermediate section, said cylinder being formed with slots through which the interior of the cylinder communicates with said chambers, a piston head in said cylinder and provided with pivots extending through said slots into said chambers, a crank-shaft supported by said lower section, and connecting-rods pivoted to said pivots and crank shaft.

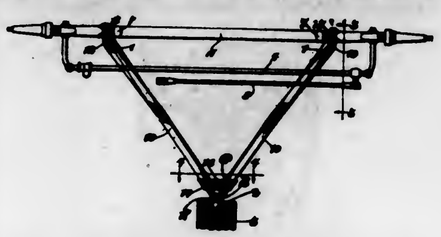
1,383,519. MACHINE FOR MOUNTING SHOES ON LASTS. CHARLES M. BOLLMAN, Cincinnati, Ohio, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 17, 1916. Serial No. 78,986. Renewed Nov. 23, 1917. Serial No. 203,627. 78 Claims. (Cl. 12—15.)



1. A releasing machine comprising a support for the

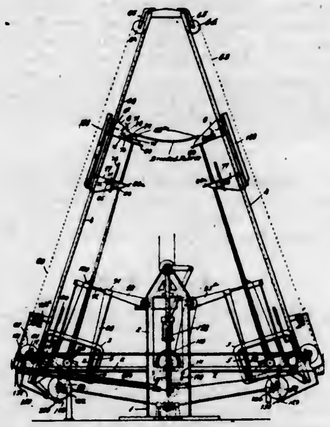
bottom and front edge of the toe of the shoe sole, a member to engage and thrust a last into the shoe, and mecha-

nism to operate said member and to automatically stop after the last has been inserted.



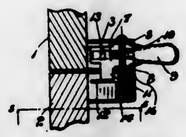
1,383,520. PRESSING-MACHINE. BLUFORD W. BROCKETT, Cleveland, and DANA H. BENJAMIN, Cleveland Heights, Ohio. Filed Jan. 13, 1917. Serial No. 142,277. 15 Claims. (Cl. 68—9.)

1. A pressing machine, comprising a lower pressing member for supporting the garment, an upper pressing member coöperating therewith, means separate from said pressing members and lying between the same for discharging steam upon an article upon the lower pressing member, and steam supply means therefor.



1,383,521. RADIUS-ROD CONSTRUCTION. ADOLPH R. BROCKSMITH, St. Louis, Mo. Filed Dec. 19, 1919. Serial No. 346,105. 5 Claims. (Cl. 267—66.)

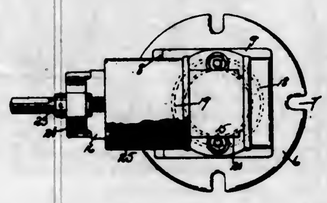
1. In a motor vehicle, a radius rod construction comprising a bifurcated member having a swivel connection with a part of the motor vehicle, and having its arms connected to the lower side of the front axle, an upper member composed of angle iron and having two diverging arms having their ends rigidly secured above the front axle and having interlocked connection with the crotch of the lower member, the angles of said upper member en-



gaging both the inner and the upper sides of the arms of the lower member for relatively a considerable distance between the crotch of the lower member and the front axle.

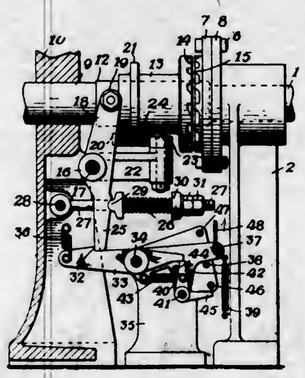
1,383,522. BRAIDING-MACHINE. ROBERT W. BROWN, New York, N. Y. Filed June 14, 1917. Serial No. 174,700. 118 Claims. (Cl. 28—4.)

51. A braiding machine comprising two groups of strand carriers each composed of two sub-groups, means for shifting the carriers of the respective groups to braid the strands of the fabric, and means for adjusting the positions of the sub-groups to unite the sub-group of one principal group with the sub-group of the other, and means for shifting the carriers to interconnect the strands and close the ends of the fabric.



1,383,523. LATCH CONSTRUCTION. ELVAH O. BULMAN, Grand Rapids, Mich. Filed Dec. 4, 1918. Serial No. 265,251. 6 Claims. (Cl. 292—128.)

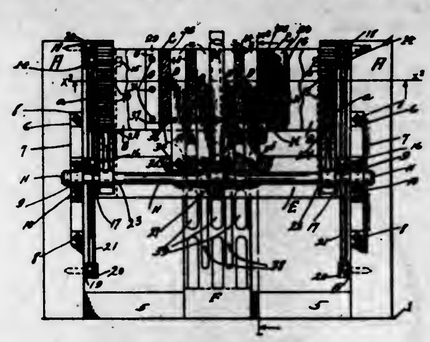
1. A latch construction comprising a housing having sides and top and formed from sheet metal, a latch member pivotally mounted on and within the housing, the outer end of said member passing through the top of the housing in a plane below that of the pivot and being formed



into a depending handle at a distance from the housing, and the inner end of the latch member having a laterally extending arm passing through a side of the housing and turned up at its free end and formed into a hooked catch, and yielding means within the housing associated with the latch member for normally elevating the inner end thereof.

1,383,524. UNIVERSAL VISE. CARL ADRIAN CARLSON, New Britain, Conn. Filed Nov. 15, 1919. Serial No. 338,876. 6 Claims. (Cl. 90—60.)

1. A universal vise comprising a saddle having a curved seat, a base fitting said seat and in contact with substantially the entire seating surface thereof, means for adjustably securing the base to said seat, a jaw support adjustably mounted on said base, means for rotatably adjustably securing said support to said base, and means for securing said support to said base.

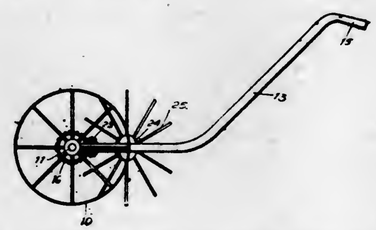


1,383,525. CLUTCH-OPERATING MECHANISM. ELBERT H. CARROLL, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 21, 1917. Serial No. 182,069. 7 Claims. (Cl. 192—116.)

1. The combination with a pair of engageable clutch members, of a pressing means for moving said members into engagement, means responsive to the rotation of said members for relieving the pressure of said pressing means, means responsive to the further rotation of said members for moving said members out of engagement, and means for automatically locking said pressing means in inoperative position.

1,383,526. BLOCK-MAKING MACHINE. HOWARD E. CAVANAH and MATHEW G. SCHOLL, Santa Barbara, Calif. Filed May 24, 1920. Serial No. 383,939. 16 Claims. (Cl. 25—41.)

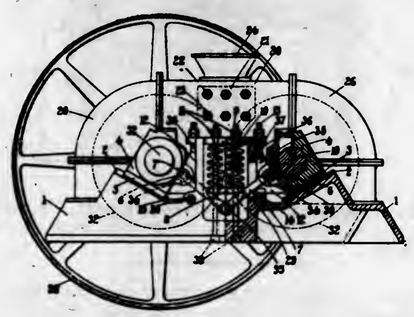
2. A device for forming concrete blocks, comprising a mold having side and end walls, a core within the mold; a removable pad within the space formed by the mold and core, a support for said pad, and means for causing said



mold and core to move relatively to said pad; said core being formed with means for compressing material in the mold.

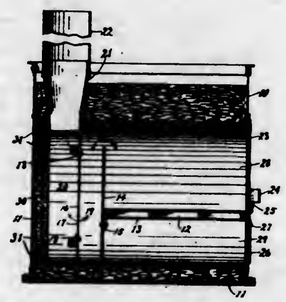
1,383,527. PUSH-BUTTON SWITCH FOR ELECTRIC CURRENT. ATTILIO CESARO, Genoa, Italy. Filed Sept. 23, 1919. Serial No. 325,789. 6 Claims. (Cl. 200—159.)

1. An electric switch including a terminal, a spring connected to said terminal and having a free end, means for moving the free end of said spring, a second terminal, a bundle of conductor strips connected to the second terminal and having free ends coöperating with the free end of said spring for establishing an electric circuit, said strips being arranged side by side and one edge of one of the outer strips having an extension directed toward the other outer strip, the free end of the two outer strips being arranged opposite each other and the free end of the intermediate strip having its major portion arranged below the lower edges of the free ends of the outer strips, the free end of the spring when the operating means is actuated, being adapted to pass around the edge of the first mentioned strip which is operative to the extension of said strip and then moved between the strip having the extension and the intermediate strip until it engages said extension.



1,383,528. ROTARY CULTIVATOR. JOHN S. CLARKE, Boone, Iowa. Filed Mar. 25, 1919. Serial No. 285,088. 1 Claim. (Cl. 97—25.)

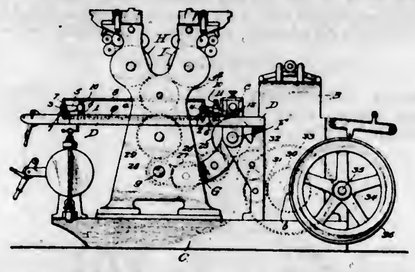
In a device of the class described, a frame, an axle thereon, traction wheels on said axle, a shaft journaled on said frame with its axis disposed at an angle relative to the transverse axis of the frame, a hub on said shaft, a plurality of substantially straight resilient earth working



devices detachably mounted on said hub, and extended radially therefrom, part of said earth working devices at regular intervals having at their outer ends laterally extending blades, and means for rotating said shaft.

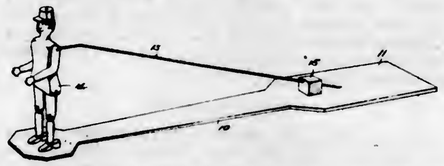
1,383,529. ROLLER-MILL FOR CRUSHING MATERIALS SUCH AS STONE OR ORES. CHARLES MARKHAM CONDER and GODFREY TWYNAM VIVIAN, Camborne, England. Filed Jan. 26, 1921. Serial No. 440,226. 3 Claims. (Cl. 83—12.)

1. A roller crushing mill comprising a frame with vertical and inclined bearing surfaces, journals mounted on said inclined bearing surfaces, shafts mounted in said journals, rolls keyed to said shafts, driving pulleys on said shafts, toggle levers connecting together said journals, spring means acting on said toggle levers and adapted to draw the journals toward one another, and wedge members with means for adjusting same between the journals and the vertical bearing surfaces.



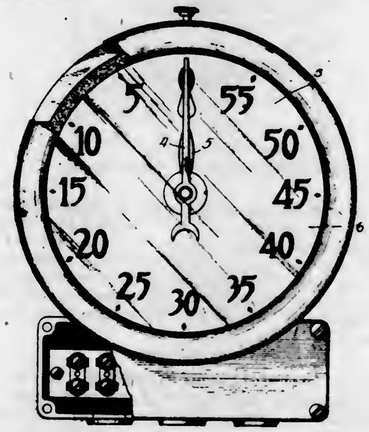
1,383,530. STOCK-TANK. WALTER H. COTTON, Chicago, Ill. Filed May 3, 1920. Serial No. 378,452. 1 Claim. (Cl. 126—347.)

A farm stock tank comprising a body having an aperture in one of the walls, a casing permanently secured within the body and alined with the aperture, horizontal ways forward on the side walls of the casing and extending inwardly from the aperture, a fuel grate slidably supported by the ways, a plate attached to the rear end of the grate and slidably engaging the bottom and sides of the casing but providing a draft passage at its top, a partition crossing the casing back of the plate and having a draft opening at its lower portion, and a smoke stack leading from the casing back of the partition.



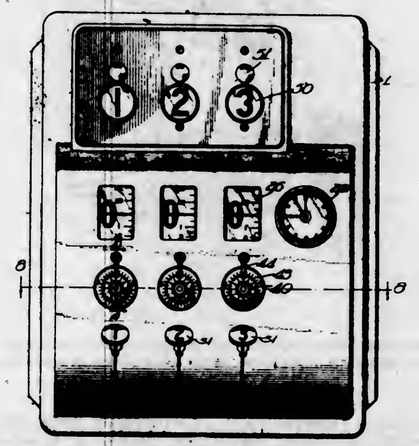
1,383,531. PRINTING-PRESS AND BLANKING-MACHINE. EDWARD CRAIG, St. Joseph, Mich. Filed Sept. 30, 1916. Serial No. 122,964. 17 Claims. (Cl. 101—227.)

1. A machine having means for operating upon and for feeding sheet material, comprising a plurality of rotary feeding members to engage the surface of the sheet material, each member comprising relatively adjustable sections to vary the length of the contact with the sheet



material, thereby to cause the sheet to move forward either a greater or a lesser distance, a shaft on which said members are spaced apart, and mechanism to simultaneously adjust all of said members.

1,383,532. DANCING TOY. HIRAM CABLE CRAMER, Lexington, Ky. Filed Oct. 25, 1920. Serial No. 419,238. 1 Claim. (Cl. 46—40.)



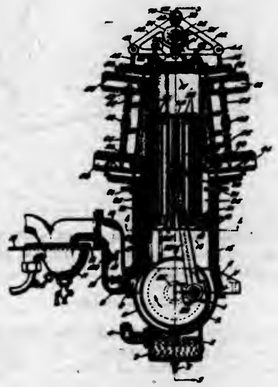
An amusement device of the character mentioned comprising a vibratory board, a flexible wire fixed at one end to the board and at its other end supporting a dancing figure operable through responsive action of the wire to vibrations imparted to the board, and a block secured to the board and having an opening therein through which the wire passes, whereby an auxiliary support for the wire is provided to produce maximum responsiveness therein.

1,383,533. AUTOMATIC TIME-INDICATING AND SIGNALING DEVICE. CHARLES M. CROOK, Chicago, Ill. Filed Jan. 16, 1918. Serial No. 212,060. 40 Claims. (Cl. 161—1.)

40. An apparatus for carrying out a process, means for initiating the operation of the apparatus to start the process, time-controlled means for use in controlling the termination of said process, and means whereby the operation of said initiating means to start the process will initiate the action of said time-controlled means.

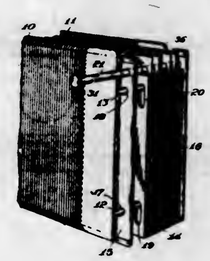
1,383,534. AUTOMATIC TIME-INDICATING AND SIGNALING INSTRUMENT. CHARLES M. CROOK, Chicago, Ill., and JOHN R. GAMMETER, Akron, Ohio, assignors to Stromberg Electric Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 26, 1918. Serial No. 251,374. 24 Claims. (Cl. 161—4.)

3. The combination with a switch, of a trip for operating said switch, a continuously rotating shaft, means for moving said trip away from said switch a predetermined distance, and means for connecting said trip with the shaft so that it will move toward the switch as the shaft rotates.



1,383,535. TORPEDO-PLACING DEVICE. EDGAR R. DAVENPORT, Granite City, Ill. Filed Aug. 24, 1920. Serial No. 405,609. 1 Claim. (Cl. 246—216.)

A torpedo carrier comprising a plate to which the torpedo is secured, a U-shaped member carried by the plate for straddling the rail and spring strips carried by said member for engaging the rail underneath the head.

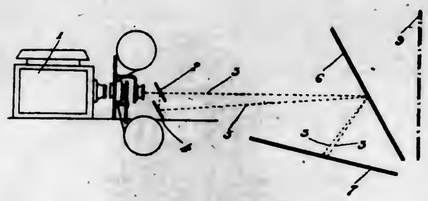


1,383,536. INTERNAL-COMBUSTION ENGINE. NELSON E. DAVIES, Redwood City, Calif. Filed Apr. 5, 1920. Serial No. 371,318. 6 Claims. (Cl. 123—47.)

1. In an internal combustion engine, the combination of a supercharging fuel supply; a cylinder; a hollow reciprocating piston in said cylinder provided with heat radiating pins on its interior; means for admitting fuel in said cylinder on one stroke of said piston and compressing said fuel on the return stroke; means for passing a portion of said fuel during the compressing action through said hollow piston over said pins and into said cylinder beyond said piston and compressing said portion of fuel during the succeeding third stroke of said piston; and means for firing said portion of fuel at the completion of said third

stroke, a pair of exhaust passages leading from said cylinder; a pair of valves controlling said exhaust passages; and a rotating cam and connections controlling said valves; substantially as described.

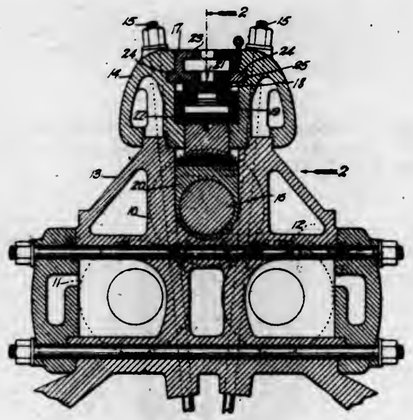
1,383,537. LEDGER. JAMES C. DAWSON, Webster Groves, Mo. Filed May 5, 1919. Serial No. 294,768. 20 Claims. (Cl. 129—12.)



1. In a ledger or the like, in combination, a pair of oppositely facing covers, and a filing post mounted for sliding movement in the direction of its length in each of the said covers.

15. In a ledger or the like, in combination, a pair of equal covers, two filing posts between the covers and sheets of less width than the covers having punch holes for receiving both of the posts when the edges of the sheets at one side are in the same plane with the corresponding margins of the covers and for receiving one of the posts when the said edges of the sheets are engaged with the other post and the opposite edges of the sheets are in the same plane with the corresponding margins of the covers.

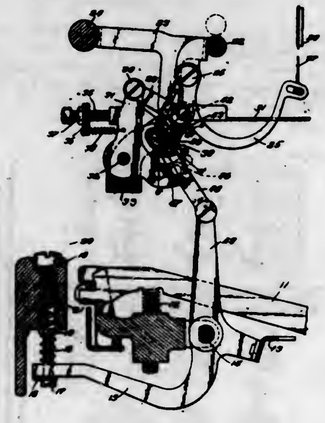
1,383,538. STEREOSCOPIC PROJECTING APPARATUS. HERBERT DICKINSON, Norwood, and GEORGE ANDERSON WILLIAM HEPBURN, Maida Hill, England. Filed Feb. 21, 1920. Serial No. 360,379. 8 Claims. (Cl. 88—16.6.)



1. In stereoscopic projection apparatus, a projector, a transparent reflector which permits a portion of the light

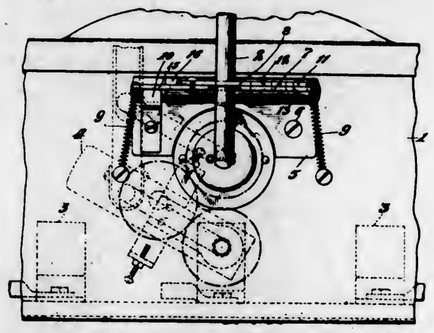
to pass to produce one image on the screen, a second reflecting surface onto which some of the light is reflected

to produce a second image and a screen upon which both the images are projected so as to be viewed side by side and slightly out of register.



1,383,539. CAP CONSTRUCTION FOR SUGAR-MILLS. GODFREY ENGEL, Sr., Brooklyn, N. Y. Filed Nov. 3, 1919. Serial No. 335,301. 4 Claims. (Cl. 100—47.)

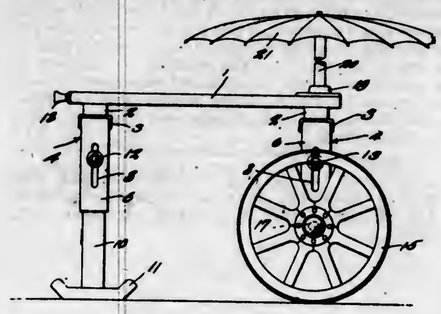
1. In a mill of the character described, the combination of rolls, a housing in which said rolls are journaled, an expansible pressure device seated in said housing and comprising a movable cylinder exerting pressure on one of the rolls, and a relatively stationary piston in said cylinder, said housing having an opening in the peripheral portion thereof through which the piston may first be removed from the cylinder and the cylinder be then lifted away from the roll and a thrust block removably secured in the housing over the piston and thereby releasably securing the pressure device in the housing.



1,383,540. RIBBON-VIBRATOR. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Mar. 10, 1919. Serial No. 281,740. 10 Claims. (Cl. 197—157.)

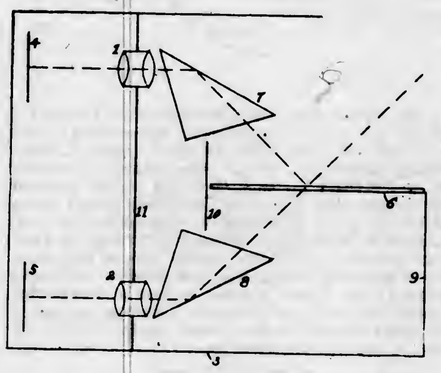
1. In a typewriter, a ribbon vibrator, an oscillatory member for operating said vibrator, means for operating said oscillatory member to impart movement to said vibrator, and a lever for simultaneously setting said oscillatory member in different initial positions and for adjusting the operating means for said oscillatory member to

cause said oscillatory member to move uniform distances from said initial positions when a key-lever is operated.



1,383,541. CENTER STOP AND OUTSIDE LOCK-OFF FOR ELECTRICAL SWITCHES. BAYSON D. HORTON, Detroit, Mich. Filed June 26, 1918. Serial No. 241,945. 9 Claims. (Cl. 200—17.)

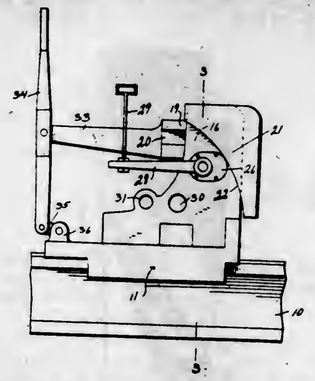
1. The combination with a double throw quick break switch of a center stop therefor comprising a fixed plate and a movable notched plate mounted thereon to swing about an axis in substantially the plane of the first plate and a spring for actuating said notched plate.



1,383,542. GARDENER'S STOOL. ARTHUR J. HUBD, Wausau, Wis. Filed Sept. 7, 1920. Serial No. 408,616. 4 Claims. (Cl. 155—2.)

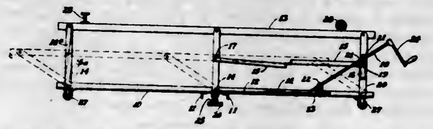
1. A gardener's stool comprising a seat; pairs of soil engaging supports disposed adjacent to the ends of the seat; and means for connecting the supports with the seat to effect a vertical adjustment between the support and

the seat and to effect a horizontal adjustment between the supports of each pair.



1,383,543. PHOTOGRAPHIC APPARATUS. FREDERIC EUGENE IVES, Philadelphia, Pa. Filed Sept. 13, 1919. Serial No. 323,605. 2 Claims. (Cl. 88—1.)

1. In or for photographic exposing apparatus a pair of side-by-side matched lenses in front of the exposure plane, a longitudinal transparent reflector in front of the two lenses with its plane extending between them, and a single light blending reflector between each lens and the transparent reflector; whereby diagonally entering light rays will be reflected and transmitted to produce two images one reversed with respect to the other.



1,383,544. TAPER ATTACHMENT FOR SAWMILL-CARRIAGE BLOCKS. IRVIN W. JOHNSON, Cosmopolis, Wash. Filed Aug. 10, 1918. Serial No. 249,237. 6 Claims. (Cl. 143—122.)

1. In a saw mill carriage mechanism, a base, a knee slidingly mounted on said base, power operated means for shifting said knee longitudinally of the base, a block mounted on and carried by the knee and having sliding movement on the knee parallel to the movement of the knee and extending to the front face thereof, the block having ratchet teeth on one face thereof extending rearward, a pawl mounted on the knee and resiliently urged into engagement with the ratchet teeth and having a handle whereby it may be shifted out of engagement with the teeth, and a lever operatively mounted upon the knee

and having operative connection to the block whereby the block may be advanced or retracted relative to the knee.

1,383,545. AUTO-JACK. SAMUEL JOHNSTON, deceased, Port Colborne, Ontario, Canada, by Albert E. Near, executor, Port Colborne, Canada, assignor, by direct and mesne assignments, of one-half to Louis G. Brown, Niagara Falls, N. Y., and one-half to Salathiel Johnston, Bertie township, Ontario, Canada. Filed Sept. 8, 1919. Serial No. 322,481. 2 Claims. (Cl. 254—91.)

1. An auto-jack, comprising a base-frame, a vertically-movable lifting-frame arranged above the same, links connecting said frames and movable lengthwise thereof, a nut swiveled upon the base-frame to rock in a vertical plane, a cross bar connecting an opposing pair of said links, and an actuating screw journaled in said cross bar but held against longitudinal movement therein, said screw engaging said nut.

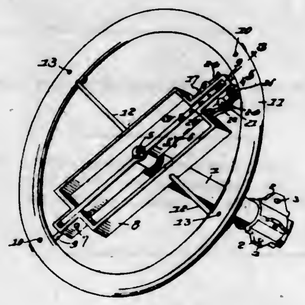
1,383,546. SPINNER FISH-LURE. EDWARD S. KNOWLES, San Francisco, Calif.; by decree of distribution of estate of said Edward S. Knowles, deceased, to Minnie E. Knowles. Filed Aug. 9, 1919. Serial No. 316,353. 1 Claim. (Cl. 43—45.)

A spinner fish lure comprising a swivel, a spinner, a fish hook, and a rod having a hook at one end passing twice through the spinner and connecting the swivel and fish hook.

1,383,547. RELIEVING ATTACHMENT FOR CLOGGED WATER-CONDUCTORS, DRAIN-SPOUTS, &c. ARTHUR R. KONSALIK, Philadelphia, Pa. Filed Jan. 31, 1919. Serial No. 274,182. 7 Claims. (Cl. 210—90.)

7. A water conductor of the character stated having a cutaway passage in its side wall, a frame adapted to occupy said passage, a strainer in said frame, means for removably retaining said frame in its position in said passage, and a supplemental trap in the conductor above said frame and strainer, said trap being formed of cross members permanently connected firmly at their ends with said wall, one member being provided at the center with a loop in which the center of the other cross member is fitted adapting to interlock said members centrally with each other forming also a doubly sustained brace for said wall above the cut-away portion of the conductor.

1,383,548. COMBINATION HINGE AND CATCH FOR AUTOMOBILE-DOORS. WILLIAM H. KROLL, De Pere, Wis. Filed Dec. 2, 1920. Serial No. 427,783. 5 Claims. (Cl. 16—25.)

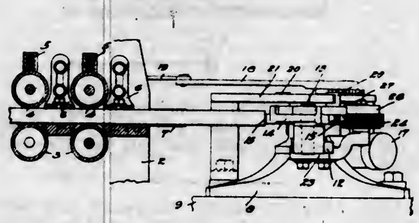


4. A combined door hinge and catch including a hinge, one side of which is engaged with the door and the opposite side engaged with the door frame, a latch bar mounted in said door and engageable with the side of the hinge on the door frame, means mounted upon said latch bar to automatically project the latter into the door frame upon contact of the latch bar with the hinge on said frame, whereby said door is automatically closed after having been operated through a predetermined movement.

1,383,549. DEVICE FOR PRODUCING ACTUATING IMPULSES. GEORGE H. LANG, Boston, Mass., assignor to Stover-Lang Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1916, Serial No. 83,415. Renewed May 28, 1921. Serial No. 473,320. 2 Claims. (Cl. 230—32.)

1. An impulse-producing member presenting an L-shaped casing, both arms of which are hollow, a driving shaft extending longitudinally of and journaled in one arm, said shaft terminating within the casing and having a crank pin at its inner end, said casing having an opening through which the crank pin is accessible, a plunger mounted for reciprocation in the other arm of the casing, a connecting rod connecting said plunger to said crank pin, a diaphragm connected to said plunger, a cap clamped to the end of the other arm and engaging the periphery of the diaphragm thereby clamping said diaphragm in place, said cap and diaphragm forming between them a chamber, a pipe leading from said chamber, and means to rotate the driving shaft.

1,383,550. LOCKABLE STEERING-WHEEL FOR MOTOR-VEHICLES. JOHN LAWSON, Manito, Ill. Filed Apr. 12, 1920. Serial No. 373,245. 2 Claims. (Cl. 74—83.)

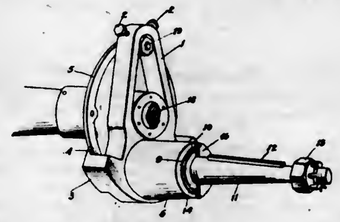


1. The combination with a steering column including a steering rod inclosed therein, of a support fixed to the upper end of said rod, a steering wheel including a frame pivotally mounted on one end of said support, the other end of the frame having a contracted portion provided with opposite sides, spring tensioned means carried by the opposite sides and protruding therethrough and into engagement with one end of the support to hold the wheel in an operative position, the parallel sides of said extension of the frame having depending portions, and means carried by the column engaging between said depending portions, and means connecting the depending portions to the means carried by the column thereby locking the wheel in an inoperative position.

1,383,551. LIFE-SAVING APPARATUS FOR BOATS. FRANK FORBES LOWNDES, Gisborne, New Zealand. Filed Nov. 18, 1919. Serial No. 338,866. 6 Claims. (Cl. 9—3.)

1. In a life saving apparatus for boats, a boat, a keel on said boat, a rail hinged to the keel to swing on an axis parallel with the keel, one rail upon each side of said keel and arranged longitudinally therewith, said rail being positioned at a slight distance from said keel to enable a grip to be secured on said boat when upturned, and whereby the said boat may be righted, substantially as described.

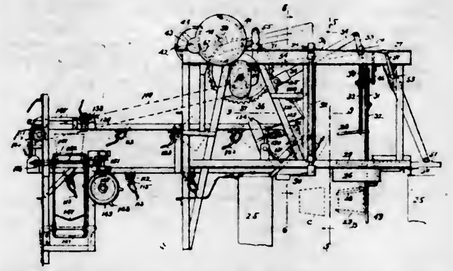
1,383,552. MACHINE FOR TRADE-MARKING OR BRANDING LUMBER OR TIMBER. JOSEPH G. McDONOUGH, Eau Claire, Wis. Filed Sept. 7, 1917. Serial No. 190,158. 29 Claims. (Cl. 101—35.)



1. The combination, with means for feeding lumber or timber longitudinally, of a trade-marking or identifying device having an oscillating movement in the path of the lumber for marking the vertical end surface thereof, the lumber being marked through the pressure of its feeding movement on the trade-marking device.

1,383,553. CYLINDER-DRYING MACHINE. JOHN McINTYRE, Portobello, Scotland, assignor of one-half to James Milne and Son Limited, Edinburgh, Scotland. Filed June 12, 1919. Serial No. 303,800. 2 Claims. (Cl. 257—96.)

2. A pair of drying cylinders arranged to rotate in reverse directions, a pair of feed rolls arranged in spaced relation and each roll in contact with the upper side of one of the drying cylinders, means to feed material between the drying cylinders and the feed rolls, means to scrape the material from the opposing sides of the feed rolls and to cause it to drop between the drying cylinders, distributing rolls engaging the lower sides of the drying cylinders, and means to scrape the material from the upper sides of the drying cylinders at points near the feed rolls.



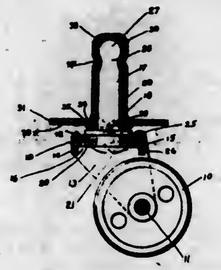
1,383,554. EMERGENCY-AXLE. WILLIAM ALBERT McQUAGGE, Marianna, Fla. Filed Nov. 29, 1920. Serial No. 427,025. 2 Claims. (Cl. 301—130.)

1. A device for the purpose set forth comprising a yoke having a hub extending laterally from one side at its lower end, said hub being provided internally near its opposite ends with annular stop flanges, a spindle fitted through said hub and through said stop flanges, anti-friction bearings interposed between the hub and the spindle

at the ends of the hub and at the outer sides of said stop flanges, and cover plates secured upon the ends of the hub and extending over said bearings.

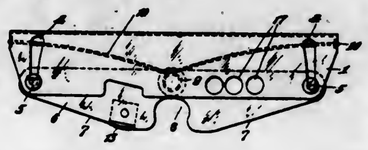
1,383,555. METAL-COATING MACHINE. JOSEPH MONTO, Cleveland Heights, and ARTHUR R. CURTIS, Cleveland, Ohio; said Curtis assignor to Clarence J. Hays, Cleveland, Ohio. Filed Sept. 26, 1917, Serial No. 193,372. Renewed Oct. 4, 1920. Serial No. 414,619. 34 Claims. (Cl. 91—12.1.)

1. In a metal coating machine, a receptacle for fluid coating material, apparatus for carrying articles to be coated through the material in the receptacle comprising a device for submerging the articles and including relatively and independently movable article gripping members automatically adjustable for different sizes of articles.



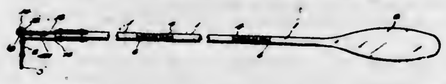
7. In a metal coating machine, a receptacle for fluid coating material, apparatus for passing articles through the material in the receptacle comprising a device having means for receiving, and lifting the articles from the coating material, and having means for giving the articles a turning movement independent of the lifting movement.

1,383,556. NAIL-SCISSORS. RUDOLF MÖTHE, Solingen, Germany. Filed Sept. 18, 1920. Serial No. 411,303. 1 Claim. (Cl. 132—73.)



The combination with a pair of nail-scissors, of a lug on one of the cutting-members of the latter, and a separate nail-cleaning instrument having a shell-like handle and adapted when not in use to engage with the latter over the sharp ends of the cutting-members of said pair of nail-scissors and with its free end in said lug, substantially as and for the purpose set forth.

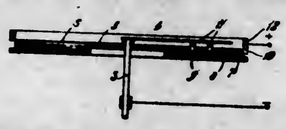
1,383,557. CASTER. WILLIAM H. NOELTING, Evansville, Ind. Filed July 6, 1920. Serial No. 394,256. 5 Claims. (Cl. 16—4.)



2. A caster including a stem, a roller and a yoke, including a pair of ears rotatably supporting a roller, said yoke including an upwardly extending bead portion, and a downwardly extending apron portion positioned between said ears and independently thereof, said bead portion extending transversely of said ears.

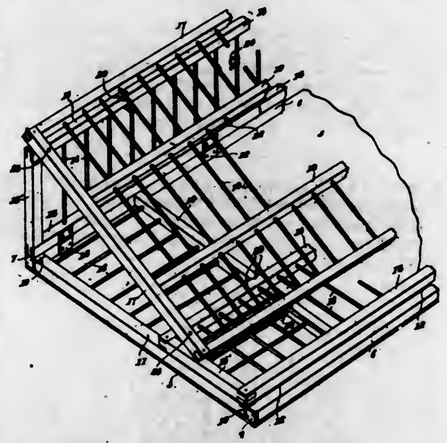
1,383,558. OUTSIDE LOCK-OFF AND CENTER STOP FOR ELECTRICAL SWITCHES. ARCHIE OAKES, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1918. Serial No. 239,724. 9 Claims. (Cl. 200—1.)

1. A center stop for double throw switches comprising a fixed member, a notched movable member attached thereto, and a spring between said members, said fixed member having slots therein, and coöperating pins on said movable member.



1,383,559. BOAT-PROPELLING POLE. ALFRED N. OLSEN, Rock Rapids, Iowa, assignor of one-half to Samuel D. Riniker, Rock Rapids, Iowa. Filed Feb. 12, 1921. Serial No. 444,506. 2 Claims. (Cl. 9—24.)

1. A device for the purpose set forth comprising a pole, a plate secured to and projecting from the end of the pole, a foot hinged to said plate, said plate being provided with a stop outwardly beyond the hinged connection of the foot to the plate to limit the movement of the foot away from the pole, and an abutment projecting from the end of the pole and spaced from the plate to be engaged by the foot and limit the movement thereof toward the pole.

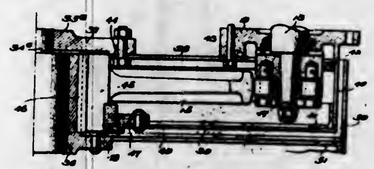


1,383,560. WORKING-TIME INDICATOR. HENRI OSIECK, Amsterdam, Netherlands. Filed Feb. 20, 1920. Serial No. 360,090. 3 Claims. (Cl. 58—19.)

1. A working time indicator, comprising a circular, graduated time plate; a graduated work plate disposed concentrically with the time plate and rotatable about its axis to vary the position of its graduations relative to those of said time plate; a clockwork-driven hand movable over the graduations of both plates; a conductor fixed to the work plate to rotate therewith and having a pair of contacts, one of which is disposed in the path of said hand; an annular conductor disposed concentrically with the work plate and engageable by the other contact on the first-named conductor in any position of said work

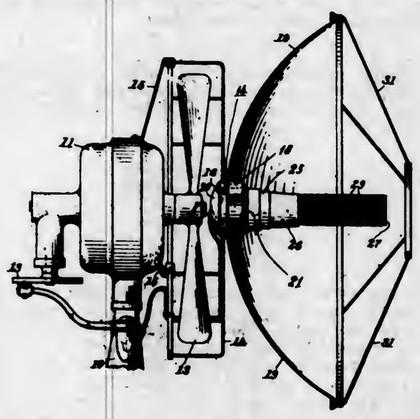
plate; and an electric circuit wherein the hand and the annular conductor are included, said circuit being closable by the engagement of said hand with the first-named contact.

1,383,561. SHIPPING-CRATE. MICHAEL F. A. O'TOOLE, Baltimore, Md. Filed Feb. 28, 1920. Serial No. 361,984. 6 Claims. (Cl. 217—47.)



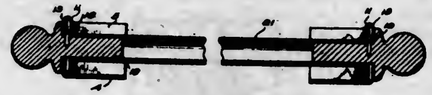
1. A collapsible shipping crate comprising a bottom wall member having end and side walls hinged thereto upon horizontal pivots, a top wall member, and means operatively connecting said top wall member to the side wall members whereby manipulation of the top wall member will effect raising and lowering of said side wall members to their collapsed or expanded position, said means comprising loops loosely and slidably connected to the top and side wall members.

1,383,562. LOCK. OLIVER M. PADDLEFORD, Los Angeles, Calif. Filed Mar. 22, 1920. Serial No. 367,698. 15 Claims. (Cl. 70—53.)



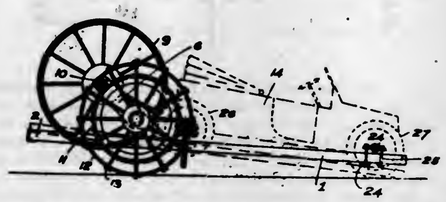
1. In an improved lock, the combination of a bolt-receiving member having a longitudinal cylindrical bore leading from its interior to its exterior, and a bolt-carrying member having a lateral slotted portion concentric with said cylindrical bore, of a bolt mounted within said bore, and having in its periphery a longitudinal notched portion, lock members located within the lateral slotted portion of the bolt-receiving member and rotatably surrounding the bolt, said lock members being provided with a plurality of internal notches, a key carried by said bolt and adapted for partial reception in said longitudinal notched portion of the bolt, and for registration with certain of the internal notches of the lock members, and means coöperating with said lock members and carried by the bolt-receiving member for indicating when the lock members have been properly set, so that the key will fall within certain of the internal notches of the lock members and permit the bolt to be rotated and axially shifted, said longitudinal notched portion in the periphery of the bolt being provided with an abrupt wall portion and a portion which opens outwardly, so that the bolt may be rotated freely in one direction, but limited as to its rotation in a counter direction when the key comes into contact with the abrupt wall portion.

1,383,563. TRACTOR. HUGH PARTRIDGE, Jacksonville, Fla., assignor to Partridge Tractor Company Inc., Jacksonville, Fla., a Corporation of Florida. Filed Feb. 20, 1920. Serial No. 360,122. 3 Claims. (Cl. 74—7.)



2. In a tractor, in combination, a pair of substantially oppositely-located traction wheels, a longitudinal main shaft, a pair of transverse aligning jack shafts geared to the respective traction wheels to drive the latter at reduced speed, the gearing comprising an externally toothed gear wheel on one traction wheel, an internally toothed gear wheel on the other traction wheel, and pinions on the respective jack shafts in mesh with the corresponding toothed wheel, the axes of the tration wheels being offset in a common horizontal plane, and gearing for driving the jack shafts comprising confronting coaxial driving wheels on the respective jack shafts, and propelling means located between said driving wheels and coöperative therewith to drive them in reverse directions.

1,383,564. HEATING APPARATUS. EMIL PHILLIPSON, New York, N. Y. Filed May 28, 1920. Serial No. 384,982. 13 Claims. (Cl. 219—42.)

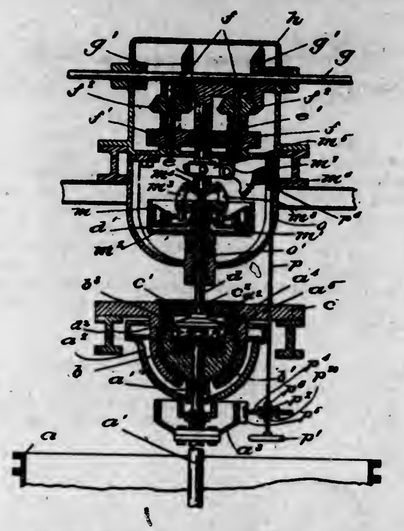


1. An apparatus of the character described comprising a support, heat-emitting means mounted thereon, and means for moving said heat-emitting means relatively to said support, substantially as specified.

1,383,565. DEVICE FOR HOLDING CARPETS. JOHN P. RASMUSSEN, Ironwood, Mich., assignor of one-half to George A. Curry, Ironwood, Mich. Filed Jan. 21, 1921. Serial No. 438,984. 2 Claims. (Cl. 16—141.)

1. A stairway carpet holding device, comprising a pair of L-shaped brackets adapted to fit in the corner between the tread and riser of the step, one of said brackets being arranged adjacent each edge of the carpet, a plate secured to each arm of said bracket, said plates being arranged adjacent each other and substantially parallel to the edge of the carpet, and being provided with registering openings, a rod of substantially the same length as the distance between said brackets, and securing means passing through the openings in said plates and secured in the ends of said rod.

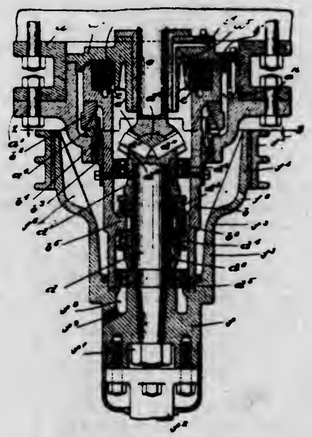
1,383,566. HEAVY-TRACTION ATTACHMENT SUITABLE FOR MOTOR ROAD-VEHICLES. RICHARD REYNOLDS and HARRY GIBBS, Birkenhead, England. Filed June 29, 1918. Serial No. 242,593. 1 Claim. (Cl. 180—16.)



An attachment for motor vehicles comprising a wheeled frame adapted to be pivoted to a forward portion of a vehicle, a driving connection between the rear vehicle wheels and the wheels of the frame, a supporting member mounted on the frame, and a device carried by the supporting member for vertically adjusting the rear portion of the vehicle with respect to the frame, said supporting member being longitudinally adjustable with respect to the frame to permit application of the attachment in predetermined relation with vehicles of different lengths.

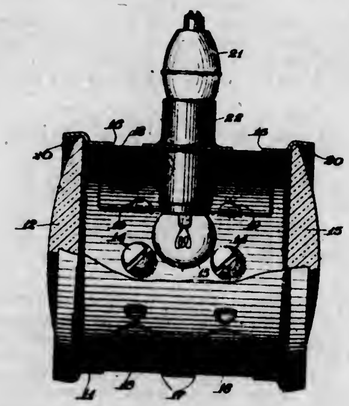
1,383,567. DRIVE FOR GYRATORY CENTRIFUGAL MACHINES. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company. Filed Apr. 28, 1917. Serial No. 165,158. 12 Claims. (Cl. 74—7.)

1. A driving system for centrifugal machines embracing in combination a continuously rotating line shaft, a plurality of centrifugal machines having rotary gyratory basket-carrying shafts suspended at their upper ends below said line shaft, a non-gyratory intermittently driven shaft mounted above each gyratory basket shaft in vertical alinement therewith, a power-transmission shaft arranged co-axially with each intermittently driven shaft, driving gear connections operatively connecting the line shaft with each transmission shaft, a clutch forming a driving connection between each transmission shaft and its coöperating intermittently driven shaft and means for releasing each clutch from operative engagement, whereby each centrifugal may be started or stopped independently of the others, substantially as described.



9. The combination with a suspended gyratory centrifugal machine, of an overhead vertically alined non-oscillatory shaft flexibly connected with the centrifugal machine to drive the machine, a power transmission shaft, a main line shaft, and gearing operatively connecting the transmission shaft to the main line shaft, and an auto-

matically operated centrifugal clutch arranged to form a driving clutch between the transmission shaft and said vertically alined shaft, substantially as described.

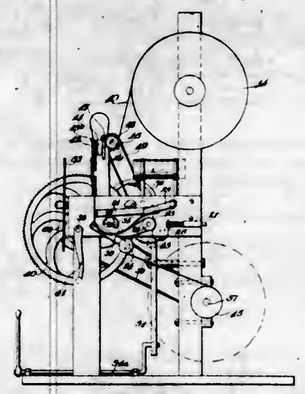


11. The combination of a gyratory centrifugal machine, a power transmission shaft vertically alined with the shaft of said centrifugal, intermediate connections embracing a clutch and flexible coupling members, a brake mechanism, and means having engagement with both the brake mechanism and the clutch and acting to release the clutch when it sets the brake, substantially as described.

1,383,568. MEANS FOR MOUNTING AND DRIVING CENTRIFUGAL MACHINES. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company. Filed Feb. 14, 1918. Serial No. 217,156. 17 Claims. (Cl. 64—48.)

1. A driving mount for centrifugal machines embracing in its construction an oscillatory bearing head provided with internal bearings for rotatably supporting the lateral and vertical thrust of the gyratory basket shaft, a curved bearing seat affording a support for said bearing head above the plane of its center of oscillation, a rotary basket shaft supported on said internal bearings to oscillate with said head, a centralising buffer having operative engagement with said bearing head to yieldingly oppose its oscillatory movements, and a power transmitting shaft mounted co-axially above said basket shaft and having jointed driving connection with said basket shaft, substantially as described.

1,383,569. PARKING-LIGHT. JOHN J. ROHDE, Milwaukee, Wis., assignor of one-half to J. Elmer Lehr, Milwaukee, Wis. Filed Mar. 21, 1918. Serial No. 223,829. 1 Claim. (Cl. 240—11.)



A parking light for automobiles comprising a casing, means distinct from the license bracket for connecting the casing to the automobile to be in sight from the front, rear and side thereof and adjacent the license plate and with its axis extending longitudinally of the automobile, an electric lamp within the casing, a clear glass lens for the front and a red glass lens for the rear of the casing, openings in the side of the casing to project light onto the license plate and to the side of the car, and transparent coverings for said openings whereby a white light is projected to the front and side of the vehicle and a red light to the rear of the automobile simultaneously with the illumination of the license plate.

1,383,570. CHECK, DEPOSIT, AND REMITTANCE TRAY. WILLIAM F. SCHNELL, Kalispell, Mont. Filed July 20, 1920. Serial No. 397,646. 1 Claim. (Cl. 211—37.)

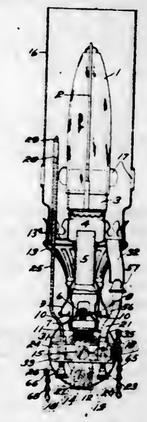
A tray of the class described including side walls connected at the rear by a rear wall, the lower margins of the side walls being turned inwardly to provide a base, a floor arranged between said side walls, said floor being inclined upwardly and terminating approximately midway the ends of said side walls, and a blank one end of which has its inception at the upper margins of the side walls, at a point above said floor, extends downwardly at an inclination past the rear end of the floor and is engaged with the latter, said blank being extended upwardly and then downwardly, in substantially inverted V-shape and engaged with said rear wall.

1,383,571. MOVING-PICTURE MACHINE. ARTHUR H. SEELEY, Chicago, Ill., assignor to Edgar R. Seeley, Chicago, Ill. Filed Mar. 3, 1919, Serial No. 280,285. Renewed Nov. 12, 1920. Serial No. 423,758. 4 Claims. (Cl. 88—18.6.)

1. In a moving picture machine, an oscillating beater for advancing the film, said beater being resilient and bowed to form the film into a loop, a pivoted support for the beater, a pivoted actuating arm connected to the beater, a rotatable cam engageable with the arms for swinging the same in one direction, and means for giving the arm a return stroke,

---

1,383,572. ANTILEAK COMPOSITION. WILL N. SHRUM, Dallas, Tex., assignor to Fred E. Tennant, James W. Jewell, and Clifford F. Merritt, Dallas, Tex. Filed Jan. 16, 1919, Serial No. 271,517. Renewed Jan. 21, 1921. Serial No. 439,053. 1 Claim. (Cl. 134—17.5.)

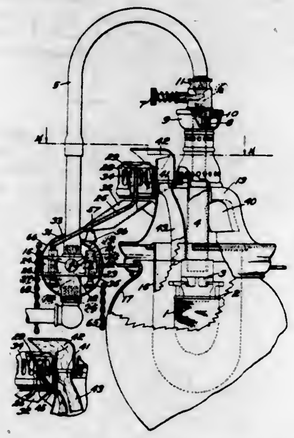


A composition for stopping leaks in radiators, boilers, etc., consisting of finely ground paper, one and one half pounds, comminuted asbestos, one pound, two gallons of a starchy paste, one half ounce of gum arabic or an equivalent gum, one half ounce resin, a suitable deodorizer, one half ounce salicylic acid, and one eighth of a pint of alcohol, all added to a sufficient amount of water to equal ten gallons.

1,383,573. THERMOSTATICALLY-CONTROLLED VALVE. RAYMOND D. SMITH, Milton, Mass., assignor to Shawmut Machine Works, Inc., Boston, Mass., a Corporation of Maine. Filed July 24, 1916, Serial No. 110,950. Renewed Oct. 4, 1920. Serial No. 414,648. 25 Claims. (Cl. 67—87.)

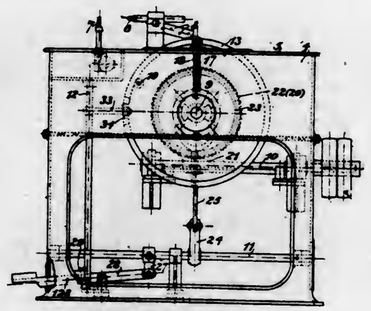
1. In combination; a main conduit for a heat productive fluid; a valve connected in said conduit to govern the flow of said fluid therethrough; mechanism adapted automatically to actuate said valve; a thermostat arranged to be operatively energized by heat from a diverted portion of said fluid, and to govern the automatic actuation of said valve; an auxiliary conduit for conducting said diverted fluid portion, and arranged to be closed when said valve is normally opened; and control means for separately opening said auxiliary conduit, to energize said thermostat, thereby to effect a designed automatic actuation of said valve.

1,383,574. DELAYED CUT-OFF FOR INCANDESCENT GAS-LAMPS. RAYMOND D. SMITH, Milton, Mass., assignor to Shawmut Machine Works, Inc., Boston, Mass., a Corporation of Maine. Filed Aug. 2, 1916, Serial No. 112,828. Renewed Oct. 4, 1920. Serial No. 414,649. 2 Claims. (Cl. 67—87.)



1. In an upright mantle gas lamp and controlling valve arrangement embodying a Bunsen burner stem and automatic agencies for governing the valve, said agencies including an auxiliary heater burner arranged laterally of said Bunsen stem, in combination; a mantle-carrying lamp structure removably mounted on the Bunsen stem above said auxiliary burner and comprising a transparent chimney and holder therefor, the latter having an annular floor portion at the base of said chimney separating the mantle from said auxiliary heater burner; and an open-ended gas-directive tube opening through and protruding downwardly from the floor portion of the removable chimney holder and carried thereby in a position to terminate at its lower end directly above the flame orifice of said auxiliary burner.

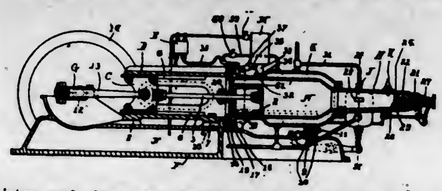
1,383,575. DELAYED CUT-OFF FOR INVERTED GAS-LAMPS. RAYMOND D. SMITH, Milton, Mass., assignor to Shawmut Machine Works, Inc., Boston, Mass., a Corporation of Maine. Filed Aug. 7, 1916, Serial No. 113,546. Renewed Oct. 4, 1920. Serial No. 414,650. 13 Claims. (Cl. 67—87.)



1. The combination, in an inverted mantle gas lamp, having a gas conductive goose neck connecting the same with a laterally located fuel control valve and embodying a downwardly directive Bunsen tube for the gas and air mixture arranged with an air inlet near the top thereof and an outlet for the fuel mixture at its bottom end whereat is suspended the illuminating mantle,—of an auxiliary burner at the valve end of said goose neck connected to be also governed as to fuel supply by said valve and constituting part of automatic agencies for controlling closure thereof; a pilot burner constantly supplied with gas independently of said valve, positioned intermediate

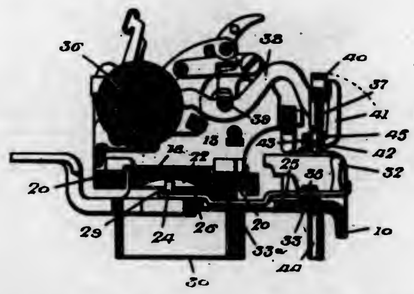
said Bunsen tube outlet and said auxiliary burner and at a higher level than either; and separate means for collecting gas issuing respectively from the said Bunsen tube outlet and from said auxiliary burner; said means

being arranged to direct said gas into common proximity to the flame of the pilot burner, so that either said mantle burner or said auxiliary burner when supplied with gas is ignitible independently of the other directly by said flame.



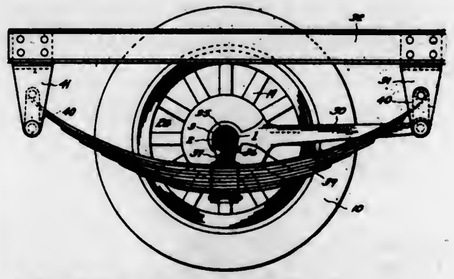
1,383,576. MACHINE FOR STRAIGHTENING WIRE. MARIUS METHILTUS SÖRENSEN, Valleröd, near Rungsted, Denmark. Filed July 16, 1919. Serial No. 311,306. 5 Claims. (Cl. 140—147.)

1. Machine for straightening out pieces of wire, consisting of a straightening member, a rotating tension member, a means for securing the wire on the latter member, and means for automatically stopping the tension member after each revolution.



1,383,577. COMBUSTION-ENGINE. WILLIAM A. SORG, Denver, Colo. Filed Apr. 7, 1919. Serial No. 287,936. 7 Claims. (Cl. 123—196.)

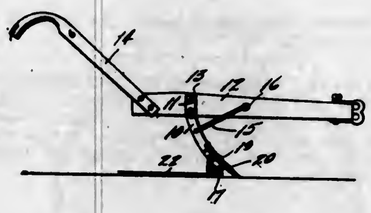
1. A combustion engine, comprising, in combination, a cylinder, a piston in said cylinder, fuel and exhaust valves connected with said cylinder, a closed chamber on the outer end of said cylinder immediately below said piston, said cylinder having a small longitudinal channel in its inner surface connecting the spaces on both sides of said piston in said cylinder when the piston reaches the end of its power strowe, whereby a small amount of spent gas and lubricating medium are received from the space in said cylinder into said closed chamber at the end of said power stroke and spread over the inner end of said



piston and the walls of said closed chamber to prevent precipitation and carbonization of particles of heavy liquid fuel by chilling.

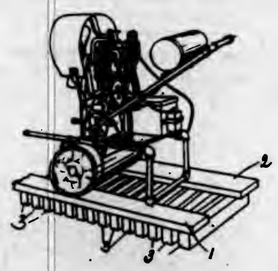
1,383,578. INTERCHANGEABLE CARRIAGE. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1920. Serial No. 358,504. 17 Claims. (Cl. 197—60.)

1. In a typewriter, a frame, a carriage base adapted to be mounted thereon, interlocking means between said base and frame, feeding mechanism for controlling the travel of said carriage, and a unitary device for controlling the interlocking means and said feeding mechanism.



1,383,579. SPRING-HANGER FOR AUTOMOBILES. CHARLES E. STARR, Bellingham, Wash., assignor to Perfecto Gear Differential Co., Bellingham, Wash., a Corporation of Washington. Filed Apr. 7, 1920. Serial No. 371,816. 5 Claims. (Cl. 180—73.)

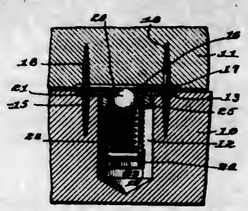
1. In a vehicle of the class described, the combination with a longitudinal frame member, a ground wheel, a driving axle for the wheel, a housing for the axle, driving mechanism for the wheel which, in operation, tends to rotate the housing oppositely to the direction of the wheel and means for substantially preventing movement of the wheel axle longitudinally with respect to the frame, of a suspending member fixed to the housing to turn therewith, a spring pivotally supported by said member, means for



supporting the frame member from the spring and permitting longitudinal shifting of the spring relative to the frame in accordance with the movement of the suspending member.

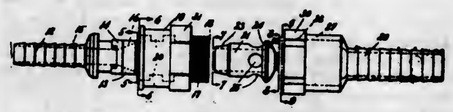
1,383,580. PEANUT-DIGGER. SHED P. STEVENS, Buffalo, Tex. Filed June 18, 1920. Serial No. 389,828. 2 Claims. (Cl. 97—26.)

1. In a peanut digger, a beam, handles secured to the rear portion of the beam, a standard depending from the beam formed of a single bar bent upon itself between its ends forming a relatively narrow loop, said bar diverging upwardly from the top of the loop to form a frame having substantially parallel sides, said sides being arranged outwardly of the sides of the beam and having their upper ends bent inwardly and upwardly forming extensions engaging the sides of the beam, means for securing the extensions to the beam, diagonal braces connecting the sides of said frame and beam, a plow share extending upwardly and increasing in width upwardly and being relatively wide and contacting with the forward face of the sides of said frame, a slide arranged rearwardly of the standard and having an upstanding bracket engaging the rear side of said loop, and a bolt passing through the loop and connecting the plow share and bracket.



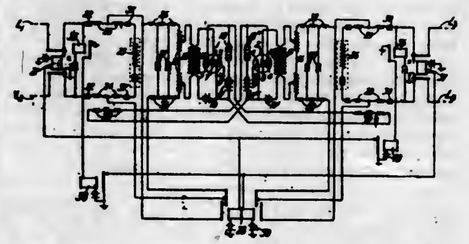
1,383,581. PAVING APPARATUS. ROBERT C. STUBBS, Dallas, Tex. Filed July 25, 1919. Serial No. 313,213. 3 Claims. (Cl. 94—48.)

1. In an apparatus for imparting vibrations provided with a vibrating machine, means for transmitting the vibrations of the vibrating machine consisting of stringers and cross-bars spaced apart attached to said stringers, said stringers forming tracks for the vibrating machine and said cross bars having greater depth than width.



1,383,582. PRESSER DEVICE. RUPERT I. STUBBS, Delta, Pa. Filed Jan. 21, 1921. Serial No. 438,929. 8 Claims. (Cl. 16—77.)

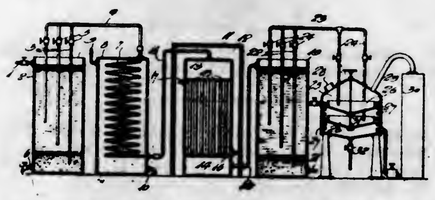
5. In a presser device, a barrel provided with exterior screw threads, a resiliently mounted presser element within the barrel, a securing plate provided with screw threads and adapted to be moved along the barrel, and a



nut coöperating with said securing plate and barrel for locking the plate in a fixed position to said barrel.

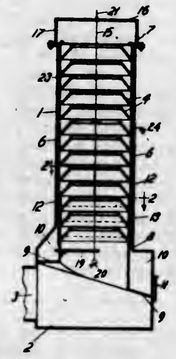
1,383,583. HOSE-COUPLING. JAMES M. TOWLE, West Somerville, Mass., assignor of one-half to Louis I. Beckwith, Boston, Mass. Filed Dec. 24, 1919. Serial No. 347,079. 3 Claims. (Cl. 284—18.)

1. A device of the class described comprising a receiver member a portion of which forms an enlarged cup screw threaded internally, a tubular connector member having an end adapted to screw into the screw threaded cup of the receiver member, and an enlarged cup shaped portion, a valve seat formed in the connector member, a cylindrical valve fitting closely in said tubular connector, said valve having an enlarged closed head with a shoulder formed thereon adapted to fit the valve seat in the connector member, having an externally beveled opposite end, and having a longitudinally extending cylindrical cavity therein, a plurality of openings extending from said cavity through the side of the valve member, said openings being closed by the connector member when the valve is seated, the enlarged cup shaped portion of the connector having oppositely placed internally extending lugs, and a tubular coupling member, one end of which is adapted to fit into the connector member, and is internally beveled to fit the beveled portion of the valve member, the median portion of the coupling member having oppositely extending external lugs adapted to pass between and beyond the internally extending lugs of the connector member, and to be locked behind said lugs when the coupling member is given a quarter turn.



1,383,584. TELEPHONE SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1918. Serial No. 268,500. 6 Claims. (Cl. 179—170.)

2. In combination with a telephone transmission line, a repeater, an input circuit for said repeater bridged across



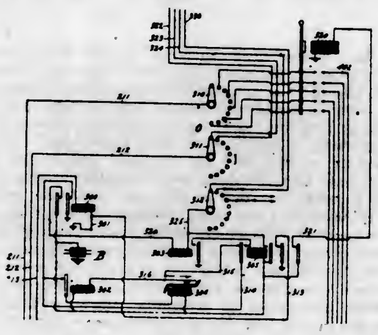
said line, an electromagnetic ringing current responsive device also bridged across said line and tuned to respond to currents of ringing frequency, and impedance means included in said repeater bridge presenting high impedance to currents of ringing frequency.

1,383,585. PROCESS FOR DISTILLING OR RECOVERING NAPHTHA OR OTHER HYDROCARBONS FROM WOOL-FAT SOLUTIONS. CHRISTOPHER N. WILSON, Lawrence, Mass. Filed Nov. 24, 1919. Serial No. 340,085. 4 Claims. (Cl. 87—6.)

1. A process for the distillation of naphtha or other hydrocarbon solvents which have been used for the extraction of grease from wool, consisting of subjecting the liquid containing the solvent and the grease and other impurities to cold, then allowing the liquid to stand until the substances congealed by subjecting it to cold settle, and finally volatilizing the solvent out of the liquid.

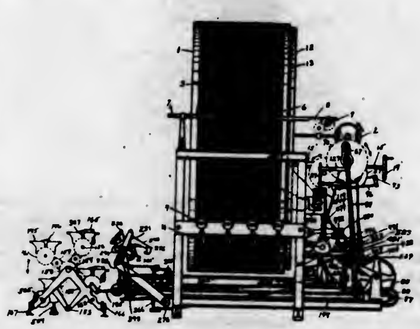
1,383,586. ART OF SEPARATING SUSPENDED PARTICLES FROM GASES. EDSON RAY WOLCOTT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 27, 1917. Serial No. 188,461. 8 Claims. (Cl. 183—7.)

4. An electrical precipitator comprising discharge electrode means, means for conducting a stream of gas past said discharge electrode means, receiving electrode members with open spaces therebetween, said members extending transversely of and defining the gas stream and spaced from the discharge electrode, means to provide a series of strong electrical field zones adjacent to said receiving electrode members, alternating with a series of weak electrical field zones at the spaces between said receiving electrode members, and outlet means for precipitated material, communicating unobstructedly with said spaces between the receiving electrode members, to receive the precipitated material passing outwardly in said spaces.



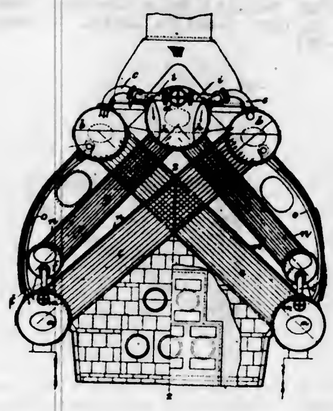
1,383,587. TAPE-MEASURE. LOUIS E. WOOD, Farrell, Pa. Filed June 7, 1920. Serial No. 387,231. 11 Claims. (Cl. 242—84.8.)

1. In a device of the class described, a casing having a rotatable side plate, a rotatable member within said casing, and an inwardly foldable handle carried by said side plate, said handle and said rotatable member having co-



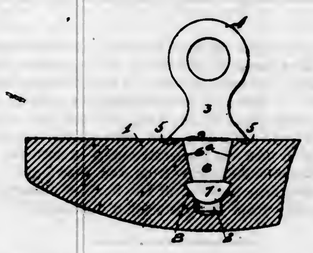
acting driving means coöperable when the handle is extended for use.

1,383,588. SEMI-AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. JOSEPH L. WRIGHT, Cleveland, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1915. Serial No. 58,569. 31 Claims. (Cl. 179—27.)



31. In a telephone exchange system, the combination of a connector switch, a trunk switch for effecting connection with said connector switch, means independent of said trunk switch for selecting said connector switch, means for operating said connector switch when selected to render it unselectable, and means controlled by said trunk switch to again render said connector switch selectable.

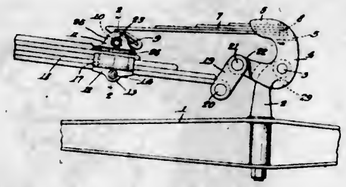
1,383,589. COLOR-PRINTING MECHANISM. CLINTON ALVORD, Worcester, Mass. Filed Aug. 5, 1920. Serial No. 401,324. 279 Claims. (Cl. 101—172.)



1. In combination, color applying mechanism, a source of color supply therefor, jacquard means for automatically transferring color from said supply to said mechanism, and means to actuate said mechanism.

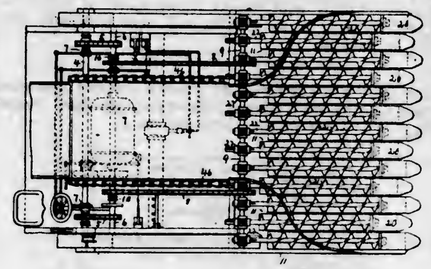
1,383,590. WATER-TUBE STEAM-BOILER. ROBERT BAYLIS ARMSTRONG, Newcastle-upon-Tyne, England, assignor to himself and R. & W. Hawthorn Leslie & Company, Limited, Newcastle-upon-Tyne, England. Filed Dec. 7, 1918. Serial No. 265,781. 3 Claims. (Cl. 122—478.)

1. In a water tube boiler, a superheater comprising an upper steam drum, two lower drums, fixed longitudinal partitions dividing said upper drum into three compartments, banks of tubes connecting each of said lower drums with the upper drum, some of each bank of tubes connecting at their upper ends with an outer compartment and some with the middle compartment, a steam inlet connection to each outer compartment, a steam outlet from the middle compartment, a water inlet to each lower drum, a by-pass connection between the compartments of the upper drum, and valves controlling said by-pass connection and said water inlets, substantially as described.



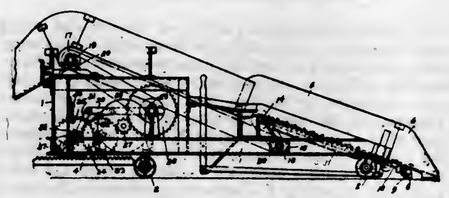
1,383,591. BUTTON. LLOYD A. ANGLE, Rochester, N. Y., assignor to Arts in Buttons, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 22, 1918. Serial No. 251,035. 5 Claims. (Cl. 24—90.)

1. A button comprising a button body of resilient material, and a shank embedded in said body and having an anchoring portion formed with an enlargement and a base having a cross-section at least equal to the cross-section of the enlargement.



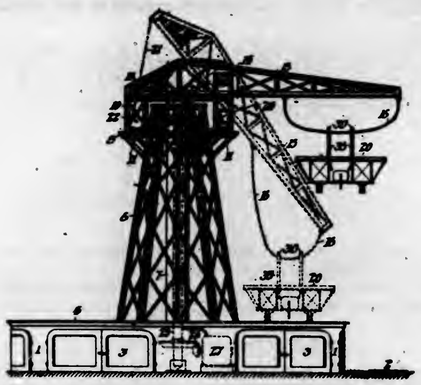
1,383,592. SHOCK-ABSORBER. ALBERT N. ANTHES, Fort Madison, Iowa. Filed Oct. 7, 1920. Serial No. 415,233. 3 Claims. (Cl. 267—19.)

2. In a device of the class described, the combination of a U-shaped stirrup adapted to be pivotally mounted in position to be operatively connected with and provide a support for the end of the main spring of the vehicle, a leaf spring rigidly attached to the other end of the pivot member, said leaf spring terminating in an angularly bent end portion, a clip mounted on the main spring, said clip carrrying a rotatable roller on which the angularly bent end of the aforesaid spring is adapted to ride, means



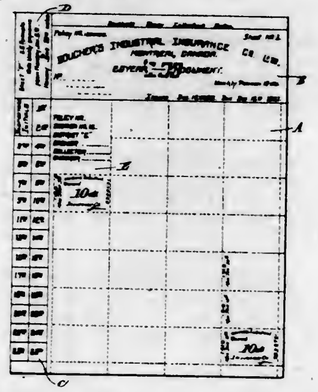
to limit the tilting movement of the stirrup, the clip having slottted side and top plates and having oiler members positioned on the top and sides adjacent the main spring, each of the side oilers being in contact with the top one.

1,383,593. LOADING-MACHINE. GEORGE R. BENNETT, Pittsburgh, Pa., assignor to Albert M. Hanauer, Pittsburgh, Pa. Filed Nov. 1, 1918. Serial No. 260,741. 8 Claims. (Cl. 193—49.)



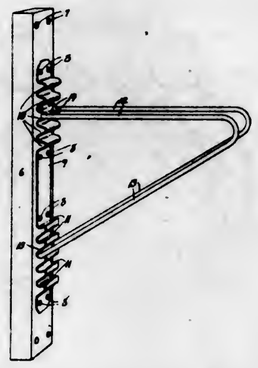
1. In a loading mechanism the combination of a plurality of shovels, means for moving material along said shovels, means for alternately reciprocating the shovels longitudinally and means for carrying the material away from the shovels.

1,383,594. LOADING-MACHINE. GEORGE R. BENNETT, Glen Osborne, Pa., assignor to Albert M. Hanauer, Pittsburgh, Pa. Filed Feb. 5, 1917. Serial No. 146,706. Renewed Mar. 5, 1921. Serial No. 449,746. 2 Claims. (Cl. 193—51.)



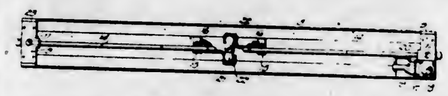
1. In a loading machine the combination of a truogh consisting of pivotally connected sections, the front section consisting of a plurality of independent fingers, means for forcing the front section under the material to be loaded, means for vibrating the fingers forming the front section and means arranged in the trough adapted to pass under the material lifted by the fingers and shift the same to the rear of the machine.

1,383,595. AIRPLANE LANDING AND LAUNCHING MECHANISM. JOHNNY S. BLACK, New York, N. Y. Filed Feb. 25, 1920. Serial No. 361,311. 15 Claims. (Cl. 244—2.)



1. In mechanism of the class described; a jib mounted to revolve azimuthally, and a cable secured to the radially outer end of said jib in a bight flexible both radially and circumferentially with respect to the center of revolution of said jib; and means holding said cable with both ends fixed on said jib.

1,383,596. RECEIPT-FORM. JOSEPH ARTHUR BOUCHER, Montreal, Quebec, Canada. Filed Dec. 10, 1918. Serial No. 266,086. 1 Claim. (Cl. 283—54.)

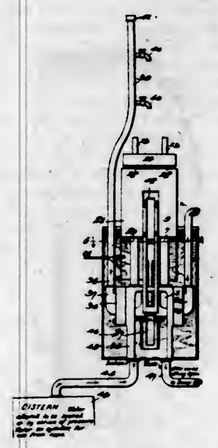


A contract form designed to cover a contract and calling for a number of serial payments comprising a sheet ruled with horizontal and vertical lines to provide a series of coupons on its face, the said coupons extending to one side and one bottom of the face, and having printed on the back thereof the numerical order of the serial payment, each coupon further having printed on the face thereof the amount of the payment and the serial number of the contract; a space B above the coupon in which the terms and serial number of a contract are printed, and a series of numbered rectangular checking spaces C immediately to one side of the coupons, each of the numbers on the checking spaces corresponding with one number of the numerated payments printed on the back of the coupons, each form further having a space E bounded by the rectangular checking spaces, the coupons and the space B and having printed thereon particulars as to the serial number of the contract, division of the territory for the distribution of the forms, cashier, collector, checker, and a space D above the rectangular checking space C and adjacent to the space B, having particulars as to the number of receipts and the number of the sheet of the contract imprinted therein.

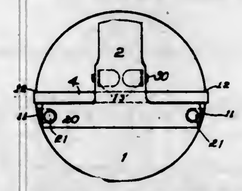
1,383,597. ADJUSTABLE BRACKET FOR GAS-METERS. THOMAS R. BRUCE, New Haven, Conn. Filed Mar. 21, 1921. Serial No. 453,878. 3 Claims. (Cl. 248—19.)

2. An adjustable gas-meter bracket having a mounting-strip, a sheet-metal bracket-plate applied thereto, and having its upper end transversely corrugated to produce sockets and its lower end transversely corrugated to produce bearing-seats; and a one-piece bracket-wire adapted to be applied to the upper and lower corrugations of the said plate with respect to which it is vertically adjustable.

1,383,598. LOCKING-RACK. CHARLES E. CAMPBELL, Lynn, Mass. Filed Sept. 14, 1916. Serial No. 120,186. 2 Claims. (Cl. 45—13.)



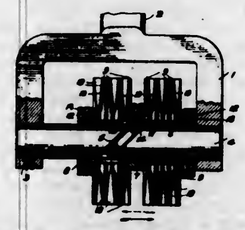
2. A rack having, in combination, a base member arranged to be secured to a wall; a pair of posts mounted at each end of the base member; a bar slidingly mounted on the posts; a series of coöperating corrugations formed on the opposing faces of the base and bar and extending longitudinally of said base and bar; means operable independently to lock the respective ends of said bar to the posts at variable distances from the base; and unitary means located near one end of the bar for unlocking both ends of the bar from the posts simultaneously.



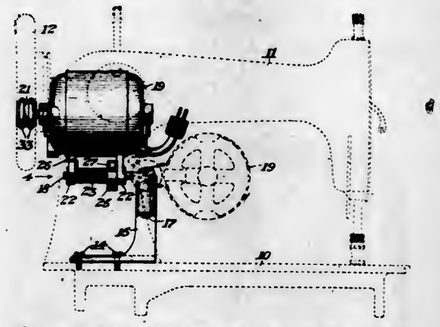
1,383,599. WATER-ELEVATING APPARATUS. ERNEST O. CARTWRIGHT, Springfield, Ohio, assignor to Charles F. Gardner, Springfield, Ohio. Filed June 10, 1919, Serial No. 303,068. Renewed May 19, 1921. Serial No. 470,946. 12 Claims. (Cl. 103—67.)

1. An apparatus of the class described, a primary and a secondary cylinder joined together, relatively fixed primary and secondary pistons coöperative with said cylinders, means including a shiftable valve device for delivering pressure fluid to the primary cylinder and exhausting the same therefrom to raise said cylinder and allow the same to fall again, means including a shiftable valve device for admitting water from a source of supply into said secondary cylinder as said cylinders rise and permitting

the same to be expelled from said secondary cylinder as the cylinders fall, a source of pressure fluid supply coöperative with said primary cylinder and a source of service water supply and a service delivery piping system coöperative with said secondary cylinder.

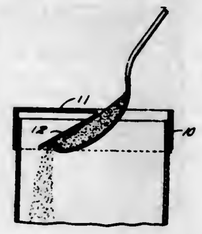


1,383,600. CAN OPENING AND PROTECTING DEVICE. MARGRET M. CODY, Seattle, Wash., assignor of one-half to James M. Cody, Seattle, Wash. Filed Aug. 19, 1919. Serial No. 318,566. 2 Claims. (Cl. 220—51.)



1. A milk can opening and protecting device comprising a cap adapted to fit over the top of a can, a T-shaped lever fixed upon the cap and pivoted upon a horizontal axis, and having can-piercing points at opposite ends of the head of said lever adapted to pierce the can head at opposite sides, the cap having holes only large enough for the passage of said points and positioned therebeneath, and a spring normally holding this end of the lever down upon the cap.

1,383,601. GRINDING-WHEEL-TRUING TOOL. EDWARD R. CONNERS, Cincinnati, Ohio, assignor to The Precision Truing Machine & Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 9, 1920. Serial No. 395,025. 4 Claims. (Cl. 125—37.)

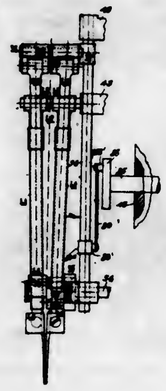


3. In a tool of the class described, a handle member, a shaft fixed upon said handle member, having an annular inclined groove about its periphery, a sleeve rotatable and slidable longitudinally upon said shaft, having an element engaged into said annular groove of said shaft, and abrading disks clamped upon the sleeve.

1,383,602. ELECTRIC-MOTOR-SUPPORTING ATTACHMENT FOR SEWING-MACHINES. HENRY W. CORNING, Cleveland, Ohio. Filed Jan. 27, 1920. Serial No. 354,452. 6 Claims. (Cl. 74—26.)

1. In combination with a sewing machine having a driving wheel, of a bracket on the machine having a vertical socket and positioning notches at the upper end thereof, a horizontal bracket arm resting on the upper end of said bracket and having a pivot loosely fitting the socket therein, and a motor having a pulley for driving engagement with the machine wheel and being mounted on said bracket arm to be shifted thereby to and from its operative driving position, the said arm engaging within the said notches of the bracket to be held stationary thereby in different predetermined positions.

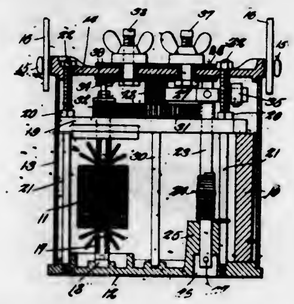
1,383,603. TEASPOON AND TABLESPOON LEVELER. HAROLD B. CRAIG, Springfield, Mass. Filed Nov. 16, 1920. Serial No. 424,355. 5 Claims. (Cl. 220—90.)



1. A device of the character described consisting of a supporting band, a plate connected to and supported by said band and partially free therefrom, the free portion of said plate inclining inwardly and downwardly and forming a reverting lip for the purpose described.

5. A device of the character described consisting of a supporting band, a plate connected to and supported by said band and partially free therefrom, the free portion of said plate inclining inwardly and downwardly and forming a reverting lip, said lip having a terminal upstanding extension attached to the lower surface of the plate as described.

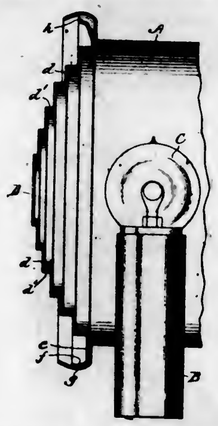
1,383,604. SEWING-MACHINE. FRANÇOIS CROZET, Condrieu, France. Filed Dec. 29, 1917. Serial No. 209,473. 3 Claims. (Cl. 112—158.)



1. In a sewing machine, the combination with a pair of vertically-arranged needle holders mounted for both

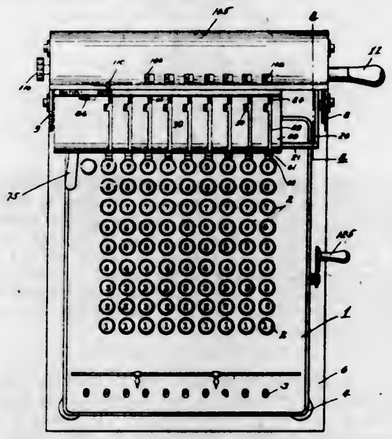
oscillatory and vertically reciprocatory movements with relation to the work plate for the fabric, and needles carried thereby, of separate means for imparting the oscillatory and reciprocatory movements to the needle holders, and means for moving the needles along paths

inclined relatively to each other so as to move laterally past each other at the top of their upward stroke; whereby both needles are caused to always reach the plane of the work plate at two points which are in a line that is normal to the line of feed of the fabric, and to pierce the fabric alternately at the same points in the plane of said plate.



1,383,605. MAGNETO. ALFRED U. DAVIS, Baltimore, Md., assignor to Davis Instrument Manufacturing Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 8, 1920. Serial No. 364,274. 2 Claims. (Cl. 171—76.)

1. A portable magneto-generator comprising; a base; a housing rising from said base; a magneto within said housing and disposed on said base; a bearing member on said magneto; a removable cover on said housing; and means for clamping said bearing member and cover against said magneto and housing respectively, comprising posts rising from said base and passing through said bearing member and cover, and having upper threaded portions, and nuts screwed on said threaded portions and bearing against said bearing member and cover.



1,383,606. SIGNAL-LIGHT FOR VEHICLES. JOSEPH DAVIS, Newark, N. J., assignor to The Insel Company, Newark, N. J., a Corporation of New York. Filed Nov. 13,1920. Serial No. 423,814. 12 Claims. (Cl. 240—11.)

1. A new article of manufacture comprising a closure of cross sectionally stepped formation and composed of flexible light-transmitting material the surfaces of which are so related as to permit the free and unobstructed transmission of light rays through the material, said

closure being susceptible of deformation for its introduction into a light housing and the material by reason of its inherent elasticity being adapted for retaining the closure in operative position relatively to said light housing.

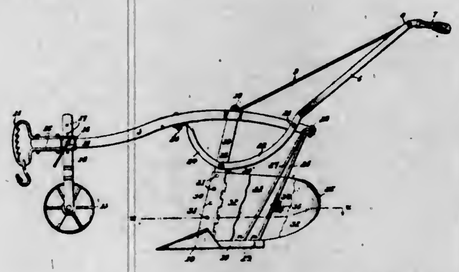
1,383,607. CALCULATING-MACHINE. ADOLPHUS S. DENNIS, Oakland, Calif. Filed June 0, 1919. Serial No. 302,964. 34 Claims. (Cl. 235—82.)

1. A device of the character described comprising the combination with the actuating parts of a calculating machine, of members for moving said parts, cams adapted to be set according to the numeral being used, means for reciprocating said cams to cause them to move said members an amount proportional to the cam settings.

7. A device of the character described comprising in combination with a calculating machine of the key operated type, reciprocable members adapted to depress the nine keys of said machine, setting devices and means for causing said setting devices to depress said members an amount proportional to the settings thereof.

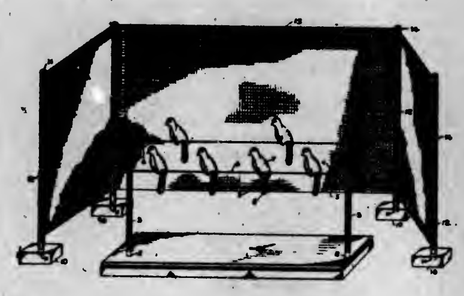
9. A device of the character described comprising in combination with a key operated calculating machine, setting devices, means operable by said devices for depressing the nine keys of said machine an amount proportional to the setting of said devices, and means for counting the depressions of said keys.

10. A device of the character described comprising in combination with a key operated calculating machine having a plurality of depressible keys, members for moving the nine keys thereof, setting devices, means for reciprocating said setting devices a uniform amount in the direction of movement of said key moving members, and means carried by said setting devices for contacting with said key moving member and moving the same an amount proportional to the setting of said devices.



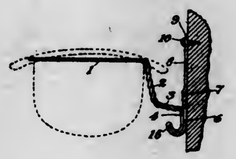
20. In a calculating machine, the combination with the actuating parts thereof of digital and codigital cams arranged in pairs, members adapted to move said actuating parts, means for bringing either cam of each pair into operative relation with said members and means for moving said cams to operate the actuating parts of the calculating machine according to the number being used.

1,383,608. MOLD-SEPARATING DEVICE. AUGUST P. DIESCHER, Pittsburgh, Pa. Filed June 11, 1920. Serial No. 388,313. 8 Claims. (Cl. 18—2.)



1. In a machine for separating mold sections from an inclosed core, the combination of three members adapted to engage respectively the mold sections and the core and means for shifting two members relative to each other and to the third member.

1,383,609. PLOW. STANISLAW DOMANSKI, Elyria, Ohio. Filed Oct. 8, 1919. Serial No. 329,257. 1 Claim. (Cl. 97—26.)

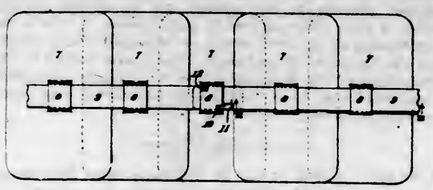


A plow of the class described comprising a beam, a ground engaging wheel adjustably carried by the forward end thereof, handles carried by the rear end of said beam, a runner, a shaft extending between the beam and the runner, braces extending forwardly and rearwardly of said shaft and connected to said shaft and beam, a pair of brace arms having their upper ends adjacently positioned and secured to the rear end of the beam, the arms diverging downwardly with their lower ends separately secured directly to the runner, one in advance of the other, a plow point carried by said runner, the shaft being triangular in cross section, a V-shaped frame inclosing the lower end of said shaft, mold boards hinged to the rear edges of the V-shaped frame to swing in horizontal directions and links adjustably connecting the mold boards to the rear brace arms.

1,383,610. GAME. ISAAC W. DOREMUS, West Englewood, N. J. Filed May 11, 1921. Serial No. 468,682. 5 Claims. (Cl. 124—15.)

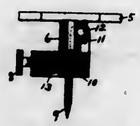
1. In a game the combination of a base member supporting upright rigid members, around the upper ends of which is strung a flexible member on which is supported a group of objects resting in balanced position, together with a number of secondary base members each supporting perpendicular uprights on which a net is secured, thereby serving as a backstop for missiles projected at said balanced objects.

1,383,611. HAT-RACK AND COAT-HOLDER. JOHN W. ETCHELLS, Brooklyn, N. Y. Filed Mar. 8, 1921. Serial No. 450,649. 2 Claims. (Cl. 45—13.)



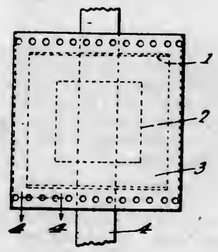
1. A hat rack and coat holder formed of a single piece of wire, having a horizontally disposed, closed loop adapted to surround the crown of a hat, a four ply, untwisted hook, a two ply, offset and twisted loop-shank extending from said loop to said hook, a two ply, twisted, back section extending away from said hook, and free ends with fastener receiving means.

1,383,612. PNEUMATIC-TIRE PROTECTOR. PETER EVANCHO, Oneida, Pa. Filed Dec. 16, 1920. Serial No. 431,293. 1 Claim. (Cl. 152—18.)



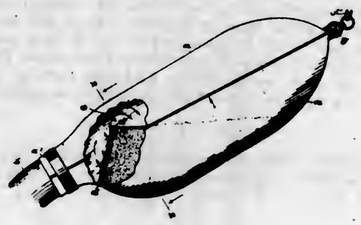
An internal armor for pneumatic tires comprising a band formed of a plurality of overlapping plates having transverse loops, and a securing strip threaded through said loops for retaining the plates in operative relation, the ends of said strip being overlapped and provided with

struck-up rearwardly directed edge lugs engaging opposite edges of one of said loops whereby the ends of the strip



are held again relative expanding displacement, one end of said strip being provided with an edge notch through which the lug of the other end of the strip projects.

1,383,613. CHUCK FOR TALKING-MACHINE NEEDLES AND THE LIKE. PINCUS FARR, Saginaw, Mich., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Oct. 4, 1918. Serial No. 256,837. 2 Claims. (Cl. 279—77.)



1. A chuck for talking machine needles and the like, comprising a socket member having a slot in its side extending into the socket in said socket member, a clamping member pivotally fixed to said socket member above said slot and having an integral blade portion projecting into said slot at one side of the socket member, and a yoke carried by said clamping member and encircling the socket member and said blade portion, and a screw mounted in said yoke and adapted to engage the other side of the socket member to draw said blade portion into contact with a needle placed in said socket member.

1,383,614. RAILWAY-TORPEDO. CLARENCE E. FRANKLIN, Fostoria, Ohio, assignor of one-third to John W. McDonel and one-third to Earl K. Cunningham, Fostoria, Ohio. Filed Apr. 26, 1921. Serial No. 464,621. 3 Claims. (Cl. 246—487.)

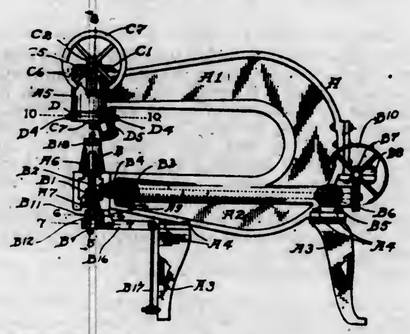
1. A railway torpedo including a flat tube constituting an outer casing, a flat tube constituting an inner casing and arranged within and extending transversely of the outer casing, an explosive charge within the inner casing, the ends of the inner and outer casings being sealed, and an attaching strap extending between the inner and outer casings and projecting therebeyond.

1,383,615. DUST-RECEPTACLE FOR VACUUM CLEANING APPARATUS. PHILIP A. GEIER, Cleveland, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 19, 1916. Serial No. 110,222. 2 Claims. (Cl. 183—51.)

1. In a device of the class described, the combination with a fabric-walled receptacle, having an inlet opening, of a partial diaphragm positioned therein adjacent to said opening and partitioning the lower portion of the receptacle from side to side, but affording a passage in the upper portion of said receptacle above the diaphragm approximately of the size of the inlet opening, substantially as set forth.

1,383,616. ELECTRIC FAN. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 15, 1918. Serial No. 222,597. 9 Claims. (Cl. 230—1.)

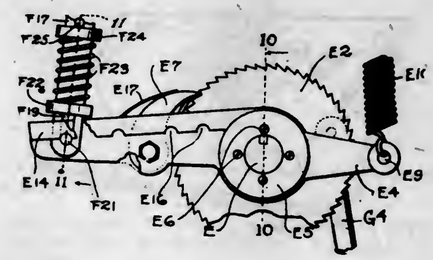
1. A fan motor having a motor-containing casing, a fan operatively secured to said motor, a guard for said fan, and means for securing said fan guard to said motor casing, comprising headed securing members mounted upon one end of said casing and means upon said guard having spaced outwardly flaring portions straddling the body portion of said members.



1,383,617. AUTOMOBILE-LOCK. ALBERT J. GRAY and WILLIAM HEBERN, Oakland, Calif., assignors, by direct and mesne assignments, to Security Auto Lock Co., a Copartnership consisting of Albert J. Gray, William Hebern, and David Guild, Jr. Filed Mar. 29, 1920. Serial No. 369,640. 4 Claims. (Cl. 70—128.)

1. In an automobile lock, the combination with the gear shift lever of an automobile and a member to which the lower portion of said lever is attached, of a locking member vertically adjustably mounted upon said gear shift lever, means for normally holding said locking member out of locking position, and means independent of and engaged directly with the first-named member for locking

said locking member to the first named member to prevent movement of said lever.



1,383,618. MACHINE FOR CUTTING SHEET-FORM MATERIAL. CHARLES BAXTER GRAY, Philadelphia, Pa. Filed Feb. 9, 1917. Serial No. 147,700. 19 Claims. (Cl. 164—68.)

1. In a machine of the nature described, the combination of a body, a first shearing wheel supported rotatably by said body, a shearing wheel supporting means supported by said body for rotation relative to said body on an axis which is coincident with the axis of the first shearing wheel, a second shearing wheel supported by said supporting means and having its edge meeting the edge of the first shearing wheel and rotatable on an axis which is non-coincident with the axis of the first shearing wheel, whereby by the rotation of said supporting means the second shearing wheel may be made to move bodily to different points in a path which is concentric to the axis of the first shearing wheel, substantially as described.

1,383,619. MECHANISM FOR TRANSMITTING MOTION. CHARLES B. GRAY, Philadelphia, Pa. Filed Apr. 22, 1918. Serial No. 230,144. 17 Claims. (Cl. 74—54.)

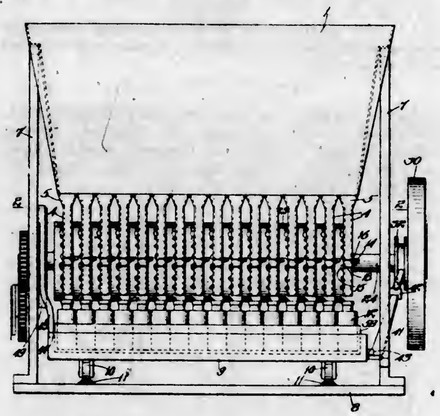
1. In a mechanism for transmitting motion, the combination of a reciprocable member and a connecting bar, the connecting bar and the reciprocable member being formed for inter-engagement at chosen places along the

length of the reciprocable member, and yielding means acting in the direction of the connecting bar and tending to maintain said engagement, substantially as described.

1,383,620. PANCHROMATIC SENSITIZING COMPOSITION. WILLIAM FRIESE-GREENE, London, England. Filed July 8, 1919. Serial No. 309,455. 5 Claims. (Cl. 95—7.)

1. A color sensitizer for color-photography comprising pinacyanel, pinaverdol, pinachrome, flavasin and ammonia mixed with water.

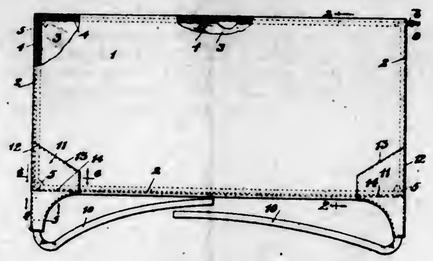
1,383,621. METHOD OF MAKING DOUBLE-PAGE MULTICOLOR MAPS. WILLIAN H. GREELEY, Newton, Mass., assignor to Ginn and Company, Boston, Mass., a Copartnership. Filed Mar. 26, 1921. Serial No. 456,017. 1 Claim. (Cl. 101—211.)



The method of making double-page multicolor maps which consists in making two separate plates for each half of the map, rigidly uniting together the two plates to constitute a control impression plate, or to be used in making such plate, printing from such control impression plate the control impression, registering two separate plates of the next color impression separately with relation to the two portions of the control impression, printing such second color impression in register with the control impression, and repeating the color printing steps for the several successive color impression.

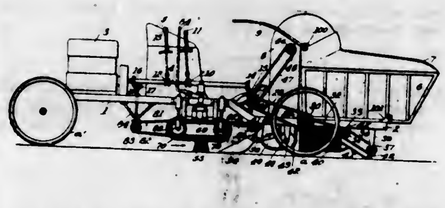
1,383,622. MAP-PLATE. WILLIAM H. GREELEY, Newton, Mass., assignor to Ginn and Company, Boston, Mass., a Copartnership. Filed Mar. 26, 1921. Serial No. 456,018. 1 Claim. (Cl. 101—395.)

A map plate for use in making double-page maps, consisting of two parts, each of impression area, having their inner edges separated from each other double margin distance, and rigidly united together in such relative position.



1,383,623. MACHINE FOR FEEDING PELLETS INTO CONTAINERS. JAMES E. GROVES, Boston, Mass. Filed May 8, 1920. Serial No. 379,748. 9 Claims. (Cl. 226—2.)

3. A machine for feeding articles into a container, having a feed tube, means for supporting a column of articles in said tube, means for releasing said articles one by one from said tube, a carriage which is movable beneath the lower end of said tube, a plurality of containers within said carriage, means for automatically moving said carriage in a step-by-step movement to successively bring each container into alinement with said tube, and means controlled by the mechanism which actuates the releasing of the articles from the tube to actuate the movement of said carriage after the releasing mechanism has been actuated to release a predetermined number of articles into the container.

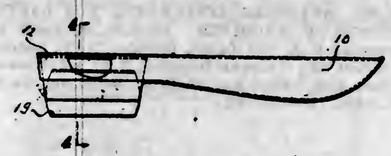


1,383,624. FLOTATION DEVICE. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1920. Serial No. 431,686. 3 Claims. (Cl. 9—17.)

1. A device of the class described comprising an inflatable body and outer covering corresponding in shape to said inflatable body, means for securing said inflatable body in said covering, tabs pendant from the outer covering

and securing tapes held within the tabs and projecting therefrom.

1,383,625. STREET-SWEEPER. WALTER S. GUYON, Brooklyn, N. Y. Filed Mar. 7, 1917. Serial No. 152,995. 11 Claims. (Cl. 15—17.)



1. In a street sweeper, the combination of a main frame, a brush, a brush-head on which it is mounted, antifriction rollers, each having a shaft, one end of which enters the brush head, an endless chain having certain of its links perforated to receive the other ends of the roller shafts, wheels supporting the said chain, a frame in which said wheels are mounted, said frame having channels in which the said antifriction rollers operate, means for driving the chain, means for raising and lowering the said frame, and guiding means for said frame in its up and down movement, consisting of vertical rods working through sockets on the main frame.

1,383,626. SOCKET-SHELL FOR INCANDESCENT ELECTRIC LAMPS. WILLIAM E. HAWKINS, Amityville, N. Y. Filed Sept. 27, 1920. Serial No. 413,075. 1 Claim. (Cl. 240—114.)

A socket-shell for incandescent lamps, the said shell having its body formed near its lower end with an abutment-bead, with screw threads located below the said bead and with an inwardly turned lead-flange located below and merging directly into the said screw threads and forming the extreme lower edge of the shell-body, whereby a shade-holder applied to the said lead-flange has its threads lined up thereby with the threads of the body of the shell.

1,383,627. SAFETY-RAZOR-BLADE HOLDER. HERMAN W. HIGLEY, New York, N. Y., assignor of one-half to Carl H. Fowler, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,821. 5 Claims. (Cl. 30—25.)

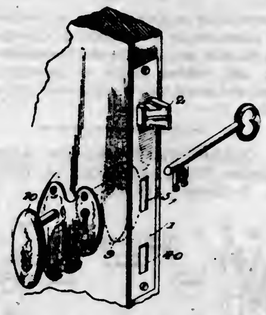
5. A blade holding clip for holding razor blades, said clip being resilient and substantially U-shaped in cross section, the surfaces of said clip being of a metallic substance adapted to adhere to or frictionally grip a steel razor blade, whereby a razor blade may be gripped within the clip and frictionally retained in position by said surfaces.

1,383,628. ANTISKIDDING CHAIN FOR WHEELS. JOSEPH F. HERMAN, Washington, D. C., assignor to Bernadette M. Herman, Washington, D. C. Filed Apr. 12, 1916. Serial No. 90,578. 4 Claims. (Cl. 152—2.)

4. An anti-skidding device for wheels comprising a chain, a ring secured to a link at one end of said chain, a hook connected to the link at the other end of the chain, said chain adapted to be applied to a spoke of the wheel by wrapping thereon and said hook adapted to adjustably engage with the links in the chain to secure the same and to provide a chain loop, and a chain secured to said chain ring and the chain loop and disposed transversely of the tire tread, substantially as set forth.

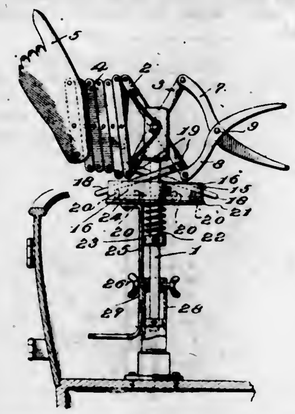
1,383,629. SURFACE-PLATE. FRANK O. HOAGLAND, Bridgeport, Conn., assignor to The Bilton Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 29, 1919. Serial No. 334,196. 3 Claims. (Cl. 33—174.)

1. A metal surface plate including a top portion having an operating surface, bridging concave-convex portions formed integral with the top body portion and inclosing pockets therewith, and posts in the pockets connecting the bridging to the body portion.



1,383,630. COMBINED TOOL-HOLDER AND CUTTER. FRANK O. HOAGLAND, Bridgeport, Conn., assignor to The Bilton Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 29, 1919. Serial No. 347,954. 4 Claims. (Cl. 29—96.)

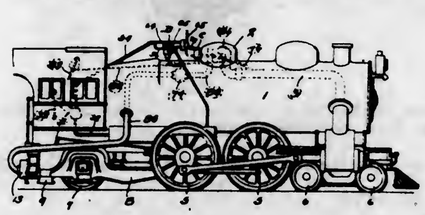
1. A tool holder comprising a head having a recess in one side and a hole therethrough, a cutter positioned at an incline in the recess and having a toothed upper edge portion forming a rack, a pinion having a tapered head positioned in the holder and engaging the rack of the cutter, a clamping plate positioned on the head of the holder to engage the face of the cutter, means to guide the cutter at an angle when operated by the pinion, and means to



draw the head of the pinion in the holder and to clamp and secure the cutter in position.

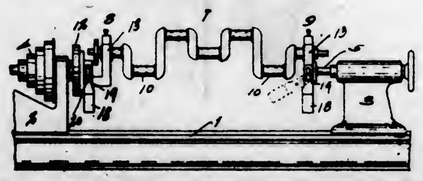
1,383,631. LOCK. CARL HOFFMAN, Allentown, Pa. Filed July 16, 1920. Serial No. 396,694. 7 Claims. (Cl. 70—29.)

1. A lock including a case, a spring held latch bolt, a tumbler controlled lock bolt designed for key actuation, a latchbolt operating lever carried by said locking bolt, lugs operable to engage a portion of said lever to retract said latchbolt, said lever having a second contact surface designed to be engaged by the lock bolt operating key to withdraw the latchbolt when the locking bolt is in retracted position, and means for preventing operation of the latch and locking bolts from one side of said case.



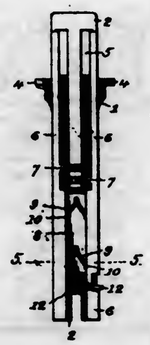
1,383,632. AUTOMOBILE-SIGNAL. CARL HOFFMAN, Allentown, Pa. Filed Aug. 16, 1920. Serial No. 403,753. 5 Claims. (Cl. 116—40.)

1. A signal including a support, an extensible signaling member pivotally secured to said support and adapted to



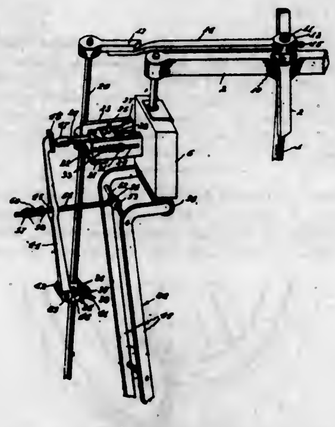
be bodily turned on its pivot so as to project upward or downward when extended, and means for actuating said extensible member to extend it, such means simultaneously turning said member on its pivot.

1,383,633. BOOSTER-MOTOR FOR LOCOMOTIVES. HOWARD L. INGERSOLL, White Plains, N. Y. Filed June 6, 1919. Serial No. 302,321. 36 Claims. (Cl. 105—48.)



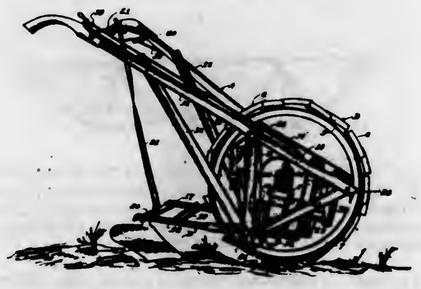
1. In controlling apparatus for a locomotive booster motor, the combination of mechanism for operatively connecting the booster motor with the locomotive, mechanism for setting said booster motor in operation, and means whereby the aforesaid two mechanisms are operable only in sequence.

1,383,634. CRANK-SHAFT HOLDER. ARTHUR G. JOHNSON, Spokane, Wash. Filed July 14, 1919. Serial No. 310,705. 2 Claims. (Cl. 82—9.)



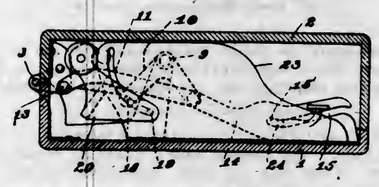
1. The combination with a lathe and a pair of holders each having adjustable centering and retaining blocks for a shaft, a counterweight for each holder formed with space arms pivoted to the holder, means for permitting adjustment of the counterweights with relation to their holders, and means for attaching the holders to supporting and operating parts of the lathe.

1,383,635. SPACE-BAND. CLAIR L. JOHNSON, Chicago, Ill. Filed Sept. 5, 1919, Serial No. 321,814. Renewed Oct. 8, 1920. Serial No. 415,676. 7 Claims. (Cl. 199—68.)



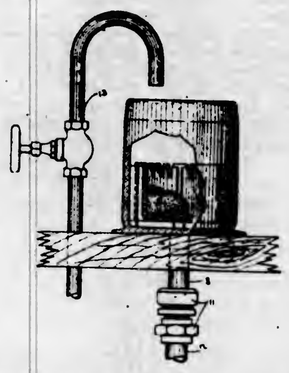
1. In a linotype space band, the combination of a wedge member formed with a receiving channel, a thickening strip associated with said channel, and means for shifting said strip from said channel to the back of the wedge member.

1,383,636. STAMPING ATTACHMENT FOR CARTON-SETTING-UP MACHINES. RICHARD E. JONES and THEODORE P. A. VON THIEN, Brooklyn, N. Y., assignors to Robert Gair Company, Brooklyn, N. Y., a Corporation of New York. Filed May 26, 1920. Serial No. 384,269. 9 Claims. (Cl. 93—55.)



1. In combination, a shaft; arms fixed on the upper end of said shaft; a former block pending from the outer end of each arm; a stub loosely mounted on the upper end of said shaft; a hanger arm having its inner end fast on said stud; a rigidly supported supporting-rod having its upper end fast on said arm; a stamp-holder fixed on said rod opposite said block; a stamp thereon; a bracket fixed on said supporting rod below said holder; and operating means carried on said bracket for pressing the stamp against a carton on the former block.

1,383,637. TRACTOR-CULTIVATOR. RICHARD A. KNESS, Los Angeles, Calif. Filed Oct. 30, 1916. Serial No. 128,592. 2 Claims. (Cl. 180—19.)

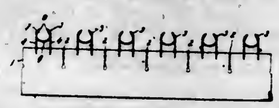


1. In combination with an annular tractor wheel; a triangular frame mounted by antifriction bearings within said annular wheel; an implement frame connected to the lower portion of said triangular frame; an engine carried by said triangular frame and operably connected to drive said annular wheel, and handles connected to the upper portion of said triangular frame.

1,383,638. INCASED COLLAPSIBLE TYPEWRITER. WELLINGTON P. KIDDER, Jamaica Plain, Mass., assignor, by direct and mesne assignments, of one-third to Harry Bates, New York, N. Y., and two-thirds to International Lettergraph Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 30, 1918. Serial No. 264,815. 25 Claims. (Cl. 197—186.)

1. In a device of the class described, a case comprising a pair of members mounted for relative movement in opening and closing, a typewriting machine frame comprising a pair of members mounted for relative movement to extend or compact the frame, a support carried by one case member and operatively associated with said frame members, and an operating connection between said support and the other case member for effecting said relative movement.

1,383,639. STATIONARY SELF-CLEANSING SHAVING-CUP. THOMAS J. KIRIAKOU, Indianhead, Md. Filed Feb. 26, 1921. Serial No. 448,263. 4 Claims. (Cl. 45—136.)

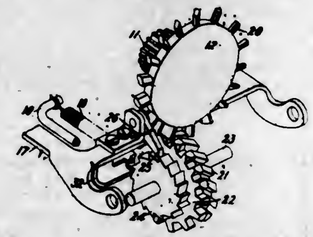


1. A shaving cup comprising an outer receptacle having a draining opening at the bottom thereof, and a removable inner receptacle having a non perforated bottom, adapted to be maintained free from the walls and bottom of said outer receptacle.

1,383,640. SALT-SPOUT. CULVER B. KNOX, Glen Ridge, N. J., assignor to The Whitehead & Hoag Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 8, 1920. Serial No. 415,695. 6 Claims. (Cl. 221—11.)

1. The combination with a container wall having an opening therethrough, of a pouring spout located in said opening, and comprising a substantially flat sheet of flexible material capable of being flexed to substantially U-shaped from and of returning by its own resiliency to substantially flat form after each flexing operation.

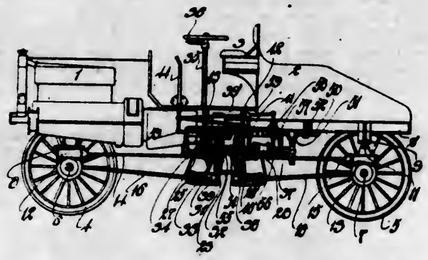
1,383,641. PRICE-TAG. FREDERICK KOHNLE, Dayton, Ohio, assignor to The Monarch Tag Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 5, 1918. Serial No. 248,271. 8 Claims. (Cl. 40—25.)



1. A ticket provided with a fastener consisting of a wire of soft metal bent to provide two parallel legs, the free ends of which are passed through the tag from one side and clenched upon the other side of the tag, the opposite ends of the legs converging toward each other and each terminating into a transverse hook fold connected by a circular loop, said circular loop arranged to and outwardly between looped ends of the legs when the legs are folded, as described, over the material, expressing outwardly the material engaged between said looped ends of the legs.

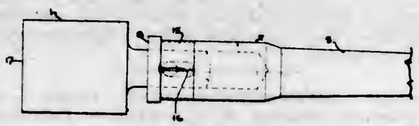
1,383,642. GARMENT-SUPPORTER. MATHEW KROMPIGEL, Youngstown, Ohio. Filed Aug. 27, 1919. Serial No. 320,126. 1 Claim. (Cl. 45—13.)

A garment supporter comprising a vertically twisted wire suspending line, a rectangular frame supported upon the top of said line, a depending wire member connected to said line, supporting fingers projecting from said wire member, a circular sheet metal frame in engagement with said fingers, and hangers suspended from the said depending wire member.



1,383,643. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1918. Serial No. 263,480. 17 Claims. (Cl. 197—82.)

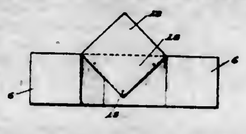
1. In a typewriting machine, the combination with a toothed escapement-wheel, normally urged to turn in one



direction, of a detent-wheel for controlling said escapement-wheel, said detent-wheel having teeth spaced so as to enable teeth of the escapement-wheel to pass therebetween, a tooth of said detent-wheel being normally in the path of movement of a tooth of the escapement-wheel, to block movement of the latter, and means to advance said detent-wheel, step by step, to permit the tooth of the escapement-wheel, previously in blocked position, to enter between two teeth of the detent-wheel, the teeth of said wheels being angularly disposed with respect to their axes, so that upon movement of the tooth of the escapement-wheel between two teeth of the detent-wheel, the latter wheel will be actuated by the former until the next tooth of the detent-wheel is brought into the path of the next tooth of the escapement-wheel.

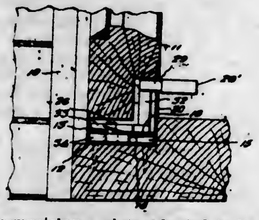
1,383,644. MOTOR-VEHICLE. ALBERT R. LANG, Spokane, Wash., assignor to Flood Manufacturing Company, Spokane, Wash., a Corporation. Filed Mar. 15, 1920. Serial No. 365,840. 5 Claims. (Cl. 280—91.)

1. The combination with the front and rear swiveled axles of a vehicle, of a pair of V-shape reach frames having their divergent arms attached thereto as described, a pair of oppositely disposed arcuate bolsters and an antifriction roller at the apex of each frame guided by said bolsters as described, means for laterally moving both frames to guide the vehicle, and means for holding one frame for the purpose described.



1,383,645. PRESSURE-BAR. OSCAR A. LAWRENCE, San Francisco, Calif. Filed July 25, 1919. Serial No. 313,183. 2 Claims. (Cl. 78—53.5.)

1. In a device of the character described an anvil having a stock thereon; a pin securely held in said stock and protruding from both sides thereof; a handle, drilled to slidably engage the stock of said anvil, having a retaining slot therein adapted to slidably receive said aforementioned protruding pin; and shock absorbing means interposed in said drilled hole in the handle adjacent the end of said anvil stock.

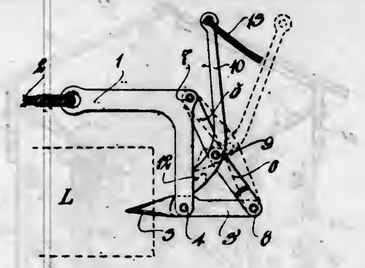


1,383,646. WATERING-TROUGH. BENJAMIN E. LUCKINBILL, Guthrie Center, Iowa. Filed Sept. 18, 1920. Serial No. 411,184. 5 Claims. (Cl. 119—61.)

1. The herein described trough composed of a single piece of sheet material folded to form a V-shaped bottom, vertical sides depending from the edges of the bottom panels, vertical end wings extending from the ends of the side panels and overlapping each other, flaps at the ends of the bottom panels folded at right angles to them and overlapping each other inside said wings, means

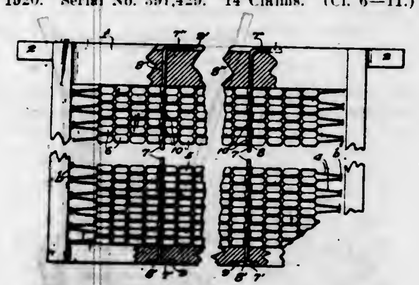
for connecting the wings and flaps at each end of the structure, and a water-tight connection between the free edge of the inner flap and the opposite bottom panel.

1,383,647. HINGE FOR CASEMENT-WINDOWS. VICTOR S. LUNDELL and GUSTAF EDWIN ECKBERG, Jamestown, N. Y. Filed Sept. 20, 1920. Serial No. 411,431. 7 Claims. (Cl. 16—106.)



4. A hinge comprising a plate adapted to be secured to a fixed member, a second plate adapted to be secured to a movable member, the first mentioned plate having an elongated slot and an opening therein, a pivot secured to the second mentioned plate and movable within said slot, the second mentioned slot having an opening, a link, lugs projecting from the opposite sides of the link adjacent the ends thereof, and received within the respective openings of the respective plates, and means carried by said pivot for holding said plates fixed relatively in an adjusted position.

1,383,648. BED. GEORGE R. MCALLASTER, Rochester, N. Y. Filed Apr. 5, 1918. Serial No. 226,949. 8 Claims. (Cl. 5—18.)



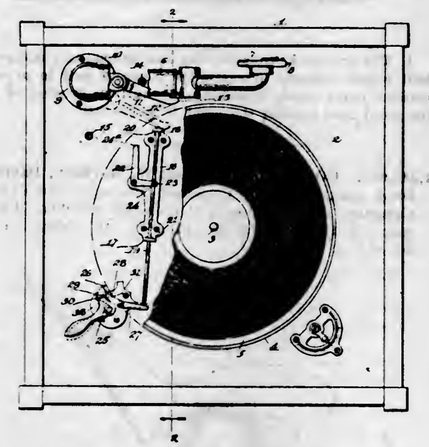
1. In a bed, a support, a bed frame mounted to swing thereon, and a frame arranged at the swinging end of the bed frame and movable longitudinally of the bed frame, said longitudinally-movable frame carrying means for holding the different bed clothes in spaced relation when the bed frame is thrown to an upright position.

1,383,649. JAMMER-HOOK. DANIEL MCGINNIS, St. Maries, Idaho. Filed Sept. 13, 1920. Serial No. 409,931. 4 Claims. (Cl. 294—83.)

1. The combination with an angular hook and its pivoted pointed shank, of a pair of flexible links connecting said members, and a release lever pivoted to said links having a fulcrum on said hook.

1,383,650. ARTIFICIAL HONEYCOMB AND THE ART OF AND MEANS FOR MAKING THE SAME. GEORGE M. MACDONALD, San Bernardino, Calif. Filed July 19, 1920. Serial No. 397,429. 14 Claims. (Cl. 6—11.)

1. An artificial honeycomb comprising a plurality of strips having grooves therein; said strips being integrally formed end to end and folded to assume superimposed positions relative to each other, the said grooves registering with similar grooves in adjacent strips to form complete cells.



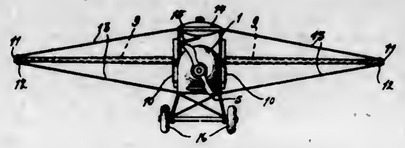
4. An artificial honeycomb comprising a frame; a plurality of strips formed integrally end to end of a continuous ribbon of sheet material folded so that the strips are superimposed upon each other; said strips respectively having grooves that register with similar grooves in adjacent strips to form cells, and means for retaining said strips in closely related superimposed position in said frame.

7. An artificial honeycomb comprising a plurality of strips integrally formed end to end and adapted to be folded at the juncture between their ends to assume superimposed positions relative to each other; said strips having grooves to register with similar grooves in adjacent strips to form cells, and said strips also having holes punched and located similarly in each strip relative to its ends and grooves; the burs formed by punching said holes occurring alternately on opposite sides of each successive strip before the strips are folded, and all extending in one direction when the strips are folded and superimposed; and wires extending through said holes to bind the strips in superimposed relation and to register the grooves with each other.

8. An artificial honeycomb comprising a frame, a plurality of elongated strips integrally formed end to end of sheet material and crimped to form transverse grooves alternately disposed upon opposite sides of the strips and alternately extending from opposite sides of the longitudinal center, being open at the edges of the strips and practically closed at the center thereof; said strips also having holes punched and similarly located in each strip relative to its ends and grooves, and the burs formed by punching said holes occurring alternately on opposite sides of each successive strip before the ribbon is folded, and all extending in one direction after the ribbon is folded and superimposed; there being uncrimped portions at the ends of the strips so that the strips are superimposed on each other and the grooves of said strip register with similar grooves in adjacent strips to form cells; and wires extending through holes in the frame and through the holes in the strips to hold the strips in superimposed relation in the frame and to register the grooves with each other.

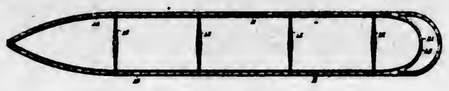
9. The method set forth of making metallic honeycomb which consists in crimping a metallic ribbon to form a series of semi-cell crimps in pre-determined lengths with blank spaces between said series; then punching the crimped spaces alternately, one series being punched in one direction and the next series in the other direction, so that the burs formed by the punch will be reversely arranged upon the successive strips; then folding the ribbon upon itself to bring the holes into register with each other, with the burs all in one direction, and then inserting wires through said holes in the direction of the burs and securing said strips in a frame by means of said wires.

1,383,651. AUTOMATIC STOP. FRANK MALOCSAY, New York, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Aug. 19, 1916. Serial No. 115,822. 10 Claims. (Cl. 192—116.)



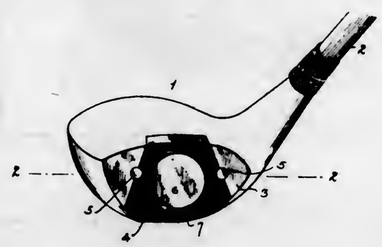
2. The combination with a reproducer and a record carrier, the two having relative movement for sound reproduction, of means including a settable element pivoted to the tone arm eccentrically of the axis thereof, for automatically causing such movement to cease when the reproducer reaches any predetermined point on the record, said settable element being automatically set to cause said means to become operative when the reproducer reaches any predetermined point on the record by a movement of the reproducer first in one direction and then in the opposite direction to said predetermined point.

1,383,652. AEROPLANE. STEVEN MARSEK, New York, N. Y. Filed Aug. 6, 1920. Serial No. 401,723. 2 Claims. (Cl. 244—29.)



1. An aeroplane comprising a body, substantially L-shaped rods, vertical sleeves on said body, the shorter

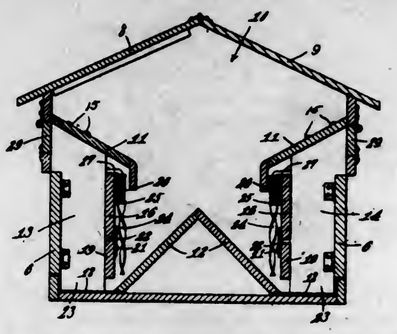
arms of said L-shaped rods having pivotal support in said sleeves, wings mounted upon the longer arms of said L-shaped rods, said longer arms passing entirely through said wings and providing shafts upon which said wings are adapted to turn, releasable means at the ends of said



longer arms for securing said wings in place, arcuate slotted frames supported upon said body, pins extending from said wings and adapted to engage said slotted frames, and means for varying the position of said pins in said slotted frames.

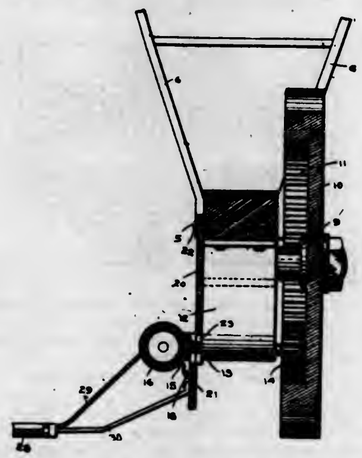
1,383,653. APPARATUS FOR AND PROCESS OF CONSTRUCTING AND LAUNCHING CONCRETE SHIPS. WILLIAM H. MASON, Haverford, Pa. Filed June 26, 1918. Serial No. 241,961. 14 Claims. (Cl. 25—130.)

1. The process of constructing and launching a concrete hull which consists in casting a concrete hull in a permanent outer mold, launching the hull by floating it in the mold, and sinking the mold from beneath it.



1,383,654. GOLF-CLUB. GEORGE W. MATTERN, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 12, 1919. Serial No. 316,956. 18 Claims. (Cl. 46—4.)

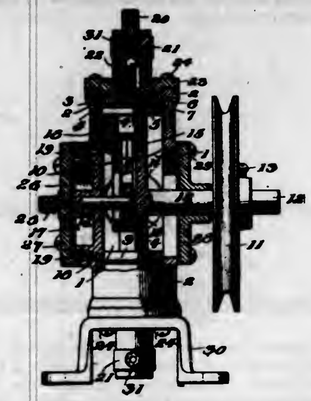
1. The combination with a golf club of a body of ivory, and a sleeve of fiber inclosing the body of ivory, said body and inclosing sleeve being embedded in the striking face of the club, substantially as specified.



1,383,655. HOG-FEEDER. ARTHUR MORRISON, Hamilton, Ill. Filed Sept. 22, 1920. Serial No. 411,967. 1 Claim. (Cl. 119—53.)

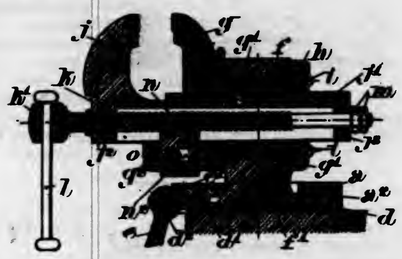
In a feeding device, a main receptacle, partitions within the main receptacle for dividing the same into feed troughs, means for controlling the passage of feed to the feed troughs, hinged doors for closing the feed troughs, vertically disposed rollers extending throughout the lengths of the hinged doors, and arranged at the adjacent edges of

the doors, and means for agitating feed within the receptacle.



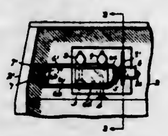
1,383,656. MOWER. JOHN BRYON NELSON, Jefferson, Tex. Filed July 22, 1920. Serial No. 398,073. 2 Claims. (Cl. 56—264.)

1. A mower comprising a mower beam, a bull wheel supported by the beam, a frame including an upper plate secured to the beam, a lower plate forming a part of the frame and having one end thereof pivotally connected to the upper plate, gearing carried by the frame, a sickle bar carried by the lower plate and adapted to receive motion through the gearing, and means at one end of the plates for permitting the lower plate to be adjusted vertically with relation to the upper plate.



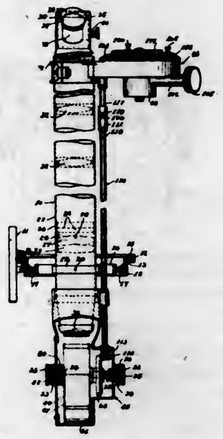
1,383,657. AIR-COMPRESSOR. JUAN NOGUERA, Buenos Aires, Argentina. Filed July 15, 1920. Serial No. 396,568. 2 Claims. (Cl. 230—27.)

1. In an apparatus of the character described, the combination of a casing; a plurality of oppositely-located pairs of cylinders disposed radially of and connected to the casing; a piston working in each cylinder; a connecting rod between the pistons of each pair of cylinders, each rod having a central longitudinal slot and being provided at its ends with lateral shoulders projecting in the same direction; said rods directly crossing each other so as to cause intersection of their slots; a central drive shaft extending through said casing and said slots; a single eccentric fixed to said shaft for action directly against the shoulders of all of said rods to reciprocate the same and thereby the pairs of pistons connected to them; fluid inlet



means associated with said cylinders; a collecting chamber in said casing; and a valve-controlled duct leading from each cylinder to said chamber to deliver to the latter the fluid compressed in said cylinders by said pistons.

1,383,658. PARALLEL VISE. NICOLAS OLIVIER, Lyon, France. Filed Sept. 13, 1920. Serial No. 409,785. 1 Claim. (Cl. 81—36.)



A quick action parallel vise capable of being rotated in the plane of its support and in a plane perpendicular thereto comprising a plate formed at its center with an aperture the edges of which are inclined, a support with a truncated conical base engaging in the said aperture, a sliding key on which said base rests, said key serving to lock the said base to the support and means for moving the key for locking and releasing the support to permit of the rotation thereof substantially as described.

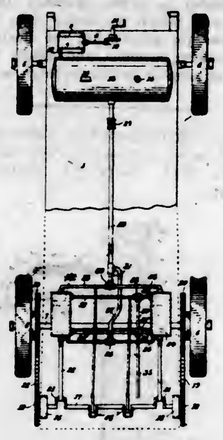
1,383,659. AUTOMOBILE-LOCK. EARL R. PERKINS, Syracuse, N. Y. Filed Sept. 27, 1920. Serial No. 412,922. 2 Claims. (Cl. 70—126.)

2. The combination with the body of an automobile and a plurality of controlling pedals, of a locking member pivoted for transverse movement in a vertical plane toward and away from said pedals, a plate carried by said memer adapted to frictionally engage the two nearest pedals when said member is swung laterally and downwardly and to force said pedals forwardly into their operative positions, means for preventing the flexing of the side rails of said locking member, and means for locking the free end of said member to the farthermost pedal.

1,383,660. GROUND-SPEED DEVICE FOR AEROPLANES. BARTON A. PROCTOR, New York, N. Y. Filed December 13, 1918. Serial No. 266,622. 42 Claims. (Cl. 235—61.)

1. In combination, a sighting instrument adapted to be sighted at different angles; a timing apparatus; adjustable means controlled by said instrument and adapted to start and stop the timing apparatus when the instrument is sighted at different angles; and graduations indicating how said means are adjusted to cause the starting and stopping of said apparatus when, while said instrument is held sighted on a given object, a selected unit distance of travel takes place between the object and the instrument.

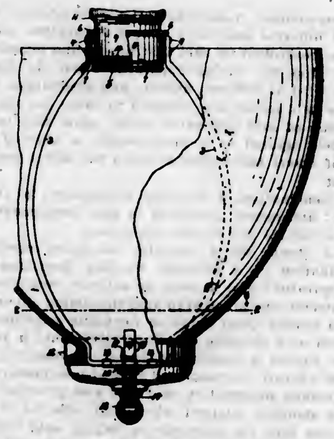
19. In combination, a sighting instrument; a timing apparatus; and means connected to said instrument and adapted to control the timing apparatus.



20. In a ground speed indicator for flying machines, the combination of a movable sighting instrument; a timing apparatus; and a pawl operatively connected to said instrument, and adapted to stop the timing apparatus.

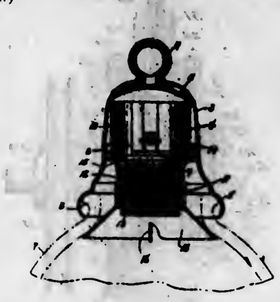
22. In a ground speed indicator for flying machines, the combination of a movable sighting instrument; a timing apparatus having a controlling lever; a rotatably supported disk operatively connected to said instrument; and a pawl pivotally mounted on said disk and provided with a forward shoulder adapted when said reflector reflects vertical rays into the telescope to engage said lever to stop the timing apparatus, said pawl being adapted when moving rearwardly to cam over said lever.

1,383,661. VEHICLE PROPULSION MECHANISM. FRANC RASPOTNIK, Westmoreland City, Pa. Filed Dec. 10, 1920. Serial No. 429,792. 5 Claims. (Cl. 180—1.)



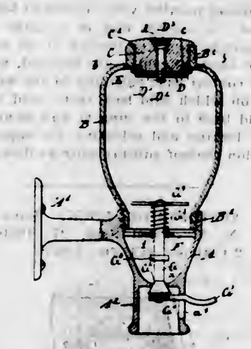
1. A toy vehicle including a frame provided with front and rear supporting wheels, a motor operatively connected to the rear supporting wheels for rotatably driving the latter and arranged adjacent thereto, a storage tank connected to the motor by means of a supply pipe and arranged at the forward end of the frame, and a pump arranged in

front of the storage tank for supplying compressed air to the latter, said pump being provided with operating



mechanism including a hand crank arranged at the forward end of the frame in the position usually provided for the starting crank of an automobile.

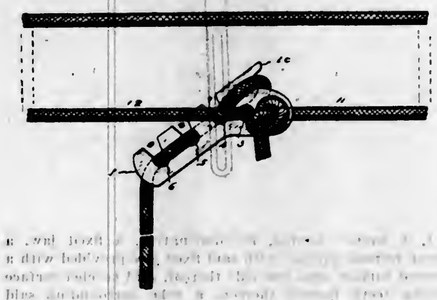
1,383,662. SHADE-SUPPORT FOR INCANDESCENT-ELECTRIC-LAMP SOCKETS. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed June 26, 1920. Serial No. 391,895. 1 Claim. (Cl. 240—111.)



In a shade-support for threaded incandescent-lamp sockets, the combination with two bowed frame-arms, shade-mounting means fastened to the shade-ends of the said arms, and lamp-socket mounting-means permanently fastened to the lamp-ends of the said arms and consisting of a one-piece lamp-socket receiving-ring fastened to the lamp-ends of the said arms, and formed at its inner end with threads for direct coaction with the threads at the lamp-receiving end of the lamp-socket, whereby, by the use of the said single ring, the said support and lamp-socket may be solidly screwed together for the use of the said support, either in the upright or in the inverted position.

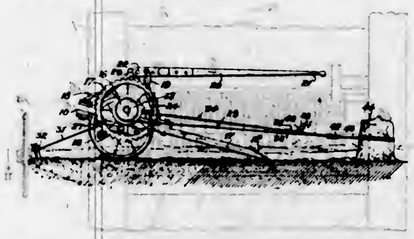
1,383,663. COMBINED INCANDESCENT-LAMP-SOCKET-INTERIOR COVER AND SHADE-HOLDER. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed July 1, 1920. Serial No. 393,284. 1 Claim. (Cl. 240—115.)

The combination with a lamp-socket-interior comprising a cylindrical base of insulating material, a screw-shell attached thereto and smaller in diameter than the same, and a tubular envelop of insulating material fitting over and conforming to the said base and shell; of a cover having suspension-means at its closed upper end and adapted to receive through its open lower end the said lamp-socket-interior and the neck of a lamp-shade; a retaining-sleeve made independent of the said cover and adapted to fit over the lower portion of the said insulating envelop and offset at its upper end to form a shoulder which engages with the said envelop at a point adjacent to the lower edge of the said base for crowding the said lamp-socket-interior upward into the closed upper end of the said cover and holding it therein against displacement, and the upper end of the said sleeve being removably secured to the inside of the said cover; and a shade-support having an upstanding sleeve by means of which it is applied to the said retaining-sleeve and formed upon its lower end with a flaring shade-supporting flange adapted to fit within the neck of a lamp-shade and coacting with the lower end of the cover for confining the neck of the shade in place therein.



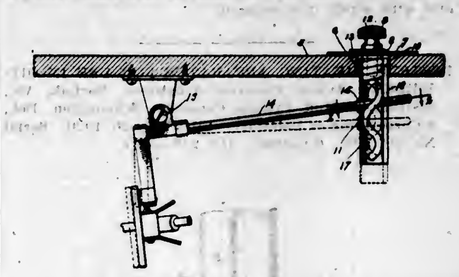
1,383,664. SOAP-POWDER DISPENSER. JOHN WALTER REMBE, Jersey City, N. J. Filed Nov. 28, 1919. Serial No. 341,000. 1 Claim. (Cl. 221—62.)

The herein described powder distributer comprising a reservoir and a casing separably formed and connected to the lower end thereof, a transverse bar in the upper end of said casing, there being a valve seat in said casing below said bar, and a tubular extension depending below said valve seat, a vertically disposed valve rod movable



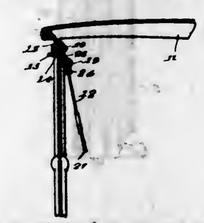
through said bar and through a delivery aperture at said valve seat, an agitator carried by the upper end of said rod, a collar on said rod between said bar and valve seat, a spring on the rod between said agitator and bar, a valve on said rod upwardly movable to close said aperture, and an operating arm connected with said rod and operable through a vertical slot in said depending extension.

1,383,665. LINE-CONNECTOR. JOSEPH P. ROHAN, Hartford, Conn., assignor of one-half to Morris B. Cartin, Hartford, Conn. Filed Jan. 18, 1921. Serial No. 438,202. 1 Claim. (Cl. 24—129.)



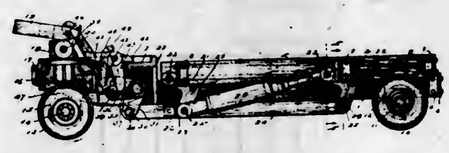
A line connector comprising a metal plate having two perforations near one end, a horn projecting from the end adjacent to said perforations, and slots in one edge of the plate, said slots tapering inward and terminating in openings that are larger in diameter than the width of the throats of the slots.

1,383,666. STUMP-PULLER. JOHN HENRY ROSEMEYER, Elmira, Idaho. Filed July 13, 1920. Serial No. 395,879. 5 Claims. (Cl. 254—166.)



1. A stump puller comprising a main U-shaped frame having the forward free end of its extensions provided with beveled ground engaging shoes, a supplemental frame secured on the main frame, a drum having bearing in the supplemental frame, side plates secured to the opposite sides of the main frame, stub axles carried by said frame and the said side plates, wheels mounted upon the said stub axles on which the frame is portable when the extensions of the main frame are lifted from the ground, anchoring connections leading rearwardly from the lower portions of the said side plates, a pulley carrying connection secured at its rear ends to the upper forward portions of the said side plates and having a forwardly extending free end, and a hitch piece carried by the said plate attaching connection with which the free end of the drum actuated cable has an adjustable connection.

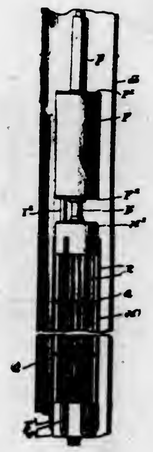
1,383,667. SPEED-CONTROLLER. CHARLES F. RUBSAM, Brooklyn, N. Y. Filed Feb. 15, 1919. Serial No. 277,300. 15 Claims. (Cl. 188—187.)



1. In a speed regulator, a spiral member, an operating member operatively engaged by the spiral member, and a housing having frictional engagement with the spiral member and provided with means which prevents its rotation with the spiral member.

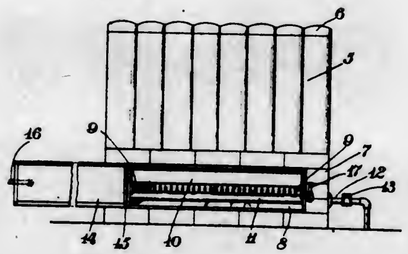
1,383,668. VEHICLE ATTACHMENT. WALTER C. SMITH, Watertown, N. Y. Filed July 29, 1919. Serial No. 314,008. 3 Claims. (Cl. 296—97.)

2. A non-glare attachment for vehicles comprising a plate, means for securing the plate to a vehicle wind shield to interrupt the passage of light, a longitudinally slidable extension for said plate, whereby the area of interrupted light may be regulated and means for yieldingly holding the extension in adjusted position.



1,383,669. ELEVATING-TRUCK. CHARLES W. SPONSEL, Wethersfield, Conn. Filed Feb. 21, 1921. Serial No. 446,597. 8 Claims. (Cl. 254—10.)

1. An elevating truck comprising a body frame, wheels supporting said frame, an elevator frame, bell crank levers fulcrumed to the body frame and having the upper limb of each pivoted to the elevator frame, bars connecting the lower limbs of the bell crank levers on each side, a transmitting shaft extending transversely of the body frame, rocker arms keyed on the transmitting shaft and jointed to the ends of said connecting bars, an arm keyed to the transmitting shaft, a latch pivotally mounted on the body frame and adapted to engage and hold said arm lifted, arms pivoted on the transmitting shaft and adapted to engage and lift the arm keyed to the transmitting shaft, fingers connected to said lifting arms, a steering wheel

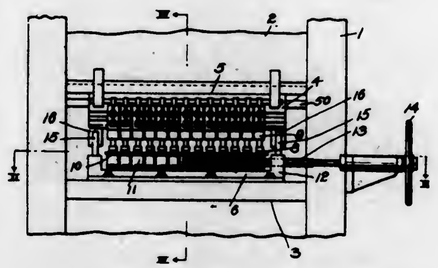


post mounted in the body frame, a draft handle pivoted to said post, means for engaging said fingers with the draft handle, and means for disconnecting said latch from the arm with which it is engaged.

1,383,670. HEATING APPARATUS FOR USE IN OIL-WELLS. JAMES CARLYLE STEPHENS, Norfolk, Va., assignor to Huff Process Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1920. Serial No. 397,590. 6 Claims. (Cl. 219—33.)

1. Apparatus for use in heating oil wells, comprising an inner tube projecting down into the casing, a closed contact box carried by said tube and provided with an insulated contact therein, an electric heater suspended from said contact box, electric conductors leading from said contact box to said heater, an electric cable, and a circuit closer suspended from said cable adapted to be lowered through said tube and to close the circuit through said contact box, substantially as described.

1,383,671. DOMESTIC HEATER. JOSEPH H. STETTNER, Columbus, Ohio. Filed Mar. 10, 1921. Serial No. 451,380. 2 Claims. (Cl. 126—85.)

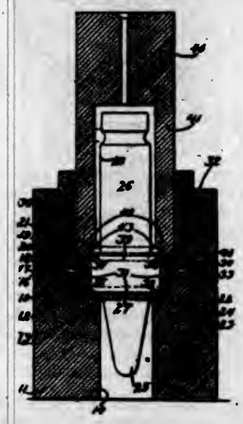


1. A heater comprising, in combination, a flueless heat storing slow radiating body, a combustion chamber within said body, and a heat insulating door for air tightly closing said combustion chamber when the body has been heated.

1,383,672. WRENCH. CHRISTOS A. STOLAKIS, Boston, Mass. Filed Dec. 14, 1920. Serial No. 430,698. 3 Claims. (Cl. 81—106.)

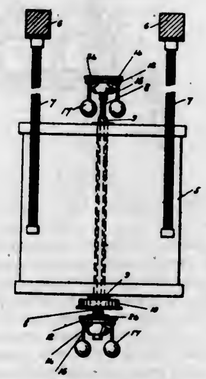
1. A wrench having, in combination, a fixed jaw, a shank formed integral with said fixed jaw provided with a beveled surface upon one side thereof, said beveled surface having teeth formed thereon, a yoke surrounding said shank and provided with teeth adapted to engage the teeth of said shank, a movable jaw opposed to said fixed jaw, a shank formed integral with said movable jaw pivotally mounted upon said yoke and yielding means interposed between said shanks adapted to force said teeth into engagement with each other and thereby rigidly secure said yoke upon the shank of said fixed jaw.

1,383,673. PUNCHING-MACHINE. GEORGE P. THOMAS, Glenshaw, Pa. Filed May 12, 1920. Serial No. 380,796. 3 Claims. (Cl. 164—90.)



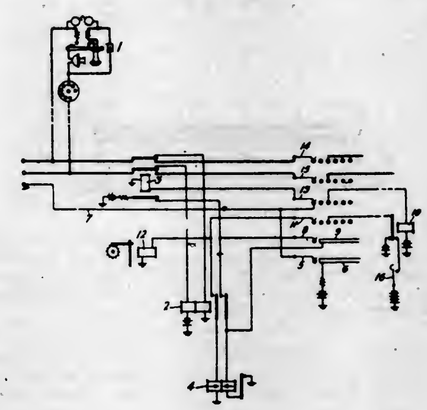
1. In a multiple plate-punching machine, the combination of a frame provided with an anvil, a reciprocating head, laterally movable punch and die carriers borne respectively by said head and anvil, means for moving said carriers laterally during the operation of the punch, said carriers being equipped with a series of coöperating punches and dies arranged in a line transverse to the line of feed through the punch for punching end and intermediate transverse lines of holes, and a series of coöperating punches and dies attached to said head and arranged in a line parallel to the line of feed through said punch for punching holes in multiple in the side of a plate, said last mentioned series of punches and dies being immovable during the punching operation.

1,383,674. PROCESS FOR THE PRODUCTION OF FINE SOOT SUITABLE FOR THE MANUFACTURE OF PIGMENTS. EMERICH SZARVASY, Budapest, Hungary. Filed June 3, 1920. Serial No. 386,408. 3 Claims. (Cl. 134—60.)



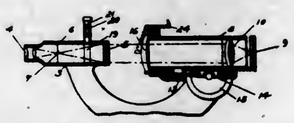
1. The process, which consists in diluting methane with a neutral gas and subjecting the mixture to a heat treatment, whereby the methane is split up.

1,383,675. DIE. WILLIAM S. THOMAS, Lock Haven, Pa. Filed Feb. 10, 1920. Serial No. 357,722. 6 Claims. (Cl. 29—33.)



1. A set of dies, for securing a jacket to an insulator which has an enlarged flange between its ends, including a base die having a recess into which the jacket can be seated; a top die fitting said base die and including a hole for embracing said jacket below the upper edge thereof, said top die including a recess above said flange; and a plunger die movable downwardly within said recess and having a portion adapted to engage and turn inwardly said upper edge of the jacket whereby when said flange of the insulator is placed within said jacket, the edge of said jacket can be turned over the flange of the insulator; substantially as described.

1,383,676. DRIVING MECHANISM FOR SHAKING-BOLTS. CARL G. THOMPSON, Knoxville, Tenn. Filed Nov. 23, 1920. Serial No. 425,985. 4 Claims. (Cl. 74—14.)



2. The combination, with a gyratory device, of a vertical driving shaft journaled in the said device, and two similar driving devices carried by the upper and lower end portions of the shaft, each said driving device comprising a pair of weighted arms pivotally connected with the driving shaft and normally arranged on opposite sides of it, and means operating to guide the weighted arms toward each other into an unbalanced position on one side of the shaft as they are moved outwardly by centrifugal force.

1,383,677. TELEPHONE-EXCHANGE SYSTEM. GEORGE THOMPSON, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1919. Serial No. 315,820. 4 Claims. (Cl. 179—18.)

1. In a telephone exchange system, an automatic switch, a differentially wound stepping magnet for operating said switch, and means for energizing the windings of said magnet to prevent further operation thereof when the switch engages terminals of an idle line.

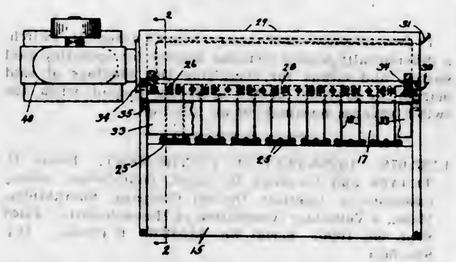
1,383,678. LENS-TESTING INSTRUMENT. EDGAR D. TILLYER and CHARLES H. KERR, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 25, 1920. Serial No. 412,639. 6 Claims. (Cl. 88—56.)

1. In a lens testing instrument the combination with a lens support, of means for projecting an image through a lens on the support with parallel emergent rays, an eye piece section reproducing the image of the object projected by said parallel rays, said eye piece including a physical object at the image point and a supplemental lens insertible in the eye piece section of power to focus at said image point the physical image of the lens being tested.

1,383,679. DEMOUNTABLE RIM FOR AUTOMOBILE-WHEELS. JAMES H. WAGENHORST, Jackson, Mich. Filed June 11, 1919. Serial No. 303,527. 12 Claims. (Cl. 301—19.)

1. The combination with a channeled fixed rim, the outer leg of said fixed rim having depressions at definite points,

of a demountable tire carrying rim having an inrolled bead, said bead being apertured at definite points, clamps having outwardly projecting lugs passed through said

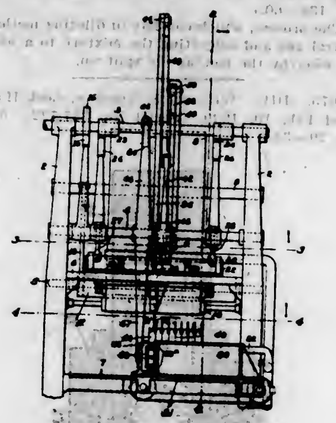


apertures and riveted to the rim, bolts passing through the fixed rim and clamps, and nuts upon the ends of said bolts.

1,383,680. METALLIC PIPE-COVERING. JOHN A WALDORF, Salt Lake City, Utah. Filed Oct. 20, 1920. Serial No. 418,260. 4 Claims. (Cl. 154—45.)

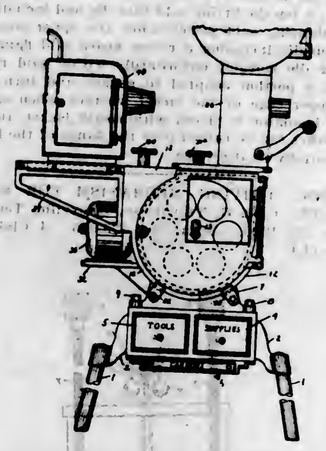
1. A pipe covering composed of semi-tubular metal sections containing hermetically sealed air spaces, spacers to center said sections with reference to the pipe covered, and semi-tubular telescope joints to connect said sections at places requiring odd lengths of section.

1,383,681. CONFECTIONERY-MAKING MACHINE. WILLIAM V. WALLBURG, Melrose, Mass. Filed Oct. 17, 1919. Serial No. 331,405. 19 Claims. (Cl. 107—20.)



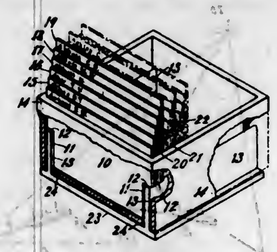
1. The combination of a plurality of dividing means arranged side by side and spaced apart, upon which strands of candy are adapted to be placed, means to heat said dividing means to a temperature sufficient to melt the candy strands placed thereon, and means to press the candy strands against the dividing means in a downward direction to accelerate the dividing movement.

17. A candy cutting machine having an opening, a plurality of dividing means arranged side by side, and spaced apart above the openings upon which a strand of candy is adapted to be placed in angular relation with respect thereto, and means for heating said dividing means to a temperature sufficient to melt the candy strand to divide it, the pieces passing through the spaces down into the opening and cooling means having delivery orifices adjacent the dividing means for delivering air to the melted divisional surfaces of the strand.



1,383,682. BOX-LINING MECHANISM. WALTER S. WEBER, Reading, Pa., assignor to William H. Luden, Reading, Pa. Filed Apr. 15, 1920. Serial No. 374,023. 13 Claims. (Cl. 93—55.)

1. In a machine for lining sheet-material boxes; an apertured lining-blank support, a box support below the same, and mechanism for forming and inserting the lining comprising a gravity-operated plunger and means for



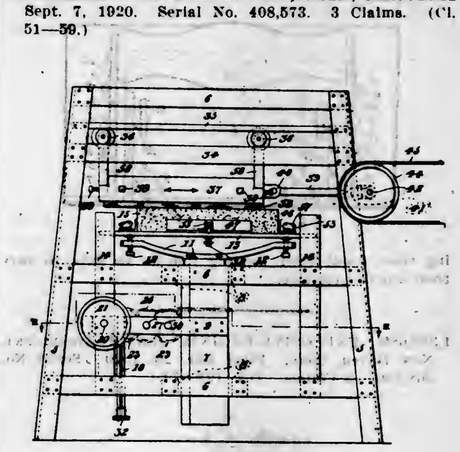
adapting the momentum thereof to merely overcoming the normal resistance of forming and unobstructedly inserting the blank into the box.

1,383,683. UNIVERSAL PROJECTOR-SUPPORT. WILLIAM WENDERHOLD, New York, N. Y., assignor to Cru Patents Corporation, a Corporation of New York. Filed June 9, 1917. Serial No. 173,763. 5 Claims. (Cl. 88—17.)

1. A supporting structure for a projecting apparatus consisting of a main base, a second base pivotally supported thereon upon a vertical axis, magazines or drawers in the main base, a source of power supported by the second base, a film reel magazine pivotally mounted upon said second base, a horizontally disposed reel shaft for actuating said reel magazine, said reel shaft forming the pivotal axis for said reel magazine, said shaft being disposed in longitudinal alinement with the driving element of the driving power source, means to pivotally adjust said second base and said reel magazine, and a projecting apparatus supported by said reel magazine.

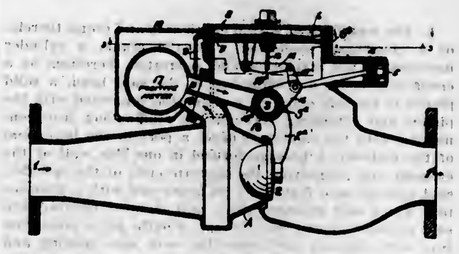
1,383,684. INDEXED CARD SYSTEM. LESTER A. WEBURY, Brooklyn, N. Y., assignor to Burnham C. Stickney, Elizabeth, N. J. Filed Jan. 17, 1917. Serial No. 142,792. 18 Claims. (Cl. 129—16.1.)

1. In combination, a bank of self-finding cards, each having a heading along one edge, the cards provided with supporting or locating means in the form of shoulders at a variety of distances from said heading, each card having its locating means at only a single distance from said heading, to render the card self-locating relatively to the remaining cards, and the single locating means upon each card being at a different position from the locating means upon the remaining cards, to enable the cards to locate themselves to show said headings in stepped or echelon arrangement as they are banked, and a common support upon which said cards are so banked normally.



14. A card tray having card-supporting ledges upon opposite sides, said ledges being fixed upon a removable base upon which the tray rests.

1,383,685. DINING-TABLE SERVICE-INDICATOR. ERNEST W. WHITE, Milford, Ohio, assignor to Meredith G. Standley, Cincinnati, Ohio. Filed June 8, 1920. Serial No. 387,419. 6 Claims. (Cl. 116—132.)

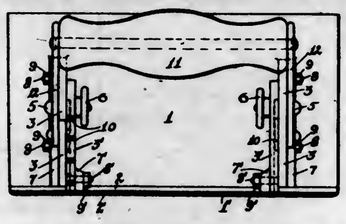


1. In a telescopic display column, a tubular base section, a second tubular section telescopically mounted within said base section, expansion means within said base section for extending the said second telescopic section, and means for limiting the extensive movement of the said second section, the said means comprising a cushion spring carried by the said second section and surrounding the same, and abuttingly engaging the said base section to retard and limit the extensive movement of the expansion means within the said base section.

1,383,686. FIRE-BRICK TRIMMING OR BEVELING MACHINE. FRANK WIERZBOWSKI, Lorain, Ohio. Filed Sept. 7, 1920. Serial No. 408,573. 3 Claims. (Cl. 51—59.)

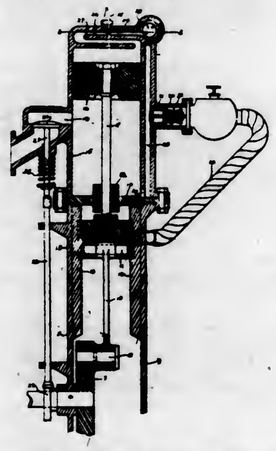
1. In a brick trimming machine of the class described, a carriage adapted to have a grinding or dressing stone clamped therein, means to horizontally reciprocate said carriage, a brick supporting pallet, means to elevate said pallet to engage the upper surface of the brick thereon with the stone carried by said carriage, means to adjust said pallet at an angle to the horizontal whereby beveling of the brick may be had, said last named means including a vertically movable standard having a spider fastened upon the upper end thereof, and set screws threaded upwardly through said spider in supporting engagement with the under surface of said pallet.

1,383,687. METER. ALBERT R. WOOD, New Orleans, La. Filed Mar. 22, 1918. Serial No. 223,893. 7 Claims. (Cl. 73—167.)



1. A metering apparatus comprising in combination a casing, a main valve, a positive meter by-pass around said main valve, a differential pressure member tending to press said valve toward its seat, and means for subjecting said member to the pressures from the inlet and discharge sides of said meter by-pass.

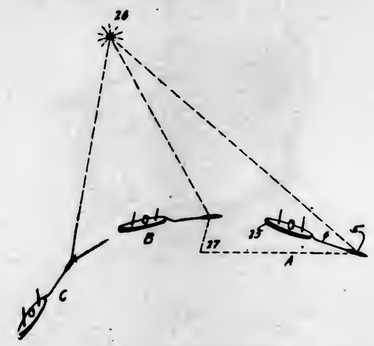
1,383,688. CORNER-TROWEL. WILLIAM W. WORD, Piedmont, Calif. Filed Nov. 30, 1920. Serial No. 427,427. 6 Claims. (Cl. 72—136.)



1. A corner-trowel comprising angularly disposed blades, the adjacent edges of which meet in a line in the planes

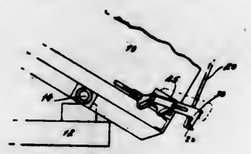
of their outer faces, and are spaced from each other back of said line; and means connecting said blades, for turn

ing them about their meeting line as an axis, to vary their angular relation.



1,383,689. EXPLOSIVE-ENGINE. JOHN R. ZYGALINSKI, New Haven, Conn. Filed Mar. 26, 1920. Serial No. 368,890. 2 Claims. (Cl. 123—74.)

1. The combination with a crank-case and crank therein, of a cross-head connected with the crank, a cylinder mounted of the crank-case and separated therefrom by a crank-case head, a stuffing-box in the said head, a solid piston in the said cylinder, a piston-rod connected with the piston and extending through the stuffing-box into connection with the said cross-head, a port in the lower end of the cylinder, a passage formed in one side wall of the cylinder and connecting the opposite ends of the cylinder, said cylinder also formed at its upper end with a chamber into which said passage opens, said chamber opening into said cylinder at one side thereof, a baffle plate projecting into said chamber and extending over said opening and between it and the said inlet passage, a check-valve at the upper end of the said passage, an intake-valve opening into the said passage near the center thereof, a check valve in said intake opening, an exhaust-port opening from one side of the cylinder, and an exhaust-valve controlling said port.



1,383,690. METHOD OF DETECTING UNDERWATER VIBRATIONS. HAROLD D. ARNOLD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,384. 7 Claims. (Cl. 181—0.5.)

1. A method of detecting the direction of a source of sound which consists in towing a pair of detecting devices a fixed distance apart, obtaining a binaural balance, changing the course of the towing vessel, obtaining a second binaural balance and deducing from these balances the direction of the source of sound.

5. In apparatus for detecting the direction of a source of under-water sound, the combination with a towing vessel of a detecting device comprising a pair of detectors spaced a fixed distance apart, a towing cable for towing said device from said vessel and means for obtaining a binaural balance between said detectors.

1,383,691. TAIL-GATE LATCH. PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Co., Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1920. Serial No. 388,483. 8 Claims. (Cl. 298—23.)

1. In a device of the character described, a body having a pivotally mounted tail gate, a latch for holding the same, said latch being mounted at the base of the body, and means for manually adjusting and holding the tail gate in partially opened position, and thereafter freeing it by moving said latch while maintaining it at all times parallel to itself, said latch being operable independently of the position of the truck body.

1,383,692. PULLEY-FACE-FRICTIONING COMPOSITION. DAVID M. BENFORD, North Pelham, N. Y. Filed Feb. 21, 1920. Serial No. 360,461. 8 Claims. (Cl. 106—7.5.)

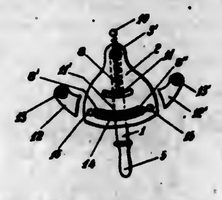
1. A pulley-face frictioning composition, comprising water-floated ground glass; and a hard-drying liquid mixed therewith.

1,383,693. COLLAR. JOHN BLAKESLY BOLTON, Methuen, Mass., assignor to John Manning Van Heusen, Boston, Mass. Filed Feb. 26, 1914, Serial No. 821,350. Renewed Oct. 29, 1919. Serial No. 334,375. 12 Claims. (Cl. 2—67.)

3. A shirt collar, made up of fabric having a reinforce of longitudinal threads of pliable material interwoven in the fabric and capable of receiving and maintaining a curvilinear set, said threads comprising soft metal wire.

5. A folding shirt collar, made up of multiple-ply interwoven fabric comprising an outer layer of woven fabric, an intermediate layer of woven fabric whose longitudinal threads are omitted along a median line corresponding to the folded edge of the collar, and a third layer whose longitudinal threads are similarly omitted.

11. A folding collar made up of an inner neck band and an outer turn-down band, said bands being woven in one piece of multiple-ply interwoven fabric and connected along their upper edges by an intermediate weakened edge-fold portion.

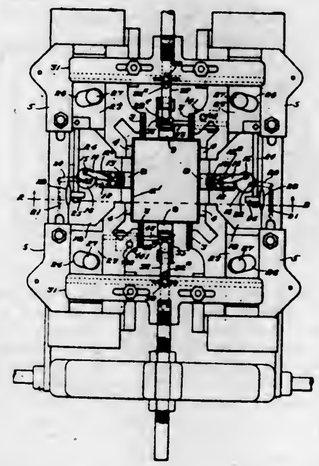


1,383,694. COLLAR. JOHN BLAKESLY BOLTON, Methuen, Mass., assignor to John Manning Van Heusen, Boston, Mass. Filed Feb. 26, 1914, Serial No. 821,351. Renewed Oct. 29, 1919. Serial No. 334,376. 9 Claims. (Cl. 2—67.)

6. A folding collar, made up of a neck band portion and a folding portion woven integral therewith of multiple ply interwoven fabric, the neck band being woven thicker and stiffer than the folding portion, and the collar folding along the edge of said neck band.

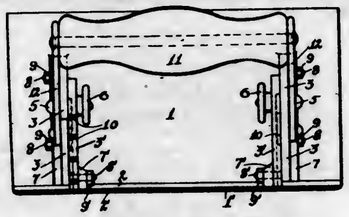
1,383,695. ELECTRIC SWITCH. GIUSEPPE COMBONI, Milan, Italy. Filed Feb. 13, 1920. Serial No. 358,395. 1 Claim. (Cl. 200—67.)

An electric switch of the character described comprising a base, two levers connected on a common pivot secured to said base, a spring having one end secured to said base and the other end secured to a point of one of said levers, two additional springs having a common end secured to a common point of one of said levers and the other ends secured to two different points of the other lever, and symmetrically arranged contact spring plates



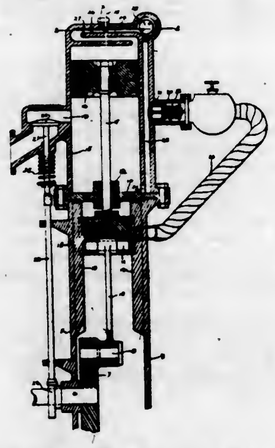
into which to snap said second mentioned lever, the common pivot of the levers being a common terminal of the double throw switch.

1,383,696. ARTIFICIAL TOOTH. ARTHUR N. DAVIS, New York, N. Y. Filed May 4, 1920. Serial No. 378,723. 5 Claims. (Cl. 32—9.)



1. An artificial tooth adapted to be securely mounted upon a support of moldable material, having vertically disposed lateral grooves in the sides thereof, said grooves having the side walls thereof undercut to provide grooves of dove-tail cross section adapted to receive therein the moldable material of a support for rigidly securing the tooth to the support.

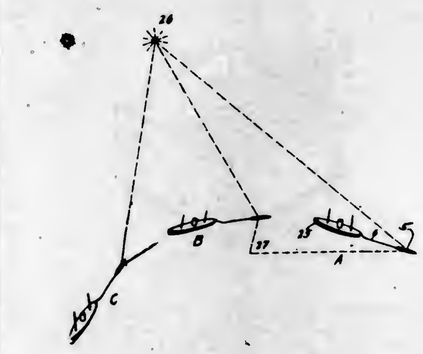
1,383,697. PAPER-BOX MACHINE. CHARLES C. DAVIS, Contoocook, N. H., assignor to Kingsbury & Davis Machine Company, South Coventry, Conn., a Corporation of New Hampshire. Filed Feb. 19, 1920. Serial No. 359,860. 26 Claims. (Cl. 93—41.)



1. In a paper-box machine, the combination with box-forming devices and cornerstay applying mechanism, of means providing for supporting the last-formed box at the level at which the corner-staying is effected after withdrawal of the former therefrom, and crimper devices which perform the crimping operation upon the sides of the empty box while the same remains at such level.

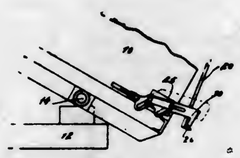
of their outer faces, and are spaced from each other back of said line; and means connecting said blades, for turn

ing them about their meeting line as an axis, to vary their angular relation.



1,383,689. EXPLOSIVE-ENGINE. JOHN R. ZYGALINSKI, New Haven, Conn. Filed Mar. 26, 1920. Serial No. 368,890. 2 Claims. (Cl. 123—74.)

1. The combination with a crank-case and crank therein, of a cross-head connected with the crank, a cylinder mounted of the crank-case and separated therefrom by a crank-case head, a stuffing-box in the said head, a solid piston in the said cylinder, a piston-rod connected with the piston and extending through the stuffing-box into connection with the said cross-head, a port in the lower end of the cylinder, a passage formed in one side wall of the cylinder and connecting the opposite ends of the cylinder, said cylinder also formed at its upper end with a chamber into which said passage opens, said chamber opening into said cylinder at one side thereof, a baffle plate projecting into said chamber and extending over said opening and between it and the said inlet passage, a check-valve at the upper end of the said passage, an intake-valve opening into the said passage near the center thereof, a check valve in said intake opening, an exhaust-port opening from one side of the cylinder, and an exhaust-valve controlling said port.



1,383,690. METHOD OF DETECTING UNDERWATER VIBRATIONS. HAROLD D. ARNOLD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,384. 7 Claims. (Cl. 181—0.5.)

1. A method of detecting the direction of a source of sound which consists in towing a pair of detecting devices a fixed distance apart, obtaining a binaural balance, changing the course of the towing vessel, obtaining a second binaural balance and deducing from these balances the direction of the source of sound.

5. In apparatus for detecting the direction of a source of under-water sound, the combination with a towing vessel of a detecting device comprising a pair of detectors spaced a fixed distance apart, a towing cable for towing said device from said vessel and means for obtaining a binaural balance between said detectors.

1,383,691. TAIL-GATE LATCH. PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Co., Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1920. Serial No. 388,483. 8 Claims. (Cl. 298—23.)

1. In a device of the character described, a body having a pivotally mounted tail gate, a latch for holding the same, said latch being mounted at the base of the body, and means for manually adjusting and holding the tail gate in partially opened position, and thereafter freeing it by moving said latch while maintaining it at all times parallel to itself, said latch being operable independently of the position of the truck body.

1,383,692. PULLEY-FACE-FRICTIONING COMPOSITION. DAVID M. BENFORD, North Pelham, N. Y. Filed Feb. 21, 1920. Serial No. 360,461. 8 Claims. (Cl. 106—7.5.)

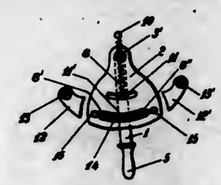
1. A pulley-face frictioning composition, comprising water-floated ground glass; and a hard-drying liquid mixed therewith.

1,383,693. COLLAR. JOHN BLAKESLY BOLTON, Methuen, Mass., assignor to John Manning Van Heusen, Boston, Mass. Filed Feb. 26, 1914, Serial No. 821,350. Renewed Oct. 29, 1919. Serial No. 334,375. 12 Claims. (Cl. 2—67.)

3. A shirt collar, made up of fabric having a reinforce of longitudinal threads of pliable material interwoven in the fabric and capable of receiving and maintaining a curvilinear set, said threads comprising soft metal wire.

5. A folding shirt collar, made up of multiple-ply interwoven fabric comprising an outer layer of woven fabric, an intermediate layer of woven fabric whose longitudinal threads are omitted along a median line corresponding to the folded edge of the collar, and a third layer whose longitudinal threads are similarly omitted.

11. A folding collar made up of an inner neck band and an outer turn-down band, said bands being woven in one piece of multiple-ply interwoven fabric and connected along their upper edges by an intermediate weakened edge-fold portion.

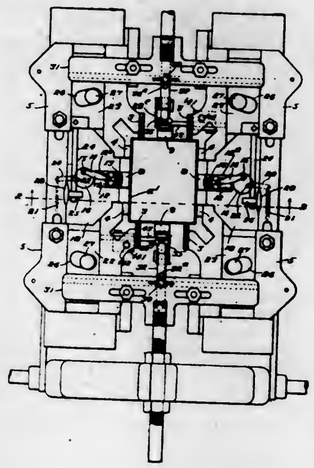


1,383,694. COLLAR. JOHN BLAKESLY BOLTON, Methuen, Mass., assignor to John Manning Van Heusen, Boston, Mass. Filed Feb. 26, 1914, Serial No. 821,351. Renewed Oct. 29, 1919. Serial No. 334,376. 9 Claims. (Cl. 2—67.)

6. A folding collar, made up of a neck band portion and a folding portion woven integral therewith of multiple ply interwoven fabric, the neck band being woven thicker and stiffer than the folding portion, and the collar folding along the edge of said neck band.

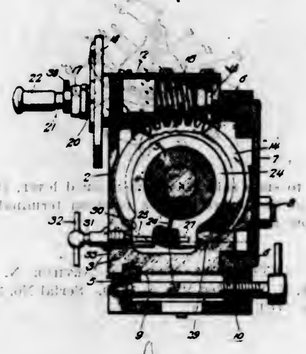
1,383,695. ELECTRIC SWITCH. GIUSEPPE COMBONI, Milan, Italy. Filed Feb. 13, 1920. Serial No. 358,395. 1 Claim. (Cl. 200—67.)

An electric switch of the character described comprising a base, two levers connected on a common pivot secured to said base, a spring having one end secured to said base and the other end secured to a point of one of said levers, two additional springs having a common end secured to a common point of one of said levers and the other ends secured to two different points of the other lever, and symmetrically arranged contact spring plates



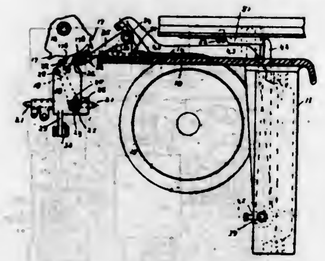
into which to snap said second mentioned lever, the common pivot of the levers being a common terminal of the double throw switch.

1,383,696. ARTIFICIAL TOOTH. ARTHUR N. DAVIS, New York, N. Y. Filed May 4, 1920. Serial No. 378,723. 3 Claims. (Cl. 32—9.)



1. An artificial tooth adapted to be securely mounted upon a support of moldable material, having vertically disposed lateral grooves in the sides thereof, said grooves having the side walls thereof undercut to provide grooves of dove-tail cross section adapted to receive therein the moldable material of a support for rigidly securing the tooth to the support.

1,383,697. PAPER-BOX MACHINE. CHARLES C. DAVIS, Contoocook, N. H., assignor to Kingsbury & Davis Machine Company, South Coventry, Conn., a Corporation of New Hampshire. Filed Feb. 19, 1920. Serial No. 359,860. 26 Claims. (Cl. 93—41.)



1. In a paper-box machine, the combination with box-forming devices and cornerstay applying mechanism, of means providing for supporting the last-formed box at the level at which the corner-staying is effected after withdrawal of the former therefrom, and crimper devices which perform the crimping operation upon the sides of the empty box while the same remains at such level.

1,383,698. INDEX-CENTER OR THE LIKE. FRED C. DICKOW, Chicago, Ill. Filed Dec. 31, 1917. Serial No. 209,685. 4 Claims. (Cl. 188—77.)

1. In a spindle locking device for index centers, and in combination a support, a work holding spindle mounted on said support, the support having bearings for the spindle adjacent its ends, and means for locking the spindle against movement relatively to the support, said means comprising a split ring clutch member arranged on the spindle to engage the same intermediate said bearings, and means for controlling the split ring clutch whereby the spindle is locked against movement relatively to the support.

1,383,699. TYPEWRITING-MACHINE. LOUIS P. DISS, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 12, 1919. Serial No. 337,434. 10 Claims. (Cl. 197—109.)

1. In a typewriting machine, the combination of a frame, a carriage movably mounted thereon, a carriage strap operatively connecting the carriages and the frame, tensioned to move the carriage for its writing movement and having its direction of movement reversed when the carriage is retracted, escapement mechanism including a movable member the movement of which is necessary for the operation of the escapement mechanism, an arm adapted to be moved into position to engage the said movable escapement member and prevent operation thereof or to be withdrawn therefrom, a movably mounted shoe frictionally engaging the carriage strap and moved thereby according to the direction of movement of the strap, and means operatively connecting said arm and said friction shoe whereby the arm is moved into locking engagement with the movable escapement member when the carriage is being retracted and the arm is disengaged when the carriage is making its writing movement.

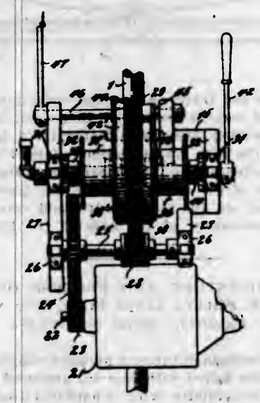
1,383,700. ACOUSTIC DEVICE. HENRY C. EGERTON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1918. Serial No. 249,837. 10 Claims. (Cl. 179—122.)

1. An acoustic device comprising a sound responsive body, a current varying device operated therefrom, and a radially inflexible coiled spring connecting said sound responsive body and said current varying device.

1,383,701. CAN-FASTENING. JOHN D. ELLIS, Philadelphia, Pa., assignor, by mesne assignments, to George D. Ellis & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1919. Serial No. 287,183. 3 Claims. (Cl. 220—55.)

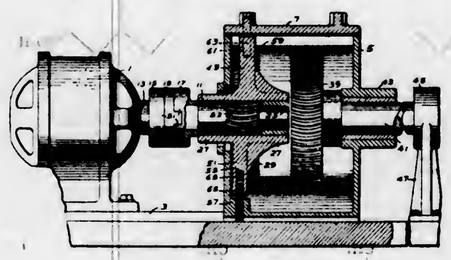
1. A body having a tongue rising therefrom, and a cover having in its side rim a keeper forming a vertical passage set out on its side walls and front wall from the adjacent portions of said rim, the bottom portion of said tongue being secured to the outer side of said body, said outer side of the body and said inner face of the tongue having deflected interlocking surfaces.

1,383,702. LIGHT-DEFLECTOR. WILLIAM ELLSWORTH and ROBERT E. MACKELLAR, Ashland, Ohio. Filed Aug. 31, 1920. Serial No. 407,078. 1 Claim. (Cl. 240—48.6.)



A light deflector adapted to be attached directly to the reflector of an automobile lamp, comprising a deflector shaped to screen the upper portion of the lamp, a hinge connecting the shank of the deflector with the adjacent portion of the reflector of the lamp above the lamp bulb, and spring means attached to the ends of the aforesaid hinge and holding the deflector at the desired predetermined angle relative to the lamp bulb for which the tension of the spring may be adjusted.

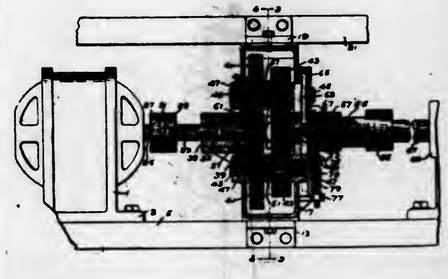
1,383,703. METHOD OF INSULATING METAL PARTICLES. GUSTAF W. ELMEN, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1920. Serial No. 353,102. 4 Claims. (Cl. 148—7.)



1. The method of coating metallic particles which consists in mixing with a mass of said particles only sufficient oxidizing agent to form a black oxid on the surfaces of said particles, and heating the mixture in a container until oxidation of the surfaces of the particle has taken place.

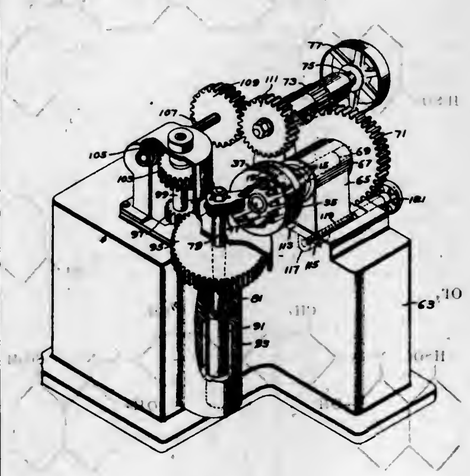
1,383,704. WINDING OR HOISTING ENGINE. CYRUS EVERS, Brooklyn, N. Y., assignor to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1918. Serial No. 260,459. 10 Claims. (Cl. 254—185.)

1. In a winding engine, a shaft, a driving element loosely mounted on the shaft, a drum loosely mounted on the shaft, friction clutch faces providing a driving connection between said drum and said driving element, means whereby rocking of the shaft in one direction connects said friction clutch faces, and rocking in the opposite direction disconnects said friction clutch faces.



1,383,705. TRANSMISSION MECHANISM FOR MOTORS. WILLIAM C. FARNUM, Winchendon, Mass. Filed Aug. 30, 1917. Serial No. 189,016. 7 Claims. (Cl. 74—7.)

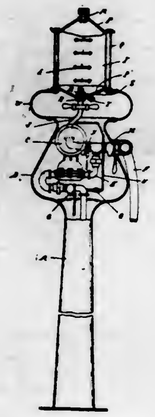
1. A transmission mechanism for motors comprising in combination, a shaft, a pinion thereon, counter shafts, gears on the latter meshing with said pinion at points circumferentially spaced thereon, a movable support for said pinion shaft, and means yieldingly sustaining said support.



1,383,706. GEAR-REDUCTION MECHANISM. WILLIAM C. FARNUM, Winchendon, Mass. Filed Dec. 28, 1918. Serial No. 268,691. 7 Claims. (Cl. 74—7.)

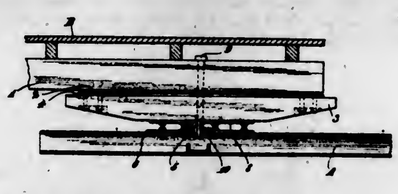
1. A transmission mechanism, comprising, in combination, a driving gear, a driven gear, alined relatively movable shafts for said gears, counter shafts at opposite sides of said shafts, gears on said counter shafts meshing with said driving gear and driven gear respectively, said driven gear being bodily movable in its plane of rotation

relative to the gears meshing therewith to equalize the power transmitted through the counter shafts to the driven gear, and means for limiting said movement of the driven gear in its plane of rotation to the path of a straight line.



1,383,707. ART OF MAKING GEAR-CUTTERS. WILLIAM C. FARNUM, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1919. Serial No. 341,875. 8 Claims. (Cl. 76—101.)

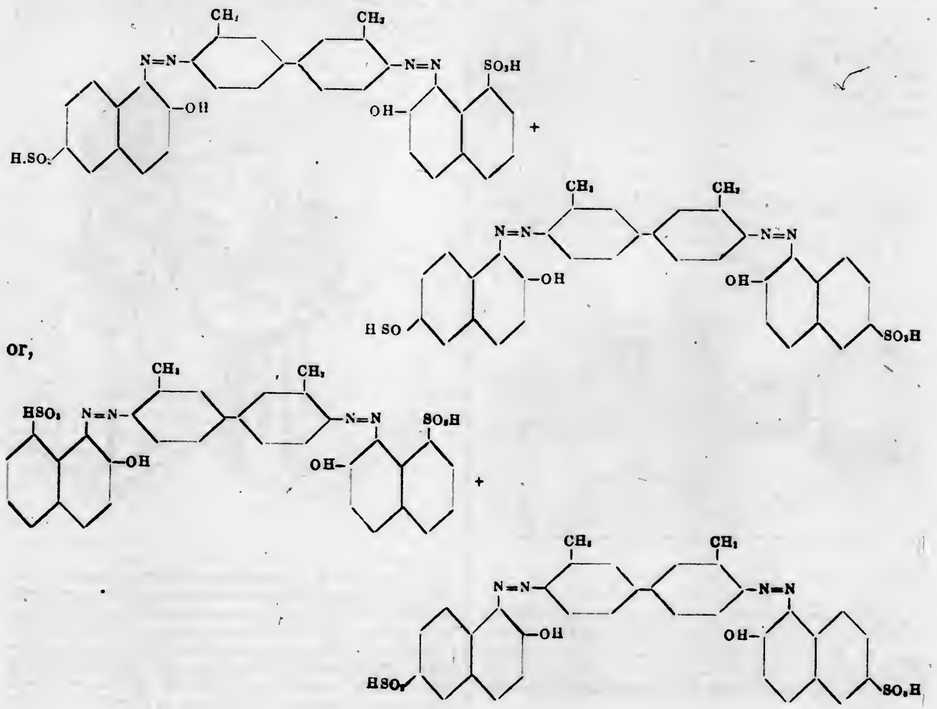
1. A method of making cutters for the production of curved teeth of gears, characterized by moving tapered portions of a series of teeth in an orbital path past a tool having a cutter of tooth-space form, while holding the teeth shanks to extend in the same general direction and oblique to the axis of said orbital path to give said tapered portions clearance angles, and relatively moving said teeth and tool in a direction of approach to dress said tapered



portions to final form suitable for cutting teeth spaces in a blank having the form of the tooth space of said tool.

1,383,708. LIQUID-DISPENSING APPARATUS. FREDERICK G. FARR, Detroit, Mich., assignor to Hydraulic Oil Systems Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1919. Serial No. 311,935. 6 Claims. (Cl. 221—99.)

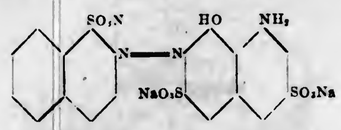
1. In a liquid dispensing apparatus, the combination with a meter and a delivery conduit, of a measuring receptacle, a branched connection between the meter and said measuring receptacle and delivery conduit respectively, and a valve in each branch of said connection.



1,383,709. TRACTOR AND TRAILER ASSEMBLAGE. FRANK J. FAULHABER, New York, N. Y. Filed Dec. 15, 1919. Serial No. 345,077. 2 Claims. (Cl. 280—33.1.)

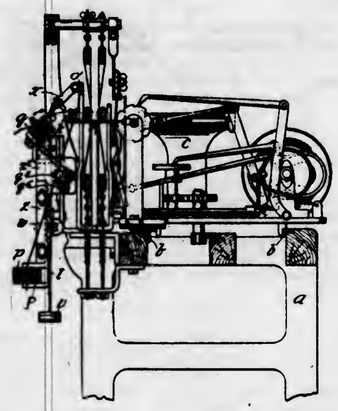
2. A trailer and tractor assemblage embodying a tractor, a fifth wheel section associated therewith, a trailer, a fifth wheel section associated therewith, a king-pin for maintaining the fifth wheel sections of both tractor and trailer in juxtaposition, and means mounting the fifth wheel section of the tractor for rocking movement on a transverse axis on the tractor with said transverse axis positioned rearwardly of the axis of the king-pin.

1,383,710. DYESTUFF AND PROCESS OF MAKING THE SAME. ALLAN JAMES FIELD, New York, N. Y. Filed Sept. 27, 1917. Serial No. 193,585. 3 Claims. (Cl. 8—1.)



1. A compound constituting a pigment color and forming a dyestuff when mixed with dextrin, produced by combining tetrazotized tolidin with 2-naphthol-6-sulfonic acid and 2-naphthol-8-sulfonic acid, and having probably the formula:

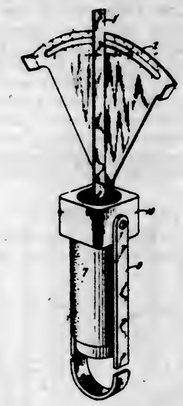
or,



1,383,711. MONOAZO DYESTUFF. ALLAN J. FIELD, New York, N. Y. Filed July 23, 1918. Serial No. 246,319. 1 Claim. (Cl. 8—1.)

As new product, the dyestuff having the formula:

obtained by combining diazotized 2-naphthylamin-1-sulfonic acid with 1:8 amidonaphthol-3-6-disulfonic acid, which is readily soluble in water with a bluish-red color, dissolving in concentrated sulfuric acid with deep violet blue color, dyeing wool and silk bluish-red shade.

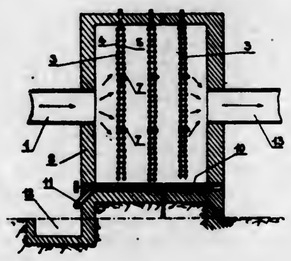


1,383,712. MACHINE FOR OPERATING UPON WARPS. MILLARD F. FIELD, Winthrop, Mass., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Original application filed June 23, 1898, Serial No. 684,201. Divided and this application filed Oct. 11, 1920. Serial No. 416,120. 7 Claims. (Cl. 139—94.)

1. In a machine for operating upon warps, a warp support comprising two frame-sections, a clamp on one frame-section to hold warp threads tightly, a clamp on the other frame-section to hold the warp threads loosely, and a shaft extending parallel with the clamps, the threads extending over said shaft, said frame-sections being relatively movable to separate the clamps and thus tension the threads.

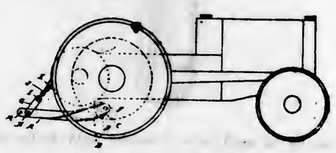
1,383,713. SPRING-TENSION GAGE. WILLIAM H. D. FORD, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1919. Serial No. 346,880. 3 Claims. (Cl. 265—1.)

1. A tension gage comprising a base, a calibrated scale mounted on said base, flexible reeds of different thicknesses adapted to coöperate with said scale, and self-adjusting means in said base whereby said reeds may be individually secured thereto.



1,383,714. FOLDING BOX. SAMUEL FREUND, Chicago, Ill. Filed Dec. 12, 1919. Serial No. 344,382. 8 Claims. (Cl. 229—35.)

1. In a foldable paper box, side and end walls, corner sections hinged at the ends of said walls, a slot in each corner section and a tongue surrounded by such slot, and a stub formed along the edge of the adjacent side of the box for engaging in said slot, said stub having an inclined edge for facilitating its passage into said slot, said tongue and stub interlocking after passage of the stub through said slot.



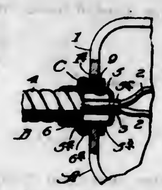
1,383,715. MECHANICAL DEVICE FOR THE REMOVAL OF DUST FROM THE GASES DERIVED FROM ROASTING ORES. LUCIEN GESCHWIND, Paris, France, assignor to Manufacture de Produits Chimiques du Nord, Etablissements Kuhlmann, Paris, France. Filed July 20, 1920. Serial No. 397,701. 2 Claims. (Cl. 183—110.)

1. A mechanical device for the removal of dust from gases derived from the roasting of ores, comprising a

chamber: curtains composed of chains freely suspended and arranged perpendicularly to the current of gas, the links of said chains being of sufficiently small dimensions to oppose a slight resistance to the passage of the gaseous current, each of said curtains comprising several parallel rows and separated from one another by empty spaces between them forming depository chambers, the various chains of one and the same row being placed side by side and quite regularly, while the chains of two consecutive rows of one and the same curtains are arranged in combination with one another in such manner that a molecule of gas passing through the space of one link of the first chain passes in front of a solid portion of a link of the second chain.

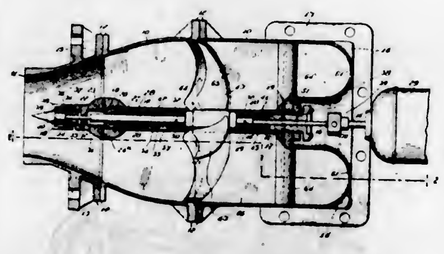
1,383,716. DRAFT-RIGGING. ERNEST GOLDBERGER, Detroit, Mich. Filed Jan. 30, 1920. Serial No. 355,204. 3 Claims. (Cl. 213—67.)

1. The combination with a draft vehicle provided with three draft attachment bearings in rigid relation to each other, of a draft bar, a universal pivotal connection between the forward end of said draft bar and one of said bearings, brace bars attached to the rear of said draft bar and engageable respectively with the other two bearings to form a rigid connection therewith, and flexible extensions for said brace bars attachable to said bearings, permitting limited freedom for universal movement.



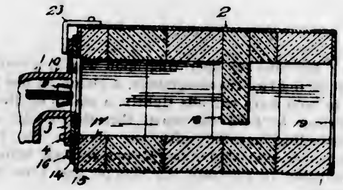
1,383,717. DISK CLUTCH. ERNEST GOLDBERGER, Detroit, Mich. Filed Jan. 30, 1920. Serial No. 355,206. 4 Claims. (Cl. 192—69.)

1. The combination with the rotary drive and driven members in axial alinement, of a head secured to one of said members having a recess in the hub portion thereof, a spring in said recess, a spring abutment member, a series of pins passing through said head connected at one end to said spring abutment, a clamping plate or head connected to said pins, and alternate drive and driven disks between said head and clamping plate, one set of disks being in engagement with said pins for the transmission of torque therethrough to said head.



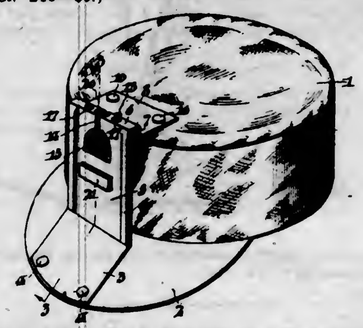
1,383,718. ELECTRICAL CONNECTION. ALBERT C. GRUNWALD, Chicago, Ill., assignor to Precision Metal Workers, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1919. Serial No. 316,174. 3 Claims. (Cl. 247—25.)

1. A connecting device of the character set forth, comprising a hollow threaded nipple having its extremity bent outwardly and forming an annular flange, a seamless tubular shank having an enlarged end-portion forming an



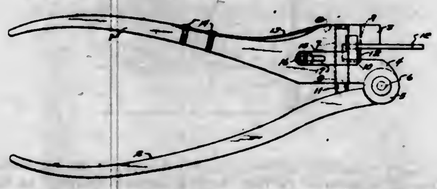
annular flange clenched over and inclosing said first-named flange, and a screw extending through a wall of said tubular shank and adapted to engage a cable.

1,383,719. BURNER. OLE G. HALVORSEN, Chicago, Ill., FINN S. HUDSON, Kansas City, Mo., and EDGAR G. RHOADS, Oak Park, Ill., assignors to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1920. Serial No. 359,537. 14 Claims. (Cl. 158—77.)



2. A liquid fuel burner comprising a casing having an air-inlet and a flame-exit, a burner-head adjacent the flame-exit having an oil-supply passage, a fan to force air to the burner-head, a valve normally closing the oil-supply passage, and means to simultaneously control the valve and fan.

1,383,720. LOW-PRESSURE OIL-BURNER WITH AN ATTACHED COMBUSTION-BOX. ARTHUR E. HAUCK, New York, N. Y.; Adolph H. Stein executor of said Arthur E. Hauck, deceased. Filed Jan. 8, 1920. Serial No. 350,149. 1 Claim. (Cl. 158—4.)

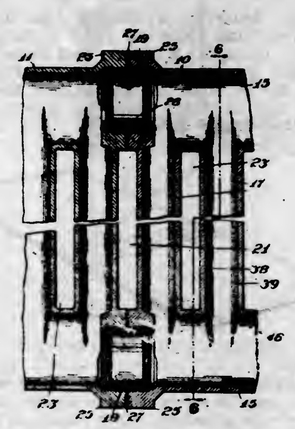


In a combined burner and combustion chamber, a burner adapted to throw a flame and a combustion chamber adapted to receive said flame, said combustion chamber being provided in its upper portion with a downwardly extending fire brick which receives the impact of the flame and becomes heated and deflects the flame and thereby permits a uniform and complete combustion in the chamber.

1,383,721. LAMP-SUPPORTING ATTACHMENT FOR MINERS' CAPS. WILLIAM ISRAEL, Kingston, Pa., assignor of one-half to Sydney Israel, Kingston, Pa. Filed June 21, 1918. Serial No. 241,305. 5 Claims. (Cl. 240—60.)

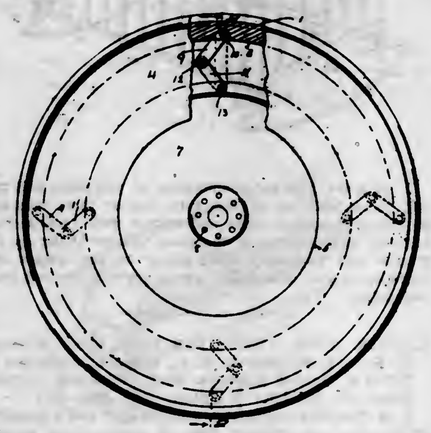
2. As an article of manufacture, a lamp-supporting attachment for miners' caps consisting of a strip of suitable material having a central portion which, when the attachment is secured to a cap, extends in general parallel relation to the body of the same and the upper end of which terminates in a rearwardly extending portion, a portion extending a short distance downwardly from the rear end of the latter portion, and a portion extending rearwardly from the lower end of the said downwardly extending portion, the second mentioned rearwardly extending portion having an opening for the reception of a hook for supporting a miner's lamp and a slot in said strip in front of said opening and in alinement therewith and a plurality of openings in the first named rearwardly extending portion of said strip adapted to receive supporting prongs attached to a lamp, substantially as described.

1,383,722. SAW-TOOTH CUTTER. JOHN JOHNSON, Des Moines, Iowa. Filed Feb. 24, 1920. Serial No. 360,821. 3 Claims. (Cl. 76—29.)



1. In a saw tooth cutter, a handle having one bifurcated termination, the prongs of said termination being perforated in alinement with each other, one of said prongs being formed with an integral downturned lip, a second handle pivotally connected to said lip, a plunger connecting the perforated portions of said prongs, a cutter carried by said plunger and adapted to move, with said plunger, into and out of the perforation formed in one of said prongs, said plunger having a bearing upon the said second handle, and means carried by said first named handle for retaining said plunger in position.

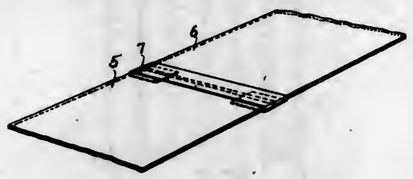
1,383,723. AUTOMOBILE-SPRING. GEORGE CHESTER JONES, Brownwood, Tex. Filed June 30, 1920. Serial No. 392,995. 8 Claims. (Cl. 267—40.)



2. In a spring suspension for automobiles, front and rear axle supporting springs, and a longitudinally bowed intermediate shock absorbing spring, said shock absorbing spring being pivotally coupled to the frame of the vehicle and pivotally coupled at its opposite ends to the front and rear springs.

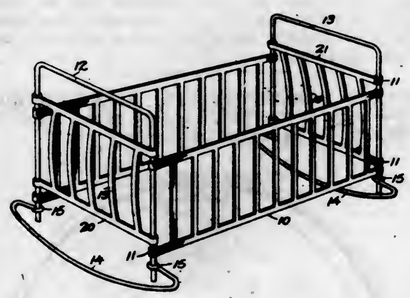
1,383,724. RADIATOR. AUGUST KEHM, Chicago, Ill. Filed Mar. 12, 1917, Serial No. 154,349. Renewed May 16, 1921. Serial No. 469,954. 10 Claims. (Cl. 257—154.)

4. The combination with a radiator section which is flat on one side and comprises a plurality of parallel longitudinal columns each having one straight side and a transverse header connecting the columns at one end of the section with the said straight sides of the columns flush with the corresponding side of the header, of a tubular nipple having a bore of a size not exceeding that of the header entering the bore of the header at one end of the same with the axis of the nipple parallel with the axis of the header but offset therefrom with the inside wall of the nipple flush with the inside wall of the header both at the said flat side of the section and at the said end of the section.



1,383,725. RESILIENT WHEEL. REGINALD O. KING, New York, N. Y. Filed June 19, 1920. Serial No. 390,166. 1 Claim. (Cl. 152—28.)

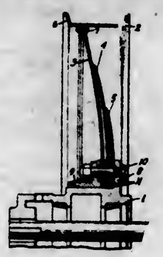
A wheel comprising a rim, plates secured to and extending inwardly from the rim in spaced relation and



having inner openings, and a hub having disks extending outwardly in spaced relation and having their outer portions entering between and engaging said plates, said disks being inclined toward said plates, and linkage devices connecting the inner portion of the rim with the outer portion of said disks and located in the space therebetween.

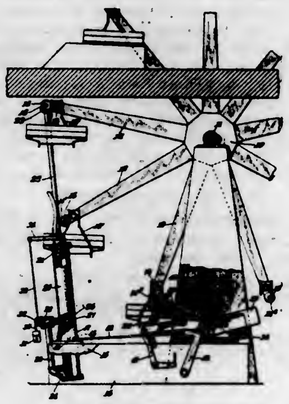
1,383,726. ROOFING MATERIAL AND METHOD OF JOINING THE ENDS OF FELT IN MAKING THE SAME. OTTERBEIN KIRACOFE, East Rutherford, N. J., assignor, by mesne assignments, to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 24, 1916. Serial No. 93,074. 3 Claims. (Cl. 154—42.)

1. The herein described method of joining or connecting separate elongated sheets of felt or the like, in the manufacture of roofing material, which consists in bringing the transverse ends of the sheets of felt together with their side edges in alinement and their ends in abutting relation, and then pasting to and across said ends a transverse adhesive flexible connecting strip of paper.



1,383,727. TOY BED. SIGMUND F. KOHN, New York, N. Y. Filed Sept. 13, 1919. Serial No. 323,573. 2 Claims. (Cl. 5—56.)

1. In a toy bed, the combination of two sides and two end pieces made up of bars with eyes at their ends and having intermediate slats, end frames with vertical rods adapted to fit loosely in the eyes, rockers fitting on the frames, and angular locking pieces on the frames and engaging a side and end piece to prevent the bed from collapsing.

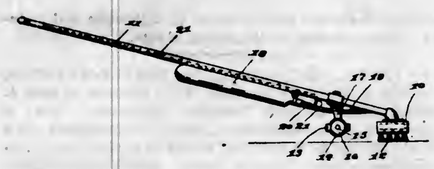


1,383,728. DISK WHEEL FOR VEHICLES. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor of one-half to Harry F. Hughes, Brooklyn, N. Y. Filed Feb. 2, 1920. Serial No. 355,728. 5 Claims. (Cl. 301—63.)

1. A disk wheel embodying a hub, a rim, and a plurality of superimposed resilient disks of progressively smaller diameters for suporting the hub from the rim, each of said disks being dished in cross section with the concave surface of each disk fitted over the convex surface of the next adjacent and larger disk, whereby that portion of the wheel which the disks form partakes of a spring-like

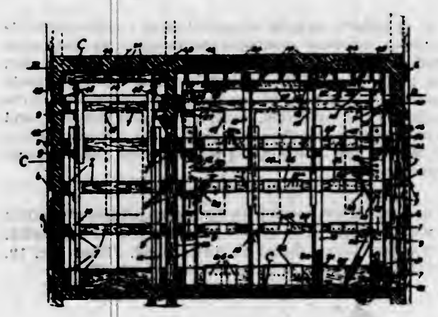
radial section adapted to support the hub in laterally resilient relation to the rim.

1,383,729. CONTROLLING MECHANISM FOR ROTARY CASTING-MACHINES. ARCHER A. LANDON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 18, 1916. Serial No. 126,332. 23 Claims. (Cl. 193—1.)



1. In a machine of the character described, the combination of a movable carrier, with a member adapted to be engaged by said carrier and to be moved thereby, means controlled by said carried for retarding the movement of said member after it has been engaged by said carrier, and means for arresting the movement of said carrier after the operation of said retarding means, substantially as specified.

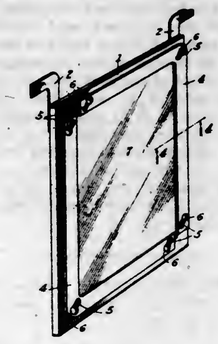
1,383,730. ROBE-HOLDER. EMERY G. LAVOIE, Greenwich, Conn. Filed Mar. 24, 1919. Serial No. 284,600. 1 Claim. (Cl. 296—82.)



In a device of the class described, a casing having a slot in one wall, a drum having trunnions at its ends journaled in said casing, the body of the drum adapted for engagement of a robe passing through said slot; a spring on each trunnion for normally imparting movement to the drum, a ratchet wheel fast upon each trunnion, a pawl engaging each ratchet wheel, a shaft connecting the two pawls, and a pedal secured to said shaft and projecting through the casing for operating said shaft at will.

1,383,731. FLOOR-CLEANING DEVICE. ABNER LEIGH, St. Louis, Mo. Filed Dec. 8, 1920. Serial No. 429,191. 1 Claim. (Cl. 15—51.)

A floor cleaning device including a handle, a slidably adjustable collar on the handle having oppositely and downwardly extending arms, a frame connected with and supported by the arms, a mop supported in the frame, and floor engaging wheels carried by the ends of the frame.

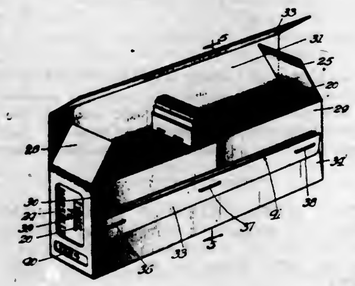


1,383,732. METHOD AND APPARATUS FOR HOUSE CONSTRUCTION. MARYAN L. LISOWSKI, Cranford, N. J., assignor to M. L. Patents Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1919. Serial No. 322,452. 7 Claims. (Cl. 25—131.)

1. Apparatus for use in building framework for cement structures comprising a plurality of form plates for ceiling and side walls; beams for supporting the ceiling and side wall plates; angle beams and junction devices for supporting the ceiling beams; uprights for supporting the angle beams and side wall beams; and telescoping beams mounted upon the uprights and bracing the side wall beams.

1,383,733. FILM-DEVELOPING RACK. NAHUM ELLEN LUBOSHEZ, London, England, assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 27, 1919. Serial No. 285,498. Renewed Dec. 27, 1920. Serial No. 433,429. 5 Claims. (Cl. 95—100.)

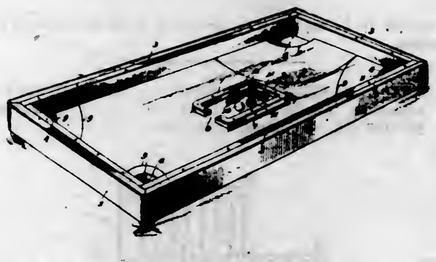
1. A developing rack comprising a frame with side and end bars, certain of said bars having ledges formed upon one side and along their inner edge upon which the edges of a plate may be laid and movable strips on said bars



adapted to be moved into or out of position above said ledges.

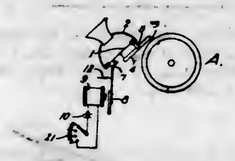
1,383,734. SANITARY BED-SPRING COVER. HENRY H. LUEDECKE, Austin, Tex. Filed Nov. 30, 1920. Serial No. 427,306. 3 Claims. (Cl. 5—3.)

1. In a sanitary spring cover, comprising in combination, a top cover, a bottom cover, an absorbent germicidally treated insert between said covers, said bottom cover inturned upon itself about its lateral edges, and having the lateral edges of the top cover inturned and disposed over the inturned lateral edges of the bottom cover, and means for fastening said covers and insert together to form an impervious structure.



1,383,735. CARTON. MATTHEW S. MCGURN, Chicago, Ill., assignor to Poole Bros., Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1916. Serial No. 113,230. 6 Claims. (Cl. 206—46.)

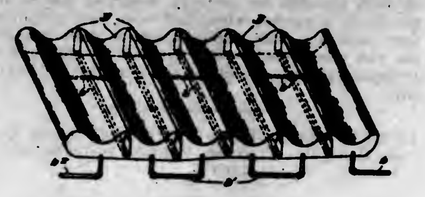
1. The combination of a pack of rectangular tickets and a safety display inclosing jacket therefor, comprising a



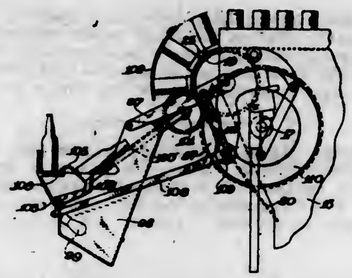
single paper blank having a base extending over the edges of all of the tickets in the pack, a pair of end pieces integrally connected to said base and having at their free edges inner safety members extending from the end pieces along and over the pack, said end pieces covering the ends of the pack and one of said end pieces being suitably apertured to display matter printed on the face of one of the end tickets of the pack, base extensions forming exterior opposed sides of the jacket and overlying the correspondingly located pairs of safety members and having extension flaps overlying the other pair of safety members, and U-shaped staple members extending from the exterior to the interior of the jacket and having their points clenched on the inside of the jacket for permanently securing together said last-named safety members and the said extension flaps.

1,383,736. GAME APPARATUS. CHARLES S. MCMAHAN, Orlando, Fla. Filed Apr. 19, 1920. Serial No. 375,095. 2 Claims. (Cl. 46—41.)

1. A game board to be manually tilted or manipulated having a playing surface formed with pockets, below the playing surface, a pen having an outlet arranged centrally of such surface, and hazard lines arranged adjacent the pockets, the relation of any one line to the pocket being different from the relation of any other line to its pocket.



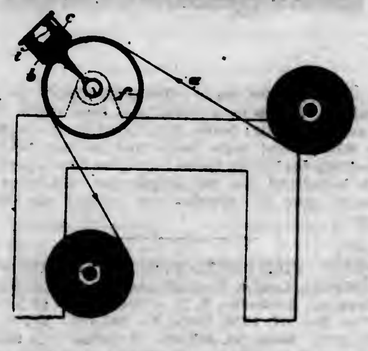
1,383,737. METHOD OF AND APPARATUS FOR RECORDING AND REPRODUCING SOUND. JAMES L. MCQUARRIE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1918. Serial No. 210,847. 17 Claims. (Cl. 274—46.)



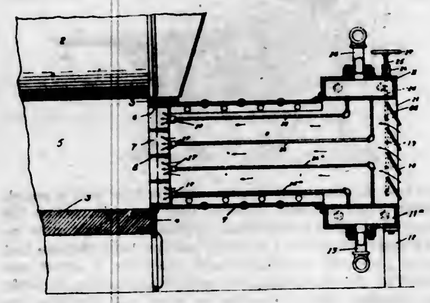
1. The method of forming sound records which consists in subjecting a sound responsive recording mechanism to sound vibrations to be recorded and reducing the sensitiveness of said recording mechanism upon the occurrence of sound vibrations exceeding a predetermined amplitude.

1,383,738. IRONING-MACHINE. ERNEST J. MALONE, Chicago, Ill., assignor to Troy Laundry Machinery Co. Ltd., Chicago, Ill., a Corporation of New York. Filed Aug. 23, 1919. Serial No. 319,312. 3 Claims. (Cl. 68—9.)

1. In an ironing machine comprising a series of steam chests and coacting ironing members, combined steam-circulating and water-draining pipes connecting the respective ends of each steam chest with the chests adjacent thereto; said pipes having water-trapping dips therein which retard the flow of steam therethrough and maintain steam pressure in the steam chests.

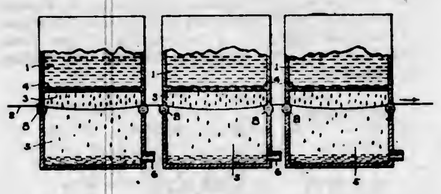


1,383,739. UNLOADER FOR BOTTLE-WASHERS. GEORGE J. MEYER, Milwaukee, Wis., assignor to Geo. J. Meyer Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Nov. 22, 1915, Serial No. 62,706. Divided and this application filed June 9, 1919. Serial No. 302,882. 9 Claims. (Cl. 193—24.)



1. In a bottle washing machine having a traveling bottle conveyer, inclined parallel rods forming an inspection chute in position to receive the bottles from the conveyer, the lower part of the inspection chute being pivotally mounted, a stop for limiting the sliding movement of the bottles on the inspection chute, a discharge conveyer, and means for swinging the lower part of the inspection chute for moving the bottles along the stop onto the discharge conveyer.

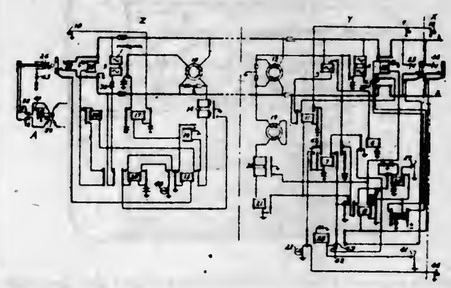
1,383,740. MANUFACTURE OF INSULATING FIBROUS WEBS FOR ELECTRIC-INSULATION PURPOSES. WALTHER MEYER, Burgdorf, Switzerland. Filed Dec. 19, 1918. Serial No. 267,512. 1 Claim. (Cl. 91—36.)



A process for the manufacture of insulating fibrous webs for electric insulation purposes, consisting in yieldingly pressing a solid block of fusible agglutinant insulating material upon one side of a movable web and in applying heat on the other side thereof at the same zone of action so as to smelt off and adherently apply agglutinant material to said web.

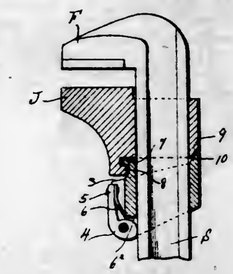
1,383,741. GAS-BURNER. JOE MILLER, Little Rock, Ark. Filed Apr. 8, 1920. Serial No. 372,204. 9 Claims. (Cl. 158—7.)

1. The combination, with a boiler front, of a burner brick setting mounted therein and provided with a series of holes increasing in cross sectional area from their outer toward their inner ends, pipes and gas nozzles therefor terminating adjacent the outer ends of said opening, said nozzles having flaringly arranged ports therein for directing the gas toward the walls of said openings, and means for delivering currents of air to pass through said openings around said nozzles.



1,383,742. PROCESS FOR MANUFACTURING A WOOL SUBSTITUTE FROM CELLULOSE AND SIMILAR SOLUTIONS. PAUL HERMANN MINCK, Petersdorf, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 16, 1919. Serial No. 297,711. 6 Claims. (Cl. 18—54.)

1. A process for the manufacture of a wool substitute which comprises dissolving cellulose, squirting the cellulose solution through a spinning nozzle into a precipitating bath, and removing the chemicals from the formed thread by passing said thread through a dripping bath under a tension produced by the kinetic energy of the falling bath liquid.

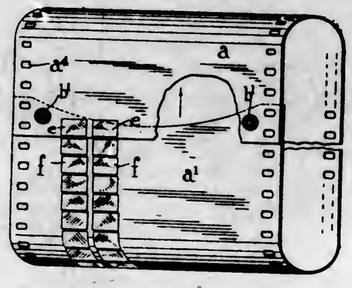


1,383,743. TELEPHONE-EXCHANGE SYSTEM. LOUIS A. MORTIMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1918. Serial No. 251,206. 6 Claims. (Cl. 179—43.)

1. A telephone exchange system comprising a transmission line circuit, a plurality of switchboards connected thereto, a calling signal at one of the switchboards, signal control means thereat responsive to signaling current on the line, a busy signal at another of the switchboards, means controlled by the signal control means for impressing a current on one of the talking conductors of the line

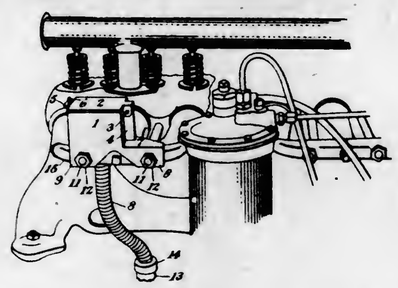
interconnecting the switchboards, and means at the second mentioned switchboard responsive thereto for operating the busy signal device.

1,383,744. WRENCH. FRANK M. MURRAY, Cadyville, N. Y. Filed May 15, 1920. Serial No. 381,560. 2 Claims. (Cl. 81—152.)



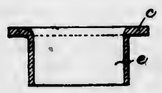
1. A wrench comprising a shank, a slidable jaw movable thereon, a holding member slidably mounted directly on the shank and coacting with the slidable jaw, said jaw and member having inclined faces coacting one with the other when pressure is imposed upon the sliding jaw whereby the holding member holds said jaw against movement along the shank, and automatically operating means carried by the holding member for maintaining the same against movement along the shank between working operations and means connecting said holding member and slidable jaw whereby said member and slidable jaw move in unison upon the shank.

1,383,745. MEANS FOR JOINING THE ENDS OF CINEMATOGRAPH-FILMS. ARTHUR SAMUEL NEWMAN, Highgate, London, England, assignor of one-third to Thomas Horace Bolam and one-third to Sidney Norman Barnard, London, England. Filed July 6, 1920. Serial No. 394,288. 3 Claims. (Cl. 88—19.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



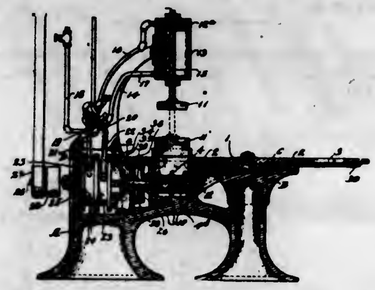
1. An improved continuous broad cinematograph film on which the pictures are arranged longitudinally and laterally thereon, the ends of said film being overlapped and the edge of the under layer having a concave end and

separate narrow means for connecting the overlapped ends of the film, one of such means being adjacent to one side



of the film and located before all the pictures and the other of such means being adjacent to the other side of the film and behind all the pictures, substantially as set forth.

1,383,746. LUBRICANT-CONDUIT. CHARLES H. NEWTON, Plainville, Conn. Filed May 20, 1920. Serial No. 382,973. 6 Claims. (Cl. 184—65.)

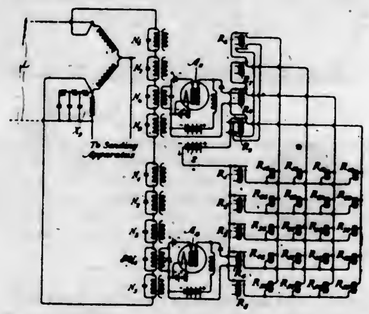


4. A lubricant conduit for automobile engines, embodying an intake box provided with means consisting of a plurality of downwardly deflected, integral flanges having openings therethrough for detachably attaching it to the engine above the crank case through the medium of the manifold stay bolts of the engine, in combination with a flexible pipe adapted to extend from said intake member to the oil intake pipe in the crank case.

1,383,747. METHOD OF MAKING FLEXIBLE SLEEVE-VALVES. WARREN NOBLE, Providence, R. I., assignor to N. C. L. Engineering Corporation, Providence, R. I., a Corporation of New York. Filed June 3, 1919. Serial No. 301,530. 5 Claims. (Cl. 29—156.7.)

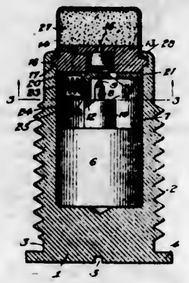
1. The method of making a flexible sleeve valve which consists in providing a tube, placing such tube upon and around an arbor, and swaging the tube by the action of external dies which are caused to hammer on the exterior of the tube, thereby reducing the thickness of the tube wall and conforming its inner surface to the surface of the arbor.

1,383,748. MOLDING-MACHINE. ERNEST N. OLSON and SWAN SWANSON, Muskegon, Mich. Filed Aug. 30, 1920. Serial No. 406,901. 5 Claims. (Cl. 18—19.)



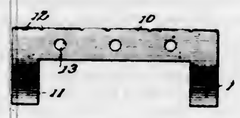
1. In a molding machine, the combination with a stand, a rotary table mounted thereon, mold boxes carried by the table and adapted to be advanced thereby, a constantly rotated operating element, a sleeve member loose thereon and having a driving connection with the table, a clutch pin carried by the sleeve and adapted to engage the rotating part, yielding means tending to move the pin into operative position, trip means for automatically moving the pin into inoperative position at a predetermined time whereby the table is intermittently rotated, a presser mounted in coöperative relation to the mold boxes, and means for operating the presser in timed relation to the table.

1,383,749. PROCESS OF TREATING CONCRETE OR THE LIKE. RAYMOND G. OSBORNE, Los Angeles, Calif. Filed Dec. 26, 1919. Serial No. 347,491. 9 Claims. (Cl. 91—70.)



8. A process for rendering concrete impervious to fluids, embodying subjecting the concrete to a temperature sufficient to drive off part of its water of combination, and then filling the voids of the concrete with a material of fluid-proofing characteristics.

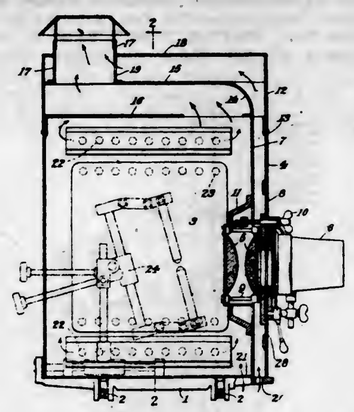
1,383,750. ALTERNATING-CURRENT SIGNALING SYSTEM. RALEIGH D. PARKER and BAXTER P. HAMILTON, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 26, 1918. Serial No. 242,084. 21 Claims. (Cl. 178—51.)



1. In a signaling system, a sending station, a receiving station, a transmission circuit interconnecting said stations, a plurality of signaling channels at said sending station, means to successively associate said channels with said transmission circuit, corresponding channels at the receiving station permanently associated with said transmission circuit, and means at the sending station to transmit currents having different characteristics for each channel as successive channels are associated with the transmission circuit and means at the receiving station responsive to said currents to select the corresponding receiving channels.

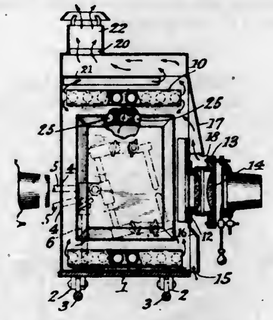
1,383,751. SELF-LOCKING BASE-FUSE. EDWARD R. PILLARS and HENRY C. LEESEBERG, Fostoria, Ohio. Filed Jan. 12, 1918. Serial No. 211,655. 4 Claims. (Cl. 102—39.)

1. In a fuse, a body, a firing pin slidable therein, a primer holder having a groove therein, a guard member slidably secured in said groove, the engagement between the guard and groove being such that the guard is thereby attached to the primer holder, said primer holder and guard each having an aperture therein and means for normally holding the holder and guard with said apertures positioned out of alinement with each other, said guard and primer holder being permanently locked together when assembled.



1,383,752. BANJO-BRIDGE. WILLIAM POST, Brooklyn, N. Y. Filed Nov. 1, 1919. Serial No. 335,130. 1 Claim. (Cl. 84—308.)

A banjo bridge comprising a supporting bar which is triangular in cross section and having its apex slightly flattened to form a surface, said surface being widened at the intermediate portion of the bridge and with both edges of said surface tapering to points at the ends of the supporting bar, said supporting bar being provided with transverse apertures, and supporting legs formed at the ends of the supporting bar extending at right angles thereto, the sides of said legs being a continuation of the sides of the supporting bar, said supporting legs being bored longitudinally thereof in their underside.

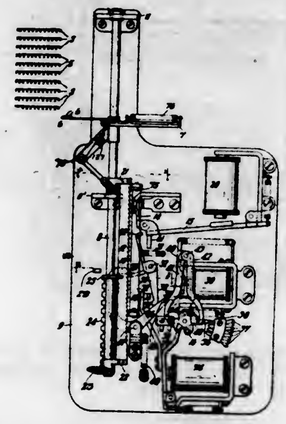


1,383,753. LAMP-HOUSE FOR MOVING-PICTURE MACHINES. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1916, Serial No. 102,072. Renewed Dec. 7, 1920. Serial No. 429,035. 12 Claims. (Cl. 240—11.)

1. A lamp house for projecting lamps consisting of a box-like housing inclosing the lamp, one wall of said housing consisting of two spaced sheets forming a passage for air circulation therebetween, said walls being formed with registering apertures for the passage of the light rays from the housing, a pair of condensers supported in said apertures, said condensers being spaced apart and with

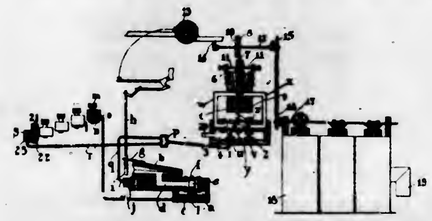
the space between them communicating with the space between the two sheets of the wall, and air ingress and egress openings to said passage.

1,383,754. LAMP-HOUSE FOR MOVING-PICTURE APPARATUS. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 12, 1915, Serial No. 55,408. Renewed Dec. 7, 1920. Serial No. 429,036. 4 Claims. (Cl. 240—11.)



1. A lamp house for projecting lamps, consisting of a housing, doors forming the greater portion of its side walls, said doors embodying air circulating means, said walls below said doors being provided with a ventilating opening for the ingress of air, and means for directing the air received through said opening toward the end walls of the housing, said housing having an egress opening at the top thereof.

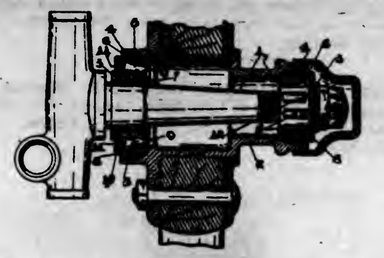
1,383,755. PROCESS OF PRODUCING DECOLORIZING-CARBON. MILTON B. PUNNETT and RAYMOND A. WHITAKER, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 12, 1919. Serial No. 296,370. 22 Claims. (Cl. 127—2.)



20. In the process of producing decolorizing carbon the steps of mixing carbonizable but uncarbonized material with a solution of a sulfate salt and drying and charring the carbonizable material in the mixture while open to the air.

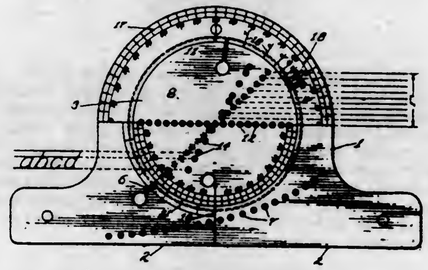
1,383,756. AUTOMATIC SWITCHING APPARATUS FOR TELEPHONE-EXCHANGE SYSTEMS. JOHN N. REYNOLDS, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1917. Serial No. 184,000. 6 Claims. (Cl. 179—27.5.)

1. In an automatic switch, stationary contacts, a movable contact member, a stepping pawl for moving said contact member in two distinctly separate movements in different directions to engage said stationary contacts, means for operating said pawl, means for holding said movable contact in advanced position, and a release magnet for releasing said holding means to restore the movable contact to its normal position.



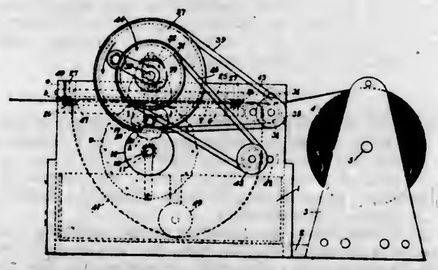
1,383,757. TYPEWRITER AND THE LIKE. REGINALD REYNOLDS, Barnes, London, England. Filed Nov. 6, 1920. Serial No. 422,309. 4 Claims. (Cl. 197—15.)

1. A pneumatically operated typewriter including type-carrying arms, bellows actuating said type-carrying arms under control of double acting relay valves, single acting valves mounted on said key buttons and controlling said double acting relay valves, pneumatically actuated spacing means and a spacing valve controlling said spacing means operated automatically by said bellows.



1,383,758. ROLLER-BEARING. HARRY WALTER ROBINSON, Toronto, Ontario, Canada, assignor to The Chapman Double Ball Bearing Company of Canada, Limited, Toronto, Ontario, Canada. Filed May 26, 1919. Serial No. 299,771. 3 Claims. (Cl. 64—62.)

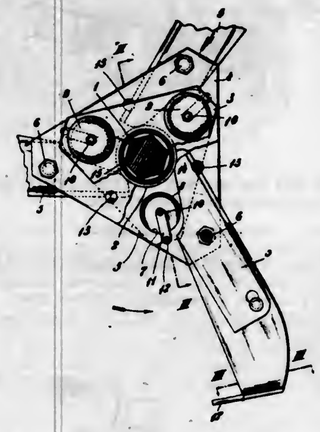
1. A roller bearing cage of drum form having slots in its periphery through which the rollers may partly project and having ring shaped ends, one of said ends provided with integral inwardly projecting fingers extending between the rollers and the opposite end having an



outwardly directed flange; and a ring plate folded over and connected to said flange and provided with fingers adapted for engagement with the surfaces of said rollers.

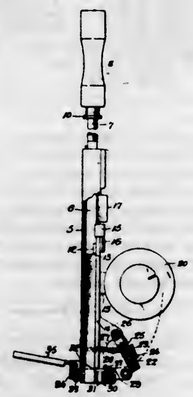
1,383,759. LINE-SPACING DEVICE. FREDERICK E. ROMIE, Oakland, Calif. Filed Jan. 14, 1920. Serial No. 351,502. 2 Claims. (Cl. 33—41.)

1. A line spacing device comprising a plate having a straight-edge base and a circular aperture therein and an annular groove in the periphery of said aperture; a member rotatably mounted within the aperture and having an annular flange of less width and slightly greater thickness than the groove whereby the sides of said groove will tend to exert a pressure upon said flange to normally prevent a free rotation thereof, said rotatable member being likewise provided with a plurality of rows of regularly spaced and alined apertures which may be arranged at an angle to said base whereby a pencil placed in successive apertures will divide a given dimension into equal spaces when said plate is moved along said base.



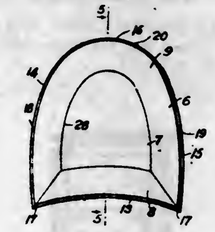
1,383,760. TRANSFER PRINTING AND ISSUING MACHINE. ARTHUR D. ROGERS, Dayton, Ohio, and ROY J. MANKER, Detroit, Mich. Filed Apr. 12, 1920. Serial No. 373,186. 11 Claims. (Cl. 101—69.)

1. In a transfer issuing machine, the combination, with a stationary printing plate having data of fixed character



arranged thereon, of printing wheels codperating with said plate to set up in connection therewith data of variable character, a movable platen operable relative to said plate, a rotatable shaft, a device to feed a strip of paper over said plate to receive an impression therefrom and means on said shaft to operate the feeding device and the platen.

1,383,761. ROTARY DIGGING-MACHINE. ARNOLD RUTISHAUSER, Olten, Switzerland, assignor to Firm Motorwagenfabrik Berna A.-G., Olten, Switzerland. Filed Apr. 8, 1920. Serial No. 372,191. 9 Claims. (Cl. 97—62.)

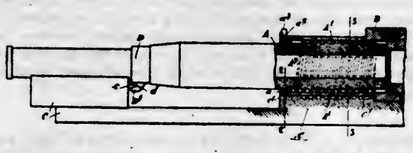


1. In a rotary digging unit, the combination of a driving axle, a pair of plates spaced apart and fixed on said axle, a second pair of plates centered on said axle arranged between and connected to the first pair by a resilient connection and a plurality of hoes the arms of which are arranged between the second pair of plates.

1,383,762. CUTTING AND PUNCHING MACHINE. CARMINE J. SALVIOLO, deceased, Brooklyn, N. Y., by Michael J. Salviolo, executor, Brooklyn, N. Y. Filed Mar. 30, 1920. Serial No. 369,962. 4 Claims. (Cl. 164—15.)

1. In a cutting and punching apparatus, the combination of a casing containing a plunger, punches carried by the plunger at its lower end, a cutting blade adjacent the punches, means for feeding a strip of sheet metal, and means forming a part of the plunger for operating the feeding means as the plunger descends.

1,383,763. RESILIENT HEEL. WALTER E. SANDERS, Trenton, N. J., assignor to Essex Rubber Company, Inc., Trenton, N. J., a Corporation of New Jersey. Filed June 6, 1917, Serial No. 173,070. Renewed Sept. 18, 1920. Serial No. 411,269. 4 Claims. (Cl. 36—35.)



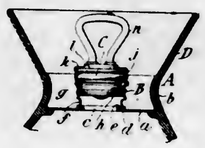
1. A resilient heel comprising a heel-section or body having a convex lower surface, the upper surface being provided with an upwardly and outwardly extending beveled marginal portion rectilinear in cross-section, and a central plane portion, the upper breast edge being concave below the plane connecting the upper corners of the heel.

1,383,764. SOCKET FOR ELECTRIC-LIGHT GLOBES. JOHN ALEXANDER SARGENT, Normanby, Taranaki, New Zealand. Filed June 13, 1919. Serial No. 303,956. 2 Claims. (Cl. 173—328.)

1. An electric light globe socket comprising a plug of non-conducting material split longitudinally to provide a plurality of substantially identical sections, each section having a top recess and bottom recesses, passages in the plug extending from the top recesses to the bottom recesses, immovable contact pieces located in the bottom recesses and designed to engage wire ends projecting through the passages, means for locking the two sections together and for locking the contact pieces in said sections, and means for forcing the contacts of a light bulb against said contact pieces.

1,383,765. MOUNTAIN-GUN. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Oct. 29, 1920. Serial No. 420,528. 5 Claims. (Cl. 89—16.)

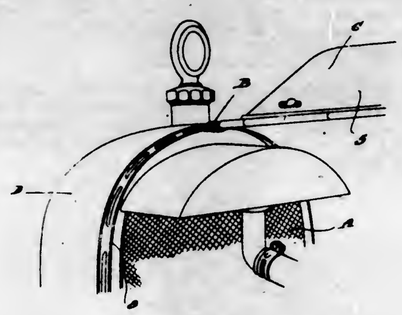
1. A separable gun comprising a slide, a barrel detachably mounted on the slide and a rotatable breech-carrying sleeve interposed between the slide and barrel when the parts are assembled, said sleeve having external and internal threaded sectors alternating with plain sectors to



coöperate with complementary sectors of the slide and barrel respectively to lock the parts together for firing by the rotation of said sleeve, in combination with a firing mechanism including a controlling member on the breech-carrying sleeve to engage a holding member on the slide during the rotative locking movement of said sleeve to maintain the firing mechanism inoperative during such rotative movement of the sleeve until the latter is seated and the controlling member is disengaged from the holding member to render operative the firing mechanism.

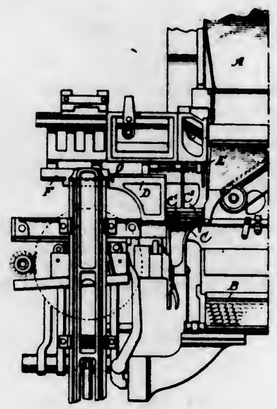
1,383,766. WALL CONSTRUCTION. GUSTAV O. SCHULZ, Revere, Mass. Filed Mar. 10, 1920. Serial No. 364,811. 6 Claims. (Cl. 217—5.)

1. A wall for a receptacle comprising, in combination, a hermetically sealed envelop, a hollow core enveloped thereby and inclosing a vacuum, said core bracing said envelop against atmospheric pressure, and means coöperating with said wall to support a refrigerant and conduct drip from said refrigerant.



1,383,767. STOPPER FOR WATER-BOTTLES OR THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Nov. 12, 1915. Serial No. 61,037. 10 Claims. (Cl. 150—8.)

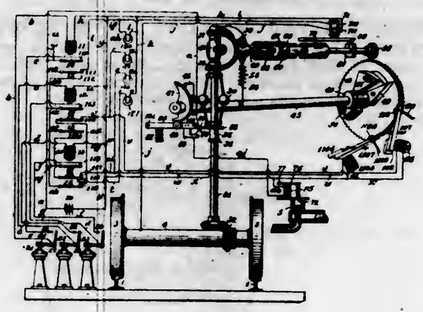
1. In a device of the character described, an enlarged neck member adapted to be secured within the neck of a water bottle or the like having fixed thereto a reduced socket member, a stopper screwing in said socket member, a seat at the lower part of said socket member, and apertures above said seat, said apertures constituting passages to the water bottle when the stopper is in its upper position.



1,383,768. PIVOT SUPPORT AND RETAINER FOR AUTOMOBILE-HOODS. FRED GABRIEL SCOZZAFAVA, Gouverneur, N. Y. Filed July 27, 1920. Serial No. 399,269. 7 Claims. (Cl. 180—69.)

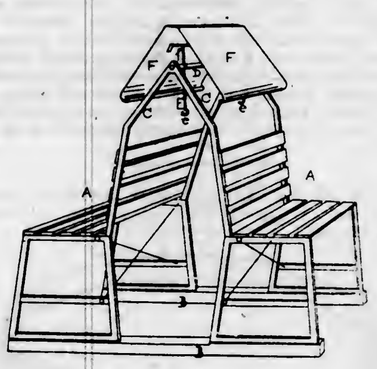
1. In a motor vehicle, the combination with a stationary retaining member including an upper rest wall, of a movable hood including a body and a rod, the rod being normally held in engagement with the rest wall by the weight of the hood body, and a lower guide wall connected

at one end with the rest wall and arranged for guiding the rod toward and from the rest wall.



1,383,769. TYPOGRAPHICAL MACHINE. LUTHER SHEARILL, Nashville, Tenn., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 28, 1920. Serial No. 392,207. 6 Claims. (Cl. 199—52.)

2. In a typographical casting machine, the combination of a mold, a transporter movable into and out of operative relation therewith and constructed to support matrices therein at different levels, adjustable means carried by the transporter to vary the vertical position thereof in reference to the mold, and a device controlled by said adjustable means to permit or prevent the entrance of matrices into the transporter at an upper level, according to the adjustment of said means.

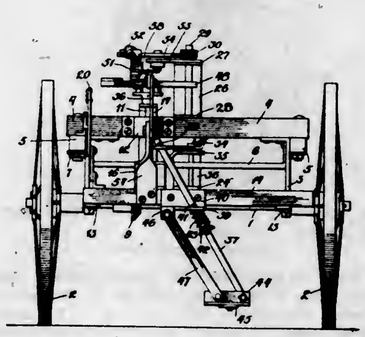


1,383,770. AUTOMATIC SPEED CONTROL FOR RAILWAYS. PAUL JOHN SIMMEN, Buffalo, N. Y. Filed Aug. 6, 1915. Serial No. 44,022. 25 Claims. (Cl. 246—182.)

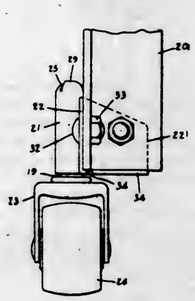
24. In apparatus of the character set forth, the combination with a vehicle, of means for establishing a maximum safe speed under clear conditions, a minimum safe speed under danger conditions, and a plurality of safe speeds between the two, and means dependent on the appearance of a hazard and the distance between the same

and the vehicle for effecting the operation of said means to establish and temporarily positively electrically maintain one of said predetermined safe speeds for the vehicle.

1,383,771. DOUBLE COMBINED GOLFER'S SEAT WITH SHADES AND UTENSIL-HANGERS. JOHN SKIDMORE, Guelph, Ontario, Canada. Filed Mar. 11, 1921. Serial No. 451,573. 1 Claim. (Cl. 155—130.)



The combined double seat A, A placed back to back on a common base and united at their tops by an extension of the side bars of the backs C, C, the vertical brackets E, with hooks (e) on their lower ends and upwardly projecting extensions (f) carrying the awning F, as hereinbefore described and illustrated in the drawings.

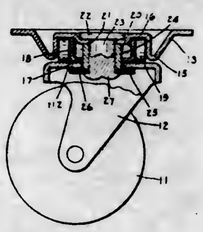


1,383,772. COTTON-CHOPPER. WILLIAM H. SMITH, Portland, Oreg. Filed Sept. 10, 1919. Serial No. 322,781. 5 Claims. (Cl. 97—45.)

2. In a machine for the purposes set forth, the combination of a frame, a chopper shank mounted upon the frame for transverse vibratory movement, means acting upon said shank for yieldably holding the same in a

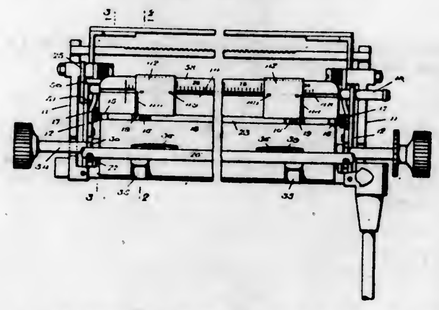
lowered position, a link pivotally hung upon the frame adjacent the shank and parallel therewith, a carrier pivoted to the lower ends of the shank and the link, and a blade secured to said carrier.

1,383,773. CASTER BRACKET-SOCKET. EMIL A. SMITHFIELD, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Jan. 3, 1921. Serial No. 434,506. 24 Claims. (Cl. 16—4.)



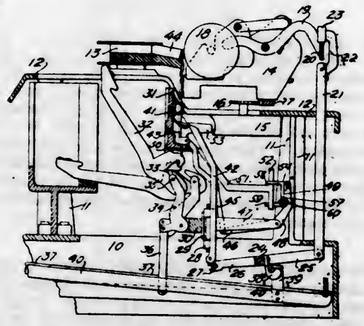
2. A caster socket formed from one piece of metal, shaped into a cylindrical body portion having a single longitudinal opening, a flap integral with said body portion opposite said opening and curved toward said opening to form an end cap, said flap extending downwardly within said cylindrical body portion adjacent the longitudinal opening to form a retaining member for the caster stem, and other flap means integral with the cylindrical body portion and curved inwardly to lie in superposed relation with said first mentioned cap forming flap to reinforce the same.

1,383,774. CASTER CONSTRUCTION. EMIL A. SMITHFIELD, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Feb. 26, 1921. Serial No. 448,129. 4 Claims. (Cl. 16—73.)



3. A caster construction comprising a spindle having two enlarged portions, circular trackway supporting means including concentric guard portions and an inner

sleeve portion rigid with the trackway when in assembled relation and concentric with said spindle, and a

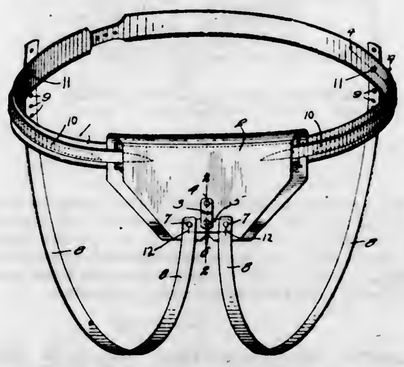


wheel supporting yoke rotatably supported upon said sleeve portion.

1,383,775. PAPER-FEEDING MECHANISM. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1920. Serial No. 358,592. 18 Claims. (Cl. 197—130.)

1. In a typewriter, the combination of a platen, a paper table pivoted at the rear thereof and having rear paper fingers extended therefrom, and front paper fingers pivotally mounted beneath the platen axis to coöperate with the rear paper fingers and provide a substantially continuous guiding surface for the paper.

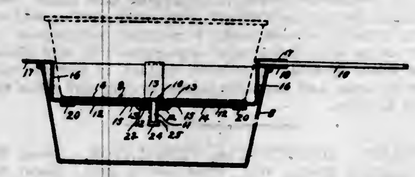
1,383,776. RIBBON-SHIFTING MECHANISM. CHARLES SPIRO, New York, N. Y., assignor to Federal Adding Machine Corporation, New York, N. Y., a Corporation of New Jersey. Filed Mar. 8, 1920. Serial No. 364,180. 12 Claims. (Cl. 197—157.)



1. In a typewriter, a ribbon shifting mechanism comprising a ribbon carrier, a vibrator lever therefor, a color controlling device shiftable upon said lever to vary the extent of vibration thereof, and a universal bail having a fixed head to engage said device whereby the bail is relieved of the weight thereof.

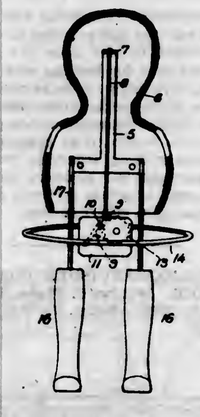
1,383,777. HEATING APPARATUS FOR USE IN OIL-WELLS. JAMES CARLYLE STEPHENS, Norfolk, Va., assignor to Huff Process Company, Wilmington, Del., a Corporation of Delaware. Filed July 26, 1920. Serial No. 398,869. 9 Claims. (Cl. 219—33.)

1. Heating apparatus for use in oil wells comprising an inner tube projecting down into the well casing and formed of a series of separable sections connected together by coupling sleeves, an electric heater suspended from said inner tube, a series of channeled blocks secured over and engaging said coupling sleeves, and an electric cable passing through said series of blocks and having its outer surface gripped at intervals by said blocks, said cable being connected to said heater, substantially as described.



1,383,778. TRUSS. HENRY N. WITT, Morristown, Tenn. Filed Sept. 17, 1920. Serial No. 410,811. 2 Claims. (Cl. 128—96.)

1. In a truss, the combination of a leather-covered truss-pad, a vertically disposed metal strip having its upper end flush with and fastened to the front of the pad and having its lower end spaced from the front of the pad and fastened thereto, an evener strip pivotally

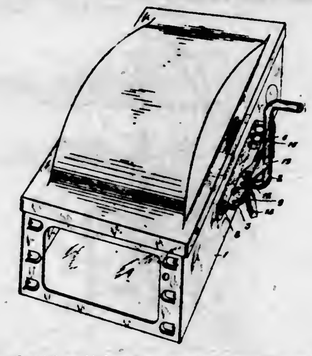


mounted under the raised portion of the vertical strip, said strip having buttons on its end, leg straps having a front end detachably secured to said buttons of the evener strip, body-encircling flexible straps to which the truss-pad is attached, and means for securing the free ends of the leg straps in adjusted positions on suitable rear portions of said body-encircling straps.

1,383,779. KITCHEN UTENSIL. FRANCES W. WORKMAN, Los Angeles, Calif. Filed Nov. 18, 1919. Serial No. 338,887. 4 Claims. (Cl. 53—2.)

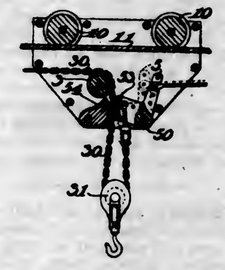
1. A device of the class described, comprising a pair of vessel supporting members pivoted together at a point approximately midway between their ends, said ends being provided with extension arms telescopically secured thereto, the end of said extension arms adapted to rest on a cooking utensil.

1,383,780. TOY. DAVID ZAIDEN, New York, N. Y. Filed August 23, 1919. Serial No. 319,470. 7 Claims. (Cl. 46—40.)



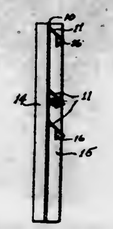
1. In a toy, the combination of a figure mounted on flexible legs, a vibratory motor carried within and supported by the figure, and means operated by the motor and adapted to agitate the figure.

1,383,781. CENTER STOP AND OUTSIDE LOCK-OFF FOR ELECTRICAL SWITCHES. ALBERT P. BALL, Royal Oak, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed June 18, 1918. Serial No. 239,740. 38 Claims. (Cl. 200—42.)



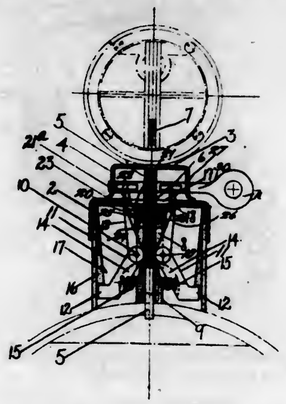
6. An outside lock off for double throw switches comprising a fixed member and a movable notched member, said members being provided with means whereby they may be locked together.

36. The combination with a double throw switch, of means permitting only a rapid continuous motion from either extreme position to the other, comprising a fixed member, a movable notched member adapted to engage



a portion of said switch when slowly operated, and means for actuating said movable member.

1,383,782. CABLEWAY-CARRIAGE. KNUTH BERGER, Seattle, Wash., assignor to Washington Iron Works, Seattle, Wash., a Corporation of Washington. Filed June 1, 1920. Serial No. 385,589. 6 Claims. (Cl. 212—110.)

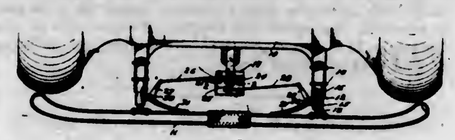


1. A fall line grip for cableway carriages comprising a hinged gripping member adapted to engage the fall line, the fall line forming a loop and having its end connected to said gripping member to hold it in gripping position, and means for releasing the grip, mounted upon the carriage and connected with the back-haul line to be actuated thereby.

1,383,783. RUBBER RAZOR. RENNIE E. BILLINGSLEY, San Antonio, Tex. Filed July 24, 1919. Serial No. 313,132. 3 Claims. (Cl. 30—12.)

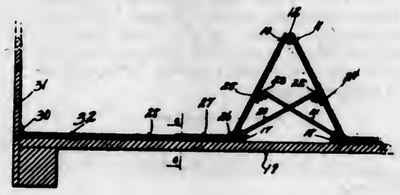
1. A safety razor comprising a plate of elastic material, a plurality of cutting blades attached to said plate in parallel relation, and a facing element of flexible material bearing upon said plate and against the blades with the cutting edges of the blades projecting in advance of the facing element.

1,383,784. LOCKING MECHANISM. ANTHONY BONSA, Felton, Del. Filed Dec. 4, 1920. Serial No. 428,415. 3 Claims. (Cl. 70—90.)



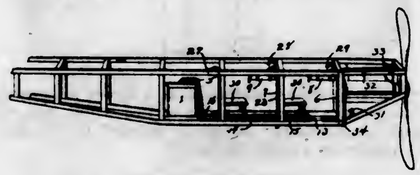
1. In combination with a tubular member having one end open and provided with an internal shoulder, a cap for closing said open end of the tubular member, a part carried by the cap and extending within the tubular member when the cap is in applied position, a movable arm carried by said part for coaction with the shoulder to hold the cap against displacement, automatic means for moving the arm into position to coact with said shoulder, said arm being provided with an angularly disposed dog, a member having movement lengthwise of the part and contacting with the dog upon movement in one direction to swing the arm free of the shoulder, means for imparting movement to the last named member in said direction, and automatic means for imparting movement to said second named member in the opposite direction

1,383,785. ROTARY WELL-DRILLING HEAD. JOHN VINCENT BOX, Los Angeles, Calif., assignor of one-third to C. R. Little and one-third to (Mrs.) William Payne Martin, (widow,) Whittier, Calif. Filed Sept. 22, 1919. Serial No. 325,552. 13 Claims. (Cl. 255—25.)



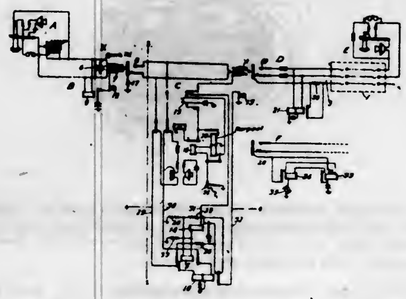
7. In a hydraulic head, the combination with a hollow shaft journal provided with supporting means, of a bearing plate for said supporting means; said bearing plate being provided with an inverted truncated conical raceway, a base plate provided with a truncated conical inwardly depressed raceway and truncated rollers in said raceways.

1,383,786. SAFETY DEVICE. LEWIS P. BRADDY, San Francisco, Calif. Filed Apr. 14, 1920. Serial No. 373,948. 5 Claims. (Cl. 116—32.)



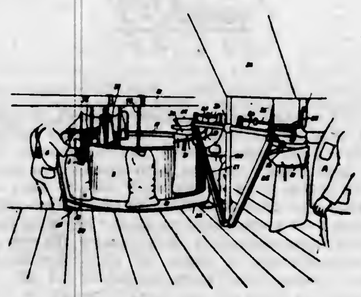
1. The combination in a device of the character described of an automobile license or identifying card holder comprising a box having a hinged downwardly opening bottom, with inwardly turned hooks, a revoluble bolt vertical to the bottom with elastic arms engageable with said hooks, and means operable by collision contact, to turn the bolt and its arms, and cause the bottom to open and allow the card to drop.

1,383,787. SHIPPING-CAR VENTILATOR. JESSE W. CALHOON, Racine, Wis. Filed Dec. 6, 1920. Serial No. 428,688. 5 Claims. (Cl. 98—26.)



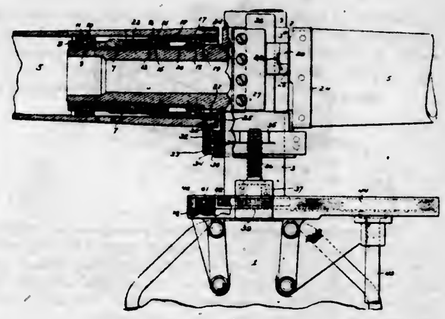
5. A ventilating device comprising two foraminous side members hinged together and provided at their outer edges with flanges adapted to rest upon the floor, means including hooks and eyes for holding said members at the desired angle to each other, rods pivotally connected to said outer edges to brace the same against the sides of the container in which the ventilator is placed, said rods being adjustable in length to fit containers of different sizes, said ventilator being separable longitudinally into a plurality of sections, end members hinged to the side members, and means to secure said end members to close the space between said side members.

1,383,788. FIRE-EXTINGUISHER FOR AEROPLANES AND THE LIKE. WALTER C. CLARK, Fort Worth, Tex. Filed July 15, 1919. Serial No. 310,998. 4 Claims. (Cl. 169—2.)



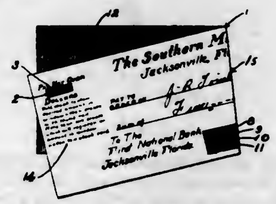
1. Fire-extinguishing means for aeroplanes and the like comprising a vessel containing fire-extinguishing material, a compressed air tank in operative relation to said vessel, spraying nozzles in front of different seats of the aeroplane and pipes conecting said nozzles with said vessel, means positioned in front of each seat whereby the occupant of the aeroplane can utilize the compressed air from said air tank to force the fire-extinguishing material from said vessel through said nozzles, and a manually operated pump operatively connected to said compressed air tank.

1,383,789. TELEPHONE-EXCHANGE SYSTEM. ROY D. CONWAY, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1918. Serial No. 251,223. 7 Claims. (Cl. 179—27.)



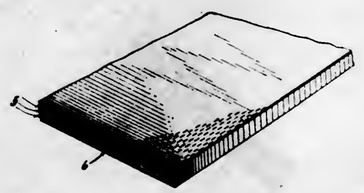
1. A telephone exchange system comprising a trunk circuit extending from a first to a second central office, a line circuit terminating at the second central office, a station thereon, a control conductor, switching means at the second central office controlled over the conductor and adapted to connect the trunk to the line, means responsive to the answer of the called station to cause a predetermined variation in the resistance of the conductor, a relay in the trunk circuit operating upon the connection of the trunk with the line and releasing upon the response of the called station, and a signaling device at the first central office controlled by the relay.

1,383,790. BAG-HANDLING APPARATUS. JOHN J. CURRAN, West Haven, Conn., assignor to The American Agricultural Chemical Co., New Haven, Conn., a Corporation. Filed Feb. 24, 1921. Serial No. 447,539. 3 Claims. (Cl. 226—53.)



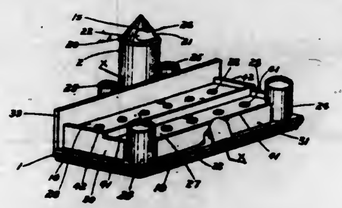
1. In a bag-handling apparatus, the combination with a rotary, annular platform, of a bag-support upstanding from the inner portion of the said platform for preventing the bags dropped thereupon from toppling inward with respect thereto, bag-handling mechanism located adjacent to the outer edge of the said platform and adapted to carry bags thereover preparatory to dropping them thereupon, and a sewing-machine having its sewing-head positioned directly above the platform for the sewing of the mouths of the bags as they are brought under it by the rotation of the rotary platform.

1,383,791. PROPELLER. THOMAS A. DICKS, Pittsburgh, Pa., assignor to Standard Steel Propeller Company, Pittsburgh, Pa. Filed Jan. 3, 1920. Serial No. 350,207. 10 Claims. (Cl. 170—163.)



1. A propeller comprising a hub having arms, blades having tubular portions receiving said arms and mounted to turn thereon, adjusting means for said blades mounted on the outside of the hub and engaging exterior parts of the blades, and means for operating said adjusting means.

1,383,792. CHECK. DWIGHT M. DICKINSON, Atlanta, Ga. Filed Sept. 23, 1920. Serial No. 412,134. 3 Claims. (Cl. 283—9.)



1. A piece of commercial paper provided with an opening and having a mark denoting value, the paper having a crease which is visible when the paper is unfolded, the mark registering with the opening when the paper is folded at the crease.

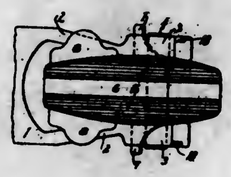
1,383,793. COMPOSITION BODY FOR SHOE-SOLES AND THE LIKE. HENRY K. ECKEL, Milwaukee, Wis. Filed Feb. 7, 1919. Serial No. 275,568. 1 Claim. (Cl. 154—52.)

A wear-resisting composition body comprising a plurality of layers of woven fabric impregnated with and maintained in cohesion by rubber cement mixed with powdered iron ore, the fabric material constituting the major portion of the composition.

1,383,794. GAME. GLADYS B. FRISBIE and FRANKLIN S. FRISBIE, Cambridge, Mass. Filed June 4, 1917. Serial No. 172,832. 29 Claims. (Cl. 46—59.)

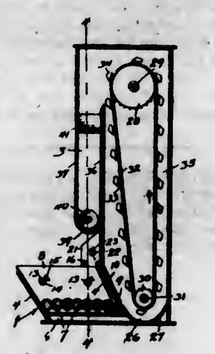
1. In a game apparatus, a holder, piston means operating within the said holder for causing balls to be projected from the said holder, and inclined deflecting means cooperating with the said piston means and adapted to engage and deflect in various directions the said balls as they are about to leave the said holder.

1,383,795. TOY. FRANK FOWLER, Philadelphia, Pa. Filed Aug. 25, 1920. Serial No. 405,903. 1 Claim. (Cl. 244—2.)



In a toy of the character described, a flying member, propeller blades formed with said member, a sleeve carried by the flying member, a stem having a reduced section therein, a rounded head carried by the outer end of said reduced section, said head and reduced section adapted to pass within the sleeve, said head having bearing contact with both the sleeve and the flying member and a handle to which the stem is secured.

1,383,796. TROLLEY-HARP EXTENSION. WALTER F. FREEMAN, Springfield, Mass. Filed Mar. 5, 1921. Serial No. 449,681. 22 Claims. (Cl. 191—60.)



1. The combination, in a trolley harp extension, with a trolley-pole harp and its axle, the latter being in an approximately vertical plane, of non-pivotal rocking means mounted indirectly on said axle and adapted to carry a trolley wheel.

1,383,797. TROLLEY-SHOE. WALTER F. FREEMAN, Springfield, Mass. Original application filed Mar. 5, 1921, Serial No. 449,681. Divided and this application filed Apr. 15, 1921. Serial No. 461,520. 9 Claims. (Cl. 191—59.)

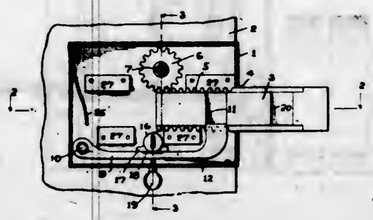
1. As an improved article of manufacture, a trolley shoe comprising separable sections, adapted to be mounted on the axle, of a trolley-pole harp, and removable means to secure such sections together.

1,383,798. BAKER'S PROPORTIONATE FLOUR FEEDER AND MIXER. EUGENE GASE, Saginaw, Mich., assignor to Baker-Perkins Manufacturing Corporation, Saginaw, Mich. Filed Dec. 4, 1920. Serial No. 428,336. 9 Claims. (Cl. 259—4.)

1. In a machine for the purpose described, in combination a wide hopper, rotatable parallel rollers having approximately the same diameter and forming the bottom of the said hopper, partition walls arranged vertically to the said rollers so as to form with the side walls of the said hopper as many compartments as there are different materials to be proportioned, means for adjusting the said partition walls sidewise so as to regulate the size of the said compartments, an outlet for the proportioned materials arranged closely above the last of the said rollers and extending along its whole length, means for rotating all the said rollers at the same time with equal celerity and in the direction of the said outlet, and means for mixing the proportioned materials leaving the latter.

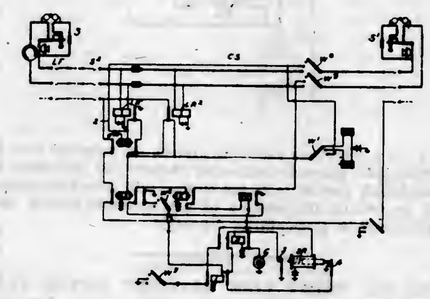
1,383,799. ELECTRICAL REGULATING DEVICE. EDGAR W. GENT, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1920. Serial No. 378,330. 4 Claims. (Cl. 219—48.)

1. In an electrical regulating device, a movable contacting member, a supporting member, a plurality of terminals on said supporting member, an eyelet for each terminal extending through said terminal and said supporting member said eyelet being formed to provide a



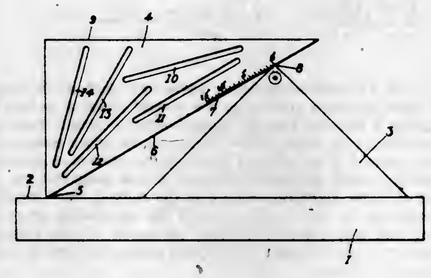
positive seating contact for said contacting member and a conducting medium connected to said terminals.

1,383,800. AUTOMOBILE-LIFT. ALBERT GEBMAR, Des Moines, Iowa. Filed Mar. 25, 1921. Serial No. 455,665. 9 Claims. (Cl. 254—94.)



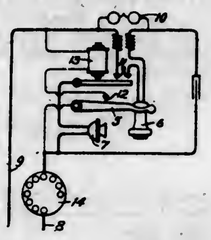
1. An automobile lift comprising a pair of spaced runways, a pair of frames secured to said runways, arm pivoted to one of said frames, and wheels rotatably mounted on the other of said frames, each of said frames being capable of having one end raised for varying the height of said arms or said wheels, means for engaging said frames for holding them in their raised positions, and means for permitting the frames to be spaced at various distances relative to each other for use with various sizes of automobiles.

1,383,801. LOCKING DEVICE. EUGENE GLISONI and ERNEST VON BECK, New York, N. Y.; said von Beck assignor of his entire right to Carlo Dalboni, New York, N. Y. Filed Oct. 29, 1920. Serial No. 420,446. 4 Claims. (Cl. 70—29.)



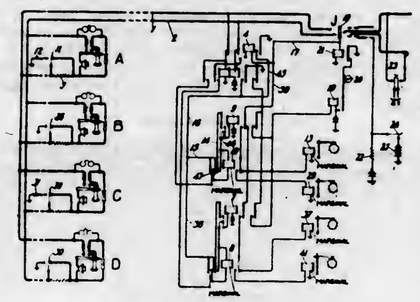
1. The combination of a bolt, a retainer to engage the bolt when projected to full operative position, a key-operated element to disengage the retainer from the bolt, a member independent of the retainer to project or withdraw the bolt when disengaged from the retainer, and a part to limit the projection of the bolt to prevent the retainer from engaging same, rendering the retainer ineffective and permitting the withdrawal of the bolt by said member, said part being operable to release the bolt to permit it, whenever desired, to move into position to be engaged by said retainer.

1,383,802. SIGNALING DEVICE. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1917. Serial No. 168,441. 5 Claims. (Cl. 179—18.)



1. In a telephone system, a signaling device for actuating the call bells of the subscribers' lines comprising a source of ringing current, means for switching said source of ringing current on and off subscribers' lines periodically, a relay for controlling the lengths of said periods, a second relay unresponsive to the initial and responsive to additional demands on said device for causing the instant switching on of said ringing current at each demand.

1,383,803. PROTRACTOR OR DRAFTING IMPLEMENT. JOSEPH MARR GWINN, Jr., New Orleans, La. Filed Nov. 19, 1920. Serial No. 425,135. 5 Claims. (Cl. 33—75.)



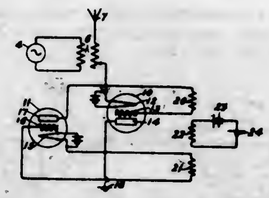
1. Apparatus for defining variable angles and comprising two triangle elements and an element having a straight edge, one of said triangle elements having a graduated scale along one edge to co-act with the vertex of the other triangle element to indicate the angle formed by one edge of the first named triangle element with said straight edge, and said triangle elements being adjustable relatively to one another along the plane of said straight edged element.

1,383,804. TELEPHONE-EXCHANGE SYSTEM. JOHN A. HALL, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1918. Serial No. 263,138. 6 Claims. (Cl. 179—81.)

1. In a telephone exchange system, an outgoing line, a substation apparatus connected thereto and including a switchhook and contacts for closing said line, and means for preventing the opening of said contacts should the switchhook be momentarily depressed.

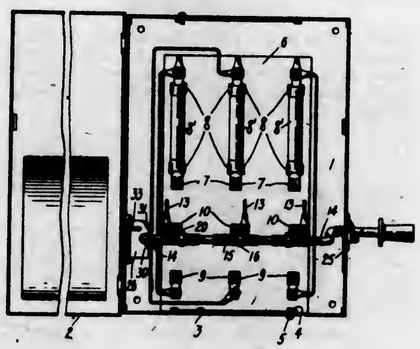
1,383,805. PARTY-LINE METERING SYSTEM FOR TELEPHONE-EXCHANGES. JOHN A. HALL, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1919. Serial No. 339,179. 4 Claims. (Cl. 179—18.)

1. In a telephone system, a party line, stations thereon, a meter for each station at the central office, a metering circuit, a line relay at the central office, a circuit therefor including both sides of the party line in series closed by the removal of the receiver at the calling station, a manual switch at each station independent of the receiver hook, a set of meter switching relays at the central office jointly controlled by the manual switch of the calling station and said line relay to connect the meter of the calling station to the metering circuit, and means for closing said metering circuit.



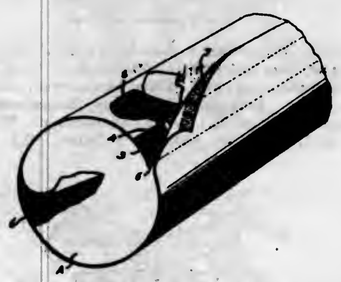
1,383,806. SHEET-METAL RIVET. ROY W. HAYNES, Philadelphia, Pa., assignor to Penn Rivet Corporation, Philadelphia, Pa., a Corporation of Virginia. Filed Sept. 1, 1920. Serial No. 407,564. 5 Claims. (Cl. 85—38.)

1. A one-piece sheet metal rivet having a hollow cupped head, legs integral with the outer marginal rim of the cupped head, each of said legs having a portion bent inwardly toward the center of the head and into the cupped interior thereof to engage the concaved surface of the head, and having the remaining portion thereof bent to form a prong extending from the head at substantially



a right angle to the plane of said rim, said rim constructed to rest throughout its periphery firmly upon the surface to which the rivet is secured.

1,383,807. POWER MODULATION FOR RADIOTRANSMISSION. RAYMOND A. HEISING, East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Sept. 21, 1915. Serial No. 51,762. 19 Claims. (Cl. 250—6.)



9. An antenna, two constantly active thermionic impedances connected in parallel in reverse directions between two points in said antenna, and means for varying each impedance in accordance with signals.

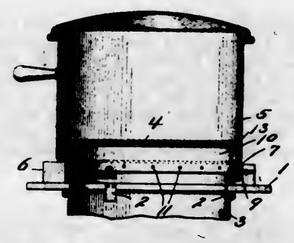
1,383,808. ELECTRICAL SWITCH. BRYSON DEXTER HORTON, Detroit, Mich., ALBERT P. BALL, Royal Oak, Mich., and FREDERICK ZENKER, Highland Park, Mich., assignors to Detroit Fuse & Mfg. Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 4, 1916. Serial No. 82,197. 19 Claims. (Cl. 200—8.)

16. In a motor starting switch having stationary starting and running contact members and coöperative movable contact members, the combination of means controlling the sequence of operations of said switch and allowing only a rapid motion of the movable contact members from starting to running position, and automatic means for quickly throwing said switch from starting to running position.

1,383,809. PAPER TUBE AND CONTAINER. CHARLES H. HOWARD, Saugus, Mass., assignor to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1919. Serial No. 316,964. 2 Claims. (Cl. 229—3.1.)

1. A paper tube formed from a blank which is composed of two superposed layers of paper secured together by a layer of waterproof adhesive, one of the layers of paper having a marginal portion longitudinally of the blank which is free from waterproof material and which extends beyond the edge of the superposed layer of paper, a non-waterproof adhesive for securing said marginal single ply portion to the inner wall of the double ply portion of the blank to form the blank into a tube, and a waterproof adhesive securing the longitudinal marginal portions of the double ply blank to each other in overlapping engagement and in position to exclude atmosphere moisture from said non-waterproof adhesive.

1,383,810. DEMOUNTABLE RIM. HENRY MARTIN HOWELL, Monroe, La., assignor, by direct and mesne assignments, of seven and one-half per cent. to Charles Schultze, seven and one-half per cent. to Richard Downs, seven and one-half per cent. to John E. Doughtie, seven and one-half per cent. to Shelby C. Blackmon, seven and one-half per cent. to Arthur King, fifteen per cent. to Louis H. Krickel, and thirty-five per cent. to Samuel Kaplan, Monroe, La. Filed Jan. 6, 1920. Serial No. 349,723. 4 Claims. (Cl. 301—11.)

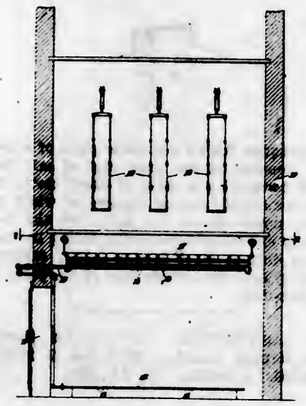


1. A demountable rim of the character described comprising the combination with a rim base section, an inner tire-retaining flange integral with said base section and a removable outer retaining flange, of an inner locking plate integral with said base section, spaced arcuate locking flanges integral with said inner locking plate, each of said flanges having an enlarged head spaced from the inner locking plate, an outer locking plate integral with said removable outer tire-retaining flange having a circumferential channel on its inner side and provided with a plurality of arcuate shoulders spaced circumferentially to permit entrance of the enlarged head in the said channel and spaced radially to accommodate said arcuate flanges when said enlarged heads are confined behind said shoulders, and means for maintaining said locking plates against circumferential movement, all as and for the purposes set forth.

1,383,811. WINDOW-VENTILATOR AND THE LIKE. ELMER E. HUNT, Chicago, Ill. Filed Apr. 30, 1920. Serial No. 377,812. 1 Claim. (Cl. 98—81.)

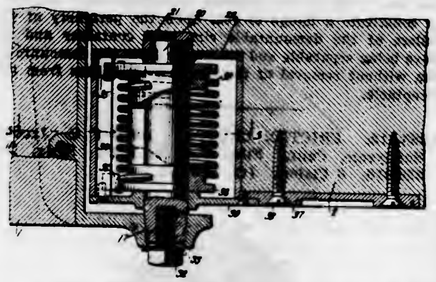
The combination with a ventilator plate of a dust guard removably mounted on the upper edge of said plate, said dust guard comprising a strip of sheet metal folded to provide a downwardly facing channel of width to firmly embrace the upper edge of the plate, and also to provide an outwardly extending downwardly facing lip for the entrapment of dust or other foreign matter carried by the air flowing up over the outside face of the plate, substantially as described.

1,383,812. ASH-SIFTER. MACKINTOSH HUTCHINSON, Toronto, Ontario, Canada. Filed Jan. 2, 1919. Serial No. 269,299. 3 Claims. (Cl. 83—60.)



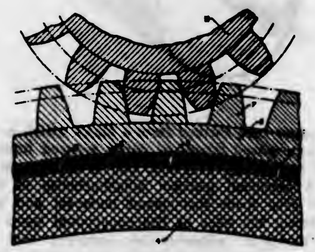
1. A sifter comprising a demountable rim adapted to rest upon a receptacle, rollers and bearings therefor attached to said rim, and a container provided with a sieve, the lower wall of the container extending below the sieve to constitute a flange to rest upon the periphery of the rollers of the demountable rim, said container and its sieve being separable and removable from the demountable rim without removal of the rim and its rollers from the receptacle.

1,383,813. FRICTION-CLUTCH. AUGUST C. JACOBI, Sunnyvale, Calif. Filed Nov. 6, 1919. Serial No. 336,016. 6 Claims. (Cl. 192—41.)



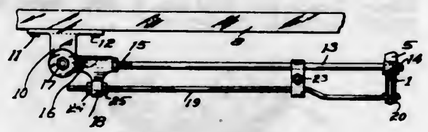
1. In a device of the class described, a drive element, a clutch member pivoted thereon to turn therewith and to rock on a fixed center, means tending to rock the clutch member, on said fixed center to the release position, and a driven element having inner and outer annular flanges presenting an annular groove therebetween, said clutch member having a lateral member receivable in said groove and adapted to engage the outer flange by a relative forward movement of the drive or to engage against the inner annular flange when released.

1,383,814. SMOKEHOUSE. AURELIAN L. KANE, Ossining, N. Y. Filed Sept. 14, 1920. Serial No. 410,190. 3 Claims. (Cl. 99—2.)



1. In apparatus of the character described: the combination with a housing; of means for supporting, in the upper portion thereof, products to be smoked, said housing being adapted to contain smoke producing material in the lower portion thereof; gas supply means to ignite said smoke producing material; additional gas supply means; and heat resisting material above said additional gas supply means and below the support for said products.

1,383,815. PIVOT SPRING-HINGE. OSCAR KATZENBERGER, Chicago, Ill., assignor to Lawson Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1918, Serial No. 239,597. Renewed May 2, 1921. Serial No. 466,217. 4 Claims. (Cl. 16—182.)

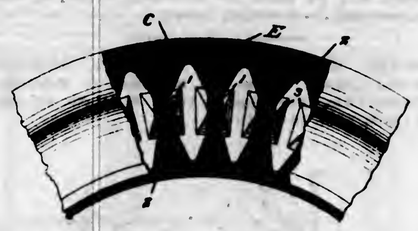


1. A pivot spring hinge comprising a pivotal pin having a tapering lower end, a connecting member for connecting the pivotal pin with a support, said connecting member having a tapering aperture for receiving the tapering end of said pin, said pivotal pin having a threaded socket on the tapering lower end, a clamping threaded member engaging said threaded socket for drawing the tapering lower end of said pin into said tapering aperture, said threaded member of said tapering lower end permitting an adjustment of the pin for securing a desired alinement, a lug extending from said pin, a plate loosely mounted on said pin adjacent each end, each of said plates having shoulders facing in opposite directions, the shoulder on one plate engaging one side of said lug and the shoulder on the other plate engaging the opposite side of said lug, a spring surrounding said pin with one end projecting into one of said plates and the opposite end projecting into the opposite plate, a casing adapted to be connected to a door, a projection extending from said casing, and means on each of said plates overlapping said projection, said overlapping means engaging said projection on opposite sides whereby the said door is normally held in a given position and moved back by said spring when moved therefrom.

1,383,816. COMPOSITE GEAR-WHEEL. HULDRICH KELLER, deceased, Zurich, Switzerland, by Katharina Keller, administratrix, Zurich, Switzerland, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed May 13, 1921. Serial No. 469,299. 4 Claims. (Cl. 74—28.)

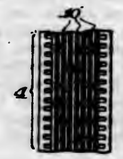
1. A composite gear wheel, comprising a wheel body provided with a rim the meridian section of which is of U-shape open toward the outer side, a ring consisting of an elastic material inserted between the shanks of the U-shaped rim of said wheel body and provided with a cylindrical circumference, and a rigid toothed rim shrunk onto said elastic ring.

1,383,817. FRONT-AXLE RADIUS-ROD. GEORGE S. KING, South Berkeley, Calif. Filed Dec. 29, 1919. Serial No. 347,967. 1 Claim. (Cl. 267—66.)



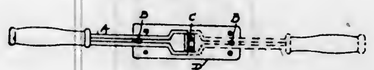
A radius rod for motor car axles comprising a bracket adapted to be secured to the under side of a motor car frame, a yoke pivotally connected to the bracket, a rod threaded into said yoke and connected at its opposite end to the axle, a second rod connected to the under side of the axle and secured to a depending lug on the yoke, lock nuts for adjusting the position of the lower rod and means to connect the two rods to prevent them from vibrating unduly.

1,383,818. CUSHION-TIRE. DEE W. KIRBY, Gurdon, Ark. Filed Nov. 24, 1920. Serial No. 426,206. 4 Claims. (Cl. 152—5.)



4. A tire comprising a carcass and a plurality of cushioning elements arranged within the carcass and extending circumferentially therearound, each of said elements being cruciform and extending transversely of the carcass, the outer end portions of the arms of the elements being substantially pyramidal in form with the apex portions inwardly directed, opposed arms of each of the elements being alined in a direction radially of the carcass, the remaining arms being opposed and extending

transversely of the carcass, the inner portions of the first named arms providing an elongated restricted part, the

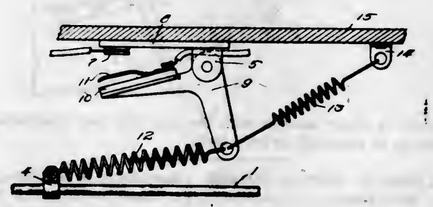


second pair of opposed arms being connected at the junction portion of the first named arms.

1,383,819. PRODUCING MATRICES AND COLOR-SCREENS THEREFROM. ISIDOR KITSEE, Philadelphia, Pa. Filed May 6, 1919. Serial No. 295,254. 5 Claims. (Cl. 95—81.5.)

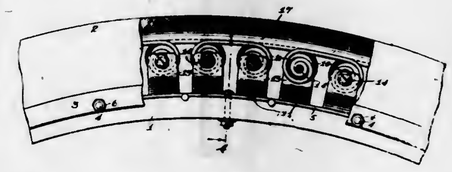
1. The method of producing a color screen integral with moving picture film which consists in first producing a matrix with the required fine lines with the aid of a one row templet, printing therefrom on a bichromate sensitized substratum, raising the protected parts and coloring then selectively the substratum with at least two colors.

1,383,820. REVERSIBLE BRUSH-HANDLE. CHARLES KLEMM, Lawrence, Mass. Filed Oct. 6, 1920. Serial No. 415,194. 1 Claim. (Cl. 306—19.)



The combination with a brush body of a handle comprising a spring wire bent into a loop having a straight cross bar hingedly connected to the middle of the brush body and two parallel slightly spaced apart portions secured in the handle grip; the brush body having a pin at each end adapted to be sprung between said parallel portions to hold the handle in contact with either end portion of the body of the brush.

1,383,821. SWITCH FOR STOP-SIGNALS FOR AUTOMOBILES. ALFRED L. KOENIG, Chicago, Ill. Filed Dec. 1, 1919. Serial No. 341,725. 3 Claims. (Cl. 200—59.)

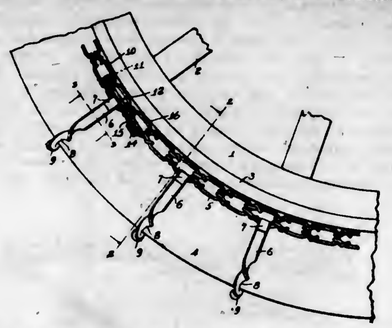


1. In a vehicle signal, a base adapted to be secured to the vehicle adjacent to the braking rod thereof, a contact on one end of the base, a bell crank lever pivoted to and depending from the opposite end of the base, a contact insulated from and carried by the bell crank and engageable with the base contact, a light spring connected to one end of the lever and to the car for normally holding the lever inoperative, and a heavier spring connected to said end of the lever and to the braking rod for moving the lever to operative position upon actuation of the braking rod and for allowing movement of said rod after the lever has reached its limit of movement.

2. In a vehicle signal and operating device for actuation by the braking device of the vehicle, means to render the signal operative including a pivoted lever formed for attachment to and for depending from the car bottom, a spring connected to one side of the lever adjacent the lower end thereof and adapted to be connected to the brake rod whereby to permit of movement of the brake rod after the lever has reached its limit of movement, and a spring connected to the opposite side of the lever and adapted to be attached to the car bottom for restoring the lever to normal position upon release of the brake rod.

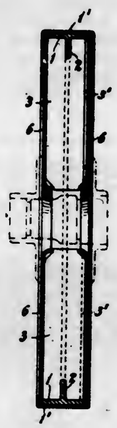
3. In a vehicle signal, a longitudinally movable actuating rod, a bell crank lever adapted for securement to the vehicle with one arm extending toward the rod and terminating in an eye, a spring connecting the eye to the rod, a lighter spring connected at one end to the eye and extending oppositely therefrom to a fixed point, an insulating block fixed on the other arm of the bell crank lever, and spaced contacts one of which is resiliently carried by the block.

1,383,822. TIRE. VRATISLAV KUBELKA, Ridgewood, Brooklyn, N. Y. Filed Oct. 26, 1920. Serial No. 419,684. 8 Claims. (Cl. 152—8.)



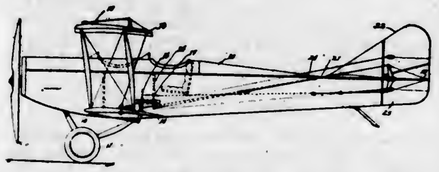
8. In a tire, an annular chain of spring links, said links substantially U-shaped, the legs of the U forming coils, said links arranged in groups of parallel links, the coils of each group of links located between and in alinement with the coils of an adjacent group, bolts passed through the alined coils, brackets supporting the bolts, said chain and its associated parts adapted to be inclosed in a tire shoe, said brackets spacing the coils from the inner surface of the shoe, an annular resilient filler band located around the chain and preventing the engagement of the intermediate portion of the links and the inner surface of the shoe, a staggered arrangement of beveled lugs on the filler band interlocking in the interstices of the links, and said filler band and brackets preventing lateral or radial movement of the chain relative to the shoe and rim.

1,383,823. ANTISKID DEVICE. VRATISLAV KUBELKA, Brooklyn, N. Y. Filed Feb. 12, 1921. Serial No. 444,427. 1 Claim. (Cl. 152—14.)



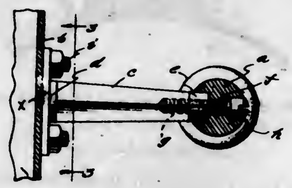
In an anti-skid device, a pair of annular chains adapted to encircle opposite sides of a tire, a plurality of U-shaped

members extending transversely of the tire shoe and having their ends connected to the chains, said members lo-



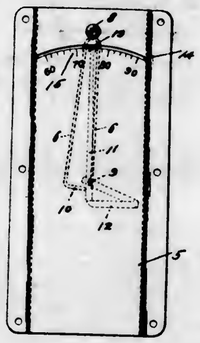
cated in direct contact with the tire shoe and comprising strips of hardened twisted steel.

1,383,824. METAL WHEEL. LAURENCE S. LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed June 3, 1919. Serial No. 301,459. 8 Claims. (Cl. 301—63.)



1. In a metal wheel, a metal rim having an internally projecting continuous metal flange integral therewith and a rigid metal spoke member consisting of metal bars interlocked with the flange of the rim by notches on the ends of said spokes and flange as and for the purpose described.

1,383,825. CONTROL. WILLIAM GRINNELL LANDON, New York, N. Y. Filed May 5, 1920. Serial No. 379,080. 1 Claim. (Cl. 244—29.)



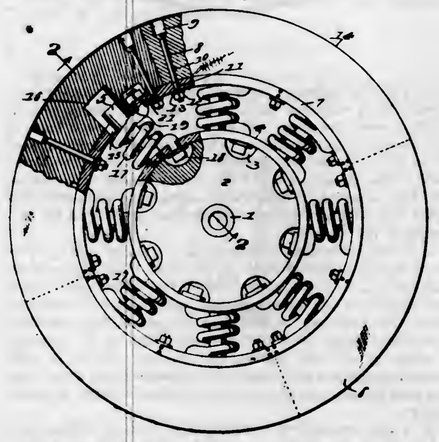
A control, including in combination with a fuselage, and duplicate sets of controls associated therewith, each set comprising a rudder, elevators and ailerons, of two independent joy-sticks in said fuselage, and means extending between said joy sticks for detachably connecting and synchronizing the movement thereof.

1,383,826. HANDLE. JARED S. LAPHAM, Northville, Mich., assignor of one-half to James T. McMahon, Toledo, Ohio. Filed Sept. 2, 1920. Serial No. 407,685. 1 Claim. (Cl. 16—103.)

In a handle having in combination, a handle member bored to receive the shank of a screw and provided with a counterbore at each end of the said bore, a fixture or bracket for attachment to a supporting member and provided with a spindle portion having a load-carrying end adapted to engage one of the counterbores and a screw having a threaded shank portion adapted to engage in the bore and a head portion adapted to engage in the other counterbore, the threaded shank engaging also in a tapped opening in the end of the said spindle.

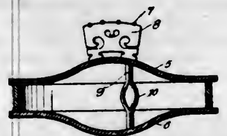
1,383,827. MECHANICAL THERMOMETER. WILLIAM LARSON, Minneapolis, Minn. Filed Oct. 4, 1920. Serial No. 414,577. 4 Claims. (Cl. 73—118.)

1. In a mechanical thermometer an approximately U-shaped expansion element having its prongs turned downwrd, and an indicator arm pivoted to one prong of said expansion element and stopped by the other prong thereof, said arm being weighted at one side of its pivot so that it will maintain contact with the stop acting prong of said expansion element.



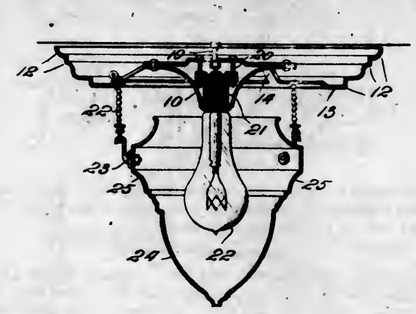
1,383,828. ADVERTISING DEVICE. CHARLES MCGINN, Cleveland, Ohio. Filed Dec. 30, 1919. Serial No. 348,458. 2 Claims. (Cl. 40—124.)

1. In a display device for advertising cards, the combination with a mirror, of flexible members having spaced openings therein, and attached in parallel lines to the top, side and intermediate bars of the mirror frame, advertising cards perforated in the margin to register with the open-



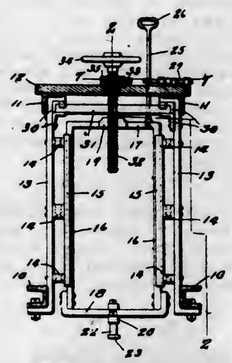
ings in said members, and flexible metal fasteners, insertible through the openings in said cards and members.

1,383,829. RESILIENT WHEEL. LOU EDGAR LEATHERS, Weed, Calif. Filed Apr. 29, 1919. Serial No. 293,452. 1 Claim. (Cl. 152—52.)



A resilient wheel having normally concentric hub and rim members, radial spokes secured at their inner ends to the hub member and fitted at their outer ends in openings in the rim member, said openings being extended longitudinal of the rim member to permit of the movement of the spoke relative thereto, and coiled springs respectively embracing said spokes and each spring being terminally secured rigidly to said hub and rim members for cushioning and yieldingly resisting the relative movements of the said hub and rim members in radial and circumferential directions in the plane of said members.

1,383,830. SOUND-POST. WILLIAM ELDON LEIGHTON, West Pembroke, Me. Filed May 5, 1920. Serial No. 379,041. 4 Claims. (Cl. 84—277.)

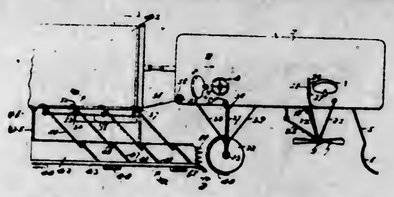


1. A sounding post, including a body portion formed with an unobstructed opening substantially intermediate its ends whereby said sounding post is rendered capable of a resilient action.

1,383,831. LIGHTING-FIXTURE. CHARLES R. LEIMECKE, St. Charles, Ill. Filed Aug. 22, 1919. Serial No. 319,086. 5 Claims. (Cl. 240—92.)

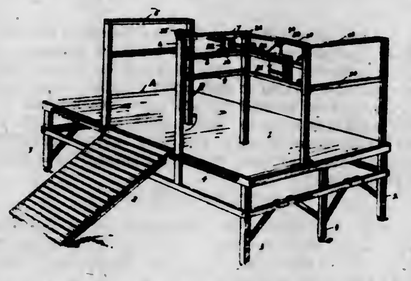
1. A semi-indirect lighting fixture comprising an upper member having formed thereon a centrally arranged depending reflector, the surface of which is curved, there being openings formed in said upper member around said reflector, a lamp secured to said upper member and disposed below the reflector, and a light diffusing bowl inclosing said source of light, said bowl having translucent upper and lower portions that are separated by a transparent portion.

1,383,832. LIFTING AND SWINGING SUPPORT FOR RAILWAY MOTOR-CARS. JOSEPH E. LOEFFLER, St. Louis, Mo. Filed Oct. 30, 1919. Serial No. 334,592. 4 Claims. (Cl. 254—87.)



1. The combination of a car, a member arranged to slide vertically thereon, fixed guideways on the car for said member, a lifting member movably mounted on said car and normally out of operative relation to said vertically sliding member, and means for operating said lifting member when in engagement with said sliding member to raise said car.

1,383,833. CANE-HARVESTER. NORMAN K. LYMAN, San Francisco, Calif. Filed July 14, 1919. Serial No. 310,781. 4 Claims. (Cl. 56—63.)

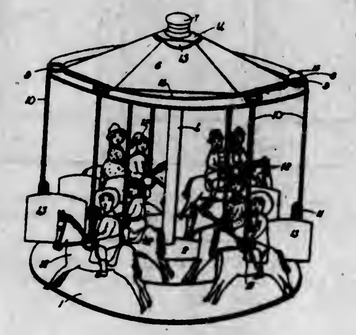


1. In a sugar cane harvester, a vehicle, a stalk topping mechanism carried by the vehicle on one side of the latter and adjacent said side, stalk severing means also carried by the vehicle but to the rear of the topping mechanism

and at a greater distance from the side of the vehicle than the topping mechanism, and means carried by the vehicle

for bending stalks over toward the latter to have their tops removed by the topping mechanism after which they may be cut by the severing means.

1,383,834. CHECKING DEVICE. GEORGE W. MCLEAN and EDWARD J. SHUA, New Orleans, La. Filed Nov. 22, 1919. Serial No. 339,793. 2 Claims. (Cl. 235—93.)



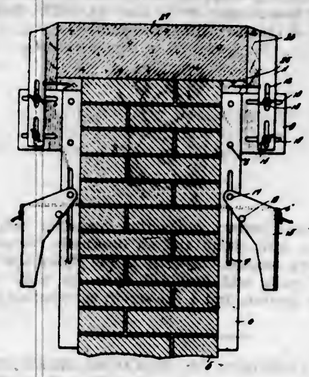
1. In a checking device, the combination of a revoluble member, pins adjacent the revoluble member, a checking arm having one end secured to the revoluble member, an arm secured to the revoluble member directly in rear of the checking arm, a register communicating with and actuable by movement of the arms; said arms being limited in their movements in one direction by the pins adjacent the revoluble member, and a spring clip so constructed and arranged with respect to the second arm that it limits the movement of the checking arm and second arm in another direction.

1,383,835. MOUNTING FOR REAMER-BLADES. ALBERT A. MARTELL, Woonsocket, R. I., assignor to The [illegible] Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed May 20, 1918. Serial No. 235,501. 9 Claims. (Cl. 77—75.5.)

1. In a device of the character described, a body member provided with blade holding slots the bases of said slots comprising portions of cylindrical concave surfaces, blades adapted to be mounted in said slots, means for moving said blades longitudinally of said body member, parallel inclined surfaces on the bases of said blades, in combination with segmental rocking supports having flat supporting surfaces for said blades and mounted within certain of said concave portions of the slots with the flat part of said rocking supports in contact with the inclined surfaces on said blades.

1,383,836. PAPER AND LIKE TOY. THOMAS MATHEWS, deceased, Leicester, England, by Annie Mathews, Leicester, and Harry Buckingham, London, England, administrators. Filed Nov. 26, 1920. Serial No. 426,610. 4 Claims. (Cl. 46—27.)

1. A toy roundabout comprising a circular canopy provided with a socketed knob at the apex thereof, a central support upon the upper end of which the socketed knob of the canopy rotatably fits, a base to maintain said support in an upright position, a flattened edge around the lower edge of the canopy, a series of cut out figures and devices, and rods adapted to detachably engage the aforesaid flattened edge and said figures and devices to suspend the latter from the canopy.



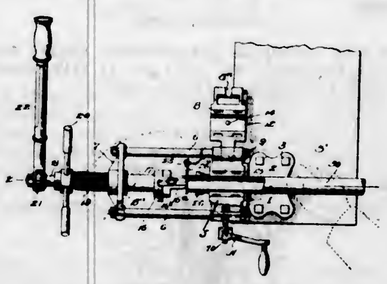
2. A toy roundabout comprising a circular canopy provided with a socketed knob at the apex thereof, a central support, a pin in the upper end of the latter upon which the socketed knob fits to permit rotation of the canopy, a base to maintain said support in an upright position, a flattened edge around the lower edge of the canopy, a series of cut out figures and devices, and wire rods adapted to detachably engage the aforesaid flattened edge and said figures and devices to support the latter from the canopy.

3. A toy roundabout comprising a circular canopy provided at its apex with a socketed knob, a central support upon the upper end of which said socketed knob rotatably fits, a base to maintain said support in an upright position, a flat annular ring on the lower edge of the canopy, a series of cut out figures and devices, and rods adapted to detachably engage both the interior and exterior edge of said ring and also engage the figures and devices for the purpose of suspending the latter from the canopy, substantially as described.

4. A toy roundabout comprising a circular conical canopy provided at its apex with a socketed knob and having around its lower edge a flat annular ring, a central support having in its upper end a pin upon which the socketed knob of the canopy rotatably fits, a base into which said support detachably fits and is maintained in an upright position, a series of cut out figures and devices, and a series of wire rods having at one end a coil adapted to fit detachably upon the interior and exterior edges of the annular ring and at the other end a coil adapted to fit detachably upon the figures and devices to support same from the canopy substantially as described.

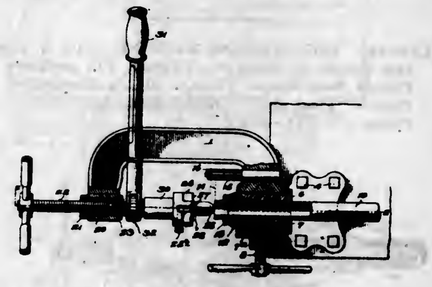
1,383,837. MOLD-SUPPORT. JOHN J. MILNES, Jr., Port Richmond, N. Y. Filed July 16, 1920. Serial No. 396,691. 3 Claims. (Cl. 25—131.)

1. A support for capping molds comprising a plurality of standards adapted to be attached to a wall, means for securing said standards to said wall, plates projecting angularly from said standards and adapted to support the



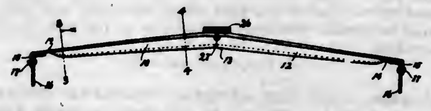
mold, and means carried by the plates for maintaining the mold in operative position.

1,383,838. CONTAINER. JOSEPH MRAZEK, New York, N. Y. Filed Sept. 16, 1920. Serial No. 410,774. 5 Claims. (Cl. 41—10.)



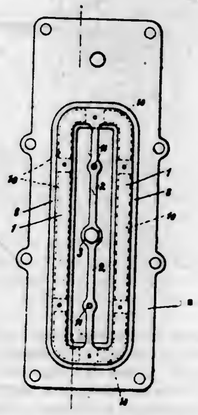
1. As a new article of manufacture, a container comprising an egg shell casing, and a receptacle located therein.

1,383,839. MACHINE FOR FLANGING SOFT-METAL PIPES. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 12, 1919. Serial No. 337,498. 12 Claims. (Cl. 453—81.)



1. In a machine for flanging soft metal pipes, the combination of a frame provided with pipe holding jaws, a flanging tool supported by said frame at one side of said jaws, means for moving the tool toward and from the jaws, and means supported by the frame for coöperating with the end of the tube to be flanged and determining the extent of projection of the pipe from the jaws.

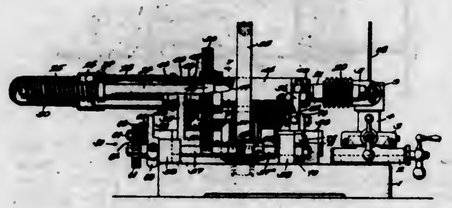
1,383,840. MACHINE FOR FLANGING SOFT-METAL PIPES. PHILIP MUELLER, ANTON C. SCHUERMANN, and ROBERT H. MUELLER, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Dec. 1, 1919. Serial No. 341,835. 7 Claims. (Cl. 153—81.)



1. In a machine for flanging soft metal pipes, the combination of a frame provided with alined bores, pipe engaging bushings within one of said bores, a feeding screw movable through the other bore, and a flanging tool adapted to be supported on the end of said screw and in a pipe projecting from said bushings and to be moved by said screw, said tool being rotatable independently of any movement by the screw, and means for thus rotating the tool.

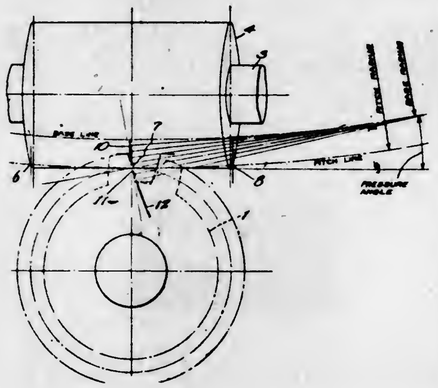
1,383,841. CARLINE. WILLIAM N. OEHM, Michigan City, Ind. Filed Aug. 12, 1919. Serial No. 317,004. 4 Claims. (Cl. 108—5.6.)

1. A carline for railway cars comprising a member channel-shaped in cross-section and having flanges adapted to contact with the car roof, the channel lying directly below the flanges and being deepest at the center of the carline and dying out near the end portions thereof, the flanges merging into said end portions.



1,383,842. VALVE OF THE ANNULAR TYPE. OLOF OHLSSON, Södertelje, Sweden. Filed May 28, 1918. Serial No. 237,165. 1 Claim. (Cl. 251—119.)

A valve of the annular type comprising, an elongated disk having a central hub, yielding arms extending radially

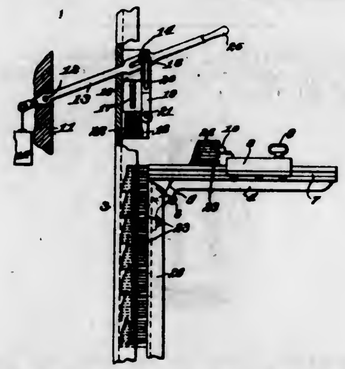


straight the greatest distance from said hub to and connecting with said disk, and means fixing the hub to the valve seat in order that the arms may force the valve disk against the said seat, said hub, disk and arms being formed integral and in the same plane.

1,383,843. HOB-GRINDING MACHINE. CARL G. OLSON and FRANK W. ENGLAND, Chicago, Ill., assignors to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 7, 1919. Serial No. 275,537. 12 Claims. (Cl. 51—225.)

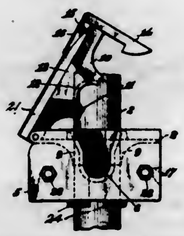
1. A machine tool having a tool holder and a rocking frame, one of which oscillates about a fixed axis for producing relative movement between the tool and the work for producing relief in the work, means for rotating the work in the work holder, a rotating cam, a pivoted arm actuated by said cam, a rider carried by the aforesaid part which oscillates, for transmitting the movement of the arm to the part which oscillates, said rider being adjustable relatively to the axis of the part which oscillates.

1,383,844. HOB FOR CUTTING INVOLUTE GEARS. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1919. Serial No. 333,075. 4 Claims. (Cl. 29—103.)



1. A hob having involute cutting teeth constructed on a base circle computed in the ordinary manner from a pitch circle which passes through the three following points, to wit, the two end points and the middle point of an elliptic arc formed by passing a plane through the pitch cylinder of the hob at an angle equal to the helix angle of the hob teeth.

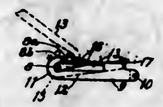
1,383,845. STORAGE-BATTERY CONNECTOR. WILLIAM H. PALMER, Jr., Wyncote, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Mar. 28, 1917. Serial No. 157,908. 6 Claims. (Cl. 173—259.)



1. A storage battery conducting connector comprising a pillar-post split clamp and an internally reversely tapered opening ranging crosswise of the clamp and having faced end walls and provided upon its body with a tapped face portion, and a cap-screw, substantially as described.

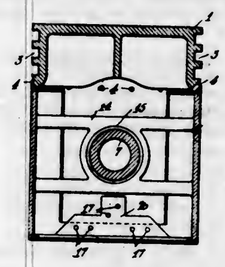
1,383,846. METHOD OF BUILDING HEEL-BLANKS. DENNIS PARKS, St. Louis, Mo. Filed Dec. 12, 1919. Serial No. 344,287. 6 Claims. (Cl. 12—147.)

1. The method of building decked heel-blanks, which comprises assembling the lifts in the proper order to gage height upon an inclined support to form a heel-blank having an inclined base, moving said heel-blank bodily to a position above the log holder and forcing it therein, while preserving the relative angularity of the lifts thereof, and maintaining a plurality of heel blanks so formed in separated relation and column formation in said holder.



1,383,847. VEHICLE ATTACHMENT. GEORGE BEN. PERKINS, Farmington, Mo. Filed Mar. 11, 1919. Serial No. 281,017. 7 Claims. (Cl. 208—45.)

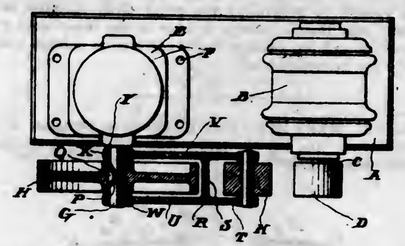
1. An attaching means for side carriers of vehicles, comprising a plate having an undercut socket opening laterally



through the plate and also opening edgewise through the plate, the openings being proportioned for permitting only edgewise access to the socket by a headed shaft, the plate being formed with a groove in its edge communicating with the socket and lateral opening, and a closure for the lateral opening adapted to be moved into and out of the groove.

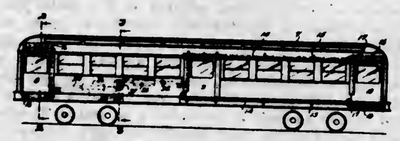
1,383,848. FASTENING-CLASP FOR JEWELRY. EDWARD W. PETERSON, St. Paul, Minn. Filed Nov. 16, 1920. Serial No. 424,489. 3 Claims. (Cl. 24—233.)

1. The combination with a wrist watch and its wrist band, of means for detachably securing said two parts together, said means comprising a wire loop or similar contrivance fixed on one of the parts, an elongated body pivotally attached to the other part and having at one end a bifurcated hook adapted to engage in the wire loop and two spaced spring arms on the body arranged to close with their ends the opening of the hook, said body having a groove between the two springs, a lever normally resting in said groove and having a hook coinciding with and pivoted between the members of the bifurcated hook close to the points thereof so as to enable it to eject the wire loop from all the hook members by a swinging movement of the lever.



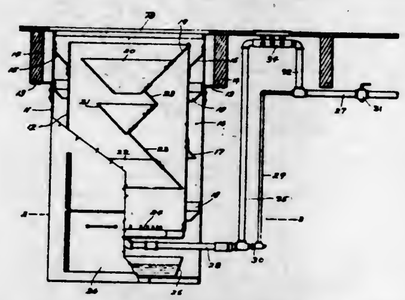
1,383,849. PISTON. HOWARD W. PIERCE, Butte, Mont. Filed Sept. 11, 1920. Serial No. 409,615. 5 Claims. (Cl. 74—108.)

1. A piston of the character described composed of aluminum and iron sections, the aluminum sections having alined openings in the walls thereof, a pin located in the piston and in alinement with said openings, and a bridge fixed to the iron section and supporting an intermediate portion of the pin, whereby the side or connecting rod thrust of the piston is sustained by said iron section.



1,383,850. BELT-DRIVE. CLAUDE PITTS, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 30, 1920. Serial No. 406,926. 4 Claims. (Cl. 64—5.)

1. A short belt drive, comprising a driven shaft, a pulley adapted to be keyed to said shaft, and an idler pulley frame having arms provided with bearing portions, the bore of one bearing portion being sufficiently larger than the other to pass over a key in the driven shaft, whereby the idler pulley frame with the pulley arranged



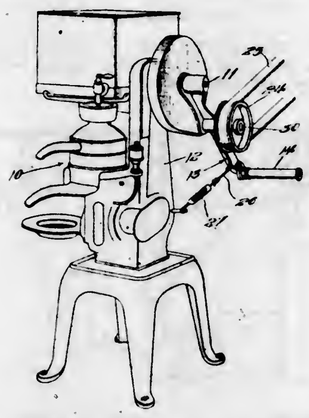
between the arms thereof, may be assembled on the driven shaft after the said key has been inserted in the shaft.

1,383,851. DOOR-OPERATING MECHANISM. JESSE M. POMBO, New York, N. Y. Filed Feb. 17, 1920. Serial No. 359,453. 4 Claims. (Cl. 268—7.)

1. A door-operating mechanism comprising, a door of the sliding type confined in guide tracks, said guide tracks having a notch made therein, a lock arm pivoted on the door adapted to engage the notch of the guide track, a link depending from the lock arm, a draw bar related with the link to push the link up to engage the lock arm with the notch and to pull the link down to disengage the lock arm from the notch, and a gear rack connected with the draw bar to operate the link and open the door.

1,383,852. FLOOR-FURNACE. ALFRED P. POST, Philadelphia, Pa. Filed July 17, 1919. Serial No. 311,643. 3 Claims. (Cl. 126—116.)

1. In apparatus of the character stated, the combination of a permanently open register, a furnace having an outer shell the bottom and side walls of which are permanently closed to the admission of air other than from a room being heated, the open top of which shell is in direct communication with a room being heated through said register, an inner shell open at its top and bottom and located within the outer shell and spaced from the bottom and side walls thereof, a burner by means of which gaseous fuel is consumed without the premixture of air said burner being located adjacent the lower part of said inner shell and piped connections for delivering gaseous

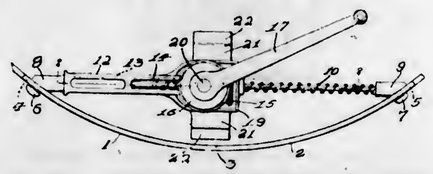


fuel to said burner, whereby all air as heated by said burner is caused to pass to a room being heated to start a circulation of air which air at room temperature is then caused to return to the outer shell through said register and thence caused to pass to the inner shell for re-heating and for passage in its entirety to a room being heated for re-circulation.

1,383,853. MESS KIT. GUY H. PRESTON, Douglas, Ariz. Filed Nov. 10, 1919. Serial No. 336,975. 2 Claims. (Cl. 206—4.)

1. A mess kit comprising an annular canteen provided with a central perforation having substantially cylindrical walls, a curved bottom adapted to fit a metal pan of standard shape, a substantially cylindrical outer wall, and a substantially flat top, with a neck projecting from said cylindrical portion, and a cap normally closing said neck, with a substantially cylindrical cup adapted to fit snugly in said central portion, and provided with a resilient handle adapted to lie radially on and to fit snugly against said top, the said handle having a downwardly projecting laterally curved arm adapted to be sprung over and engage the cylindrical outer wall of the canteen and to hold said cup against accidental displacement when the parts are assembled, substantially as described.

1,383,854. DRIVE FOR CREAM-SEPARATORS. WALTER E. RATHBUN, Milan, Ill. Filed May 7, 1920. Serial No. 379,553. 5 Claims. (Cl. 74—7.)



1. The combination with the operating mechanism of a cream separator including an operating shaft, of a main gear drivingly connected to said shaft, a crank arm pivotally mounted with respect to the shaft, a pinion shaft journaled in the crank arm, a pinion on the pinion shaft drivingly engaging the main gear, a collar drivingly secured to the pinion shaft, a pulley journaled on the pinion shaft adjacent to one face of the collar, a ratchet and pin connection between the pulley and collar permitting the pinion shaft and collar to run ahead of the pulley but insuring a driving connection from the pulley to the pinion shaft when the pulley tends to run ahead of the pinion shaft, and a pin and ratchet connection between the other face of the collar and the crank arm permitting the collar and pinion shaft to run ahead of the crank arm, but preventing a retrogressive movement between these parts, substantially as described.

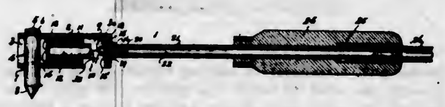
1,383,855. SHIRT. HENRI H. REINEQUE, Los Angeles, Calif. Filed Aug. 14, 1919. Serial No. 317,543. 1 Claim. (Cl. 2—89.)

A shirt comprising a body having a permanent bosom, the shirt having a front opening and fastening means for said front opening, cuffless sleeves associated with the body portion, detachable cuffs adapted to be associated with the sleeves and each having an extension flap adapted to be received within the opening of the sleeve, fastening means arranged on the inner side of the sleeve and cooperating with the extension flap, and a detachable plait adapted to be arranged along the front opening of the shirt and being releasably secured in position thereon by the fastening means of said front opening.

1,383,856. AUTOMOBILE DEMOUNTABLE-RIM TOOL. OLIVER M. RICE, Birmingham, Ala. Filed Mar. 6, 1920. Serial No. 363,894. 2 Claims. (Cl. 157—1.)

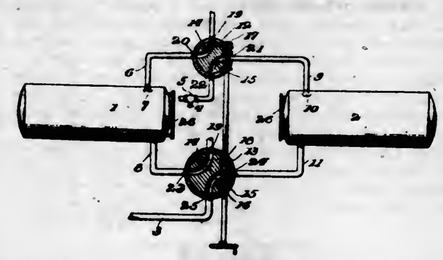
1. A tool of the character described comprising a frame having a smooth bore therein and a groove extending longitudinally with said bore, a threaded shaft slidably fitted in said smooth bore and having a projection entering said groove to prevent relative rotation between the shaft and frame, heads carried by the outer ends of said frame and shaft, parts on said heads adapted to engage with a demountable rim, a housing extending about one portion of said frame and having an end wall disposed close to said threaded shaft, a sleeve forming a continuation of said frame closely embracing the threaded shaft and spaced from said end wall, a pinion having spiral interior threads engaged with the threads on said threaded shaft, said pinion disposed between the end of said sleeve and said wall, a stud projecting from said frame at right angles to said threaded shaft, a beveled gear wheel on said stud meshing with said pinion, means engageable over said stud and having connection with said gear wheel to rotate the latter, and a pair of feet diverging in opposite directions and provided with angularly disposed toes for supporting the frame and housing, said feet being formed on said frame and housing, substantially as described.

1,383,857. MOLD FOR MAKING HEELS, LIFTS, SOLES, OR OTHER ARTICLES FROM RUBBER OR OTHER MATERIAL. HARRY CHARLES RIDOUT, Bournemouth, England. Filed Mar. 5, 1920. Serial No. 363,368. 1 Claim. (Cl. 18—42.)



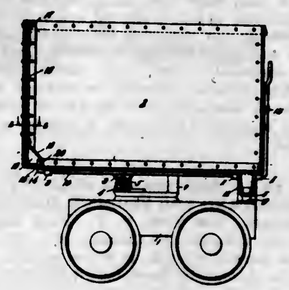
A divisible mold for forming resilient heels or the like, said mold comprising separable members having recesses formed therein produced by stamping from two separate pieces of sheet metal, said depressions forming the matrix proper, said members having laterally projecting flanges, one of said members being provided with a number of steps and a centrally placed concave part having domed projections thereon, the other member having a centrally placed convex part surrounded by a concave portion, washer-locating-pegs rising from said convex and concave parts, apertures formed in one of said flanges and pegs on the other flange adapted to register with said apertures whereby said members are properly positioned.

1,383,858. BUMPING-POST. ALEXANDER ROBERTSON, Granite City, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 23, 1917. Serial No. 176,456. 5 Claims. (Cl. 104—254.)



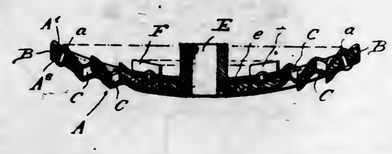
1. The combination of an upwardly inclined section of the track and a bumper mounted on said section comprising a series of upwardly extending projections having tread surfaces, said projections extending above said track to a substantially uniform height.

1,383,859. GAS-HEATED SOLDERING-TOOL. KARL ROLLE and JOSEPH F. HEINE, Newark, N. J. Filed Sept. 4, 1920. Serial No. 408,208. 4 Claims. (Cl. 158—26.)



1. In a device of the kind described a carrier member provided with a combustion chamber at its outer end, a soldering iron fixed to extend through and project from said combustion chamber, a tubular member connected with the rear end of said carrier member provided with a gas passage, a handle on the free end of said tubular member, means for connecting said gas passage with a source of gas supply, said carrier member having an air induction chamber at its rear end, a gas discharge jet connected with said gas passage to enter said air induction chamber, and means for receiving and intermixing gas and air prior to delivery into said combustion chamber located intermediate said air induction chamber and said combustion chamber.

1,383,860. COMPRESSOR. ADOLF ROSZKOWSKI, New York, N. Y. Filed Feb. 9, 1920. Serial No. 357,485. 6 Claims. (Cl. 137—79.)



1. An air compressor for water systems using compressed air as a motive power, comprising two tanks, arranged to have a water head from the system, and means for simultaneously connecting one tank with such water head and compressed air service of such system and the other tank with the atmosphere.

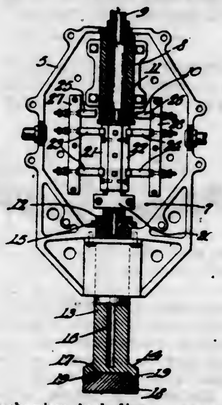
1,383,861. DUMP-CAR LATCH. WILLIAM J. RUNDLE, Meaderville, Mont. Filed July 12, 1920. Serial No. 395,475. 5 Claims. (Cl. 105—274.)

1. The combination with a dump car comprising a truck, a body pivoted on the truck, and a hinged door on the body, of a crank shaft located under the body, a crank lever controlling the position of said shaft, said body having an opening in the bottom thereof, and a crank finger on the crank shaft projecting through said opening and locking said door in closed position.

1,383,862. COMPOSITE SPRAY-PLATE. JOHN SCHEMINGER, Jr., Providence, R. I. Filed Dec. 8, 1919. Serial No. 343,342. 5 Claims. (Cl. 158—28.)

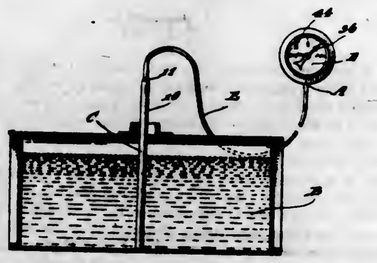
1. A composite spray plate for rotary oil burners comprising a plurality of disks having circular series of openings therethrough of oval shaped form arranged to effect the passage of fluid therethrough substantially in the plane of the disk, and a sheet of asbestos or similar reinforcing and heat-resisting material between said disks having oblong openings therein which register with the openings through the disks.

1,383,863. METHOD OF MAKING BIFOCAL LENSES. HENRY A. SCHEUERLE, Philadelphia, Pa.; Marie E. Scheuerle executrix of said Henry A. Scheuerle, deceased. Filed Mar. 18, 1914. Serial No. 825,604. 6 Claims. (Cl. 51—278.)



1. The method of making bifocal lenses which consists in rotating the blank to be abraded, with the minor area at the axial region thereof and the major area at the distal region thereof, while rotating abrading means contiguous to said major area in an annulus encircling the axis of rotation of said blank but eccentric to that axis; and preventing any change in the direction of the respective axes during the abrading operation; and thereby preventing abrasion of the axial, minor region of said blank while circularly abrading an annular, major region of said blank concentric with the axis of rotation of said blank but eccentric to the axis of rotation of the abrading means.

1,383,864. PROCESS FOR SOLIDIFYING CHINA-WOOD OIL AND THE PRODUCT THEREOF. BENJAMIN SCOBEL, New York, N. Y. Filed Mar. 23, 1918. Serial No. 224,247. 15 Claims. (Cl. 106—23.)



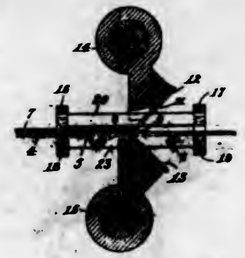
1. That process wherein an active metallic halogen derivative is thoroughly disseminated through China wood oil.

1,383,865. SHOE. ARCHIBALD G. SHAVER, Chicago, Ill., assignor to Casale Safety Device Company, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1919. Serial No. 292,546. Renewed Dec. 6, 1920. Serial No. 428,771. 6 Claims. (Cl. 246—190.)

4. A shoe mechanism including a support, an air supplied chamber carried thereby, a tubular plunger mounted in said chamber for vertical movement, said plunger being sealed at its lower end, and carrying the shoe, a fixed electrical contact carried by the tubular member, and oppositely disposed electrical contacts carried by the support for coöperating with the movable contact member, said contact members being in electrical engagement when the shoe is in its lowermost position and being out of engagement should the shoe be held in uppermost or abnormal position.

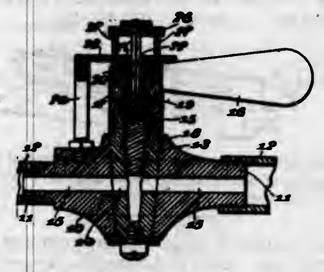
1,383,866. LIQUID-GAGE. JAMES SHEPHARD, Detroit, Mich. Filed June 15, 1920. Serial No. 389,160. 7 Claims. (Cl. 73—54.)

1. In a liquid gage, an air containing member arranged to permit the entrance of liquid into the lower end thereof, a pneumatically operated indicating member including an air tight casing, a dial plate, a movable pointer, a rotatable shaft carrying the pointer, a diaphragm arranged in the casing and operating means for said shaft engaging said diaphragm, and means connecting the cylinder with the air tight casing.



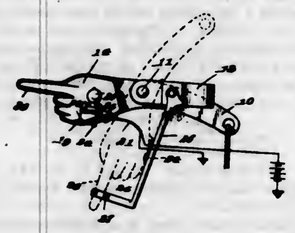
1,383,867. TOILET-ARTICLE PACKAGE. ABNER SIRIS, Brooklyn, N. Y. Filed Apr. 2, 1921. Serial No. 457,917. 1 Claim. (Cl. 206—46.)

A toilet article package comprising in combination a powder puff, a transparent envelop inclosing said puff and through one wall of which the powder puff may be inspected, the other wall of said envelop having a hole of any desired shape, and a printed or pictorially ornamented insert interposed between the hole and the powder puff to protect the puff, to maintain the envelop in substantially extended form, and to present through the hole an unobstructed view of printed or pictorial matter on its exposed surface.



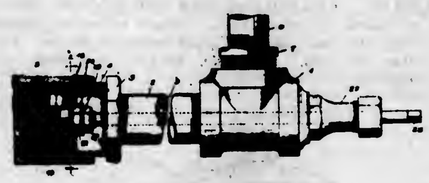
1,383,868. CUTTING MECHANISM. CHARLES F. SMITH, Watertown, N. Y., assignor to Howland Bag and Paper Company, Dexter, N. Y., a Corporation of New York. Filed July 5, 1918. Serial No. 243,287. 9 Claims. (Cl. 164—68.)

1. In a cutting mechanism for moving sheet material the combination of a fixed cutting member and a movable cutting member, and a guide rail extending in the direction of travel of the sheet material and having a



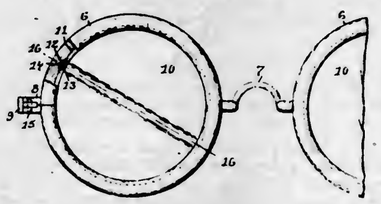
portion of said rail lying within the field of coaction of said cutters.

1,383,869. VALVE AND LOCKING DEVICE THEREFOR. WILLIAM T. SMITH, Philadelphia, Pa., assignor of one-half to William R. Thomas, Philadelphia, Pa. Filed Sept. 27, 1920. Serial No. 412,940. 4 Claims. (Cl. 277—25.)



1. A device of the character described comprising a body provided with passages and forming a socket, a rotary main valve provided with a cross passage and disposed in said socket to have its passage brought into or out of registration with the passages of the body, a supplementary valve movably disposed within the main valve to intercept the passage thereof, a handle for the main valve to actuate the same, said handle including a head, a stem on the supplementary valve and passing upwardly through the handle, a spring for actuating the supplementary valve, a slotted plate, and retaining pins carried on the stem of the supplementary valve to be moved when the handle is actuated to bring the retaining pins into or out of line with the slots in the said plate.

1,383,870. AUTOMOBILE-SIGNAL. JOHN ARTHUR Southwell, Scranton, Pa. Filed Jan. 13, 1920. Serial No. 351,186. 1 Claim. (Cl. 177—329.)



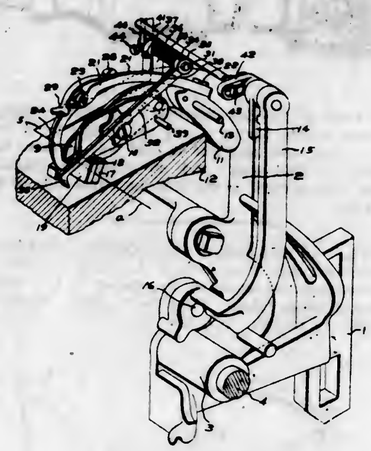
A signaling device comprising a supporting member clamped upon the wind shield of a vehicle, a signal arm pivoted upon said support and having one end formed hollow and transparent and shaped to represent a human hand, an incandescent bulb within the hollow portion of the arm, a contact secured at the lower edge of the hollow portion of the arm, a leaf-spring located within said hollow portion and having one end connected with one terminal of the lamp and having its other end engageable with said contact, a source of current connected in circuit with said contact and with the lamp and spring, said spring engaging said contact to complete the circuit when the arm is in signaling position, an inclined arm depending from said support and serving as a stop for the signal arm when the latter is in inoperative position, and a plunger slidable through the lower side of said hollow portion and engageable with said spring whereby to disengage the latter from said contact when the plunger engages said inclined arm.

1,383,871. VALVE. ELMER H. SPENCER, Nederland, Tex., assignor of one-fourth to A. C. Block, Port Neches, Tex., and one-fourth to Crook, Lord & Lawhon, a Law Firm composed of W. M. Crook, C. A. Lord, and I. W. Lawhon, Beaumont, Tex. Filed Mar. 15, 1920. Serial No. 365,919. 10 Claims. (Cl. 251—84.)

1. A valve of the class described comprising a casing, a valve seat therein having a port and a hole for a valve stem, a valve stem rotatable in said hole, a valve body connected to said stem, and an adjustable abutment adapted to be secured to the stem on either side of said valve body.

1,383,872. OPHTHALMIC MOUNTING. FREDERICK ARTHUR STEVENS, Providence, R. I., assignor to Stevens and Company, Incorporated, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 3, 1919. Serial No. 328,102. 2 Claims. (Cl. 88—47.)

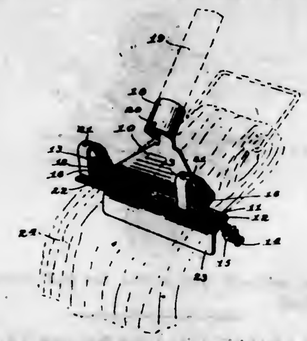
1. An ophthalmic mounting comprising a circular rim, a circular lens in the rim, and ground on its surface to correct visual defects of the eye, and compressible means, intermediate the rim and the lens, for locking the lens within the rim on a line with the axis of the lens.



1,383,873. HIDE-CLEANING TOOL. ROBERT J. STINE, Eagle Grove, Iowa. Filed Jan. 2, 1920. Serial No. 349,080. 1 Claim. (Cl. 149—8.)

In a hide cleaning tool, a handle having a plate at one end extending downwardly from the handle and provided at its lower edge with a series of fingers inclined down-

wardly and toward the handle end of the tool, said fingers having relatively thin but not sharp edges, said handle being provided at the upper part of said plate with a downwardly opening receiving channel, providing a receiving member for a blade, a blade having its upper edge received in said channel and projecting downwardly and terminating above said fingers, said blade being beveled at its lower edge on its side away from the fingers for providing a sharp edge adjacent to the fingers, a bolt extended through said plate and blade, and a nut on said bolt.

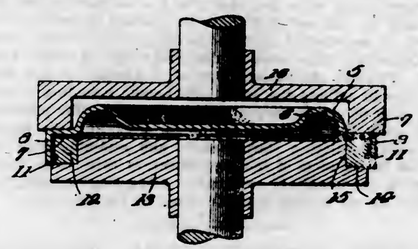


1,383,874. FILLING-CATCHER FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 27, 1920. Serial No. 384,611. 9 Claims. (Cl. 139—85.)

1. In a filling replenishing loom, the combination of a shuttle feeler, a thread parter and clamp mounted on the shuttle feeler, a thread catcher mounted on the shuttle feeler to engage the filling between the cloth selvage and clamp, means for raising the thread catcher as the shuttle feeler and thread catcher move to rearward position, and means for lowering the thread catcher to engage and bear upon the filling between the cloth selvage and clamp as the shuttle feeler returns to front position and to impart a further lowering movement to the thread catcher to remove the end of the filling when it is parted at the cloth selvage.

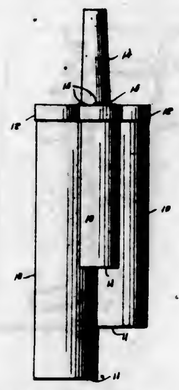
1,383,875. MOP. GILBERT P. STRELINGER, New York, N. Y. Filed June 29, 1920. Serial No. 392,810. 3 Claims. (Cl. 15—56.)

1. In a mop holder, two clamping members of sheet metal, one of said members being formed with a handle engaging portion, spring means for yieldingly maintaining said members in closed relation, and strips struck from the material of one of said members and bent over to provide guards for said spring means.

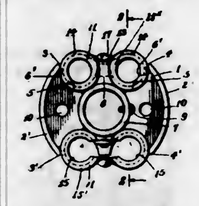


1,383,876. GOLF-PRACTICING MEANS. PAUL C. SULLIVAN, Fairmont, W. Va. Filed Jan. 12, 1920. Serial No. 350,890. 11 Claims. (Cl. 35—12.)

1. Golf practicing means wherein is employed a support and a series of alined stroke indicating elements yieldably mounted thereon.



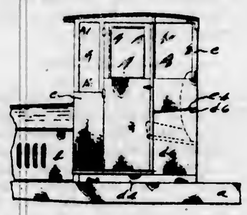
1,383,877. METHOD OF FORMING CLOSURES FOR RECEPTACLES. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed Sept. 6, 1919. Serial No. 322,041. 7 Claims. (Cl. 113—80.)



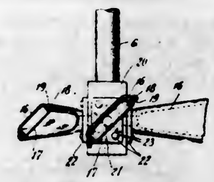
1. The method of forming a closure for receptacles comprising shaping said closure and forming a gasket seat thereon, forming a vulcanized rubber ring gasket, applying a relatively thin coating of adhesive rubber cement to the seat on said cap portion, placing said preformed gasket thereon, and applying pressure to the gasket for causing said adhesive rubber cement to firmly adhere both to the gasket and the closure for securing the gasket to said closure.

1,383,878. TOY WHISTLE. JAMES C. TAYLOR, Dayton, Ohio. Filed Aug. 25, 1920. Serial No. 405,825. 3 Claims. (Cl. 46—46.)

1. A toy whistle consisting of a plurality of sounding tubes provided at one end with heads arranged in flush relation and having a series of openings communicating respectively with the interiors of the tubes, and a mouth piece or tube arranged in substantially concentric relation with the series of openings and provided adjacent to the plane of said head with outlet slits for directing currents of air transversely with relation to the openings therein.

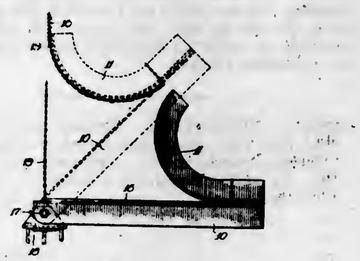


1,383,879. OUTLET-BOX. GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,576. 9 Claims. (Cl. 247—25.)



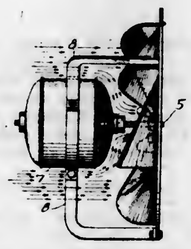
1. In an outlet box, the combination of a box member having a base and a peripheral wall, said wall being curved inwardly of the member, for a sufficient distance to enable its outside surface to serve as a seat for an electrical conduit, a clamp suitably curved to press against the outer surface of the conduit, and means for securing said clamp to said box member and clamping the conduit in position, comprising a screw extending downwardly and inwardly at an angle from the upper portion of said clamp into said member.

1,383,880. AUTOMOBILE CONSTRUCTION. HORACE T. THOMAS, Lansing, Mich. Filed Feb. 25, 1921. Serial No. 447,813. 4 Claims. (Cl. 296—103.)



1. In a vehicle, the combination of a chassis, a seat construction forming an integral unit adapted to be removably secured to said chassis, a top construction forming an integral unit adapted to be secured to said chassis and said seat construction in place upon the chassis.

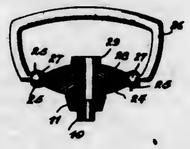
1,383,881. FLOTATION APPARATUS. JOSEPH INGRAM THOMAS, Garfield, Utah. Filed Mar. 25, 1919. Serial No. 284,922. 6 Claims. (Cl. 261—87.)



1. A flotation apparatus comprising in combination a container and a gaseous fluid distributer relatively rotatable with respect to each other, said distributer being arranged within said container and comprising a hollow blade-like body having a porous medium forming a substantially plane wall thereof for permitting the escape therefrom of gaseous fluid in a finely disseminated state, said hollow blade-like body being so disposed that the escape of gaseous fluid from the interior thereof through said porous medium exerts an impelling action tending to effect relative rotation between said container and said distributer, and means for supplying gaseous fluid to the interior of said body.

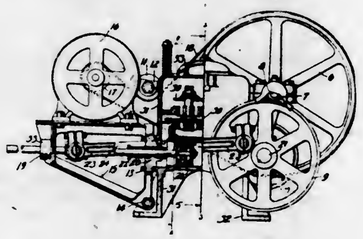
1,383,882. DEVICE FOR BENDING PLATES. HAROLD G. TREGILLUS, Barrington, Ill. Filed Mar. 10, 1919. Serial No. 281,750. 7 Claims. (Cl. 153—32.)

1. A plate bending device comprising in combination a support member, a plate carrying member pivotally secured thereto, a form member associated therewith, and chains extending around the plate and adapted to pull the plate around the form member.



1,383,883. SELF-COOLED MOTOR. JOSEPH EUGENE TRUITT and EMIL ACKERMAN, Chicago, Ill. Filed June 16, 1919. Serial No. 304,535. 3 Claims. (Cl. 230—1.)

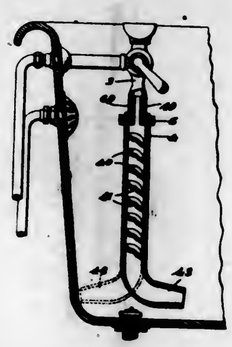
1. In combination with a motor, a propeller fan secured to the motor shaft, and a plurality of vanes secured to



certain of the fan blades and projecting over adjacent blades for diverting air currents passing into said fan to the motor casing for cooling the same.

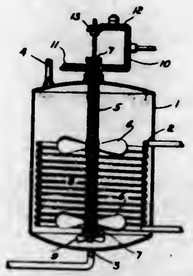
1,383,884. WATCH-PENDANT. LOUIS E. F. WACHTER, New York, N. Y., assignor to Star Watch Case Co., Ludington, Mich. Filed Aug. 3, 1920. Serial No. 401,044. 1 Claim. (Cl. 58—96.)

A watch pendant, comprising, in combination, a body portion having a plane upper surface and comprising semi-spherical bearing projections extending diametrically from the main portion thereof, said projections each having a substantially semi-spherical depression in its plane surface, a cylindrical portion extending above said plane surface, a removable body portion having a plane surface adapted to fit on said first named surface, and bearing projections and depressions to register with the first named bearing projections and depressions, said removable portion fitting over said cylindrical portion and a cylindrical retaining ring secured to the projecting end of said cylindrical portion to hold the pendant in assembly, and providing an outwardly cylindrical surface standing above the assembled pendant.



1,383,885. POWER-PUMP. THOMAS DESMOND WEAVER, Mansfield, Ohio, assignor to Humphryes Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed Dec. 13, 1920. Serial No. 430,200. 4 Claims. (Cl. 103—79.)

1. A power pump having a plunger cylinder, a water intake or vacuum chamber, a suction valve chamber, a suction valve seat formed with a water valve opening and with an air valve opening, an air intake connected with said air opening, a discharge valve chamber, a plunger, a discharge valve, and a suction valve to open and close both said water and air valve openings simultaneously.

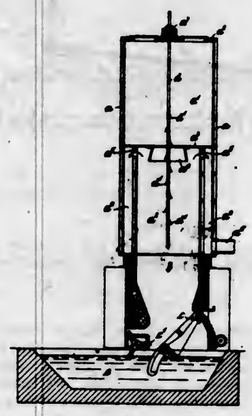


1,383,886. WATER-SILENCER. JEAN F. WEBB, Sr., New York, N. Y. Filed Sept. 25, 1919. Serial No. 326,169. 1 Claim. (Cl. 137—111.)

As a new article, a water silencer, comprising a tubular member having means, at one end, for connecting it, fluid tight, to a faucet outlet, the outlet end of the tubular member being shaped to direct the outflow at an angle to

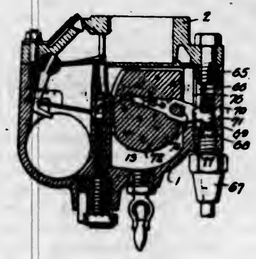
the direction of the inflow thereto, the said tubular member having integral internal barriers for retarding the direct flow and force of the water therethrough.

1,383,887. OIL-HARDENING PROCESS. ALFRED A. WELLS, Montclair, N. J. Filed Jan. 11, 1918. Serial No. 211,338. 2 Claims. (Cl. 87—12.)



1. The process of hardening animal and vegetable oils, which comprises passing a stream of hydrogen from beneath into a body of the oil containing finely-divided nickel, violently stirring the oil at the point of entry of the hydrogen stream, whereby the hydrogen is disseminated in the form of fine globules throughout the oil, giving the oil a relatively slow swirling motion throughout its entire body, while the hydrogen globules are moving upwardly through said body of oil.

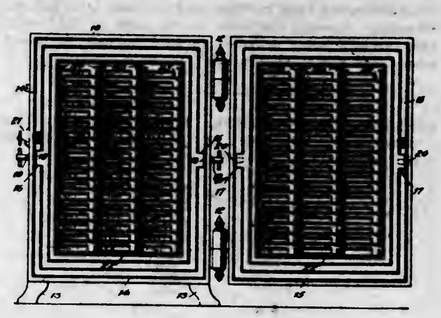
1,383,888. PROCESS AND APPARATUS FOR CARBONIZING WOOD AND OTHER CARBONACEOUS MATERIAL. JOHN FREDERICK WELLS, Cairo, Egypt. Filed Dec. 16, 1919. Serial No. 345,411. 1 Claim. (Cl. 202—2.)



The continuous process for carbonising wood, vegetable, peat, coal, lignite and other carbonaceous material, consisting in charging a vertical chamber with the material to be treated, effecting combustion of the gases or volatile products at the bottom of the chamber by the admission of air below the grate, and withdrawing the carbonised material from the bottom of the chamber substantially at the moment when the last portion of the volatile constituents is being consumed; the material withdrawn

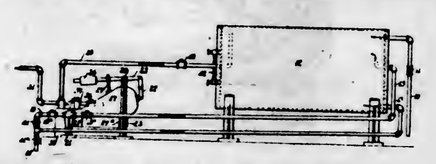
being replaced by a portion of the descending fuel from which the lighter volatile constituents have been driven

off by the heat from the combustion of the gases or volatile products rising from the bottom of the chamber, substantially as set forth.



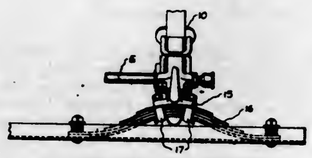
1,383,889. CARBURETER. RICHARD WENDELKEN, New York, N. Y., assignor to Julius Winter, New York, N. Y. Original application filed Aug. 12, 1918, Serial No. 249,534. Divided and this application filed June 22, 1920. Serial No. 390,740. 2 Claims. (Cl. 137—104.)

1. A carbureter having a fuel chamber provided with an extension and a slot establishing communication between said chamber and extension, said extension having a fuel inlet connection terminating in a valve seat, a valve operating in said extension with relation to said seat, a float located in said fuel chamber, a lever connected to said float and to said valve, one of the side walls of said slot having a recess, and a bar fitted in said recess and having a pin extending across said slot and upon which said lever is pivoted.



1,383,890. ACCOUNT-REGISTER. SILAS N. WHEELER, Omaha, Nebr. Filed Mar. 10, 1917. Serial No. 153,971. 1 Claim. (Cl. 45—2.)

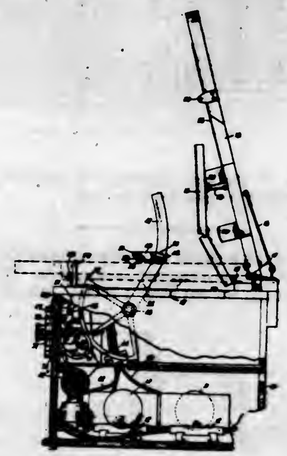
In an account register the combination with a series of account-slip trays each comprising a bottom having the edges thereof bent upwardly to form retaining walls at its sides and ends, and a cut-away portion angularly crossing said bottom its adjacent side and end walls at the



front corner of the tray whereby its contents may be inspected without removal from the tray.

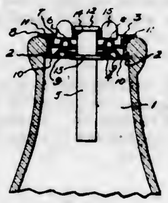
1,383,891. WATER-FEED FOR STEAM-BOILERS. WILLIAM ALBERT WHITMORE, Nelsonville, Ohio. Filed Sept. 2, 1919. Serial No. 321,039. 1 Claim. (Cl. 137—101.)

A water feed apparatus for steam boilers, including a steam trap, a receiver adapted to contain water and having an outlet independent of the steam trap and adapted to be connected with the steam boiler for the direct feed of the water from the receiver to the boiler, a supply connection between the receiver and trap to direct water to the trap from the receiver, and means controlled by the operation of the trap to direct steam to the receiver from the boiler to balance the pressure of the receiver and cause the discharge of water to the boiler from the receiver, together with means independent of the receiver to connect the trap with the boiler and deliver water to the boiler from the trap without passing it through the receiver.



1,383,892. MOTOR-CAR BUMPER. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 25, 1919. Serial No. 333,182. 7 Claims. (Cl. 293—55.)

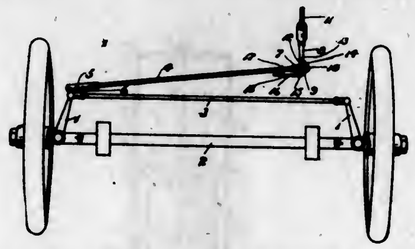
6. In an automobile bumper and in combination with a side frame member having a depending curved portion at its end, a bracket having a seat shaped to correspond with the end portion of said frame members; U-shaped stirrups extending about said end portion to thereby secure said bracket in place upon the end of said side frame member; a spring support carried by said bracket; a horizontally disposed leaf spring the middle portion of which is secured



to said spring support, and the end portions of which are provided each with a hole; a horizontally disposed bumper bar of channel form in cross section; and securing bolts extending through the holes in the ends of said spring and through holes provided in said bumper to thereby secure said bar to said spring.

1,383,893. TIME CONTROL. JACK L. WINKLER, Hempstead, N. Y. Filed Nov. 23, 1920. Serial No. 426,050. 15 Claims. (Cl. 161—26.)

1. In combination with a housing, and door movably associated therewith, of means for automatically opening said door after the lapse of an interval of time, and automatic means for actuating a source of illumination within said housing only while the door is in closed position.

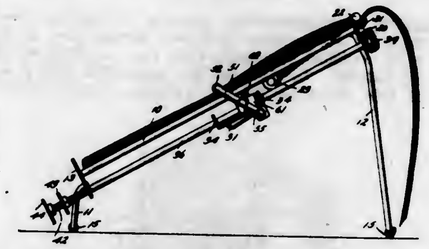


1,383,894. MILK-STERILIZING JAR-CLOSURE. HANS J. WINTHERLICH, Omaha, Nebr., assignor of one-half to Richard H. Larson, Omaha, Nebr. Filed July 30, 1920. Serial No. 399,977. 3 Claims. (Cl. 215—53.)

2. A jar closure comprising a central socket member closed at its lower end and open at its upper end, sealing members associated with and surrounding the socket member, and a locking member mounted on and capable of being turned about the socket member to adjust the sealing members.

1,383,895. STEERING-ROD SHOCK-ABSORBING AND ANTIRATTLING DEVICE. FLOYD GRANT WITHROW, Grand Rapids, Mich. Filed May 3, 1920. Serial No. 378,367. 2 Claims. (Cl. 280—96.)

1. In combination, a steering arm, a connecting rod attached at the end thereof and located substantially at right angles thereto, and a wire device having a central U-shaped portion passing around the arm, the legs of the U lying at opposite sides of the steering arm, thence over the connection of the arm to the rod and back under

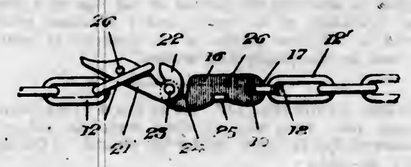


the rod, said device having two end portions connected together detachably and to the rod, substantially as described.

1,383,896. OINTMENT. JOHN WOOD, Pembroke, Va., assignor to R. H. Chitwood, Pembroke, Va. Filed Sept. 1, 1920. Serial No. 407,319. 2 Claims. (Cl. 167—2.)

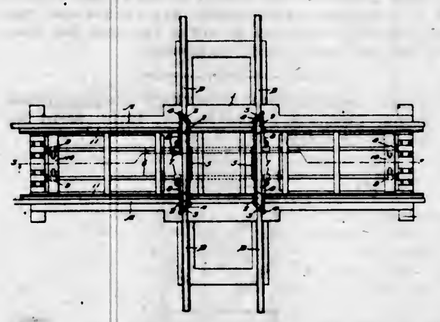
1. An ointment made from life everlasting leaves, balm of Gilead buds, elder bark, water and mutton tallow, combined in substantially equal proportions.

1,383,897. COPY-HOLDER. ALBERT N. WOODRUFF, New York, N. Y. Filed Apr. 9, 1920. Serial No. 372,487. 3 Claims. (Cl. 120—34.)



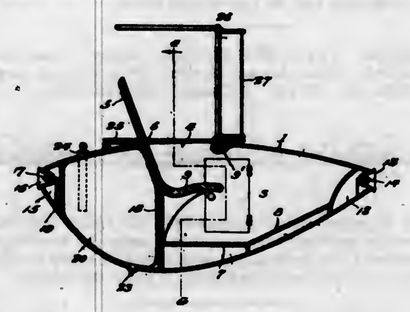
3. In a copy holder, a writing bed, a carriage mounted upon the writing bed, means reciprocatively mounted with respect to the writing bed for moving the carriage thereabout, a resiliently mounted pivoted pawl carried by the carriage and adapted for engagement with the writing bed to prevent movement of the carriage in one direction upon operation of the reciprocating carriage-moving means, a line indicator carried by the carriage and adapted for pivotal movement with respect thereto, and means positioned in the path of the line indicator whereby when said line indicator is rocked about its pivotal point, the pawl will be released from engagement with the writing bed to permit of free reciprocal movement of the carriage in either direction.

1,383,898. COUPLING FOR CHAINS. FRED W. ZIEMENDORF, Neenah, Wis. Original application filed May 11, 1920, Serial No. 380,558. Divided and this application filed Sept 20, 1920. Serial No. 411,383. 1 Claim. (Cl. 24—232.)



A coupling comprising a flat link member, a latch having a hook at one end overlapping and pivoted to one end portion of said member so that the latch can be swung against one side of said member, said link member having a recess in one edge at one end near said pivot for receiving a link fitted on said latch when the latch is swung against said side of the member, said hook being arranged for the seating of the link therein when the latch

is swung against the side of said member, and said link member having a hooked stop at the opposite edge for limiting the movement of and receiving the latch, said



member and latch having portions to spring into engagement near said stop when the latch is swung against the stop.

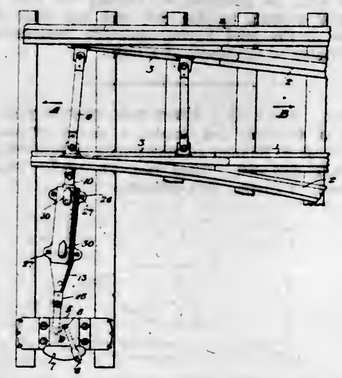
1,383,899. RAILROAD-CROSSING. CHARLES A. ZOBEL, Phoenix, Ariz. Filed Nov. 9, 1920. Serial No. 422,949. 2 Claims. (Cl. 246—278.)

1. A railroad crossing having one track in a higher plane than the other track, said higher track having cutaway portions leaving spaces for receiving the lower track, pivoted bridges for said spaces, cross arms connected with said bridges, spring means for connecting the cross arms for each pair of bridges together so as to hold the bridges in closed position, rock shafts, crank arms therein, links connecting the arms with the cross arms and means for rocking said shafts by a train on the lower track.

1,383,900. SIDE CAR FOR MOTORCYCLES. LUIGI BELLUSCIO, Rochester, N. Y. Filed July 31, 1920. Serial No. 400,470. 6 Claims. (Cl. 208—45.)

5. A hollow side car body having a cock pit and an opening in its top wall in communication with the cock pit and also having in rear of the cock pit a gasolene tank, and a hinged door complementary to said opening and adapted when raised to serve as a back rest.

1,383,901. ANTIKICKING DEVICE FOR COWS. ALVAH BLACKBURN, Alum Bank, Pa. Filed Feb. 14, 1921. Serial No. 444,909. 3 Claims. (Cl. 119—126.)



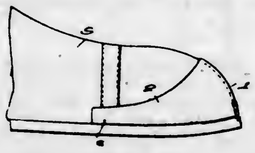
1. An anti-kicking device for cows comprising a pain inflicting member for crosswise disposition on the spinal bone of a cow, and a flexible inelastic retaining element for said member, being adapted to encircle the body of the animal.

1,383,902. COW-TAIL HOLDER. ALVAH BLACKBURN, Alum Bank, Pa. Filed Feb. 14, 1921. Serial No. 444,910. 2 Claims. (Cl. 119—105.)

1. A cow tail holder made from a single length of wire bent to form a central and horizontally disposed flat spring coil, a pair of spaced rearwardly extending handles, and a pair of spaced forwardly extending jaws, the outer ends of the latter being flared to facilitate engagement of the jaws with the cow's leg, and the free ends of the wire being bent and passed forwardly through said coil and providing comparatively short fingers for catching into the hair on the tail.

1,383,903. SWITCH-OPERATING DEVICE. ARCHIE BLAKE, New Orleans, La., assignor of one-third to Mrs. Rebecca W. Chandler. Filed Aug. 16, 1920. Serial No. 403,710. 1 Claim. (Cl. 246—321.)

In combination with the main and siding rails of a railway system, switch points therebetween, a bridle bar

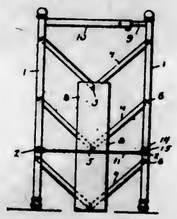


connecting the switch points, and a switch stand having switch mechanism associated therewith and locking means therefor; of a two-part casing having a closed end which is pivotally connected to the bridle bar, removable means connecting the sections of the casing, and the said casing having a centrally depressed portion therein, an operating rod slidable through the open end of the casing and pivotally connected with the throw mechanism of the switch stand, a collar on the reduced end of the operating rod, a flanged sleeve on the extreme reduced end of the operating rod, means for holding the sleeve against outward movement on the operating rod, and a helical spring surrounding the operating rod and exerting a tension against the flange of the sleeve and the collar, all as and for the purpose set forth.

1,383,904. SAFETY-LOCK FOR AUTOMOBILES. HARRY M. BROWNE, Freehold, N. J. Filed Aug. 11, 1919. Serial No. 316,707. 1 Claim. (Cl. 70—180.)

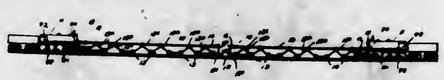
In a means for locking the starting crank of an automobile to the front axle of the machine, an angle bracket designed to have one of its arms arranged against the front of the axle and its other arm arranged beneath the axle, the first mentioned arm being of a length less than that of the height of the axle, and the last mentioned arm being of a length greater than the width of the axle, means surrounding the axle, passing through the last mentioned arm of the bracket and contacting with the inner face of the first mentioned arm for securing the bracket on the axle, an outstanding rounded ear having inwardly concaved sides integrally formed at the upper end of the first mentioned arm, jaws having semi-cylindrical body portions, outer straight ends and knuckles on their inner ends at the opposed corners thereof, said knuckles designed for contacting engagement with the opposite faces of the ear, a pivot passing through the knuckles and ear having head portions which frictionally engage with the knuckles for holding the jaws against accidental turning on the ear, and the outer straight portions of the jaws having openings therethrough for the reception of the staple of a lock.

1,383,905. BOOT AND SHOE TOE PROTECTOR. WILLIAM O. BUNNELL and QUINCY A. GATES, Wilkes-Barre, Pa.; Rose P. Bunnell administratrix of said William O. Bunnell, deceased. Filed Dec. 12, 1917. Serial No. 206,802. 1 Claim. (Cl. 36—72.)



A shoe protector corresponding in shape to the forward portion of a shoe and adapted to be fitted thereon, tapered rearwardly directed extensions formed integral with the protector, penetrating prongs arranged on the terminals of the extensions extending downwardly therefrom and adapted to penetrate the portion of the sole of a shoe lying outwardly of the upper, and a fastening prong carried by the front portion of the protector to retain the same in engagement with a shoe.

1,383,906. LINGERIE-CLIP. EMMA EVANS CLARK, Hammond, Ind. Filed Mar. 22, 1920, Serial No. 367,913. Renewed May 14, 1921. Serial No. 469,495. 4 Claims. (Cl. 24—259.)

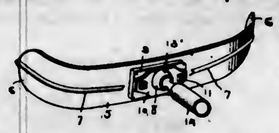


4. A lingerie clip comprising a U shaped body of resilient material, one of the limbs being stamped to form a spherical socket member and the other limb stamped to form a spherical ball member slotted at spaced points so as to snap into socket member, and a shield bent from one limb and overlapping the end of the other limb when the ball and socket are in engagement.

1,383,907. ADJUSTABLE BEDSTEAD. CHARLES COBB, Forrest City, Ark. Filed Mar. 1, 1917. Serial No. 151,775. 1 Claim. (Cl. 5—8.)

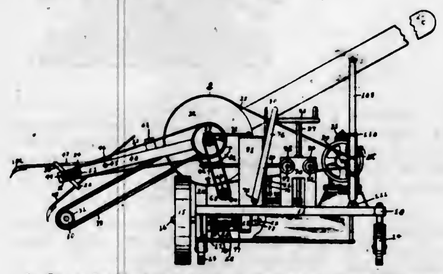
An adjustable bedstead comprising foot and head posts each of hollow formation and having slots, side rails connecting the foot and head posts together, pairs of links having their outer ends pivoted to said posts within the slot and limited in their upward and downward movements by the upper and lower walls of said slots, pivots connecting the inner ends of the pairs of links together, panels connected to said pivots on opposite sides of the links and adapted when in one position to engage the floor for aiding in supporting and limiting the movement of said links, and adjustable securing means between the pair of head posts and the pair of foot posts.

1,383,908. TRAIN STOP-SIGNAL. MOSES CULBERTSON, Kelfield, Saskatchewan, Canada. Filed Oct. 29, 1920. Serial No. 420,451. 6 Claims. (Cl. 246—166.)



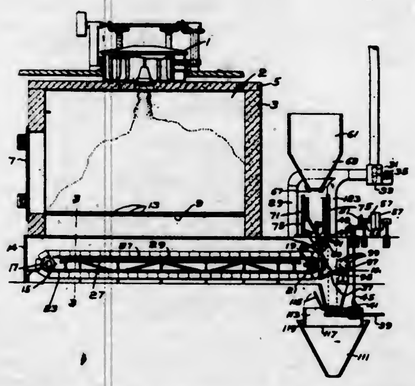
5. A safety signaling apparatus for trains including trucks, a sectional barrel supported upon the trucks and provided at its forward end with explosive means for discharging a projectile rearwardly through the barrel.

1,383,909. MINER'S BREASTPLATE. WILLIE H. DAVIS, Accoville, W. Va. Filed May 21, 1920. Serial No. 383,197. 3 Claims. (Cl. 145—66.)



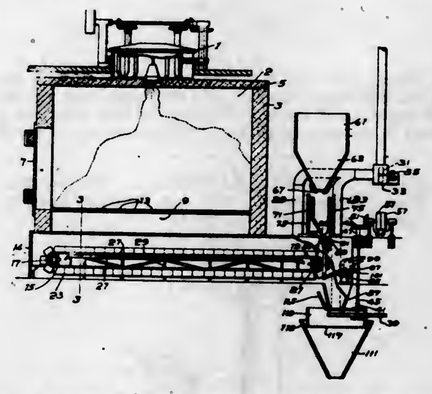
1. In combination, a breast plate, a tool supporting element, and means connecting the breast plate with the supporting element and permitting universal movement

of the latter whereby the tool supporting element and tool mounted therein may be moved to various angular



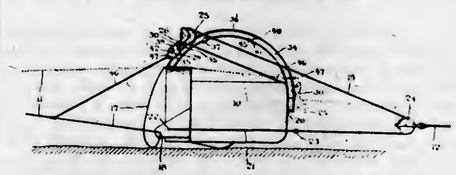
positions while the breast plate is maintained flat against the chest.

1,383,910. LOADING-MACHINE. JOHN E. DOWDEN, Lake Preston, S. D. Filed July 8, 1919. Serial No. 309,400. 6 Claims. (Cl. 193—49.)



1. In a loading machine, a frame, a steerable wheel and a traction wheel journaled therein, supports mounted on said frame, a shaft journaled in said supports, means for operatively connecting the traction wheel with the shaft, an elevator pivoted on said shaft, means for operatively connecting the elevator with said shaft, a frame pivoted to said shaft and extended to position adjacent to one end of the elevator, agitating devices mounted on said frame, means for operatively connecting said agitating devices with said shaft, means for selectively operating both the traction wheel and elevator and agitating devices simultaneously and independently of each other, and means for raising or lowering the agitating devices relative to the elevator.

1,383,911. APPARATUS FOR MANUFACTURING ACID PHOSPHATE OR SUPERPHOSPHATE. WILLIAM T. DOYLE, Boston, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 13, 1920. Serial No. 365,558. 9 Claims. (Cl. 71—1.)

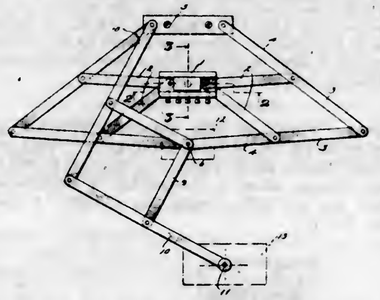


1. An apparatus for manufacturing acid phosphate, comprising, in combination, means for mixing ground phosphate rock and sulfuric acid, means for introducing the mixture into a storage den, means for conveying the mixture from said den, a housing for said conveying means for communication with said den, means for adding pulverulent phosphate rock to the mixture to take up free sulfuric acid and phosphoric acid in the mixture, means to pulverize the mixture delivered by the conveyer, and means to draw steam and fumes from the den through the housing and also from the pulveriser.

1,383,912. PROCESS FOR MANUFACTURING ACID PHOSPHATE OR SUPERPHOSPHATE. WILLIAM T. DOYLE, Boston, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1921. Serial No. 436,021. 7 Claims. (Cl. 71—7.)

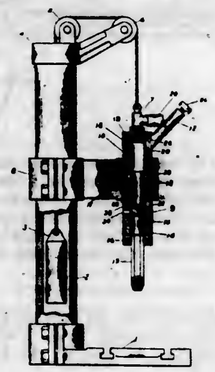
1. A process of manufacturing acid phosphate characterised by mixing ground phosphate rock and sulfuric acid, storing the mixture for a period, pulverizing the mixture, adding pulverulent phosphate rock to the mixture to take up free sulfuric acid and phosphoric acid therein, and removing the steam and fumes from the mixture.

1,383,913. EXCAVATING APPARATUS. PIERPONT E. DUTCHER, Upper Montclair, N. J. Filed Nov. 28, 1919. Serial No. 341,035. 11 Claims. (Cl. 37—54.)



1. An excavating apparatus including, a bucket adapted to operate on the ground, a line circuit secured to said bucket, means for actuating the line circuit to cause the bucket to dig and then carry its load, and means for causing the bucket to maintain a regular digging angle with tension on the drag line only irrespective of the amount of load in the bucket.

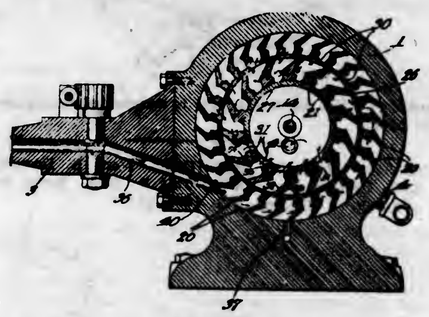
1,383,914. PANTOGRAPH. RUDOLPH CHRISTOPHER EMMERLING, West Hoboken, N. J. Filed Dec. 24, 1919. Serial No. 347,095. 3 Claims. (Cl. 33—25.)



1. A device of the character stated comprising a fixed support, a pair of levers pivotally connected to opposite ends of the support, a pair of links, each link pivotally connected at one end to the free end of one of the levers and the other ends of said links being pivotally connected

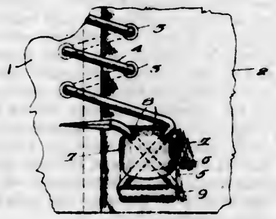
together, a plurality of work-holding arms pivotally connected at one end to a piece of work and at their other ends to the intermediate portions of the links and levers,

a tracing point, an arm carrying said tracing point, and means connecting said arm with the support and with the pivotal point of the links whereby the work is caused to move in the direction in which the tracing point is moved.



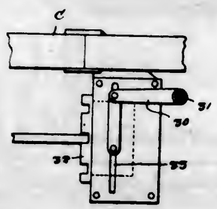
1,383,915. RIVETING MACHINERY. CHARLES REMI ENGEL, Yoman, Wash. Filed Sept. 15, 1919. Serial No. 323,841. 4 Claims. (Cl. 78—42.)

1. A pneumatic machine comprising a main supporting standard provided with a base, a hammer supporting arm adjustably supported by said standard, said arm being adapted to swing about the axis of said standard and being adjustable of position along said axis, a pneumatic hammer supported by said hammer supporting arm, said hammer being provided with a rack engaging with a pinion supported by said arm, said pinion being provided with an operating lever whereby said hammer may be raised or lowered, means integral with said operating lever for controlling the air supply to said hammer, said hammer being provided with means for holding tools adapted to pneumatic hammer work, said base acting as a support for the work to be executed, and means for counterbalancing the weight of said hammer and its attached elements.



1,383,916. ROTARY ENGINE. PETER ERICSON, Tacoma, Wash. Filed July 15, 1918. Serial No. 244,959. 3 Claims. (Cl. 253—51.)

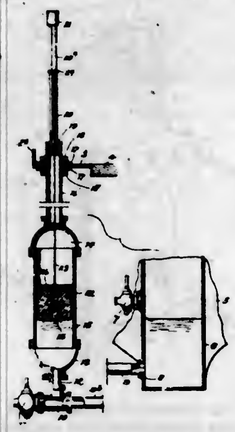
1. A rotary engine comprising a fixed casing, a rotor therein dividing the casing permanently into two independent chambers, said casing having an annular projection extending inwardly beyond the outer edge of the rotor and reducing the diametric extent and therefore the volume of one chamber with respect to the other, annular partitions projecting from the walls of the casing into and dividing each chamber, buckets carried by the rotor and operating in spaces defined by the partitions, means



for admitting a motive fluid to either chamber at will, the respective annular partitions being formed throughout a limited non-registering area with openings to permit the passage of steam through and beyond such partitions.

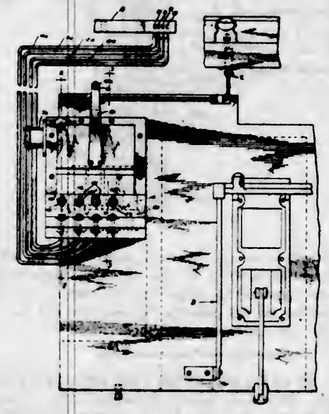
1,383,917. HOLDER AND TIE. ADDISON HAMILTON EVA, San Antonio, Tex. Filed Aug. 27, 1920. Serial No. 406,313. 3 Claims. (Cl. 24—121.)

2. A device of the character specified, comprising a plate having a portion overlying the body thereof, and connected to the plate at one end by a reduced neck, the side edges of the overlying portion extending toward the body of the plate, and a stop at that end of the plate remote from the neck for engagement by the lace.



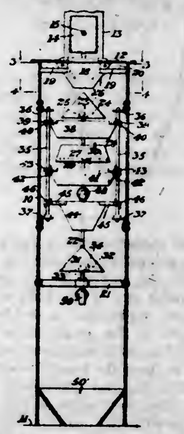
1,383,918. ADJUSTABLE SIEVE-HOLDER FOR THRESHING-MACHINES. ADOLPH R. FADNESS, Velva, N. D. Filed July 30, 1920. Serial No. 400,052. 1 Claim. (Cl. 130—15.)

In a threshing machine, including superposed sieves, of a pair of housings secured upon the inner surfaces of the side of the threshing machine, bars slidable vertically within said housings and formed with a series of notches within selected ones of which the sieves may be engaged, a shaft journaled transversely of the threshing machine and provided with an operating knob exteriorly thereof,



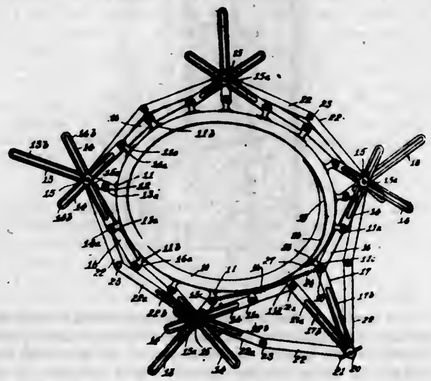
the confronting faces of said housings being formed with vertical slots, arms carried by said shaft, and links pivotally connected to the free ends of said arms and pivotally connected with said bars, said last named pivotal connections being accommodated within said slots.

1,383,919. LUBRICATING SYSTEM. STANLEY W. FINCH, Washington, D. C. Filed Feb. 4, 1921. Serial No. 442,433. 5 Claims. (Cl. 184—13.)



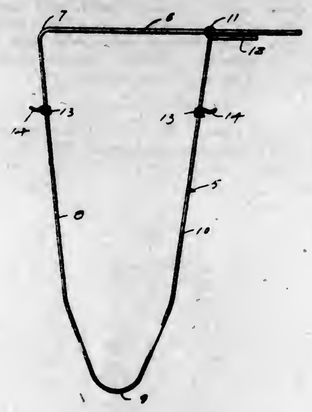
2. In combination with an oil reservoir of an internal combustion engine; a pipe extending from the lower portion thereof; a float chamber in communication with said pipe; a pipe extending from the upper end of said chamber; means carried by said pipe for securing it to a fixed element; a slotted member secured to said last named pipe; a float in the float chamber; and a rod, the lower end whereof is secured to the float, said rod extending upwardly from the float through the pipe and the slotted member and having its upper end bent laterally and extending outwardly through the slot.

1,383,920. AUTOMATIC EXPRESSION-CONTROLLING DEVICE. CHARLES FREBORG, Kankakee, Ill., assignor to Price & Teeple Piano Company, Chicago, Ill., a Corporation of Illinois. Filed July 24, 1918. Serial No. 246,429. 5 Claims. (Cl. 84—42.)



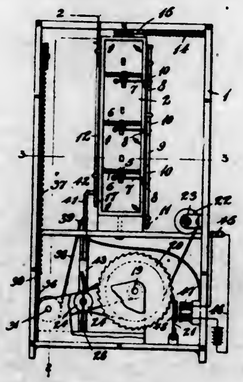
1. In a structure of the class described, an air-exhausting means, means to convey air thereto, a plurality of ducts providing communication between said air-conveying means and said exhausting means, a valve normally closing each of said ducts, means to open each of said valves upon passage of a corresponding aperture in a sheet of music over a tracker board, said ducts being each provided with a port, and a main valve member for regulating flow of air through said ports, said ports being located in different positions relative to the direction of movement of said main valve.

1,383,921. AGITATOR. MICHAEL M. FREDEL, Brooklyn, and WILLIAM BOSANKO, Richmond Hill, N. Y. Filed Feb. 23, 1921. Serial No. 447,080. 13 Claims. (Cl. 259—4.)



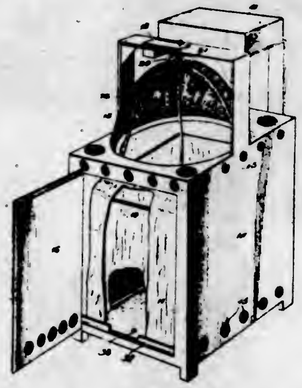
1. In an apparatus of the class described, means causing the material under treatment to assume a hollow completely closed wall formation, and a plurality of devices through and over which the said material is alternately caused to flow and to be maintained at all times during its flow through the apparatus in its hollow completely closed wall formation to agitate the material.

1,383,922. HAT-CONFORMATOR. DAVID FREEDLINE, Brooklyn, N. Y. Filed Aug. 16, 1920. Serial No. 403,634. 8 Claims. (Cl. 33—176.)



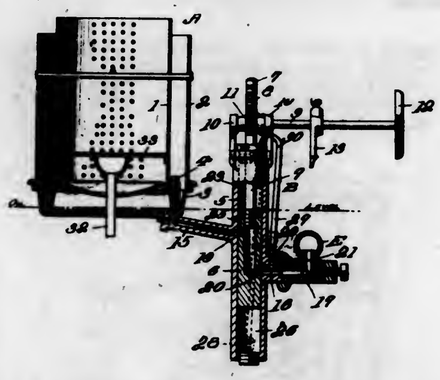
1. A hat conformator comprising a split band, and groups of adjusting elements disposed about the band and pivotally secured thereto at various points about the band.

1,383,923. FUR-STRETCHER. JAMES EDWARD FRITCH, Cody, Nebr. Filed June 6, 1918. Serial No. 238,526. 1 Claim. (Cl. 149—21.)



As an article of manufacture, a fur stretcher comprising a single wire strand bent to form a body of substantially V-shape with the end of one leg extended at a right angle across the large end of the body and past the opposite leg, said opposite leg having its end bent to form a loop at an oblique angle to the longitudinal axis of the first mentioned end, the second mentioned end being extended to provide a loop to form the handle whereby the loop may be turned to receive the first mentioned end and grip the same frictionally when the handle is released to retain the sides of the body in adjusted position, and a pair of fur engaging members mounted on the sides of the body.

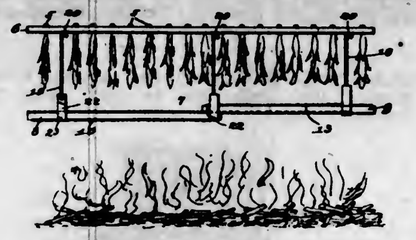
1,383,924. BURGLAR-ALARM. KUWAKICHI FUJITA, Hazleton, Pa. Filed Nov. 19, 1918. Serial No. 263,191. 3 Claims. (Cl. 116—75.)



1. A device of the class described comprising a rotatable member, cartridge-receiving barrels therein, trigger mechanism carried by said member, means for rotating said member to bring the barrels into firing position, a rod for holding said member against rotation, a second rod having arms thereon of different lengths, rods connected with the trigger mechanism and engaged by said arms for holding the triggers cocked, a vertically movable rod having parts thereon for engaging the holding rod when the member is in non-firing position and the arm carrying rod when the member is in firing position and a spring motor for actuating said vertically movable rod.

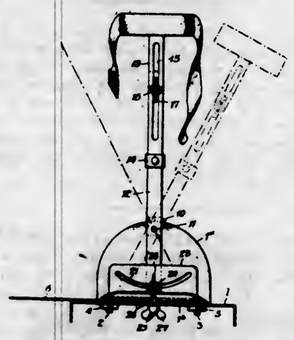
1,383,925. COOLER. KUWAKICHI FUJITA, Hazleton, Pa. Filed June 15, 1920. Serial No. 389,173. 6 Claims. (Cl. 45—133.)

1. A device as characterized comprising a casing embodying a storage compartment and air passages, a fabric inclosing said compartment, and in combination, apparatus for periodically spraying said fabric with a liquid, including a rotatable member which temporarily retains the liquid.



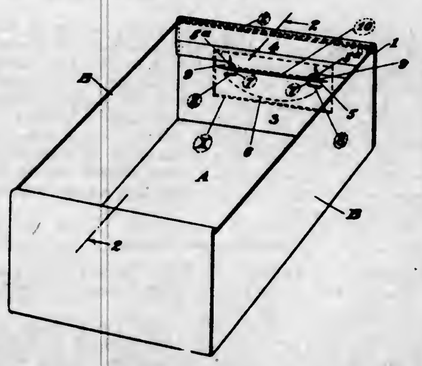
1,383,926. OIL-FEED CONTROLLER. FREDERICK L. FULDAUER, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 19, 1920. Serial No. 425,124. 16 Claims. (Cl. 158—49.)

1. A controller for oil burners, comprising an oil conduit, a controller located in the conduit comprising two members, one movable in respect to the other, one of said members having an oil passage tapered toward its closed position, for the purpose described.



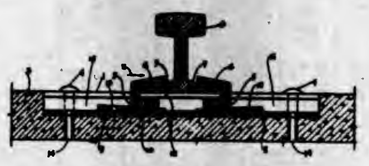
1,383,927. SPARK-ARRESTER FOR TOBACCO-DRYING HOUSES. HENRY L. GANTT, Roseland, Va. Filed Feb. 11, 1921. Serial No. 444,132. 4 Claims. (Cl. 183—51.)

1. A spark arrester unit for the area of a drying chamber consisting of a plurality of elements each having a frame and a foraminous fabric thereon, means on one of said elements for receiving another of said elements



in an adjustable over-lapping relationship, and suspending means for said elements.

1,383,928. SURGICAL OR ORTHOPEDIC APPLIANCE FOR THE TREATMENT OF THE ANKLE. GRACE GASSETTE, Chicago, Ill. Filed Mar. 3, 1919. Serial No. 280,221. 12 Claims. (Cl. 128—88.)



1. In an appliance of the character described, a sole plate arranged to be secured to the foot of a patient, a side piece rigidly connected with said sole plate, a leg support universally articulated with said side piece adjacent the ankle joint and arranged to be secured to the patient's leg above said joint, and means for rigidly securing said leg support in any position of adjustment.

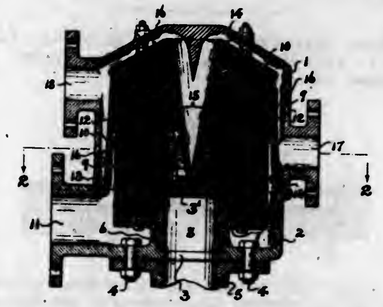
1,383,929. FOLDING CARDBOARD BOX. EDWARD G. GEREKE, St. Louis, Mo. Filed Dec. 4, 1920. Serial No. 428,272. 10 Claims. (Cl. 229—34.)

1. A box formed of cardboard or the like and having a wall composed of a plurality of overlapped portions, one of which portions is provided with an opening through which a tongue is adapted to be inserted and the adjacent portion having an open space or hole for receiving said tongue.

1,383,930. RAIL-CLAMP. STUART L. GRAWIG, Rome, N. Y. Filed Mar. 3, 1921. Serial No. 449,323. 10 Claims. (Cl. 238—331.)

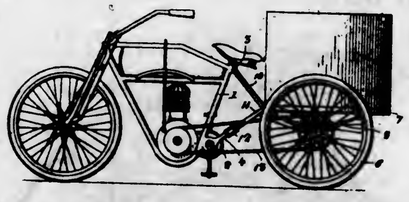
4. A rail clamp comprising a base section which supports the rail, clamping means carried by said base section for clamping the rail thereto, and wedges driven between the said clamping means and said base section in a direction transversely to the rail and longitudinally to the base section, thereby locking the clamping means in clamping condition.

1,383,931. DIRECTION-INDICATOR FOR AUTOMOBILES. MARIO USAI GIOVANNETTI, Bridgeport, Conn. Filed Sept. 27, 1920. Serial No. 412,985. 3 Claims. (Cl. 116—44.)



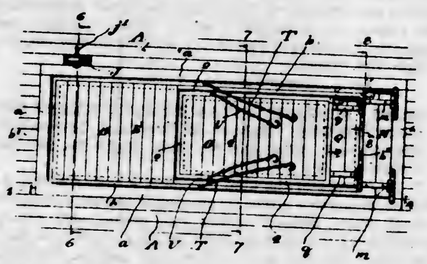
1. A direction indicator comprising a casing having its upper end open, and provided with guide slots, bell crank levers pivoted in said casing and one of the arms of said bell crank levers being longer than the other, signals pivoted to the long arms of the bell crank levers and normally resting horizontally within said casing and being disposed in opposite directions, means for swinging the bell crank levers upon their pivots to elevate the signals into a position exteriorly of the casing, pins carried by the signals and extending into the slots to guide the signals into and out of the casing, means for maintaining the signals in horizontal position when elevated, and means for returning the signals to a non-signaling position within the casing.

1,383,932. SURFACE VAPORIZER ATTACHMENT FOR CARBURETERS. ERNEST R. GODWARD, Invercargill, New Zealand. Filed Apr. 30, 1920. Serial No. 377,796. 8 Claims. (Cl. 48—180.)



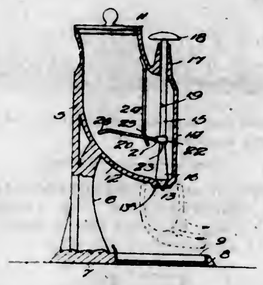
2. In a device of the kind described, a casing having an inlet opening and a discharge opening, a plurality of nested conical plates inclosed within said casing, said conical plates having centrally disposed openings of uniform diameter alined together to provide an inlet passage extending through said nested plates and communicating with said inlet opening of said casing, said conical plates being vertically spaced one from another to provide intermediate lateral passages bounded by the downwardly sloping surfaces of contiguous plates, the distance of separation of said plates being such that the sum of the areas of the

intake ends of said lateral passages approximates the cross-sectional area of said inlet passage extending through said plates, and the walls of said casing being



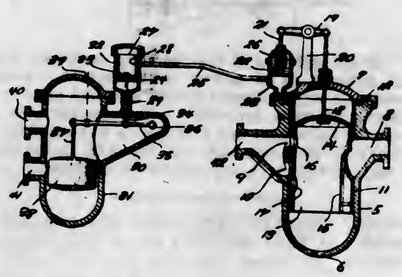
spaced away from the outer circumference of said nested plates to provide an annular discharge passage between the outlet ends of said lateral passages and said discharge opening of said casing.

1,383,933. MOTORCYCLE-TENDER. HARRY J. GOODMAN, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,702. 1 Claim. (Cl. 208—45.)



In a machine of the type specified embodying a main frame having upper and lower rear extensions, a truck, transversely spaced upper and lower members projecting forwardly from the truck, said upper members converging at their front ends and rigidly secured to the upper rear extension of the main frame, and coupling means rigidly connecting the lower members to the lower rear extensions of the main frame.

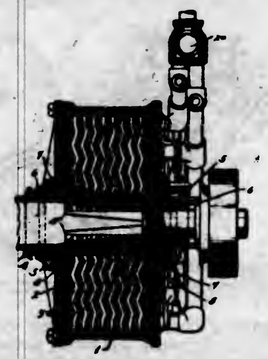
1,383,934. VEHICLE-DUMP. JAMES R. GAIDSS, Rosedale, Ind. Filed Apr. 19, 1920. Serial No. 375,025. 6 Claims. (Cl. 214—49.)



1. A vehicle dump, comprising a floor, a truck-dumping platform mounted therein to turn about a horizontal axis, a wagon-dumping platform mounted within the truck-dumping platform to turn about a horizontal axis, a trap door within the truck-dumping platform and in rear of the wagon-dumping platform, another trap door mounted in the floor in rear of the truck-dumping platform and in rear of the trap door first mentioned, and means for separately raising and lowering said trap doors.

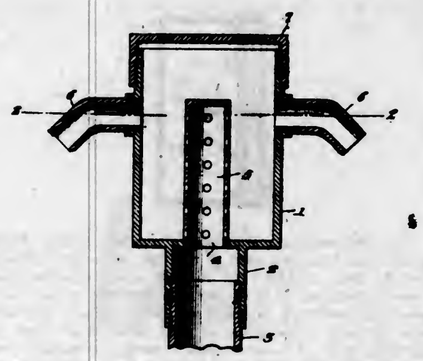
1,383,935. TOBACCO-RECEPTACLE. ANDREW J. GUILL, Winifred, Mont. Filed Feb. 28, 1919. Serial No. 279,838. 3 Claims. (Cl. 131—59.)

3. A tobacco receptacle including a body provided with a discharge port, a vertically movable loosely mounted valve rod constituting a closure for said port, an agitator arm pivotally secured to the rod, and a slotted supporting arm loosely supporting the agitator arm and normally supporting the latter in a substantially horizontal position in the lower portion of the body when the valve rod is in closed position.



1,383,936. BOILER-FEED-WATER REGULATOR. WILLIAM E. GUISE, Rittman, Ohio. Filed July 17, 1919. Serial No. 311,476. 3 Claims. (Cl. 137—101.)

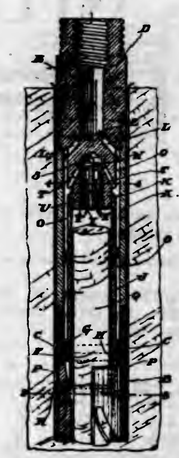
1. The combination of a valve casing having an inlet and an outlet port, a sleeve valve mounted to reciprocate in said casing and having an inlet port always in register with the inlet port of the casing and an outlet normally out of register with the outlet of the casing, pressure controlled means for holding said valve in normal position, a receptacle having a float, a valve connected to reduce the pressure in said means on the lowering of the float to a predetermined point thereby moving the sleeve valve to bring its outlet port into register with the outlet of the casing.



1,383,937. TURBINE. LAURENCE RAWLIN GUTHRIE, Miami, Okla. Filed Feb. 12, 1920. Serial No. 358,065. 3 Claims. (Cl. 253—51.)

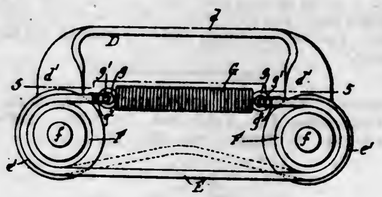
1. A turbine, comprising a stator and a rotor, said rotor consisting of a tubular shaft forming an exhaust passage and having radial perforations therein within the stator, a series of annularly corrugated disks secured on the shaft and spaced apart and forming passages between them communicating with the radial perforations of the shaft, a pair of tangential nozzles in the stator projecting in opposite directions and discharging into the spaces between the disks, each of said spaces

being provided with a pair of said nozzles, and means for controlling the flow of motive fluid through either of the sets of pairs of nozzles in accordance with the direction of rotation desired for the rotor.



1,383,938. CHEMICAL-RETAINER FOR SEWER-PIPES. NELSON R. HAGEMAN, Reno, Nev. Filed Oct. 12, 1920. Serial No. 416,365. 1 Claim. (Cl. 4—21.)

A device of the class described comprising a container having a reduced lower end screw threaded to engage the screw threaded upper end of the vent pipe, a perforated tube within the container having its lower end in communication with said reduced part and its upper end closed, a vent pipe connected with the upper part of the container and a screw threaded cover closing the top of the container.

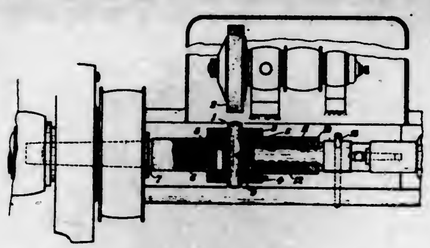


1,383,939. DOUBLE CORE-BARREL FOR CORE-DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 3, 1920. Serial No. 401,000. 5 Claims. (Cl. 255—72.)

1. A double core barrel for core drills comprising outer and inner barrels, a bit connected to the lower end of the outer barrel, a plug connected to the upper end of said outer barrel, the said plug having an upper bore communicating radially with the space between the barrels, a valve chamber below said upper bore, a relief valve in said chamber controlling communication between the inner barrel and the space between the barrels, and lateral apertures in the upper portion of the bit, whereby

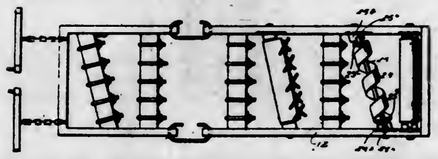
shot and cleaning fluid introduced into the plug are carried by centrifugal action into the space between the barrels, and pass downwardly and out through the said lateral apertures and around the outside of the bit to the cutting edge.

1,383,940. BUMPER FOR LOOMS AND THE LIKE. ORLANDO P. HARGROVE, Wayland, N. Y. Filed June 15, 1920. Serial No. 389,060. 5 Claims. (Cl. 139—22.)



2. A picking stick bumper for looms and the like, including a frame member having a body portion adapted to be secured to the loom frame and having arms extending outwardly beyond said body portion, a flexible member stretched between said arms and adapted to receive the blows of the picking stick, and resilient means also arranged between said arms and connecting with the ends of said flexible member for stretching said flexible member across said arms.

1,383,941. WORK-HOLDER FOR GRINDING AND THE LIKE MACHINES. ROBERT HARMAN, York, England, assignor to T. Cooke & Sons, Limited, Bishopshill, York, England. Filed Feb. 27, 1920. Serial No. 361,877. 2 Claims. (Cl. 51—237.)



1. As an article of manufacture, a holder for a piece of work, means to secure the work in said holder, with both ends permanently exposed for operation, a spindle

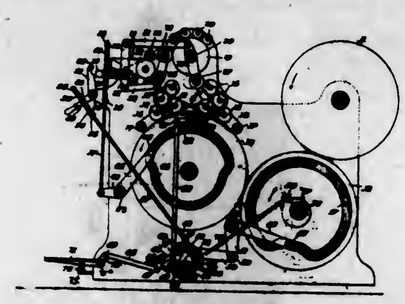
carrying said holder, means to continuously rotate said spindle, and means to continuously rotate said holder in

said spindle about an axis at right angles to the axis of rotation of the spindle.

1,383,942. HARROW. JAMES W. HARRIS, Turbeville, S. C. Filed Mar. 20, 1918. Serial No. 223,560. 2 Claims. (Cl. 55—12.)

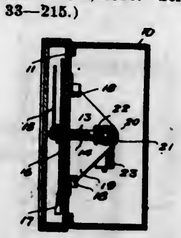
1. A soil leveler consisting of a substantially cylindrical elongated body with relatively wide convolutions in direct contact with the ground to travel thereon and with such convolutions separated to provide an intervening space.

1,383,943. METALLIC PACKING. WILLIAM L. HARRIS, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,855. 4 Claims. (Cl. 106—8.)



1. A metal packing comprising a metal alloy in a finely divided state, asbestos, grease, mica and metal wool intermixed with the remaining parts for holding the same together.

1,383,944. SURGICAL APPLIANCE. LEWIS B. HART, Plaquemine, La. Filed Dec. 20, 1919. Serial No. 346,254. 2 Claims. (Cl. 128—79.)

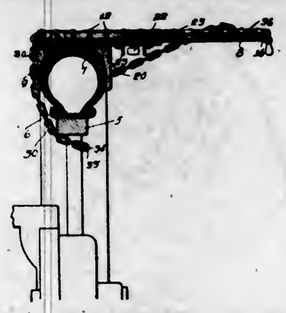


1. An appliance of the class described comprising a split resilient and flexible sleeve-like body, said body including inner and outer concentrically disposed members, and longitudinal ribs projecting from each member and alternately disposed to hold said members separated, and said ribs providing longitudinal spaces between said members as and for the purpose specified.

1,383,945. INKING MECHANISM FOR PRINTING-PRESSES. CARL HENDERSON, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1918. Serial No. 233,412. 10 Claims. (Cl. 101—351.)

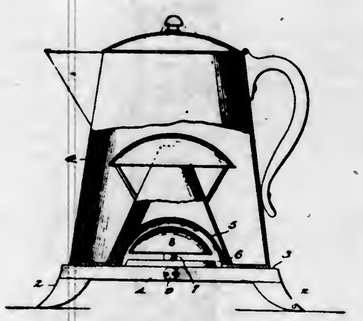
1. In a printing press, the combination with the form cylinder of a printing couple, and inking mechanism therefor comprising an ink fountain, ink distributing rolls, and form rolls, of a ductor for transferring the ink from the fountain to the distributing rolls, a second ductor for transferring the ink from the distributing rolls to the form rolls, and means for concurrently suspending the functioning of both ductors and of the form rolls whereby to intermit the flow of the ink from the fountain.

1,383,946. INCLINOMETER. JOHN A. HERRING, Okmulgee, Okla. Filed June 4, 1920. Serial No. 386,436. 1 Claim. (Cl. 33—215.)



An inclinometer comprising a graduated dial, flanges projecting from one side of the dial, an arbor journaled on the dial, a hand fixed on said arbor, a second hand loosely mounted on the arbor and weighted at one end, a shaft journaled in said flanges, beveled gears carried by the adjacent extremities of said arbor and shaft and meshing with each other, and a weight removably associated with said shaft, said hands being gravity actuated and independently operable.

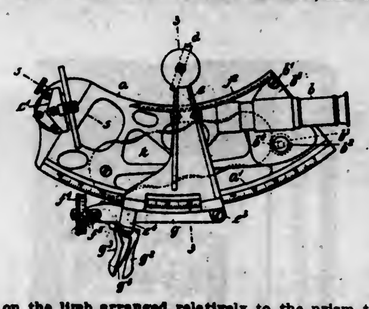
1,383,947. METHOD OF MAKING SHOE-FILLERS. MEYER S. HESS, Baltimore, Md. Filed Oct. 8, 1917, Serial No. 195,427. Renewed Aug. 21, 1919. Serial No. 319,043. 3 Claims. (Cl. 12—146.)



1. The method of reclaiming deformed insoles in shoes which consists in superposing on the insole a filler which is plastic only at temperatures higher than body temperature, and then by pressure conforming its upper and lower surfaces respectively to the last of the shoe and to the deformities in the insole.

1,383,948. TRACTION DEVICE. HUGH EDWARD HOUSTON, Wichita Falls, Tex. Filed Dec. 9, 1920. Serial No. 429,474. 1 Claim. (Cl. 152—14.)

A traction element comprising a plate provided with a rigid right-angular end adapted to embrace a portion of a wheel, a block slidably mounted on said plate and adapted to engage a portion of the wheel, said right-angular end and said block being so shaped as to conform to the outer portion of the wheel engaged, a plurality of ribs carried by the plate, a centrally disposed attaching chain extending longitudinally of the plate and engaging the spokes of the wheel at one end and the end of the plate at its other end, and diagonally arranged chains attached to one end of the plate at one of said ends, said chains diverging toward the wheel and secured thereto at a point exterior of the confines of the plate.

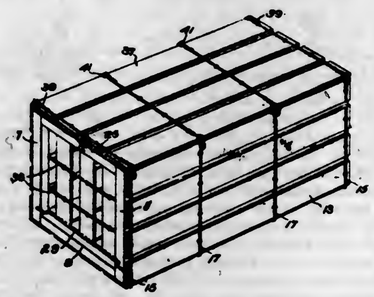


1,383,949. ELECTRIC STOVE. JOHN A. HOWARD, Sr., West New Brighton, N. Y., assignor to Camward Engineering Co. Inc., a Corporation of New York. Filed July 3, 1920. Serial No. 393,847. 1 Claim. (Cl. 219—43.)

In a cooking means, a utensil having a closed central chamber rising from its bottom and also having a flat bottom portion surrounding said chamber, in combination with a stove comprising a base portion with a flat upper surface on which said flat bottom portion of the utensil is superimposed, and an electrical heating edement rising from said base portion of the stove and disposed in said chamber of the utensil, whereby the opposed coöperating surfaces of the bottom portion of the utensil and the base portion of the stove are adapted to confine heat in said utensil chamber.

1,383,950. SEXTANT. HENRY ALEXANDER HUGHES, London, and THOMAS YEOMANS BAKER, Slough, England. Filed Apr. 27, 1920. Serial No. 377,065. 1 Claim. (Cl. 88—23.)

In a sextant, a limb in the form of a segment of an annulus, a carrier slidable bodily thereon in the arc of a circle whose center lies outside the sextant, means for adjusting the carrier on the limb, an index mirror on the carrier, a horizon prism mounted on said limb, and a telescope on the limb arranged relatively to the prism to receive direct rays of light from beneath the prism and reflected rays therefrom, substantially as described.



1,383,951. VULCANIZING DEVICE. SAMUEL J. HURWITZ, Youngstown, Ohio. Filed Oct. 15, 1918, Serial No. 258,140. Renewed Dec. 11, 1920. Serial No. 430,046. 2 Claims. (Cl. 18—18.)

1. A vulcanizing device comprising an element having a vulcanizing surface, a heating member in said element, a second element having a rockable vulcanizing surface and also having an individual heating member complementary to and rockable with said surface, and means at opposite sides of said surfaces to hold the elements together under pressure.

1,383,952. BOX. RICHARD G. INWOOD, deceased, South Bend, Ind., by Mary Cain Inwood, administratrix, South Bend, Ind., and Charles H. Bombardie, Chicago, Ill., assignors to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Jan. 10, 1918. Serial No. 211,272. 18 Claims. (Cl. 217—12.)

1. A wirebound box comprising relatively foldable side and bottom sections having coöperating end cleats and connected by wire bindings; end sections embraced thereby each having a cleat corresponding to the fourth side of the box adapted to interlock with the cleats of the side sections; and transverse metal reinforcing members carried by the end sections and fastening means for coöperation therewith carried by the cleats of the side sections.

1,383,953. MATERIAL-FEED-REEL BRAKE. HENRY VINCENT JAMES, Radlett, England. Filed Mar. 28, 1918. Serial No. 224,362. 8 Claims. (Cl. 242—75.)

3. In combination with a spindle for a material feed reel; of a brake drum mounted on the spindle; vertically movable bearings in which the spindle is mounted and whereby the spindle is capable of rising and falling movements; springs for counterbalancing the weight of the spindle and the material thereon, said springs causing the spindle to rise as the weight of the material on the spindle decreases; and an electric brake coöperating with the brake drum on the spindle and capable of retarding the rotation of the spindle; a rheostat electrically connected to said brake; and connections between the rheostat and the vertically movable bearings for operating the rheostat to vary the effective braking operation of the electric brake as the weight of the material on the spindle decreases.

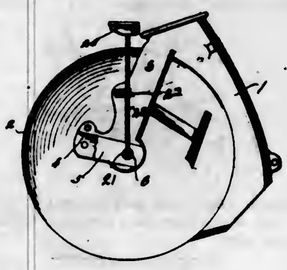
1,383,954. RAILROAD-TIE. CHARLES JAMES JONES, Marshall, Tex. Filed Apr. 1, 1921. Serial No. 457,715. 3 Claims. (Cl. 238—62.)

1. In a device of the character described, a metallic tie having openings formed adjacent to the ends thereof, fasteners comprising body portions associated with the tie, the body portions having extensions positioned within the openings, a curved arm forming a part of each fastening device, said curved arm adapted to embrace a portion of the rail, a bolt passing through each body portion and having a curved extremity embracing a portion of the rail, and means coöperating with the extensions for securing the extensions to the tie.

1,383,955. COTTON-PICKER'S BAG. JOE LEN KILEY, Heloise, Tenn. Filed May 11, 1920. Serial No. 380,452. 3 Claims. (Cl. 150—2.)

1. A device of the class described comprising a tubular sack open at the ends and with a plurality of fastening devices attached to the sides of the sack and spaced from its ends, the material of the sack in advance of the fastening devices foldable in superposed layers to form a closure to the sack and means for connecting the fastening devices from the opposite sides of the sack.

1,383,956. HARVESTING-BAG. JOE LEN KILEY and ROLAND E. LUCAS, Heloise, Tenn.; said Lucas assignor of one-half of his entire right to said Kiley. Filed Sept. 13, 1920. Serial No. 410,060. 3 Claims. (Cl. 150—2.)

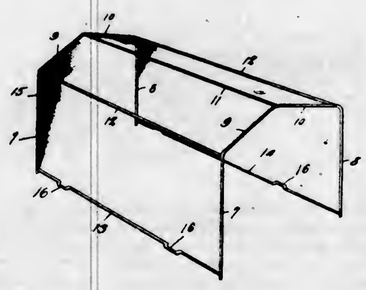


1. In a harvester bag of the class described, an open ended flexible body, flexible reinforcing strips stitched to and outside the body, draw strings for closing both ends of the body and the reinforcing strips, fastening means secured to the outer ends of said body, an auxiliary bag having a pocket stitched to the sides thereof detachably secured to said fastening means and adjustable shoulder straps for supporting said auxiliary bag and body for the purpose specified.

1,383,957. OILER FOR DISK DRILLS. ROBERT W. LEWIS, Granville, N. D. Filed June 18, 1918. Serial No. 240,565. 10 Claims. (Cl. 64—27.)

1. The combination with a support, a spindle carried by said support, a disk drill mounted upon said spindle,

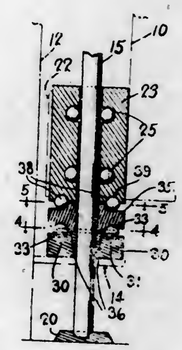
of a hollow bolt passing through said support and spindle and extending into said oil chamber for conveying lubricant to the oil chamber, and for securing the spindle to the support.



1,383,958. BEARING-BRASS. HAROLD G. MARTIN, Philadelphia, Pa., assignor of one-half to Michael H. Newgirg, Baltimore, Md. Filed Nov. 23, 1920. Serial No. 426,012. 1 Claim. (Cl. 64—10.)

A bearing brass having a reinforce section embedded therein, said section having hook-ends and being curved adjacent the ends in conformity with the curvature of the brass, the intermediate portion of the reinforce being thickened, whereby when thrust in direction of the thickened portion of the reinforce occurs and tends to cause the reinforce to yield, the hook-ends engaging in the brass prevent yielding and breaking of the brass.

1,383,959. SCREEN-HOOD. RALPH MARTIN, Winslow, Ind. Filed Dec. 10, 1919. Serial No. 343,908. 1 Claim. (Cl. 180—69.)

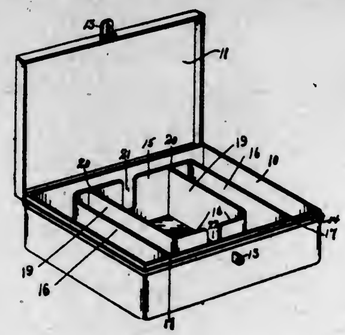


In an engine hood, the rigid frame embodying end sections, horizontal upper and lower bars connecting the end sections, the lower bars having offset portions to receive the usual hood securing clips, a covering of wire mesh material supported by the bars and end sections, and said hood having inclined upper surfaces.

1,383,960. LEVELING AND MEASURING INSTRUMENT. JAMES MAZZACCO, Gallup, N. Mex. Filed July 22, 1918. Serial No. 246,070. 1 Claim. (Cl. 33—72.)

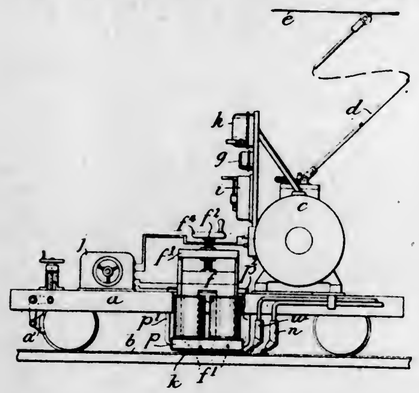
In a device for the purpose set forth, a graduated stock having a degree indicator centrally thereof and a longitudinally extending round opening therethrough adjacent one of the edges thereof, a tube having one of its ends arranged a slight distance inwardly of the opening at one end of the stock, said tube having a closed end provided with a central opening, a second tube telescopically received in the first mentioned tube, compressing means between the tubes for frictionally holding one of the tubes when withdrawn through the other tube, a collar in the opening surrounding the outermost tube and providing a locking means for the said tube, all as and for the purpose set forth.

1,383,961. GATE-HINGE. FRANK MELUGIN, Webb City, Mo. Filed Sept. 7, 1918. Serial No. 253,041. 1 Claim. (Cl. 16—163.)



In a device of the class described, a vertical shaft, means for mounting the latter, a tubular member carried by the shaft and provided with internal grooves constituting race ways, balls located in said grooves and bearing on the shaft, means for securing the tubular member to a gate or the like, a race plate rigidly mounted on the shaft and provided with a cam surface comprising oppositely located depressed portions provided with grooves, a second race plate having a cam surface similarly formed on that side adjacent to the race plate first named, a series of balls between the second race plate and tubular member and means for retaining the individual balls in position between said elements last named causing them to rotate together upon the shaft.

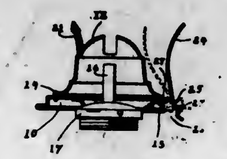
1,383,962. INNER-TUBE RECEPTACLE. JAMES HARLAN MILLS, Gallipolis, Ohio. Filed June 28, 1920. Serial No. 392,251. 1 Claim. (Cl. 206—1.)



A container having an outer U-shaped partition therein united at the ends of its side members to one wall of

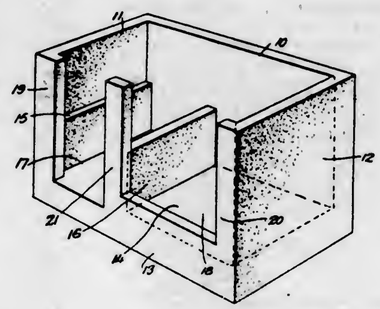
the container, and an inner and smaller U-shaped partition within the outer U-shaped partition with the ends

of its side members united to the closed end of the outer partition, whereby interengaging U-shaped spaces are provided within the walls of the container.



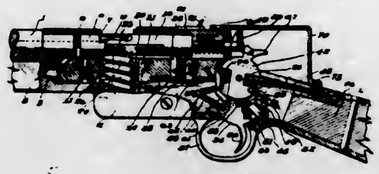
1,383,963. HEAT TREATMENT OF TRAMWAY AND OTHER RAILS. WILLIAM MORRIS MORDEY, Westminster, England. Filed June 2, 1920. Serial No. 386,029. 13 Claims. (Cl. 148—10.)

1. The process for the heat treatment of a tramway or other rail for the purpose herein set forth, which consists in causing the rail to pass longitudinally through a magnetic field set up between the magnetic poles of a powerful alternate current electromagnet so that successive longitudinal portions of the rail will successively form between the said poles part of the magnetic circuit of the magnet core and will have induced in each of them in succession a magnetic flux and consequent eddy currents, of such strength as thereby to become heated to the desired temperature limited by the critical non-magnetic temperature of the metal of which the rail is composed, the successive portions of the rail thus heated being successively cooled.



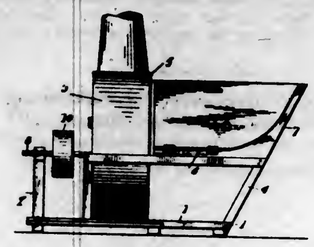
1,383,964. LAMP-BURNER. CHARLES H. MULLICAN, Macy, Ind. Filed Jan. 2, 1920. Serial No. 348,783. 1 Claim. (Cl. 240—98.)

In a lamp burner, a base portion, a plurality of permanently mounted spring fingers carried thereby, a dome hinged on the base, a pivotally mounted spring finger cooperating with the fingers first named and movable on a horizontal axis toward and away from the dome, for resiliently engaging the inner surface of the chimney, and retaining means movable radially of the base, formed



on the pivoted finger, and proportioned to positively engage the edge of the base, said retaining means constituting a spring clip.

1,383,965. COMPOSITE STOVE. WILLIAM H. MYERS, New York, N. Y., assignor to Union Stove Works, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1917. Serial No. 190,826. 2 Claims. (Cl. 126—1.)

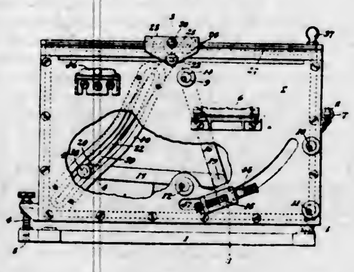


2. A stove including bottom, end, back and front walls integrally formed from a plastic composition suitably molded, said front wall being formed by inwardly projecting portions of the forward extremities of the end walls, and by an extension rising from the forward edge of the bottom wall, thereby providing an opening, and a top for the stove.

1,383,966. AUTOMATIC RIFLE. STACY OLIVER, Hartford, Conn. Filed Feb. 3, 1919. Serial No. 274,680. 6 Claims. (Cl. 42—3.)

1. In an automatic rifle, in combination, a barrel, a cartridge chamber, means for feeding cartridges into alinement with said chamber, a recoil operated bolt for forcing cartridges into said chamber, yieldable means carried by the bolt for interlocking engagement with said chamber for connecting the chamber to the bolt for retracting the chamber when the bolt is retracted, means for limiting the retraction of the chamber and releasing the same from said bolt whereby said chamber is adapted to move with the bolt through a predetermined retracting distance, and means carried by the chamber and connected to said barrel for returning the chamber to a bullet receiving position.

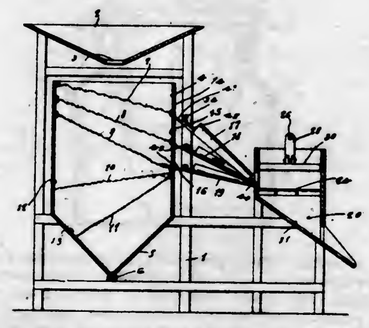
1,383,967. BLOWER FOR THRESHING-MACHINES AND THE LIKE. WILFRID OUELLETTE, St. Scholastique, Quebec, Canada. Filed Dec. 6, 1919. Serial No. 343,034. 1 Claim. (Cl. 302—37.)



The combination in a device such as described, of a frame including upright and inclined bars, and horisontal bars connected thereto, an angular housing mounted in one side of the frame, a circular housing mounted in the opposite side of the frame, a shaft journaled in the circular housing, a fan carried by the said shaft, said circular housing having an outlet at its upper side, said housings having a communicating opening therebetween, and a closure secured to one side of the angular housing as and for the purposes set forth.

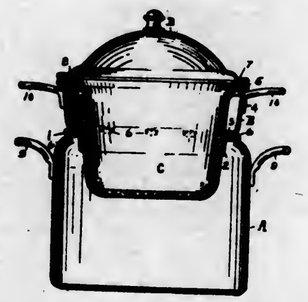
1,383,968. WATCH BELT-BUCKLE. CHARLES PERRY, Jr., and NEIL CURRIE, San Antonio, Tex. Filed Sept. 14, 1920. Serial No. 410,100. 1 Claim. (Cl. 224—4.)

In a belt buckle of the class described, having an open, beveled front side, a watch case having an integral hook hinged to the lower edge of said front face, and a catch integral with the front face of said buckle for engagement with the stem of a watch to keep the same in its closed position.



1,383,969. AEROPLANE BOMB-SIGHT. GEORGE ERLE BEGGS, Princeton, N. J. Filed Mar. 29, 1918. Serial No. 225,467. 11 Claims. (Cl. 235—61.)

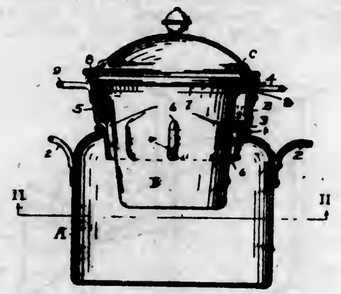
1. In an aeroplane bomb-sighting mechanism, means for calculating and indicating the angle of fire from preliminary observations, embodying a fixed scale graduated in terms of one element of the required calculation, an associated and relatively movable slide scale graduated in terms of the other elements of such calculation, cooperating means, adjustable relative to such scales, for registering the result of the calculation, adjustable sighting means, and mechanism actuated by said coöperating means for adjusting the sighting means to a line of fire corresponding to the result of such calculation.



3. In an aeroplane bomb-sighting mechanism, means for calculating and indicating the angle of fire from preliminary observations, embodying a fixed scale graduated in terms of one element of the required calculation, an associated and relatively movable scale graduated in terms of the other elements of such calculation, coöperating means, adjustable relative to such scales, for registering the result of the calculation, adjustable sighting means, and mechanism actuated by said coöperating means for adjusting the sighting means to indicate the result of such calculation.

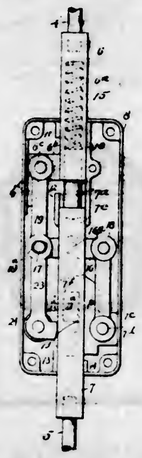
1,383,970. SEED-POTATO-CUTTING MACHINE. GEORGE A. BENTLEY Marathon, Iowa. Filed Aug. 14, 1917. Serial No. 186,130. 4 Claims. (Cl. 130—32.)

1. A device for sorting and directing selected potatoes to graded cutters, having an oscillatory casing pivotally mounted at its lower end and having lateral outlets, stationary chutes having flexible conveyer elements between their inlet ends and said outlets, and grading screens of graduated mesh arranged at graduated inclination in superposed relations in the casing and respectively in communication with said outlets.



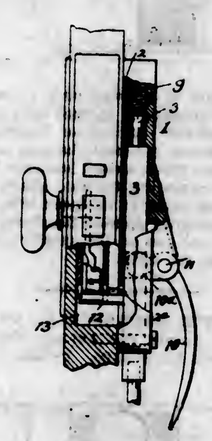
1,383,971. COOKING UTENSIL. HENRY C. BIETTE, Pittsburgh, Pa., assignor of one-half to J. Audley Pierce and one-sixth to J. Scott Jamison, McKeesport, Pa. Filed Sept. 11, 1920. Serial No. 409,623. 2 Claims. (Cl. 53—2.)

2. A cooking utensil comprising an outer vessel, a steam ring provided intermediate of its height with a circumferential shoulder whereby said steam ring may be mounted on said outer vessel with its portion below said shoul-



der depending within said outer vessel and its portion above said shoulder extending above said outer vessel, said lower portion being contracted, an inner vessel supported by the engagement of its side wall intermediate of its height with the contracted lower portion of said steam ring whereby an annular chamber is formed between said steam ring and said inner vessel, said steam ring being provided within said outer vessel with ports whereby steam is admitted to said chamber from said outer vessel, and a lid for said utensil fitting on top of said steam ring and provided with a depending annular portion interposed between said ring and said inner vessel.

1,383,972. COOKING UTENSIL. HENRY C. BIETTE, Pittsburgh, Pa., assignor of two-thirds to J. Audley Pierce, McKeesport, Pa. Filed Nov. 12, 1920. Serial No. 423,257. 2 Claims. (Cl. 53—1.)

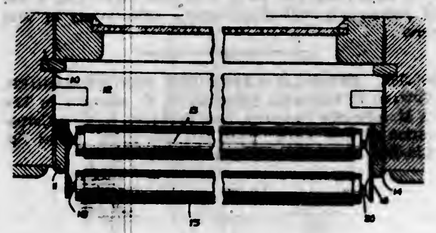


1. A cooking utensil comprising an outer vessel adapted to contain water, a steam ring mounted on said outer vessel, an inner vessel suspended by means of said steam ring partially within said outer vessel, passages being provided between said ring and said inner vessel whereby the steam will ascend from said outer vessel in direct contact with the wall of said inner vessel and means for inclosing the tops of said steam ring and said inner vessel from atmosphere and from each other.

1,383,973. EMERGENCY-DOOR-LOCK-OPERATING MECHANISM. WILLIAM BERTRAM BOLLES, Milwaukee, Wis. Filed Sept. 30, 1918. Serial No. 256,234. 11 Claims. (Cl. 292—21.)

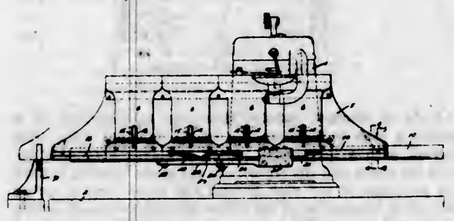
1. The combination with a door and a locking bolt therefor, of a pair of oppositely disposed members mounted to slide upon the door, one of said members being connected with the locking bolt, one of said members being formed with a recess, the other of said members being formed with a projection adapted to slide in said recess, a spring in said recess engaging the said projection, an operating lever pivoted upon the door, and operating connections between the said lever and one of the sliding members.

1,383,974. OPERATING MECHANISM FOR EXIT-DOORS. WILLIAM B. BOLLES, Milwaukee, Wis. Filed Sept. 30, 1918. Serial No. 256,235. 7 Claims. (Cl. 292—21.)



1. In a device of the character described, a casing, a member within the casing provided with a recessed opening, a spring in said opening, wall members associated with the casing, a sliding member coöperating with said wall members, said sliding member having a projecting portion which extends into said opening and coöperates with the spring therein, a lever pivoted upon the casing and having operative connection with the sliding member, a lock operating member connected with the sliding member.

7. In a device of the character described, the combination with a casing, a part within said casing having an opening, a spring within said opening, a slidable member within the casing, said slidable member being provided with an extension which coöperates with said opening and the spring therein, said sliding member being provided with an opening and also a recess adjacent the opening, a lever pivoted at its central portion within the casing, a link connecting one end of said lever with the said sliding member, a second link connected with the opposite end of said pivoted lever, means for guiding said second link as it moves, a member extending within the recess formed in the sliding member, said member being connected with the second mentioned link, an operating lever pivoted upon the casing, having a part which extends on the outside of the casing, said operating lever having a part which coöperates with the opening in the sliding member and is positioned adjacent the member extending within the recess of the sliding member for the purpose described.



1,383,975. SHADE-BRACKET. WILLIAM HORACE BOOTH, New York, N. Y. Filed Nov. 22, 1920. Serial No. 425,847. 1 Claim. (Cl. 156—24.)

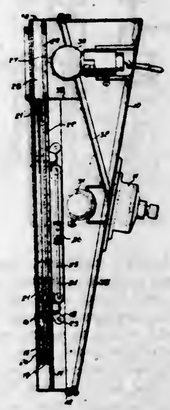
A shade bracket including a U shaped body portion adapted to embrace a side strip, said body being formed with a cutout portion whereby to provide a substantially straight tab, said tab being in line with and forming a rearwardly extending continuation of one of said arms, and means adjacent the outer ends of both said tab and

the arm of said U shaped body portion with which said tab alines, for permitting the association therewith of one of the ends of a shade roller.

1,383,976. SEWING-MACHINE. ARTHUR A. BOUTON, Brooklyn, N. Y. Filed Mar. 9, 1920. Serial No. 364,372. 4 Claims. (Cl. 112—19.)

1. In a sewing machine, the combination of a work supporting carriage, a track on which said carriage is adapted to travel to present the work supported thereby to the sewing mechanism of the machine, said track comprising a horizontally disposed base provided at its inner edge with an upstanding vertical flange mounted intermediate its ends to the sewing machine with the flange disposed toward the same, a shoe on the carriage adapted to rest upon the horizontal base for longitudinal movement thereon, tension means for normally maintaining the inner side of the shoe against the flange for guiding the same on the track, said means comprising an arm pivoted to the underside of the horizontal base, a clip secured to the free end thereof and adapted to engage the outer side of the shoe, and means for yieldably drawing the arm toward the upstanding flange as and for the purpose specified.

1,383,977. ELECTRIC CLIPPER. LEVI M. BOWMAN, Tulsa, Okla., assignor of one-half to William A. Smith, one-fourth to L. N. Butts, and one-fourth to George S. Berry, Tulsa, Okla. Filed July 8, 1919. Serial No. 309,323. 1 Claim. (Cl. 30—1.)

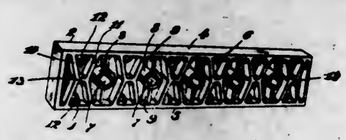


In a device of the class described, an insulated hollow handle having a tapered socket formed thereon and opening toward one end of said handle, a stationary tool member, a tapered supporting member including a curved portion and a straight portion removably engaged in said tapered socket, means for securing said straight portion within said socket, a movable tool member mounted on said stationary tool member, an arm carried by said movable tool member and having a transversely extended portion with a turned free end, a movable operating

means projecting from said handle and directed toward and spaced from the turned end of said arm, and resilient

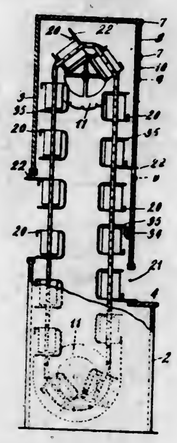
connections between said turned end of said arm and the said operating member.

1,383,978. LICENSE-PLATE HOLDER. HENRY BREWSTER, New York, N. Y. Filed Jan. 31, 1921. Serial No. 441,427. 2 Claims. (Cl. 40—132.)



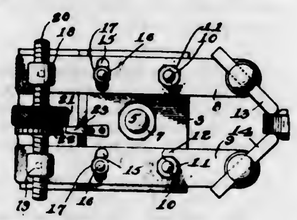
1. A plate holder, including a housing formed with an open face, a source of light within said housing, a reflector for said source of light, said reflector including a plate arranged at an angle between the outer upper edge of said housing and the rear wall of the same, the rear of said housing below and adjacent to the point of contact of said plate with the same, being inclined outwardly to form a second reflecting surface.

1,383,979. PARALLEL FOR MACHINE-TOOLS AND THE LIKE. ELMER J. BRYANT, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed June 16, 1920. Serial No. 389,361. 14 Claims. (Cl. 90—59.)



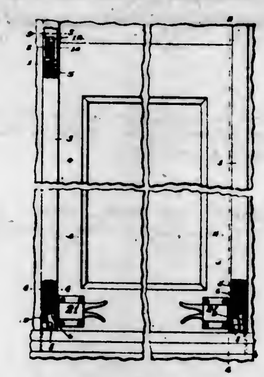
1. As an article of manufacture, an integral piece of metal comprising a parallel for machine tools and the like having a pair of edge members, said edge members being provided with parallel surfaces, a central web connecting said members, a plurality of transverse webs triangularly

arranged on each side of the transverse center line of said central web, said transverse webs being integral with said side members and said central web, a plurality of beads extending between said webs, bolt wells formed ad-



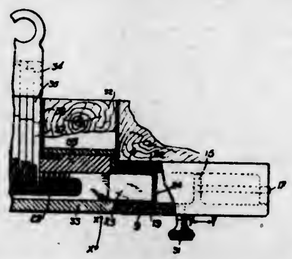
jacent said beads, and reinforcing brackets between said side members and said central web and intermediate said transverse webs, with the edges of said transverse webs, said bolt wells, and said members on the same side of the device being co-planar.

1,383,980. STORE FURNITURE. WILLIAM MIDGLEY CAMPBELL, Hot Springs, Ark. Filed Aug. 12, 1920. Serial No. 403,032. 4 Claims. (Cl. 211—21.)



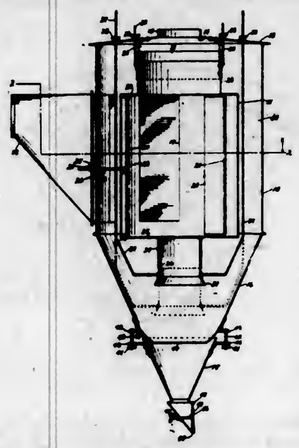
1. An article of store furniture, comprising a cabinet subdivided into rows of compartments, said cabinet having delivery outlets connecting with said compartments; independent endless conveyers operable in the compartments, each having a series of article receivers or holders adapted to successively register with one of said outlets, means for manually imparting movement to the conveyers, said means comprising handle members attached to each conveyer, locking bolts projected across the path of movement of said handles, and means for releasing said bolts.

1,383,981. LATHE-TOOL HOLDER. WILLIAM LYLE CATLIN, Chattanooga, Tenn. Filed Sept. 2, 1919. Serial No. 321,128. 4 Claims. (Cl. 82—36.)



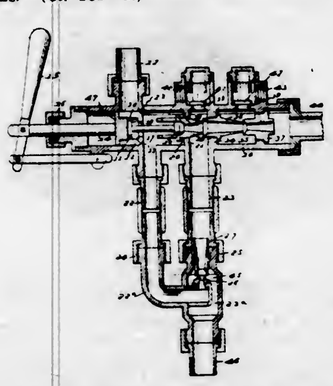
1. A lathe tool holder comprising a base plate, a plurality of levers having their intermediate portions pivotally mounted on said base plate, a tool carried at one end of each lever, a threaded member connecting the opposite ends of said levers, a single hand engaging member mounted on the threaded member for causing movement of the tools toward or away from each other, and a dial and pointer for indicating various adjustments of said levers.

1,383,982. SPRING-BALANCE FOR WINDOW-SASHES. EDWARD F. CHAFFEE, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 27, 1916. Serial No. 128,036. 2 Claims. (Cl. 16—115.)



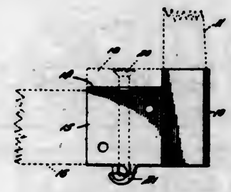
1. In a window construction, the combination of a frame, a sash movable in the frame, window stops each formed with a lengthwise recess, the sash extending behind the stops and the recesses of the stops opening toward the portions of the sash behind the stops, and a spring extending lengthwise of the recess of each stop, and acting at one end against the window frame and at its other end against the sash, substantially as and for the purpose described.

1,383,983. SPRING SLIDE DOOR-JAMB OR LATCH. FRANCISCO CLARK, Durango, Mexico. Filed June 26, 1919, Serial No. 306,784. Renewed Dec. 24, 1920. Serial No. 433,051. 7 Claims. (Cl. 70—15.)



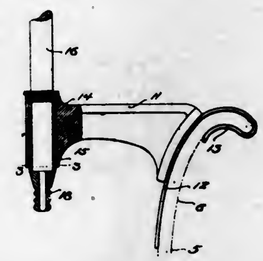
1. The herein described jamb lock device comprising a casing open at one end and one side, a lock bolt keeper slidable longitudinally of the casing and adapted in one position to close the open side thereof, means carried by the two casing sides adjacent to the keeper to confine the keeper in the position indicated, means acting upon the keeper tending to hold it in the position for closing said open side of the casing, and a member acting automatically to hold the keeper in an open position against the force of said closing means.

1,383,984. ADJUSTABLE AIR-SEPARATOR. WILLIAM G. CLARK, Chicago, Ill. Filed Nov. 16, 1920. Serial No. 424,373. 8 Claims. (Cl. 183—5.)



1. An air separator comprising, in combination, an outer drum having an outlet in substantially the center of its upper end, an inner drum, means for introducing dust laden air tangentially into said inner drum, an inwardly deflected member in the periphery of the inner drum providing a gap communicating with the space between the drums facing the currents of air from said inlet, an outlet pipe projecting from the upper end of said inner drum terminating short of the end of the outer drum adjacent its outlet whereby a gap is provided placing the space between the drums in communication with said outlet.

1,383,985. INJECTOR. PERCY J. CRIMSEY, Cabin Creek, W. Va. Filed June 7, 1920. Serial No. 387,103. 7 Claims. (Cl. 162—1.)

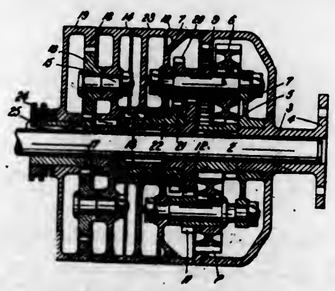


1. An injector having a pressure chamber and a suction chamber, an injector nozzle connecting the said chambers, pressure and suction tubes respectively in communication with said chambers, the pressure tube being provided with a suction nozzle discharging axially into the suction tube, an overflow port in communication with the suction chamber and having an inwardly seating valve, a pressure valve for controlling the communication of steam to the pressure chamber, and an injector valve seated in the injector nozzle to connect with the pressure valve for actuation thereby, the former being capable of unseating movement independently of the latter.

1,383,986. STAKE-HOLDING DEVICE. THOMAS F. CULLINAN, Providence, R. I. Filed Dec. 22, 1920. Serial No. 432,422. 2 Claims. (Cl. 296—43.)

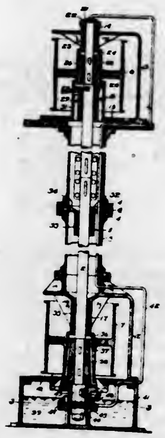
1. A stake holder comprising a vertically-disposed stake receiving tubular socket member having a horizontally disposed laterally-extending flange located adjacent its upper end, a vertically-disposed flange positioned to cooperate with said horizontal flange and by which the device may be securely bolted to the frame of a vehicle, and a hook formed on the lower edge of said device for engaging a load-binding rope.

1,383,987. SHOWER-BATH DEVICE. GENNARO DE BELLIS, Philadelphia, Pa. Filed Nov. 17, 1921. Serial No. 338,609. Renewed May 17, 1921. Serial No. 470,324. 3 Claims. (Cl. 4—26.)



1. A shower device of the character described including a supported arm having an upright hole; and an upright shower pipe including a portion adapted to freely slide downwardly into said hole, said hole and portion of the pipe having parts adapted to prevent rotation therebetween, said pipe having a hose connecting nipple whereby a hose can be connected to said nipple and to a faucet, and the nipple and pipe can be freely lifted upwardly out of said hole when it is desired to detach the pipe from the bracket, said pipe having a part for limiting the downward movement of said portion of the pipe in said hole; substantially as described.

1,383,988. VARIABLE VELOCITY-RATIO GEARING. EDGAR JOSEPH DE NORMANVILLE, London, England. Filed May 14, 1921. Serial No. 469,683. 5 Claims. (Cl. 74—34.)

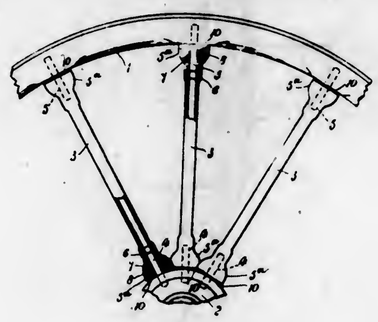


1. Variable velocity ratio gearing for transmitting motion from a driving shaft to a driven member, comprising in combination, primary and secondary planet wheels mounted on the same frame and in gear one with the other, a sun wheel fast on the driving shaft and in gear with the primary planet wheel, an internally toothed wheel fast with the driven member and in gear with the secondary planet wheel, a sleeve rotatably mounted on the driving shaft, a second sun wheel fast on this sleeve and geared to the secondary planet wheel, a controlling planet wheel carried by the said sleeve, a brake drum,

an internally toothed wheel carried by the brake drum, and a third sun wheel fast on the driving shaft, the in-

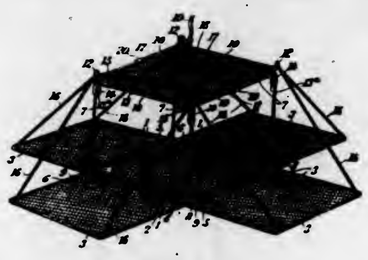
ternally toothed wheel carried by the brake drum and the third sun wheel both being in gear with the said controlling planet wheel.

1,383,989. SYSTEM OF VERTICAL-TRANSMISSION-SHAFT CONSTRUCTION AND MEANS FOR LUBRICATING THE SAME. WILLIAM A. DOBLE, San Francisco, Calif., assignor to The Pelton Water Wheel Company, San Francisco, Calif., a Corporation of California. Filed Jan. 9, 1917. Serial No. 141,399. 11 Claims. (Cl. 64—56.)



1. In vertical transmission shaft construction, a transmission shaft, a tubular housing surrounding and inclosing the shaft, guide bearings for said shaft carried by said housing and means operated by said shaft for introducing lubricating oil into the tubular housing above the upper guide bearing.

1,383,990. MANUFACTURE OF ACID SODIUM PYROPHOSPHATE. ANDREW KELLY, London, England. Filed Jan. 22, 1921. Serial No. 439,269. 3 Claims. (Cl. 23—13.)



1. The method of manufacturing an acid sodium pyrophosphate which comprises adding to sodium pyrophosphate an acid capable of converting same into acid sodium pyrophosphate, and precipitating said acid sodium pyrophosphate by salting out.

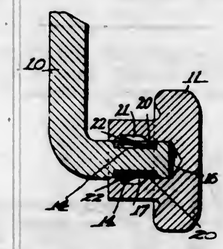
1,383,991. VEHICLE-WHEEL. EDWARD KEMP, Toronto, Ontario, Canada, assignor of one-third to George Whitaker Morley, Toronto, Ontario, Canada. Filed May 17, 1919. Serial No. 297,845. 8 Claims. (Cl. 301—67.)

1. In a wheel, a spoke, a radially slidable connection between the end of said spoke and the contiguous part of said wheel, a cushion compartment at the end of said spoke, a resilient cushion within said compartment, and a slidable closure for said compartment, said closure and said cushion being compressively located between the walls of said compartment and the contiguous part of said wheel.

1,383,992. COLLAPSIBLE TRAP. JOHN F. MASEK, New York, N. Y.; Karolina Masek, administratrix of said John F. Masek, deceased, assignor to Joseph Holoubek, New York, N. Y. Filed Oct. 15, 1920. Serial No. 417,149. 5 Claims. (Cl. 43—105.)

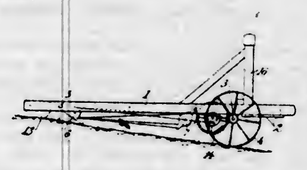
1. A trap comprising rectangular top and bottom members, four rectangular side members hinged to the edges of the bottom member, a pair of balls having downwardly extending side arms hinged at their lower ends to opposite edges of the bottom member, a pair of reach-rods for separably connecting the balls to each other at points above the bottom member hinged to opposite edges of the top member and having laterally bent end portions, and means rigidly held to the balls provided with apertures for receiving the laterally bent end portions of the reach-rods.

1,383,993. NAIL-STRIP HOLDER. ELI J. MILLER, York, Pa. Filed Oct. 18, 1920. Serial No. 417,713. 6 Claims. (Cl. 206—56.)



1. In a nail-strip holder, in combination, a box for holding a spool, a rigid spindle on which the spool may turn, a disk to which the spool may be attached about the

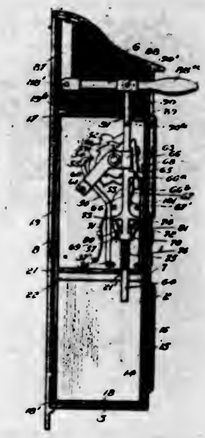
lower end of the spindle, a disk and friction spring about the upper part of the spindle, there being a mouth where



discharging of a strip wound on a spool may occur, and means about said mouth for directing the strip.

1,383,994. CRANK-HANDLE. ROBERT C. OLSON, Worcester, Mass. Filed Feb. 24, 1920. Serial No. 360,698. 6 Claims. (Cl. 287—91.)

1. The combination with a crank having a handle end having a transverse slot in its wall, of a handle grip having a cylindrical passage for said handle end and provided with a groove in the wall of said passage, and a plate adapted to lie in said slot, and a yielding tongue projecting therefrom into said groove and extending toward the body of the crank.



1,383,995. STUMP-PULLING MECHANISM. WELI KAARLO ARMAS PALOHEIMO, Helsingfors, Finland. Filed Apr. 9, 1920. Serial No. 372,639. 4 Claims. (Cl. 254—145.)

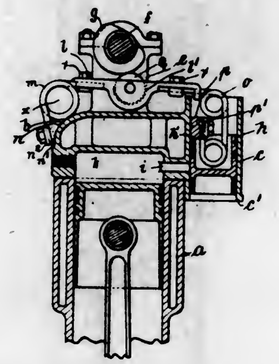
1. In a machine for pulling tree stumps, the combination of a beam, one end of which is adapted to be connected to a tree stump, and the other end of which is adapted to rest on the ground; and means to move the end of the beam, comprising a windlass mounted on said beam.

1,383,996. VENDING-MACHINE. LAYTON M. PARKHURST, Indianapolis, Ind., assignor, by mesne assignments, to George B. Pitts, trustee, Cleveland, Ohio. Filed Mar. 31, 1908, Serial No. 424,304. Renewed July 23, 1915. Serial No. 41,617. 32 Claims. (Cl. 194—57.)

1. The combination of a support having a coin chute, a movable member, means for locking said member against movement, a movable device normally projecting into the coin chute and serving as an arrester therein for a coin,

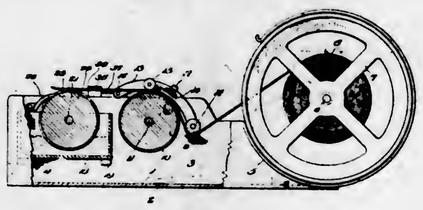
said device having operative engagement with and bodily movable laterally to actuate said locking means, and means for moving a coin past said device.

1,383,997. PUMP FOR DELIVERING LIQUID. EDWARD LLOYD PEASE, Darlington, England. Filed Aug. 23, 1920. Serial No. 405,419. 9 Claims. (Cl. 103—67.)



1. A pump comprising a stationary casing having a peripheral inlet and a peripheral outlet, a body adapted to be turned in said casing and having a diametrical passageway adapted to communicate with said inlet and outlet and a plunger, adapted to travel along the passageway and of less than half the length of such passageway so that during such passage it passes bodily well beyond the center of rotation of the rotary body, thereby forming a pocket for the reception of liquid that has a capacity greater than the volume represented by the plunger, substantially as described.

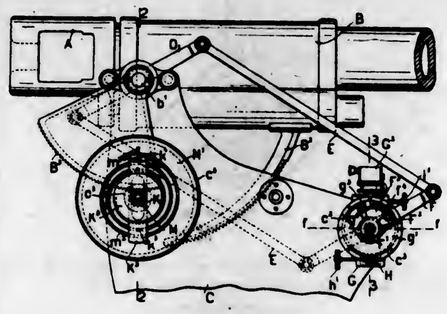
1,383,998. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. CHARLES WILLIAM PRADEAU, London, England. Filed Feb. 8, 1921. Serial No. 443,447. 4 Claims. (Cl. 123—90.)



1. In combination with a cylinder and a valve of an internal combustion engine, a floating member, a spring connecting the said member to the cylinder, a second spring connecting the said member to the valve, the first

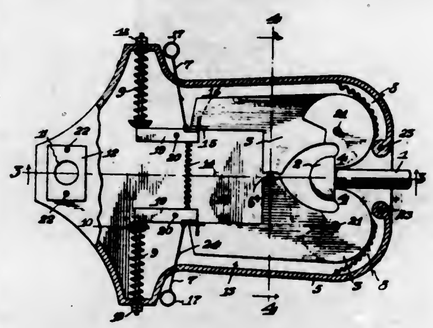
named spring serving to move the floating member and the valve in one direction, and positively driven means to

move said floating member and said valve in the reverse direction.



1,383,999. TAPE MOISTENING AND DELIVERY APPARATUS. WILLIAM D. ROBERTSON and STANLEY SAVAGE, Seattle, Wash., assignors to S-R Mfg. Co., Seattle, Wash., a Corporation of Washington. Filed May 29, 1920. Serial No. 385,211. 11 Claims. (Cl. 91—14.5.)

1. In a moistening apparatus for tape and the like, a supply reel for the tape, a delivery roll by which the tape is fed, a moistening roll for applying moisture to one surface of the tape, and means for operating said rolls to insure a predetermined movement of the moistening roll prior to any movement of the delivery roll, whereby said predetermined movement of the moistening roll causes a moistened surface of the roll to be presented to the tape, so that the entire length of tape delivered is moistened.

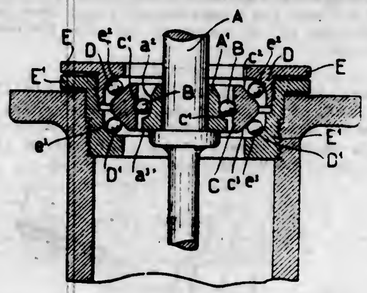


1,384,000. POINTING DEVICE FOR ORDNANCE. RICHARD SCHÜMANN and LEOPOLD SCHMIDT, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 7, 1920. Serial No. 408,746. 10 Claims. (Cl. 89—41.)

1. A pointing device for guns comprising a range device, a pair of adjusting members rotatable independently of each other about the same axis, means connecting said range device to one of said adjusting members, said connecting means moving said adjusting member through a greater angle than the angle of rotation of the range device, means connecting the second adjusting member to the gun, said means moving the second adjusting member through an angle greater than the angle of rotation of the

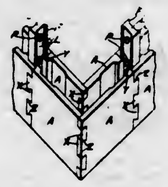
gun part appertaining thereto, the ratio of rotation of said adjusting members being the same, substantially as and for the purpose described.

1,384,001. COUPLING AND RELEASING DEVICE. ALBERT H. SPLITTSTOESSER, Kulm, N. D. Filed Jan. 11, 1921. Serial No. 436,561. 4 Claims. (Cl. 213—67.)



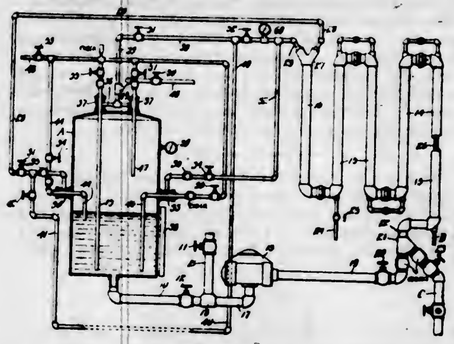
1. A coupling and releasing device comprising a casing adapted for connection to some pulling device, within said casing two pivoted lever pieces adapted for holding and releasing a coupling pin, a coupling pin adapted to be held by said lever pieces, two pivoted lock pieces frictionally engaging said lever pieces, two bolts with one end of each fitted against said lock pieces respectively and the other end slidably attached to said casing, two spiral springs one each surrounding said bolts capable of resisting to a fixed stress the operation of said lever pieces and said lock pieces, another spiral spring connecting said lock pieces to hold same in position, and means for holding said parts in operating position, substantially as described.

1,384,002. BALL-BEARING. HERMANN SUNDHAUSSEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 8, 1920. Serial No. 408,087. 2 Claims. (Cl. 64—58.)



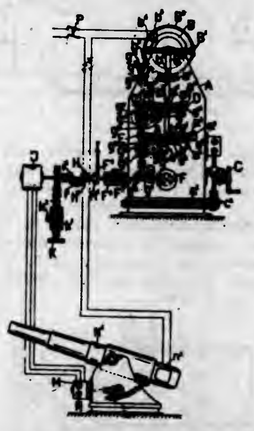
1. In a ball bearing, the combination with an inner member having an external bearing surface and an outer member having an internal bearing surface, of an intermediate ring having internal and external bearing surfaces coacting with the first mentioned bearing surfaces

respectively, and balls interposed between each pair of coacting bearing surfaces, one of said bearing surfaces being cylindrical to permit relative axial movement of



the inner and outer members, and another of said bearing surfaces being longitudinally curved to permit relative angular movement of said members.

1,384,003. CONCRETE AND LIKE BUILDING CONSTRUCTION. HENRY THOMPSON and STANLEY H. THOMPSON, Malvern, Melbourne, Victoria, Australia. Filed Apr. 26, 1921. Serial No. 464,681. 4 Claims. (Cl. 72—38.)



2. A building slab formed at each end with complementary interlocking edge portions, whereby it may interlock with the meeting ends of adjacent slabs, said slab being further formed on the inner surface adjacent the respective ends with thickened portions shaped to provide half dove-tail grooves.

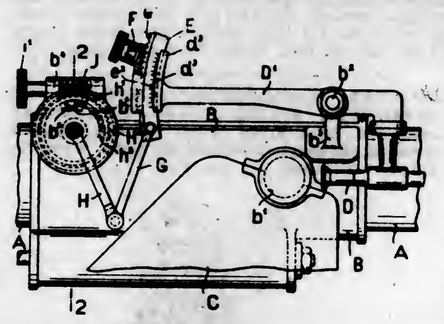
1,384,004. OIL-VAPORIZER. JOHN J. WEITHAUS, North Vernon, Ind., assignor of one-half to Michael C. Ainsberry, Rushville, Ind. Filed May 3, 1919. Serial No. 294,438. 4 Claims. (Cl. 48—107.)

1. In an oil vaporising apparatus, the combination of a tank, a heating coil, a source of oil supply leading to the tank, a pipe leading from the tank to the heating coil, an air supply connecting with the oil supply at a point adjacent to its connection with the heating coil, pipes leading from the heating coil back to the tank at points above the normal oil level therein, a service pipe connected with the upper portion of said tank, air supply pipes connected with said tank, and a pump for forcing the oil and air under pressure through the heating coil and into the tank, substantially as set forth.

1,384,005. FIRE-DIRECTION APPARATUS FOR NAVAL GUNS. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 23, 1920. Serial No. 419,127. 9 Claims. (Cl. 89—41.)

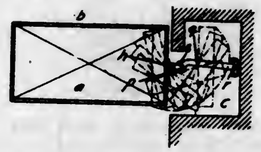
2. A fire control apparatus for naval guns comprising in combination with an adjustable gun barrel, a transmitter forming part of a distance electrical control device, a receiver positioned at said gun, means operatively connecting said transmitter to said receiver, means including a range device for adjusting said transmitter and means operatively connected to said transmitter for measuring the angle of roll and for imparting an additional adjustment to the transmitter corresponding to this angle of roll, substantially as described.

1,384,006. TIE AND RAIL-FASTENER. GEORGE H. ANTHONY, Sykesville, Pa. Filed Apr. 20, 1921. Serial No. 462,850. 8 Claims. (Cl. 238—46.)



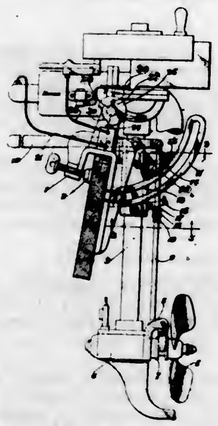
2. In a device of the character and for the purpose indicated, a tie having a pocket, a rail, and gravity actuated fasteners mounted in the pocket, one operating the other, to securely grip the rail and forcing the same toward the tie.

1,384,007. SIGHTING DEVICE FOR ORDNANCE. MAX BARTHOLDT, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,099. 5 Claims. (Cl. 33—48.)



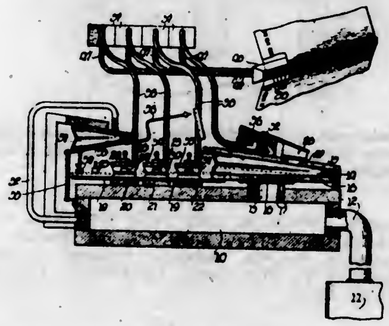
1. A device of the class described comprising a sighting means, a carrier for said sighting means, a device for indicating the range, which embodies a casing and a rotatable member, with means for rotating said member, one end of the sighting means carrier terminating in a

sector-shaped guide, a slidable member mounted in said guide, means for varying the position of the slidable member in said guide, arms operatively connecting said



slidable member and rotatable member, said parts being arranged to form a kinematic quadrilateral system, substantially as and for the purpose set forth.

1,384,008. BED-MOUNTING. HOMER G. BISHOP, Oakland, Calif., assignor to American Automatic Lock & Lift Company, San Francisco, Calif., a Corporation of California. Filed Feb. 15, 1918. Serial No. 217,388. 1 Claim. (Cl. 5—18.)

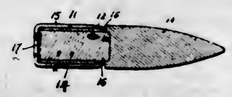


A folding bed having a head structure wider when upended for concealment than the opening through which it is passed, a partially rotatable vertical member suspended from a horizontally slidable member, means supporting said slidable member from the ceiling and a plurality of devices compelling the coincident rotation and horizontal movement of the bed.

1,384,009. MOTOR. RALPH W. BOSCHERT, St. Louis, Mo. Filed Nov. 24, 1919. Serial No. 340,248. 9 Claims. (Cl. 115—17.)

7. The combination with a motor, of a bracket, a pivot connecting the bracket and the motor, an arcuate arm having its center of curvature at the axis of the pivot, ratchet teeth on the upper side of said arm, a sleeve supported by the motor, a pawl carried by said sleeve for engaging the ratchet teeth, ratchet teeth on the lower side of said arm, and a pawl carried by said sleeve movable into and out of engagement with the last-named ratchet teeth.

1,384,010. EXPRESSION DEVICE FOR AUTOMATIC PLAYERS. FRANK J. CLARK, Milwaukee, Wis., assignor to Clark Pneumatic Action Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 18, 1919. Serial No. 331,589. 34 Claims. (Cl. 84—42.)



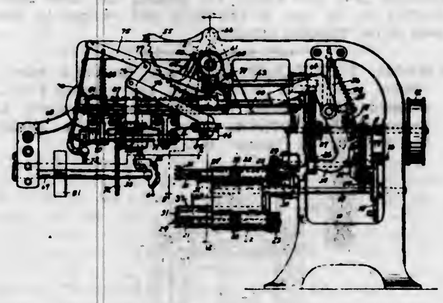
1. An expression device for pneumatic players including a vacuum system having an air inlet, a valve mechanism for controlling the admission of air through said inlet and influenced by the tension in said system toward open position, and stops for selectively limiting the opening movement of said valve mechanism to any desired degree to vary the tension in said system.

16. In a device of the character described the combination of a vacuum chamber, a valve mechanism actuated by the air tension in said chamber for admitting atmospheric air to said chamber, at least one stop for limiting the opening movement of said valve mechanism, and a pneumatic for moving said stop.

20. In a device of the character described the combination of a vacuum system having an air inlet, a valve for controlling the admission of air through said inlet, a pneumatic in constant communication with said system and influenced by the air tension therein to actuate said valve toward open position, and means for controlling the opening movement of said valve to any desired degree.

26. An expression device for pneumatic players including a vacuum chamber having an atmospheric air inlet, a single pneumatic having means coöperating with said inlet to control the admission of atmospheric air to said chamber, a communication between said pneumatic and chamber, whereby said pneumatic is actuated in one direction by the air tension in said chamber, and means for admitting atmospheric air to said pneumatic to actuate said pneumatic in another direction.

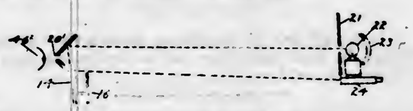
1,384,011. ARMOR-PIERCING TRACING-BULLET. WALLACE L. CLAY and JOHN C. BEATTY, U. S. Army, and DICKERSON G. BAKER, Greenfield, Mass. Filed May 2, 1919. Serial No. 294,278. 3 Claims. (Cl. 102—29.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A tracer projectile including a body having an armor piercing forward portion and a reduced rear portion, the reduced portion having a rearwardly opening recess con-

taining a substance for producing a visible vapor and a flash of light, and a cap engaging over the reduced portion and having an aperture through which the vapor and flash producing substance is ignitible.

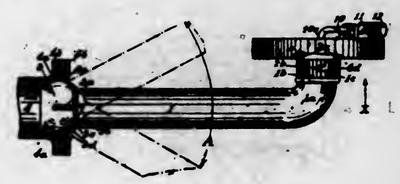
1,384,012. PEAT FUEL. SAMUEL CLELAND DAVIDSON, Belfast, Ireland. Filed Feb. 7, 1920. Serial No. 357,028. 2 Claims. (Cl. 44—32.)



1. The process of preparing fuel from peat, which consists in stirring wet peat as obtained directly from the bog into an approximately putty-like consistency, gradually adding powdered pitch and powdered dry peat thereto, during the continuance of the said treatment, continuing the stirring treatment until the three materials are blended together to form a homogeneous mass, and pressing the same into blocks.

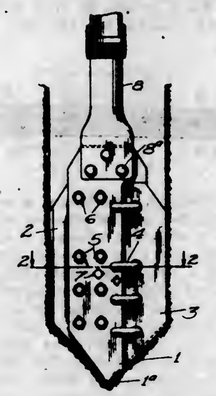
1,384,013. APPLE PARING, CORING, AND SLICING MACHINE. WILLIAM EHRLICH, Chicago, Ill. Filed May 29, 1920. Serial No. 385,192. 8 Claims. (Cl. 146—6.)

1. The combination with an apple paring and coring machine having a rod therein mounted for longitudinal movements, of coring and slicing knives fixed on said rod; a holding member mounted for movement adjacent said rod for holding an apple against the slicing knife; and means for moving the holding member laterally away from the rod.



1,384,014. METHOD AND APPARATUS FOR SIGNALING AND OTHERWISE UTILIZING RADIANT IMPULSES. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Jan. 14, 1918. Serial No. 211,758. 1 Claim. (Cl. 250—1.)

Means for signaling by radiant impulses comprising a tetrahedron having three adjoining faces at right angles to each other and a surface in proximity to said tetrahedron whereby the incidence of radiant energy on said tetrahedron may be determined.

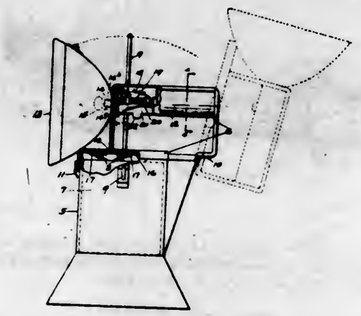


1,384,015. TONE-ARM FOR PHONOGRAPHS. WILLIAM FRICK, New York, N. Y., assignor to Cliff Manufacturing Works, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,576. 5 Claims. (Cl. 274—23.)

1. In a phonograph, a support holding a sound conveying tube, a spherical shaped member having guide-forming grooves in its surface at one end and a reproducer at the other end of said tube, a stationary pin on said

support slidably engaged by said guides forming means to restrict the oscilatory motion of said tube and to permit a rotative motion thereof about its axis.

1,384,016. ROTARY WELL-REAMER. WALTER J. FULKERSON, San Diego, and GEORGE H. YAHRAUS, Los Angeles, Calif.; said Fulkerson assignor to said Yahraus. Filed Mar. 30, 1920. Serial No. 369,887. 6 Claims. (Cl. 255—76.)

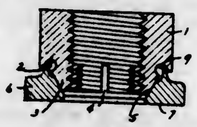


1. A rotary well reamer, including a main supporting plate provided with a tapering end, a pair of reaming plates pivotally mounted on opposite sides of said plate in such position that when they are swung outwardly they extend past the edge of said main plate and adjustable means mounted on opposite sides of said plate for regulating and controlling the folding of said reaming plates against the main supporting plate.

1,384,017. ELECTRIC LANTERN. JOHN HAACK, Portland, Oreg. Filed May 10, 1920. Serial No. 380,223. 3 Claims. (Cl. 240—8.5.)

1. In an electric lantern a hinged cover, having in combination therein, an incandescent lamp, a rigidly secured, downwardly facing disk, having two circular insulated terminals therein, one of which is connected with one terminal of the lamp, and a circuit bar having one terminal connected with the opposing terminal of the lamp, its other terminal connected with the opposing terminal of the aforesaid disk, also a closing arm extending from the last mentioned bar terminal downwardly, and a movable finger block, arranged in a manner to allow it to slide

below the arm and press its free end into contact with the opposing bar terminal and thus retain it, also to allow

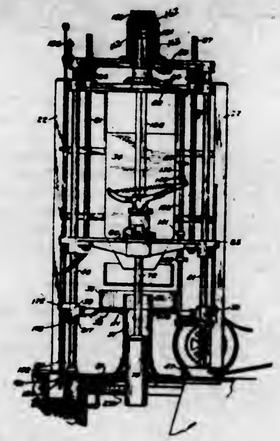


the block to be lifted vertically to cause its free end to engage the opposing bar terminal while held in such position.

1,384,018. ELECTRODEPOSITION OF NON-METALLIC BODIES. LODEWYCK HOORNBEEK, Newark, N. J., assignor to John J. Fields, 3d, New York, N. Y. Filed Sept. 8, 1917. Serial No. 190,316. 1 Claim. (Cl. 204—8.)

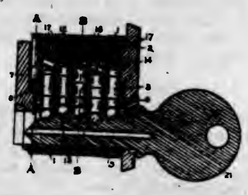
As a new article of manufacture, a non-metallic base, an electric conductor, and an adhesive means for causing said conductor to adhere to a surface of said base, anchoring devices connected with said base, each anchoring device comprising a bifurcated shank adapted to be driven into and anchored in said base and an anchoring enlargement extending beyond the surface of said conductor, and a coating of electrically deposited metal upon the face of said conductor, said anchoring enlargements being entirely embedded in and beneath the exposed surface of said electrolytically deposited metal which attaches itself to and adheres to said anchoring enlargements.

1,384,019. COMBINED WASHER AND LOCK-NUT. CHARLES F. JOHNSTON and GEORGE G. REES, San Francisco, Calif. Filed Jan. 26, 1920. Serial No. 354,005. 1 Claim. (Cl. 151—19.)



A locking nut and washer comprising a polygonal periphery on the said nut and a conical projecting flange split parallel with the axis, the nut threaded axially and recessed between said conical surface and said polygonal surface, and provided with an overhanging edge bounding said recess; in combination with a washer having a conical recess adapted to compress the conical surface of the said nut and a flange to engage the recess in the nut and compress over said edge when the nut and washer are pressed together.

1,384,020. CHUCK. FRIEDRICH WILHELM KUPER, Gera, Reuss, Germany. Filed June 28, 1920. Serial No. 392,422. 8 Claims. (Cl. 279—60.)

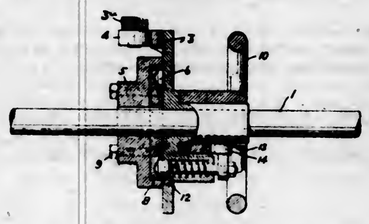


1. In a self-acting chuck the combination of a threaded spindle screwing into the body-portion of the chuck, with gripping jaws and means for guiding the jaws horizontally by the body of the chuck and inclined by the head of the threaded spindle.

1,384,021. PIPE-MAKING MACHINE. GEORGE J. OLSEN, Colton, and FRANK WATERFIELD, Los Angeles, Calif., assignors to California Portland Cement Company, a Corporation of California. Filed Mar. 1, 1920. Serial No. 362,610. 18 Claims. (Cl. 25—36.)

1. In a pipe making machine, a mold, a core movable through the mold, and means for lubricating the core as it enters the mold.

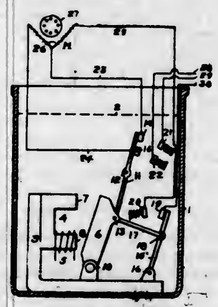
1,384,022. LOCK. FRANK ELLISON BEST, Seattle, Wash. Filed Aug. 28, 1919. Serial No. 320,521. 25 Claims. (Cl. 70—47.)



2. In a lock, the combination with the lock case, of a core therein, locking mechanism in said core to lock said

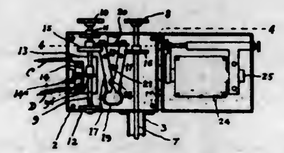
mechanism to said case, a key for operating said mechanism to release and withdraw said core and mechanism as a unit from said case.

1,384,023. ACID-RESISTING RECEPTACLE. HERMANN EVERKEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 4, 1920. Serial No. 408,374. 1 Claim. (Cl. 206—2.)



An acid resisting receptacle having an inner wall of acid resisting iron, an outer wall separated from the inner and a filling of cast lead between said walls.

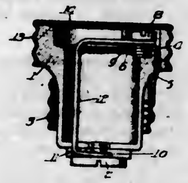
1,384,024. LINOLEUM OR LIKE PRINTING MACHINE. WILLIAM K. HARRIS, Salem, N. J., assignor to Salem Manufacturing Company, Salem, N. J., a Corporation of New Jersey. Filed Sept. 25, 1920. Serial No. 412,753. 4 Claims. (Cl. 101—198.)



1. In a linoleum or like printing machine the combination of a driven cam-shaft, block-releasing and detaining latch shafts, cams freely revoluble in respect to the cam shaft, and adapted to operate the latch shafts, collars revoluble with the cam shaft and provided with spaced keeper elements, hand-wheels revoluble in respect to the cam shaft, spring bolt elements carried by the hand-wheels and adapted to lock the cams to the collars to be driven thereby, and to the hand wheels to be turned thereby, and cam means on the hand wheels for operating the bolt elements by movement of the hand wheels, substantially as described.

1,384,025. MEANS FOR PROTECTING SWITCH-CONTACTS UNDER OIL. HARRY F. STRATTON, Cleveland, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1919. Serial No. 337,591. 3 Claims. (Cl. 200—144.)

1. In a circuit controller for multiple conductors, a tank, oil therein, switch-contacts for each conductor, some at least of said contacts being submerged in the oil, and means whereby all the contacts may be closed and whereby some of the submerged contacts close before the remaining contacts close, and whereby some of the submerged contacts may be opened only after the remaining contacts have been opened.

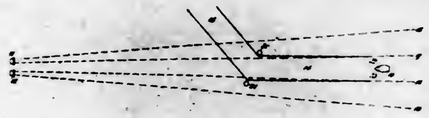


1,384,026. LOCKING DEVICE FOR MOTOR-CARS. WILLIAM DIEFENBARGH, Montpelier, Ind., assignor of one-half to Frank Hedges, Montpelier, Ind. Filed Feb. 19, 1920. Serial No. 359,991. 3 Claims. (Cl. 70—127.)

1. A locking device for motor cars, comprising an electric switch capable of being set at position to open the circuit, a valve in the fuel supply line, a valve mechanism capable of being set at position to maintain the valve closed, a holding means to engage and hold the switch and the valve mechanism at the set positions, a casement to inclose the said holding means, and a lock for the door.

1,384,027. [WITHDRAWN.]

1,384,028. FUSE-PLUG. ERNEST H. BAXTER, Chicago, Ill. Filed Aug. 5, 1916. Serial No. 113,289. 4 Claims. (Cl. 175—277.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



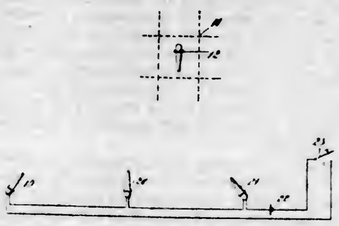
1. A refillable fuse plug of the character described having two connecting terminals each adapted to receive and secure the free end of a fuse adapted to extend from one connecting means to the other, and a gage plate mounted within said fuse plug, said gage plate having a hole therethrough to accommodate a predetermined size of fuse, said gage plate extending across the path of the fuse to prevent access to one of said connecting means except through said hole.

2. A refillable fuse plug of the character described having two connecting terminals each adapted to receive and secure the free end of a fuse adapted to extend from one connecting means to the other, and means mounted within said fuse plug, said means including a gage plate having a hole to accommodate a predetermined size of fuse, said means preventing the interposition of a fuse between said connecting means except through said gage hole aforesaid.

3. A refillable fuse plug of the character described having two connecting terminals each adapted to receive and secure the free end of a fuse adapted to extend from one connecting means to the other, and a gage plate mounted within said fuse plug, said gage plate having a hole therethrough to accommodate a predetermined size of fuse, said gage plate extending across the path of the fuse to prevent access to one of said connecting means except through said hole, said gage plate carrying one of said connecting means.

4. A refillable fuse plug of the character described having two connecting terminals each adapted to receive and secure a free end of a fuse adapted to extend from one connecting means to the other, and means having a gage hole entirely screening one connecting means to prevent the interposition of a fuse between said connecting means except through said gage hole.

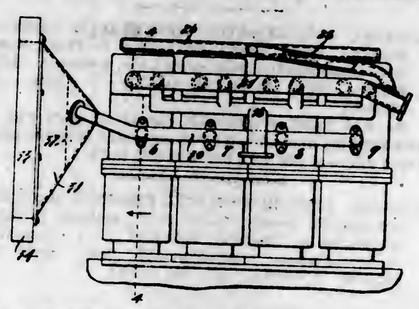
1,384,029. SOUND-SIGNALING. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Mar. 22, 1917. Serial No. 156,718. 6 Claims. (Cl. 181—0.5.)



1. As a means of producing localized distribution of sound, a plurality of sound sources each located to act as a separate source and means for operating them in a predetermined phase relation with each other and interacting with each other to produce interference fringes of sound.

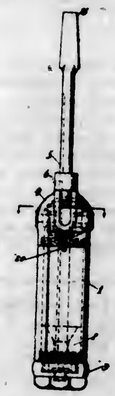
2. A method of producing localized sound signals which consists in arranging a plurality of sound sources at a predetermined distance apart whereby each will act as a separate source and exciting said sources at a predetermined frequency and with a predetermined phase relation between each other and interacting with each other to produce interference fringes of sound.

6. That method of guiding a ship in its course, which consists in exciting a number of sources of sound arranged at a predetermined distance and direction from each other said distance being sufficient to cause each to act as a separate source and excited at a predetermined frequency and phase relatively to each other, whereby at certain positions the waves will coincide and the sound intensity thereof at such positions will be proportioned to the square of the number of sound sources instead of proportioned to their sum.



1,384,030. METHOD OF DESTROYING ENEMY GUN POSITIONS. REGINALD A. FESSENDEN, Newton, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Original application filed Jan. 11, 1919, Serial No. 270,723. Divided and this application filed Dec. 8, 1919. Serial No. 343,241. 2 Claims. (Cl. 89—1.)

1. The herein described method of destroying enemy military positions which consists in throwing into a predetermined and small area of said enemy military positions and at a distance from each other of the same order of magnitude as their depth of penetration, an accumulation of time fused shells so set as to explode simultaneously and independently of their time of firing and of the distance at which they are fired, whereby the explosive wave effects from a number of said shells is made cumulative by occurring at the same instant, and independently of the number of guns from which the shells have been fired.

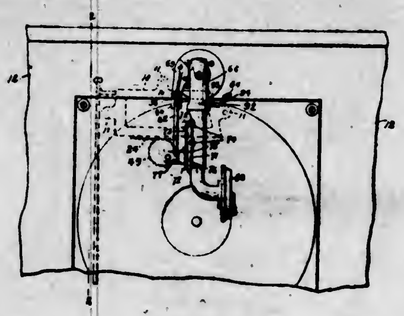


1,384,031. MOTOR-COOLING MEANS. JOSEPH A. INGRAM, East Orange, N. J. Filed Feb. 24, 1920. Serial No. 360,776. 7 Claims. (Cl. 123—170.)

7. An internal combustion motor consisting of a plurality of cylinders, each cylinder being provided with a chamber to contain liquid, at the lower portion thereof, an independent air jacket for each cylinder, an air exhaust manifold connecting said jackets, an air inlet duct common to all of said jackets, and suction means connection to

the air exhaust manifold, and an air collector ahead of said motor connected to said air inlet duct, said liquid chambers being independent of each other.

1,384,032. RATCHET-SCREWDRIVER. WALENTY J. MALECKI, East Pittsburgh, Pa. Filed June 23, 1920. Serial No. 391,239. 3 Claims. (Cl. 145—75.)



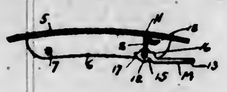
1. The handle of the mechanical screwdriver, consisting of the handle-middle-piece with a rod bearing inside of its lower end, also threaded on its lower end for receiving the handle bottom-piece, threaded on its upper end to receive the head of the handle, with catch and notch between them, preventing the two parts from screwing off, with vertical slot and hole on opposite side of the head of the handle for receiving the rod, transversely of or in alinement with the handle, a pivotal member in which the rod can slide and two bearings in the opposite sides of the handle-head to support the adjusting mechanism, as shown and described.

1,384,033. PROCESS OF TREATING CASTINGS. ALLEN B. NORTON, Cleveland, Ohio, assignor to The Aluminum Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 5, 1918, Serial No. 248,277. Renewed Apr. 11, 1921. Serial No. 460,518. 17 Claims. (Cl. 148—6.)

1. A process of treating porous metallic articles which includes subjecting the article to the action of fluid reagents in a manner to cause the latter to enter the pores of the article, forming by chemical reaction within the said pores a solid compound having sufficient bulk to stop the said pores and heating the article to change the nature of the solid compound.

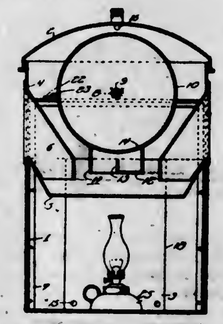
1,384,034. PHONOGRAPH REPEAT MECHANISM. WILLIAM BURTON BENHAM, Washington, D. C. Filed Mar. 15, 1920. Serial No. 365,924. 11 Claims. (Cl. 274—14.)

1. The combination with the movable tone arm of a phonograph including the needle-carrying portion thereof, of a vertically and rotatively movable standard, means for coupling said standard to the tone arm, means adapted to be operated by the motor of a phonograph for oscillating said standard, and manually operative means for simultaneously elevating said standard and coupling the motor operated means and the standard oscillating means.



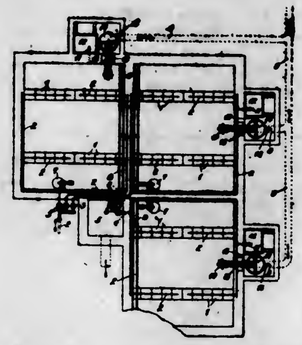
REISSUES.

15,137. SAFETY-TREAD. JONATHAN O. FOWLER, New York, N. Y. Filed Apr. 29, 1920. Serial No. 378,318. Original No. 1,183,365, dated May 16, 1916, Serial No. 72,041, filed Jan. 14, 1916. 11 Claims. (Cl. 168—1.)



11. In a device of the class described, a tread, a plurality of convolutions, a support therefor and for the tread, other convolutions and treads spaced from the ones first named, means to hold the rearward portion of a set of convolutions from relative movement backward when the tread contacts the ground, and means to force the forward part of the set of convolutions backward upon the support being moved relatively rearward in use, and to allow the convolutions to move relatively forward when the said adjacent tread is raised from the ground, thereby completing an oscillatory movement.

15,138. BUCKLE. WALTER EUGENE GUYOT, Attleboro, Mass. Filed Jan. 3, 1921. Serial No. 434,735. Original No. 1,360,937, dated Nov. 30, 1920, Serial No. 385,279 filed May 29, 1920. 11 Claims. (Cl. 24—191.)

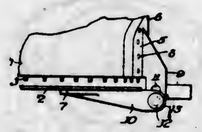


1. A buckle comprising a body portion, a tongue thereon arranged to swing on one side of a pivotal axis into engagement with a part to be adjustably held, and a member swingably mounted on said tongue having a lug arranged to impart swinging movement thereto.

15,139. STOCK-WATERING DEVICE. ERNEST S. JOHNSON, Webster City, Iowa, assignor of one-half to William B. Rood, Webster City, Iowa. Filed Apr. 9, 1920. Serial No. 372,718. Original No. 1,287,696, dated Dec. 17, 1918, Serial No. 219,057, filed Feb. 25, 1918. 8 Claims. (Cl. 119—73.)

1. In a stock watering device, a casing having openings in opposite sides, an open top receptacle positioning across the interior of the casing from one opening to the other, and an inverted vessel having common receiving and delivery ports and having a pendent chamber receiving from said ports and having a channel delivering into said receptacle, including an elevated part of the channel restricting the delivery therefrom, said chamber having part of its outer closure wall removed and having a longitudinal ledge extending as a partial septum across it spaced from the vessel.

15,140. PURIFICATION OF SEWAGE AND ANALOGOUS LIQUIDS. WALTER JONES, Stourbridge, England. Filed Aug. 11, 1919. Serial No. 316,875. Original No. 1,247,543, dated Nov. 20, 1917, Serial No. 56,537, filed Oct. 18, 1915. 10 Claims. (Cl. 210—8.)



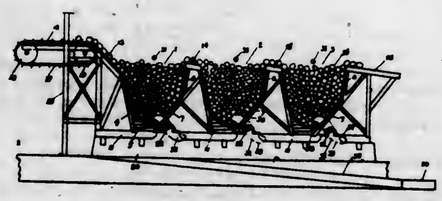
1. The process of purifying sewage or analogous liquids consisting in gradually supplying the crude sewage to a body of bacterial sludge or solid matter, aerating or oxidizing it while so being supplied.

15,141. [WITHDRAWN.]

15,142. HINGE FOR BOILER-FRONTS. WILLIAM E. RICKETSON, New York, N. Y., assignor, by direct and mesne assignments, to The Okadee Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1920. Serial No. 392,085. Original No. 1,299,228, dated Apr. 1, 1919, Serial No. 209,004, filed Dec. 26, 1917. 7 Claims. (Cl. 16—179.)

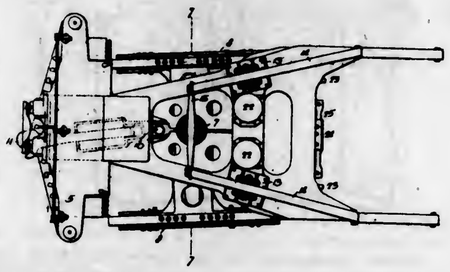
4. In combination with a boiler having an opening affording access thereto, a closure member for said open-

ing and means interposed between the boiler and the closure member whereby the closure member may be fixed in supported relation to the boiler and slidably detached therefrom, of an auxiliary attachment serving to



attach the closure member to the boiler, permit such sliding movement and support the closure member after such sliding movement of the closure member relatively to the boiler is effected.

15,143. BAIT FOR GLASS-DRAWING MACHINES AND IN THE PROCESS OF DRAWING GLASS. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed Dec. 10, 1917. Serial No. 206,543. Original No. 1,170,464, dated Feb. 1, 1916, Serial No. 747,581, filed Feb. 10, 1913. 30 Claims. (Cl. 49—17.1.)



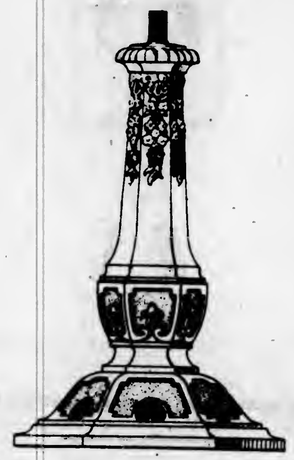
29. A bait for drawing hollow glass or cylinders from molten glass comprising means for supplying distending air pressure thereto, and means for forming and lifting without adhesion a glass novel, said means being adapted to support said novel without producing rupturing strain thereon during the drawing operation.

15,144. LOG-BARKER AND THE LIKE. CARL BUSCH THORNE, Hawkesbury, Ontario, Canada. Filed Mar. 29, 1921. Serial No. 456,661. Original No. 1,319,935, dated Oct. 28, 1919, Serial No. 286,138, filed Mar. 29, 1919. 15 Claims. (Cl. 144—208.)

1. In a log barker and the like, a hopper having front and rear walls terminating in a slotted bottom portion and a driven rotatory member suitably journaled and in rotation entering the hopper through said slotted bottom portion and operating toward the rear wall.

15,145. FOOTPLATE FOR ELECTRIC LOCOMOTIVES. ALLEN WALLACE, Moorestown, N. J., assignor to Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1921. Serial No. 441,440. Original No. 1,343,698, dated June 15, 1920, Serial No. 278,252, filed Feb. 20, 1919. 22 Claims. (Cl. 105—82.)

7. As a new article of manufacture, a locomotive front end frame formed in a single piece and comprising a pair of side members which gradually converge toward their forward ends.

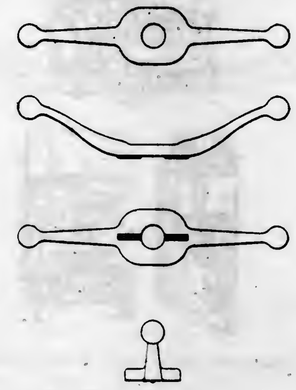


15,146. WINDOW. FRANCIS A. WINSLOW, New York, N. Y., assignor, by mesne assignments, to Austral Window Company, New York, N. Y., a Corporation of Maine. Filed Apr. 27, 1921. Serial No. 465,074. Original application filed Apr. 15, 1912, Serial No. 690,722; renewed May 12, 1916, Serial No. 97,182; original No. 1,351,083, dated Aug. 31, 1920. Divided and application filed May 29, 1914, Serial No. 841,718; original No. 1,303,752, dated May 13, 1919. 13 Claims. (Cl. 189—67.)

1. In combination, a window frame, an upright channel member on each side of the frame, a pair of swinging sashes mounted therein and having a channel member on each side thereof arranged to interlock with said upright channel members, said sashes swinging in opposite directions about their own respective pivots, the bottom of the upper sash being in the form of a channel member and the top of the lower sash being in the form of a channel member, said channel members being arranged so that their flanges interlock when the window is closed, the flanges of each channel contacting with the opposite channel to form a plurality of tight weather joints at such time.

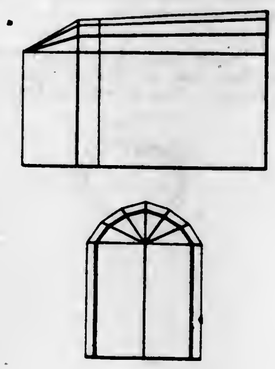
DESIGNS.

58,284. LAMP-STAND. ROBERT J. BALDINGER, Brooklyn, N. Y., assignor to Harrison Fixture Works, Brooklyn, N. Y., a Firm. Filed Dec. 4, 1920. Serial No. 428,401. Term of patent 7 years.



The ornamental design for a lamp stand as shown.

58,285. DANCING TOY. THOMAS BARNABY, Middletown, Ohio. Filed Jan. 17, 1921. Serial No. 438,031. Term of patent 3½ years.



The ornamental design for a dancing toy, as shown.

58,286. RADIATOR-CAP. HAROLD R. CLIFFORD, Rockford, Ill. Filed Feb. 26, 1921. Serial No. 448,248. Term of patent 3½ years.

The ornamental design for a radiator cap, as shown.

58,287. COMBINED AUTOMOBILE RADIATOR AND HOOD. JULIAN L. CRACRAFT, Georgetown, Ky. Filed Mar. 22, 1921. Serial No. 454,488. Term of patent 7 years.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

DE FERRANTI *v.* HARMATTA.

Decided May 2, 1921.

1. PATENTS—INTERFERENCE—COPYING CLAIMS OF A PATENT DISCLAIMED IN A PRIOR PATENT—ESTOPPEL BY DELAY.

Where in an interference between an application of H., filed in 1903, and a patent of R., granted in 1909, both owned by a common assignee, priority was awarded to H. and a patent was issued to him in 1912, including the interfering claims, after which the counts of that interference were disclaimed in the patent to R., a third party who filed an application in 1911 as a division of one filed in 1904 is estopped from making in 1913, in the divisional application, the claims disclaimed by R., the claims having been copied more than four years after the grant of R.'s patent, although within two years after the grant of H.'s patent.

2. SAME—SAME—SAME—ESTOPPEL BY DELAY—FOUNDATION OF RULE.

The limitation of two years within which claims may be taken from a patent arises from the application of a sound principle of public policy for the prevention of the undue extension of monopoly by procrastination in the assertion of adverse rights against one already in possession. This situation is not different by analogy from a reissue case, where the public is in adverse possession. In both instances the applicant has stood by and permitted others to assert rights which he now negligently seeks to monopolize for himself.

Mr. Melville Church for De Ferranti.

Mr. F. P. Fish and *Mr. J. L. Stackpole* for Harmatta.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents awarding priority of invention to appellee Harmatta. The interference involves the application of De Ferranti, filed December 29, 1911, which was divisional of his earlier application of May 14, 1904, and the application of Harmatta, filed December 3, 1903, which eventuated into a patent December 3, 1912.

The invention relates to what is known as "spot welding." This is accomplished by passing an electric current through the parts joined in such manner as to confine it to a small spot, thus making a correspondingly small weld.

It is not necessary to enter into the details of the invention, since we think the case can be disposed of by the consideration of a single point. It appears that a patent was issued to one Rietzel on July 20, 1909, in which the claims of the present issue originated. Harmatta appropriated these claims, which led to an interference, resulting in an award of priority to Harmatta. The Thomson Electric Welding Company was the assignee of both the Rietzel and Harmatta applications. After the Harmatta patent was issued on December 3, 1912, the counts of that interference were disclaimed in the Rietzel patent.

De Ferranti first made the claims in issue July 29, 1913, more than four years after the issue of the Rietzel patent. It is sharply contended that De Ferranti's delay in making the claims in interference can only be counted from the date of the Harmatta patent. But we are not impressed by this contention. De Ferranti filed his present application December 29, 1911, more than two years after the issue of the Rietzel patent, of which he had constructive notice. He is, therefore, clearly estopped to make claims against Rietzel. The Harmatta claims were derived from the Rietzel patent by reason of his being adjudged the prior inventor.

The limitation of two years within which claims may be taken from a patent arises from the application of a sound principle of public policy for the prevention of the undue extension of monopoly by procrastination in the assertion of adverse rights against one already in possession. This situation is not different by analogy from a reissue case where the public is in adverse possession. In both instances, the applicant has stood by and permitted others to assert rights which he now negligently seeks to monopolize for himself.

Monopolies are inherently obnoxious, and it is solely because of ultimate benefit to the public that a conditional form of monopoly is permitted an inventor. When the element of diligence or good faith in an applicant is lacking, there is no valid reason for such a construction of the patent laws as would effect an extension of the limited monopoly granted upon prescribed conditions which include those very elements. Inasmuch as even diligence and good faith do not entitle one to a monopoly upon a monopoly, it is not perceived why delay and the lack of good faith should do so. (*In re Fritts*, 45 App. D. C., 211, 217.)

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

RANSDALL *v.* JAHNS.

Decided May 2, 1921.

1. PATENTS—INTERFERENCE—DELAY OF TWENTY MONTHS IN COPYING CLAIMS OF PATENT—NO ESTOPPEL.

An applicant is not estopped to contest an interference with a patentee because he delayed copying the claims of the patent almost twenty months after the patent issued and fifteen months after he had notice of the patent, as he was well within the two-year period fixed by the Supreme Court in *Chapman* v. *Wintroath*, (252 U. S., 126; 272 O. G., 913.)

2. SAME—SAME—RIGHT TO MAKE CLAIMS—COMPARATIVE EFFICIENCY NOT A TEST.

Although the device of one party to an interference may be less efficient than that of his rival, so long as it comes within the issue and is operative the objection is not one upon which it may properly be held that he is not entitled to make the claims.

Mr. E. W. Bradford for Ransdall.

Messrs. J. H. & C. T. Milans for Jahns.

VAN ORSDEL, *J.:*

The invention in interference relates to leak-proof piston-rings, described in the opinion of the Board of Examiners-in-Chief as follows:

The invention at issue relates to leak-proof piston rings and includes an inner slip expander ring having outer inclined faces and being of a width to fill the opening of the groove in a piston. Outer triangular split metal packing rings fit the inclined faces of the inner ring and are of thin cross section so as to be forced into contact with the wall of the cylinder by the expander ring.

Appellant Ransdall filed his application December 31, 1914, on which a patent was granted April 4, 1916. Appellee Jahns filed his application May 10, 1915. Appellant, the senior party, derives no benefit in this proceeding from the granting of the patent, since, when it was granted, the Jahns application was pending.

The finding below that Jahns conceived the invention and reduced it to practice before Ransdall came into the field is clearly supported by the evidence. The claims in issue were taken by Jahns from the Ransdall patent almost twenty months after the patent was issued and fifteen months after Jahns admits that he had notice of the patent. It was claimed below that Jahns should be held estopped to contest the interference for failure to make the claims of the patent within the time limited by the rule controlling this procedure in the Patent Office. But Jahns was well within the two-year period, the limitation recently fixed by the construction placed upon the rule in *Chapman* v. *Wintroath*, (252 U. S., 126.)

Ransdall sought by a belated motion to dissolve to challenge Jahns's right to make the claims, on the ground that they did not read upon his original disclosure. Notwithstanding the delay in filing the motion, which technically disposes of the contention, we have investigated this point and conclude upon the testimony that, while, perhaps, the Ransdall device was more efficient, nevertheless the Jahns rings, constructed in compliance with his disclosure, were operative and came within the counts of the issue. This is all that is required, since we are not basing our opinion upon a competitive test of efficiency. The present claims read upon Jahns's original disclosure as set forth in his application, and this entitles him to priority.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE PRUDEN.

Decided May 2, 1921.

PATENTS—INVENTION—CHANGE IN SIZE.

It being old to mix comminuted fuel with air by means of currents of air directed transversely to the path of travel of the fuel, there is no invention in making the mixing-chamber of greater length.

VAN ORSDEL, *J.:*

This appeal is from the refusal of the Commissioner of Patents to grant a patent upon a device which he describes as follows:

The appellant's invention is a device designed for mixing comminuted fuel with air and conveying the same to a burner. Briefly described, it comprises an elongated mixing chamber with perforations distributed longitudinally of the chamber through which air under pressure is admitted from a surrounding chamber. The currents of air so admitted are directed substantially transversely of the mixing chamber and in their passage across it they meet and intimately commingle with a jet of comminuted fuel which is being projected longitudinally of the chamber by an air blast from one end thereof to the other where the burner is situated.

The Commissioner found that the invention of appellant is anticipated by a number of patents. We have examined the references, and find the anticipation most complete in a patent to one Fogler, of December 14, 1915, and a patent to one Caracristi, of February 6, 1917.

Appellant contends that the distinction between his invention and the prior art consists in the induction of cross-currents of air, which mix the air and fuel so that a complete combustion takes place immediately upon the delivery of the fuel in the furnace. It is urged that in prior inventions, the air was injected into the cylinder through which the fuel was driven longitudinally in the same direction with the fuel, and, instead of mixing with the fuel, it enveloped the fuel and thus prevented combustion until it had passed from the cylinder a considerable distance into the furnace.

Appellant forces the air into the cylinder transversely, with the result that combustion takes place immediately when the fuel enters the furnace. While the transverse injection of the air in the Fogler device is not so marked as in appellant's machine, the induction of the air is from a surrounding chamber into a nozzle-like mixing-chamber, with considerable transverse direction, which, we think, would tend to mix the air and fuel for immediate combustion upon entering the furnace.

In the Caracristi device, the air-jets are admitted from the air-chamber, apparently in almost as transverse direction as in appellant's machine. This feature of appellant's invention, which is about all there is to it, is clearly anticipated by these two patents, as well as by other references cited, though in a less pronounced degree.

Stress is laid upon the fact that appellant shows an elongated mixing-chamber, while, for example, in

Caracristi the chamber is short. Elongated chambers are not new in the art, as appears in a reference to a patent issued to one Martindale, December 31, 1912. The mere enlargement of the fuel-mixing cylinder, either in length or diameter, does not constitute invention. (*Edison et al.* v. *Alsen's American Portland Cement Works*, 219 Fed., 895.)

If the act or improvement be the mere modification, variation, or carrying forward of the principle involved in a previous invention or discovery, a patent will be denied. No patent should issue, nor will it be valid if issued, for an improvement which is merely a new application of knowledge already possessed by those skilled in the art. (*In re Klemm*, 21 App. D. C., 186, 190.)

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

WRIGHT *v.* HALLE *et al.*, (No. 1,383.) WAHL *v.* BARRETT *et al.*, (No. 1,384.) BARRETT *v.* WAHL *et al.*, (No 1,385.)

Decided May 2, 1921.

1. PATENTS — INTERFERENCE — JUDGMENT ON RECORD—OPERATIVENESS.

The junior parties having failed to overcome in their preliminary statements the filing date of the senior party and the Office tribunals having held that the senior party's disclosure is operative, the judgment of priority was correct and is affirmed.

2. SAME—OPERATIVENESS—DECISIONS OF PATENT OFFICE TRIBUNALS NOT DISTURBED.

Where the issue covers technical mechanism and the tribunals of the Patent Office, on a motion to dissolve, refused to rule that the senior party's device was inoperative and refused to permit the taking of testimony to show inoperativeness, the court, on appeal on priority, will not disturb that ruling, no error being clearly apparent.

3. SAME—SAME—AFFIDAVITS FILED TO SHOW INOPERATIVENESS OF DEVICE CONSTRUCTED IN ACCORDANCE WITH SENIOR PARTY'S DISCLOSURE.

Affidavits filed to show that a machine alleged to have been constructed in accordance with the senior party's disclosure, tested, and found inoperative *Held* insufficient to overcome the effect of his first filing as a prior constructive reduction to practice, the test having been made *ex parte* and the structural defects pointed out being subject to mechanical correction.

Mr. B. C. Stickney and *Mr. Louis E. Giles* for Wright.

Mr. W. W. Dodge, Mr. J. H. Milans, Mr. D. A. Carpenter, Mr. C. T. Milans, and *Mr. B. G. Foster* for Halle *et al.*

Mr. J. H. Milans and *Mr. C. T. Milans* for Wahl.

Mr. W. W. Dodge, Mr. B. C. Stickney, Mr. D. A. Carpenter, and *Mr. B. G. Foster* for Barrett *et al.*

VAN ORSDEL, *J.:*

These appeals are from a decision of the Commissioner of Patents awarding priority of invention to appellee Halle in an interference arising between the applications of Halle, filed October 11, 1902; Wright, filed April 20, 1908; Barrett, filed December 13, 1909, and Wahl, filed May 23, 1911.

Appellants, in their preliminary statements, failed to allege a date of conception prior to Halle's filing date. In accordance with the practice of the Patent Office, appellants were notified by the Examiner of Interferences that Halle would be awarded priority on the record, unless cause was shown why such a course should not be pursued. Wahl and Barrett moved to dissolve the interference, on the ground that the machine disclosed by Halle was inoperative. The motions were denied by the Examiner, and appeal was taken to the Commissioner, where the decision of the Examiner was affirmed. The Examiner then adjudged Halle entitled to priority on the record. This procedure is approved in *Ewing* v. *Fowler Car Co.*, (244 U. S., 1.)

The present appeals are based chiefly upon the alleged error of the tribunals below in holding the Halle device operative. The issue involves improvements in combined typewriting and adding machines, which is suggestive of technical mechanism. The experts of the Patent Office are unanimous in holding that Halle's machine is operative. So clearly was it held to be disclosed, that a motion to take testimony on the question of operativeness was denied. On this point we have held that error must be clearly apparent to justify judicial intervention.

Appellants, however, have constructed a machine following, it is claimed, the Halle disclosure. Affidavits are produced to show that the machine so constructed would not work. This sort of attack is usually looked upon with suspicion, since the test has been conducted wholly by the enemy. The necessity for the correction of minor structural defects does not necessarily establish a false inventive concept. Here, we think the structural defects pointed out are subject to mechanical correction.

The decision of the Commissioner of Patents is affirmed. All costs on the writs of certiorari are taxed against the moving parties.

Affirmed.

Court of Appeals of the District of Columbia.

EARLES AND LOWE *v.* GOMBER.

Decided May 2, 1921.

1. PATENTS — INTERFERENCE — AMENDING PRELIMINARY STATEMENTS.

Amendments moving back the dates alleged in preliminary statements, after an adversary's dates have been disclosed, should not be allowed unless the interests of justice plainly demand it.

2. SAME — SAME — REISSUE APPLICATION — INTERVENING RIGHTS—NOT A QUESTION OF PRIORITY.

Presumptive intervening rights arising from a delay of more than two years in filing an application for reissue with broadened claims is a question not available in interference proceedings.

3. SAME—SAME—ESTOPPEL—DELAY IN FILING REISSUE FOR MORE THAN TWO YEARS AFTER OPPOSING PARTY PUT DEVICE ON MARKET.

Delay in filing a reissue application for more than two years after knowledge by applicant that his rivals in interference proceedings had placed the device on the market does not operate as an estoppel under the rule announced in *Wintroath* v. *Chapman* (252 U. S., 126) where he himself had placed the device on the market before the filing date of the opposing applicants or their invasion of the market, the reissue applicant being the first inventor and the first to place the device on the market. Long delay might bar the reissue application on the ground of dedication to public use; but the question could not be raised in an interference proceeding.

Mr. J. R. H. Potts and *Mr. Brayton G. Richard* for Earles *et al.*

Mr. E. G. Siggers for Gomber.

VAN ORSDEL, *J.*:

Appeal from the decision of the Commissioner of Patents awarding priority of invention to appellee Gomber, the senior party.

The issue is in the following count:

A fly killing device comprising a handle; and the flap on said handle formed of a perforated sheet of soft flexible non-abrasive material.

A patent was granted appellants April 2, 1918, upon an application filed May 29, 1915. Appellee is here on an application filed August 6, 1918, for the reissue of a patent granted November 23, 1915, on an application filed March 4, 1915. Appellants alleged conception and reduction to practice in 1912, and appellee alleged a date of 1910. The preliminary statement of appellants claiming the above date was filed September 20, 1918. On February 17, 1919, they filed a motion under Rule 113 of the Rules of Practice of the Patent Office seeking to amend their preliminary statement to show conception and reduction to practice in 1904. We agree with the tribunals of the Patent Office that the evidence is wholly inadequate to sustain the motion. Testimony to support such a motion must be convincing and free from suspicion.

It is always a suspicious circumstance in a case of interference that, after the claim of one of the parties has been fully disclosed and fixed as a specified date, the other should then seek by amendment of his preliminary statement to show a date of invention different from that in the original statement and prior to it and to the date of his opponent. Amendment upon so important a point should not be allowed in such a case unless it is shown that the interests of justice plainly demand it; for upon the determination of these dates it depends, in the majority of cases, which party is entitled to the patent, and a change of memory is comparatively easy when self-interest dictates a different date. (*Parker* v. *Appert*, 8 App. D. C., 270.)

Appellee's reissue application is assailed on the ground that it is barred by intervening rights, in that it seeks to broaden the claims more than two years after the original patent was granted and is for a different invention. These questions are not available in an interference proceeding. (*Norling* v. *Hayes*, 37 App. D. C., 169.)

But, it is contended that appellee is estopped under the rule announced in *Chapman* v. *Wintroath*, (252 U. S., 126.) This contention is based upon alleged commercial exploitation of the invention by appellants in the years 1915 to 1918, and knowledge by appellee late in 1916 that such a device was on the market. Assuming that two years elapsed between the date when such knowledge came to appellee and the date of his reissue application, which is not satisfactorily established, it is conclusively shown that appellee had the invention on the market in large quantities early in 1915, at a date prior to appellants' filing date or their invasion of the market with the manufactured product. Appellee was the prior inventor, and it was from him that the public first derived knowledge of the invention due to his placing it upon the market. In such circumstances, there is no hypothesis on which an award of priority to appellants could be justified. If appellee delayed too long in applying for reissue after placing the device upon the market, he might be barred by dedication to public use, but this is not available to appellants in this proceeding.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

JENKS AND PERRY *v.* GEIGER.

Decided May 2, 1921.

PATENTS — INTERFERENCE — SKETCH DISCLOSING INVENTION.

A sketch relied upon as proof of disclosure of the invention of a side bearing for railway-cars considered and *Held* to show the invention.

Mr. C. E. Mehlhope for appellants.

Mr. Geo. I. Haight, *Mr. H. N. Low*, and *Mr. Jos. Harris* for appellee.

VAN ORSDEL, *J.*:

Appellants Jenks and Perry appeal from the decision of the Commissioner of Patents awarding priority of invention to appellee Geiger for an invention defined in the following count:

In a side bearing for railway cars, the combination with a bolster and having an upper bearing surface, of a roller-carrying member having a bottom wall and vertically extending spaced side walls, said bottom wall being provided on its under side with a bearing surface coöperable with said first named bearing surface, an anti-friction roller carried by said member and disposed between said vertical side walls, said roller having journals supported by said side walls and rotatable about a relatively fixed axis, means for holding said member in operative relation with said bolster, said bearing surfaces permitting said member to tilt in a direction at right angles to the axis of rotation of said roller.

Appellants filed their application March 15, 1915, and appellee filed November 18, 1916, a renewal of his original application filed October 22, 1914. Neither party claims actual reduction to practice. Appellee has been awarded June 27, 1914, as a date of conception and disclosure. This is earlier than any date claimed by appellants. Since appellee was the first to constructively reduce to practice by filing his application, he is the first to conceive and reduce to practice. Nothing appears in the record to impeach appellee's position in this respect.

Appellants, however, contend that appellee's original sketch does not disclose the invention in issue. The side bearing, which supports the car when in a swinging motion or rounding a curve consists of a roller, with which the car comes in contact. This roller is supported by a member attached to the truck-bolster. It must be so constructed that, when the car comes in contact with the roller, the member will tilt in a right-angular direction to the axis of rotation of the roller, so that the roller will receive the weight and friction of the car equally throughout its length. The tilting motion of the member adjusts the roller to properly contact with the car.

Appellee, in his application, discloses the member carrying the antifriction-roller bolted to the truck-bolster in such manner, it is contended, as will not admit of the tilting action. The drawing discloses the bolt-holes larger than the bolts and the under face of the heads curved so as to permit of the tilting motion. It is argued that, since the bolts must be drawn tight to hold the parts firmly together, the friction would be too great to permit of the movement required. The count does not call for free movement, and we think the great weight of the car would force the slight tilt required to adjust the face of the roller to the underbearing of the car. The adjustment of the size of the bolt-holes and the bolts to accomplish this result would require only mechanical skill.

We find nothing to warrant us in disturbing the concurrent decisions of the three tribunals of the Patent Office in awarding priority of invention to appellee Geiger.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Nolan Act—Reciprocity of Austrian Laws Recognized.

(ORDER No. 2,678.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 13, 1921.

Notice is hereby given that the laws of Austria are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently the privileges specified in said act will be extended to citizens of Austria, subject to the limitation that extensions will not be granted to relieve defaults failing under section 2 of the Act for a longer period than seven years and two months.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 27, 1921.

Fred Hollender & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Hinckley & Schmitt, 420 West Ontario street, Chicago, Ill., for registration of a trade-mark and trade-mark registered August 29, 1905, No. 45,804, to Fred Hollender & Co., 115–119 Elm street, New York, N. Y., and a notice of such declaration sent by registered mail to said Fred Hollender & Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Fred Hollender & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 6, 1921.

Amédée Castaing, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Spiros C. Markatos, 456 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered January 29, 1907, No. 60,225, to Amédée Castaing, 518 West Thirtieth street, New York, N. Y., and a notice of such declaration sent by registered mail to said Amédée Castaing at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Amédée Castaing, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,350,263.

On June 6, 1921, a decision was rendered that Nils Arvid Palmgren was not the first inventor of the subject-matter covered by claim 1 of his Patent No. 1,350,263, subject, "Roller-bearing," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,253,310.

On June 8, 1921, a decision was rendered that Richard Von Reppert was not the first inventor of the subject-matter covered by claims 49 and 50 of his Patent No. 1,253,310, subject, "Calculating-machine," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,253,310.

On May 28, 1921, a decision was rendered that Richard Von Reppert was not the first inventor of the subject-matter covered by claims 89 and 93 of his Patent No. 1,253,310, subject, "Calculating-machines," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,315,346.

On June 10, 1921, a decision was rendered that Paul J. Simmen was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, and 11 of his Patent No. 1,315,346, subject, "Speed-control system," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,320,959.

On June 11, 1921, a decision was rendered that Ernst F. W. Alexanderson was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,320,959, subject, "Radiosignaling system," and no appeal having been taken within the time allowed such decision has become final.

APPLICATIONS UNDER EXAMINATION.

Condition at Close of Business July 2, 1921.

Room No.	Divisions and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders	Feb. 7	Mar. 11	674
128	2. Bee Culture; Dairy; Medicines; Pneumatics; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Oct. 7	Dec. 6	1,504
175	3. Electric Heating and Rheostats; Electrochemistry; Heating; Metal-Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Dec. 13	Nov. 5	716
234	4. Conveyers; Conveyers, Fluid-Current; Elevators; Excavating; Handling—Hand and Hoist-Line Implements; Hoisting; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	Aug. 9	Mar. 16	1,558
167	5. Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Sept. 24	Dec. 4	727
318	6. Bleaching and Dyeing; Chemicals; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Jan. 29	Apr. 8	865
312	7. Games and Toys; Optics; Photography; Velocipedes	Jan. 24	Mar. 16	1,464
131	8. Beds; Chairs and Seats; Flexible-Sheet Securing Devices; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	Apr. 2	May 18	613
221	9. Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	Sept. 13	Apr. 20	777
235	10. Land-Vehicles; Land-Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles—Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles.	Jan. 25	Apr. 27	1,159
154	11. Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Mar. 24	Apr. 16	386
222	12. Machine Elements	Nov. 9	Apr. 13	1,055
329	13. Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Sept. 16	Mar. 25	1,567
323	14. Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire-Working.	Oct. 7	May 5	912
306	15. Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	July 17	Dec. 9	1,592
111	16. Radiant Energy; Telegraphy; Telephony	Sept. 3	Dec. 18	1,450
307	17. Coating, Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Dec. 16	Mar. 11	801
230	18. Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Oct. 11	Dec. 18	1,543
236	19. Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidostats.	Oct. 7	Jan. 14	888
179	20. Artificial Body Members; Builders' Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Feb. 19	Feb. 12	1,182
213	21. Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	Oct. 29	Apr. 9	518
249	22. Aeronautics; Firearms; Ordnance Ammunition and Explosive Devices	Mar. 25	Apr. 30	396
217	23. Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Dec. 6	Apr. 15	729
144	24. Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines	Dec. 20	Apr. 4	887
315	25. Agitating; Butchering; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	May 10	May 13	242
105	26. Electricity, Generation; Motive Power; Prime Mover Dynamo Plants	Dec. 11	Feb. 1	750
214	27. Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus	Feb. 7	Mar. 29	1,096
225	28. Internal-Combustion Engines	Dec. 4	Feb. 25	1,202
147	29. Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wheelwright-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.	Dec. 10	Apr. 13	707
152	30. Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-Writing Machines	Feb. 2	May 6	996
172	31. Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar and Salt.	Aug. 9	Nov. 4	2,020
278	32. Gas and Liquid Contact Apparatus; Heat Exchange; Refrigeration	Sept. 13	Mar. 24	1,067
70	33. Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Jan. 12	Mar. 11	742
304	34. Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track-Sanders; Vehicle-Fenders.	May 9	May 24	295
57	35. Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet	May 24	Apr. 1	485
204	36. Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring	Feb. 2	Jan. 22	1,509
107	37. Electricity, Circuit Makers and Breakers; Electricity, General Applications	Dec. 30	Jan. 3	1,952
278	38. Animal Husbandry; Earth Boring; Fishing, Trapping and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Feb. 12	Feb. 14	1,034
220	39. Fluid Pressure Regulators; Joint Packings; Multiple Valves; Packed Shaft or Rod Joints; Pipe Joints or Couplings; Rod Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Aug. 19	Sept. 17	1,699
273	40. Baggage; Bottles and Jars; Check-Controlled Apparatus; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Dec. 13	Jan. 21	1,939
125	41. Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	Dec. 13	Mar. 22	832
114	42. Electricity, Conductors; Electrical Conduits and Housings; Electric Signaling	Oct. 18	Oct. 27	2,025
383	43. Baths and Closets; Dispensing; Dispensing Beverages; Electricity, Medical and Surgical; Fire-Extinguishers; Sewerage; Surgery; Water Separation or Purification.	Sept. 11	Dec. 20	1,308
253	44. Air-Guns, Catapults, and Targets; Ammunition and Explosive Charge Making; Boats and Buoys; Filling and Closing Portable Receptacles; Marine Propulsion; Railway Draft Appliances; Ships.	Oct. 20	Apr. 18	537
379	45. Journal-Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	Jan. 3	Apr. 7	1,022
332	46. Curtains, Shades and Screens; Educational Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Diffusing; Paper Files and Binders; Wooden Buildings; Scaffolds.	Dec. 16	Feb. 25	884
264	47. Brakes; Clutches; Elevator; Fluid Pressure Brake and Analogous Systems	Nov. 11	Feb. 1	1,008

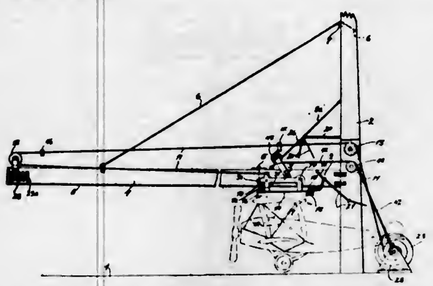
PATENTS

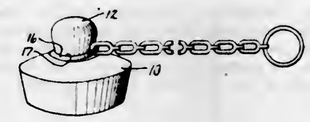


GRANTED JULY 12, 1921.

1,384,035. COOKING UTENSIL. HERMAN L. ALEXANDER, Chicago, Ill. Filed Dec. 18, 1920. Serial No. 431,643. 11 Claims. (Cl. 53—1.)

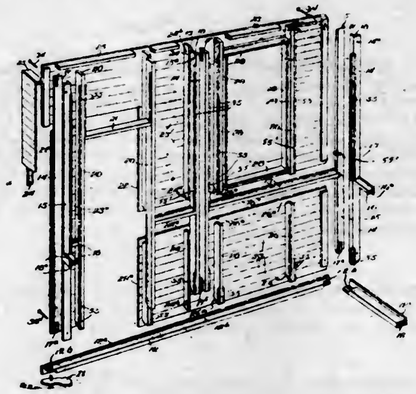
1. In a device of the class described, the combination of a receptacle open at its upper end; and a cover comprising a deep dome-shaped portion, and laterally extending means about the outer edge of the dome-shaped portion for supporting the cover upon the receptacle, said cover being adapted to serve as a mixing bowl.

1,384,036. DEVICE FOR LAUNCHING AEROPLANES FROM SHIPS. GUSTAF ANDERSON, New York, N. Y. Filed Dec. 27, 1920. Serial No. 433,103. 3 Claims. (Cl. 244—2.)



1. A device of the class described comprising a support, a beam extending from said support, a carriage movably mounted on said beam, means for releasably locking an aeroplane against said carriage, a cable attached to said carriage, means driven at a uniform rate of speed for winding up said cable at an increasingly-rapid speed, means for releasing said locking means, and means for operating said winding means.

1,384,037. PLASTIC COMPOSITION. MORGAN K. ARMSTRONG, Winnetka, Ill., assignor to Bestwall Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 1, 1919. Serial No. 327,625. 1 Claim. (Cl. 106—34.)



A plaster composition comprising approximately eighty-five pounds of calcined gypsum, mixed dry with approximately fifteen pounds of finely divided peat or peat moss, the combined one hundred pounds of dry mixture being mixed with water in sufficient amount to make it workable.

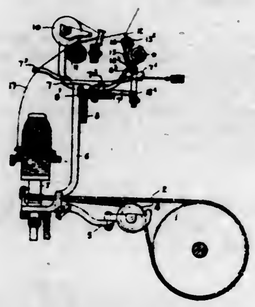
1,384,038.. DRAIN-PLUG. NATHAN BECKER, New York, N. Y. Filed Mar. 19, 1921. Serial No. 453,683. 2 Claims. (Cl. 4—35.)

1. A drain plug of compressible molded rubber composition comprising a body portion and a knob integral with the body portion and having a relatively enlarged head and relatively narrow neck, a ring through which said head is adapted to be passed by compression of the head, said ring encircling said neck, and a chain attached to the plug by passing the ring forcibly over the compressible head.

1,384,039. PORTABLE BUILDING. MARTIN BLAI, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,889. 5 Claims. (Cl. 20—2.)

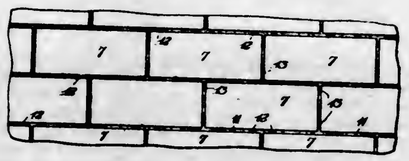
1. A portable building comprising end walls, side walls, a floor and a roof, said end walls and side walls consisting of vertically extending members and a plurality of superposed units, a plurality of vertically extending strips carried by said members, means for securing said units to said vertically extending members, a plurality of inner wall frames, and means for securing said inner wall frames to said vertically extending strips, whereby said frames form a smooth inner wall.

1,384,040. SHOCK-ABSORBER. WILLIAM N. BORDER, Dunlap, Mo. Filed May 21, 1920. Serial No. 383,200. 2 Claims. (Cl. 267—17.)



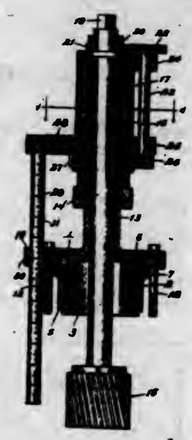
1. In combination with a vehicle provided with main springs, a plate secured to an axle of said vehicle, an auxiliary spring rockably mounted at one end upon said

plate, a rod fixed to said auxiliary supplemental spring and extending downwardly through an opening in the plate, a spring embracing said rod and abutting against the plate to resist rocking movement of the auxiliary



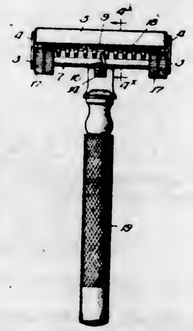
spring, means for regulating the tension of said supplemental spring, and means connecting the opposite end of the auxiliary spring to a spring-supported portion of the vehicle.

1,384,041. TWISTING AND DOUBLING MACHINE. THOMAS ALEXANDER BOYD and HAROLD ARTHUR BOYD, Glasgow, Scotland. Filed Dec. 11, 1919. Serial No. 344,264. 3 Claims. (Cl. 118—7.) (Filed under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a detector mechanism for twisting and doubling machines, in combination, a rod, an upper delivery roller carried by said rod, a catch plate normally detaining said rod against movement, a cam, a detector box pivoted to said catch plate, detectors in said box, said detectors normally sustained by the yarn but adapted on failure of the yarn to fall into the path of the cam, and means on said detector box engageable with said rod to disengage said rod from the catch plate on the fall of a detector into the path of the cam.

1,384,042. PAVEMENT CONSTRUCTION. FREDERICK A. BROTSCH, Jr., Brighton, N. Y. Filed Nov. 3, 1919. Serial No. 335,338. 6 Claims. (Cl. 94—11.)



1. A pavement comprising a plurality of juxtaposed sections smaller at their bottoms than at their tops to provide downwardly increasing intervals therebetween and facilitate the penetration of cementing material adjacent the bottoms of said intervals, cementing material in said intervals for securing them together, and anchoring portions on the sections providing horizontal shoulders interlocking with the cementing materials to prevent upward or downward movement of the sections.

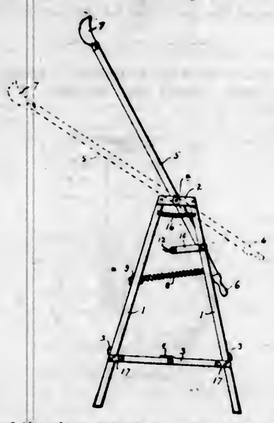
1,384,043. CYLINDER BORING OR REAMING MACHINE. GORDON MARK BRUBAKER, Millersburg, Pa. Filed Mar. 9, 1920. Serial No. 364,417. 9 Claims. (Cl. 77—2.)

1. A cylinder boring or reaming machine comprising a clamping head, means for securing the same to a cylinder, an elongated externally threaded inner bearing sleeve fixed to and extending from the clamping head, a tool driving shaft journaled in said head and sleeve, an outer bearing sleeve coupled to the tool driving shaft and in guided and slidable connection with the clamping head, a threaded feed spindle journaled in the outer bearing head and arranged to travel upon the threads of the inner bearing sleeve, and gearing between the tool driving shaft and feed spindle.

1,384,044. SAFETY-RAZOR. CHARLES R. BURKE, Chicago, Ill. Filed June 19, 1920. Serial No. 390,090. 7 Claims. (Cl. 30—12.)

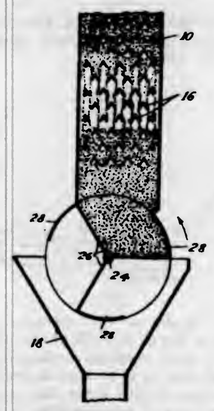
1. In a safety razor, a frame, a blade holder mounted to reciprocate in said frame, a cam shaft having connection with the blade holder through which it reciprocates the latter, and a guard overlying the cam shaft.

1,384,045. HOSE-COUPLING. FRED WILLIAM BURNS, Johnstown, Pa. Filed Mar. 15, 1920. Serial No. 365,719. 3 Claims. (Cl. 285—83.)



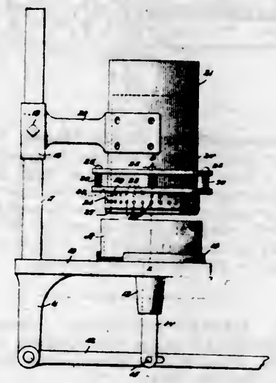
3. A hose coupling comprising a female member, including a recessed head having an internal shoulder, a tubular portion extending from one side of said head and having a tapering bore, a locking head mounted in said recess, a set screw threadedly mounted in said head and

operatively connected to said locking head, a male member including a head and a tapered tubular portion ex-



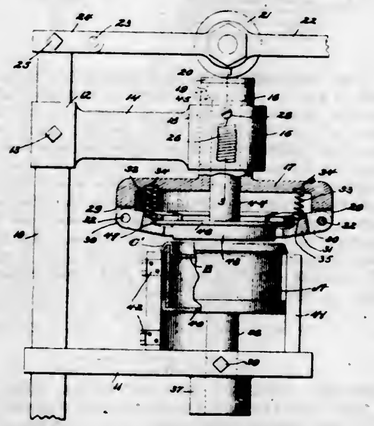
tending from one side of said head and having a shoulder engageable with the shoulder of the female head.

1,384,046. CATAPULT. ANDREW CARRINO, Sterling, Ill. Filed May 12, 1920. Serial No. 380,911. 1 Claim. (Cl. 124—1.)



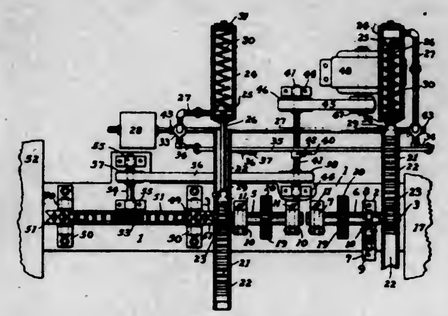
A device of the class described, comprising two pairs of legs, foldably united; plates uniting said legs, in pairs, at their upper ends; a hand-lever pivotally mounted in said plates and provided at its outer end with a pocket; a spring connecting said lever with said frame, and capable of imparting force thereto, when operated; and a yieldable buffer mechanism mounted in said frame, and adapted to be contacted by said lever at the end of its movement, when discharging a missle.

1,384,047. PROCESS OF DRYING GRANULAR MATERIAL. CLARENCE W. CARTER, Minneapolis, Minn. Filed Apr. 22, 1918. Serial No. 229,910. Renewed Dec. 27, 1920. Serial No. 433,432. 2 Claims. (Cl. 34—24.)



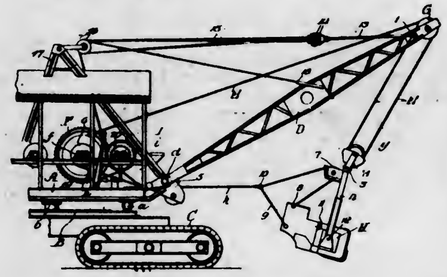
2. A process of drying granular material which consists in supporting a vertical column of said material at its bottom, said column being of a predetermined length, passing heated air through said column throughout the principal part of the length thereof, periodically withdrawing said support to an extent sufficient to cause the entire column of material to move downward uniformly throughout its cross section, and regulating the intervals of time between each of said withdrawals so that the part of the material which moves past the point of support and is discharged from the column will have been suitably dried.

1,384,048. PASTE-APPLYING APPARATUS. FREDERICK COATES, Wyoming, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 25, 1920. Serial No. 412,833. 12 Claims. (Cl. 91—43.)



1. In a paste applying apparatus, a paste tank, a paste applying ring slidable on said tank, said ring and tank having coöperating paste ports normally out of registry, and means to hold a carton arranged to bring the carton into engagement with the ring and thereby cause the ports to register.

1,384,049. MACHINE FOR SECURING END CLOSURES IN VESSELS. FREDERICK COATES, Wyoming, Ohio, assignor to Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 25, 1920. Serial No. 412,835. 18 Claims. (Cl. 93—55.)

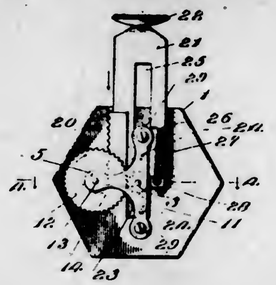


1. In a machine of the class described, a reciprocable plunger head, carton periphery engaging members carried by the plunger head, and means to engage and move said members inward as the plunger moves in one direction.

1,384,050. SAUSAGE-LINKING MACHINE. HERMAN CRAMER, Pine Lawn, Mo. Filed Mar. 12, 1921. Serial No. 451,764. 4 Claims. (Cl. 17—6.)

1. A sausage-linking machine having an organised means for simultaneously twirling in opposite directions parts of a filled sausage casing, to form simultaneously from said oppositely-twirled casing two separate connected links, of sausage; in combination with means for drawing the finished connected links as well as the casing from which they are made, through the machine and delivering said links to a delivery-table or platform.

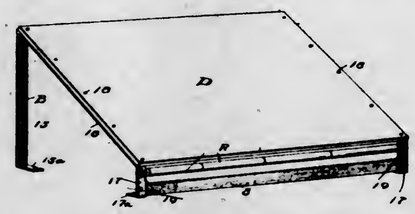
1,384,051. LIFTING APPARATUS. GEORGE N. CRAWFORD, Chicago, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed July 2, 1917. Serial No. 178,137. 8 Claims. (Cl. 37—55.)



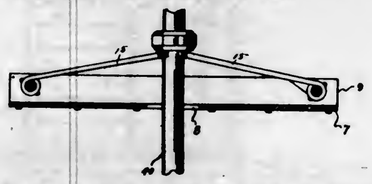
1. In lifting apparatus, instrumentalities to carry the load, a line to raise and lower said instrumentalities, a winding drum for said line, a clutch for rotating said drum to raise the load, a brake for said drum, means to swing the load sidewise, a single lever connected to control both the clutch and the brake, so that the load may be raised or lowered at will by operation of said single lever, a shaft on which said drum and clutch and brake are supported; the clutch being operable to connect the drum to the shaft by movement of said lever in one direction, and adapted to release the drum when said lever is moved in the opposite direction to apply said brake, whereby the drum is rotatable with the shaft to raise said instrumentalities and rotatable in the opposite direction on the shaft under control of said brake to lower the boom.

1,384,052. SUPPORT FOR HANKS OF SILK, YARN, AND THE LIKE IN TREATING-MACHINES. JOSEPH A. DISCHINGER, Tonawanda, N. Y. Filed Apr. 22, 1920. Serial No. 375,874. 6 Claims. (Cl. 8—19.)

1. A machine for treating hanks of silk and the like having an arm for supporting said hanks which comprises an arbor, a plurality of disks mounted in spaced relation on said arbor and each having a plurality of notches arranged in an annular row in the periphery of the disk, and a plurality of longitudinal rods arranged in an annular row around the arbor and each secured with its inner side in corresponding notches in said disks in such position that the outer side of the same is arranged radially outward beyond the periphery of the several disks.



1,384,053. FAN. MARTIN S. DUPONT, Chicago, Ill. Filed July 29, 1920. Serial No. 399,869. 1 Claim. (Cl. 230—33.)

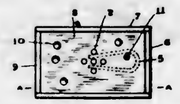


A mechanically operated fan comprising a support and casing adapted to be held in the hand, a shaft journaled in said support and casing, fan blades carried by said shaft, means for rotating the fan blades continuously in one direction, a bifurcated slidable member extending from said casing and controlled by the thumb or finger for operating the aforesaid means, a relatively long guide plate secured to the aforesaid support and projecting into the bifurcated portion of the slidable member, a bracket in which the aforesaid shaft is journaled, and studs connecting said bracket to the support, said studs also serving to guide the aforesaid slidable operating member.

1,384,054. POULTRY DEVICE. HOWARD COCHRAN EVANS, Lynchburg, Va. Filed July 28, 1920. Serial No. 399,518. 5 Claims. (Cl. 119—31.)

3. A poultry device of the character described comprising, a pair of brackets, each of the brackets comprising a vertical portion, a second vertical portion relatively longer than the first vertical portion, an inclined portion connecting the two at their upper edge, a floor connecting the inclined portions of said brackets, a strip connecting the first vertical portion to said brackets and spaced from the adjacent edge of said floor, a shaft journaled on the first vertical portion and disposed between said strip and said floor, and a plurality of rollers rotatably mounted on said shaft.

1,384,055. PIPE-HOLDER. LORNE E. FERGUSON, Parkland, Alberta, Canada. Filed Mar. 11, 1921. Serial No. 451,534. 4 Claims. (Cl. 24—249.)

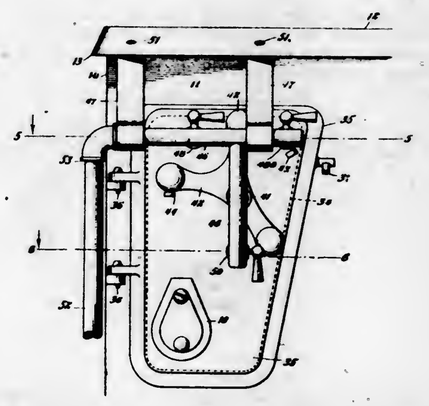


1. A pipe holder consisting of a plate, an opening in said plate to receive a pipe therethrough, side members for said plate, a set of jaws hingedly mounted in said side members and having their inner ends extending inwardly inside the circumference of said opening and said inner ends being provided with gripping means for holding said pipe, the pivot of one of said jaws being removably supported.

1,384,056. ALLOY. COLIN G. FINK, Yonkers, N. Y., assignor to Chile Exploration Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 354,218. 9 Claims. (Cl. 75—1.)

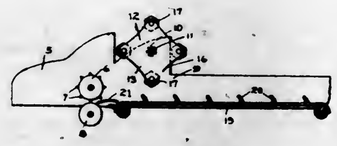
1. An alloy resistant to the corrosive action of acid liquors and containing lead and 3 to 65 per cent. of thallium.

1,384,057. PUZZLE. JAMES FLEET, Montreal, Quebec, Canada. Filed Dec. 20, 1920. Serial No. 432,128. 2 Claims. (Cl. 46—41.)



1. In a puzzle, a case having a transparent top and playing board therein contained with the suitable arrangement of pockets, a plurality of magnetizable balls and a non-magnetizable ball, and a magnet suitably placed to misdirect the courses of the magnetizable balls.

1,384,058. VALVE FOR EXPLOSION-ENGINES. HERMAN FURST, Redlands, Calif. Filed Oct. 20, 1919. Serial No. 331,053. 1 Claim. (Cl. 123—188.)



A valve for explosion engines, comprising a one-piece stem and valve head concentric with the stem, said head being semi-hexagonal in diametric cross section, with the top of the head flat and concentric with the stem and joined to the stem by strengthening fillets, said head having a conical side wall joining the flat top at an angle of approximately 45 degrees, whereby the head is of cup-shape, the conical side wall being of substantially even thickness throughout with said thickness corresponding to the extent of contact of the seating edge of the valve with the valve seat.

1,384,059. COMBINED COAL AND GAS RANGE. LOUIS GIAMBRONE, Buffalo, N. Y. Filed May 28, 1920. Serial No. 385,053. 3 Claims. (Cl. 126—36.)

1. A combined coal and gas range having an opening in one of its vertical walls, a combined water front and oven heating gas pipe adapted to pass through and to be rotated in said opening and having a laterally-extending branch pipe, and means for covering up said opening when said combined gas pipe is not being used.

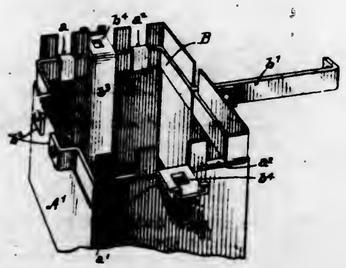
1,384,060. CUTTING MECHANISM. RICHARD GRIMM and ERWIN F. RHODE, Two Rivers, Wis. Filed Sept. 21, 1920. Serial No. 411,857. 1 Claim. (Cl. 146—29.)

In a cutting machine, a frame, cutting means carried by the frame, a conveyer operating on the frame, a reel supported above the conveyer, said reel comprising end sections, rollers mounted to revolve between the end sections, and each of said rollers having flat surfaces.

1,384,061. BELT-BUCKLE. HARRY GROSSMAN, New York, N. Y. Filed Sept. 24, 1920. Serial No. 412,436. 7 Claims. (Cl. 24—194.)

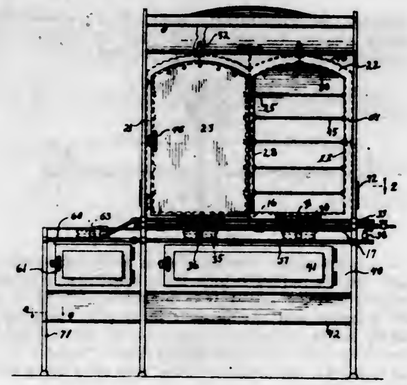
1. The herein described belt buckle comprising a front panel, a pair of side flanges extending with the side edges of the front panel, a plurality of bearing and keeper members lying in the same plane and located back of the said flanges and formed integral therewith, abutment means

located back of the front panel and against which the anchor end of a belt is adapted to abut when being inserted into the buckle, means to lock said anchor end of the belt against one end of the front panel, and means to lock



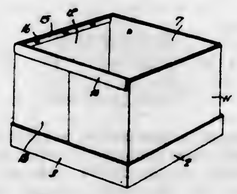
the tongue end of the back adjacent to the other end of the buckle, the tongue end of the belt passing over said abutment means and between the bearing and keeper means and the anchor end of the belt.

1,384,062. LEVEL. JOHN HAPPLE, Syracuse, N. Y. Filed May 19, 1919. Serial No. 298,018. 4 Claims. (Cl. 33—211.)



1. As an article of manufacture, an elongated level glass body having a longitudinal fluid holding bore with closed ends, the interior and exterior faces of the body having different cross sectional shapes and one of said faces comprising portions that are substantially flat and angularly disposed in cross section.

1,384,063. PROTECTIVE COVERING FOR STORAGE-BATTERY CELLS. CHESTER P. HATFIELD, Lebanon, Ohio. Filed Nov. 22, 1920. Serial No. 425,722. 4 Claims. (Cl. 224—29.)



1. A protective casing for the batteries of self-starting automobiles, conformed to the battery and its supporting bracket-yoke and adapted to be slipped up over same from below and inclose battery and yoke, said casing extending above said yoke and provided with suitably spaced slits forming flaps adapted to be manually bent inward over and engaged upon the supporting yoke; and a removable cover adapted to seat externally upon the upper portion of said casing.

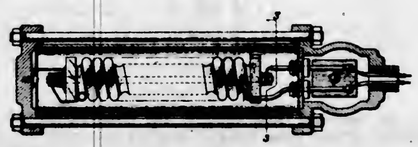
1,384,064. STOVE. JULIUS E. HETTINGER, Chicago, Ill. Filed Mar. 9, 1920. Serial No. 364,413. 2 Claims. (Cl. 126—20.)

2. In a stove, a casing, a gas burner and electric wires in said casing, and means for passing gas to said burner and electric energy to said wires, said casing being arranged so as to be inverted.

1,384,065. COLLAPSIBLE PORTABLE HATBOX. AARON HIRSCHWITZ, New Orleans, La., assignor of one-half to Sydney S. Goldberg, New Orleans, La. Filed Mar. 4, 1920. Serial No. 363,235. Renewed Nov. 29, 1920. Serial No. 427,207. 2 Claims. (Cl. 229—41.)

1. A box of the character described including a bottom, end walls hinged along opposite edges to the bottom and adapted to fold down one upon another against said bottom, a body portion distinct and separate from the bottom and adapted to seat at its lower edges thereon, said body portion composed of rigid side walls and collapsible end walls, the end walls of the bottom adapted to swing up against the interior sides of the collapsible end walls of the body portion whereby to reinforce and stiffen the same, locking flaps on the upper edges of the bottom end walls for engaging over the upper edges of the collapsible end walls of the body, and locking strips secured to the rigid side walls of the body along the interior of the upper edges of the same and having their opposite ends adapted to engage the adjacent portions of the bottom end walls whereby to securely hold the same in place, and a top for the box, substantially as described.

1,384,066. BUCKLE. ERNEST N. HUMPHREY and OEL E. WARDNER, New Britain, Conn., assignors to The Traut & Hine Mfg. Company, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 24, 1921. Serial No. 447,461. 3 Claims. (Cl. 24—191.)

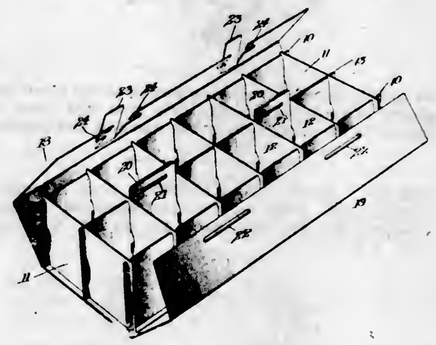


1. A buckle for belts and the like, comprising a front plate, two opposite rearwardly directed flanges at the edges

thereof, a lever mounted between said flanges, a floating belt gripping plate between the lever and the rear face

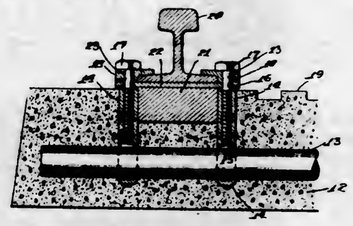
of the front plate, said belt gripping plate being movable into the belt gripping position by said lever and a support for said gripping plate intermediate the length thereof.

1,384,067. WEATHERPROOF ELECTRIC HEATER. LEE P. HYNES, Albany, N. Y. assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed May 8, 1920. Serial No. 379,811. 9 Claims. (Cl. 219—67.)



1. A weatherproof electric heater comprising a casing forming a coil chamber, a supplementary casing forming a low-temperature chamber suitable for moisture-proof wires, a heat insulating partition between the two chambers and a heat-proof conductor leading from the coil in the coil-chamber through said partition to a terminal in the low-temperature chamber.

1,384,068. RESISTANCE APPENDAGE FOR TRACTOR-WHEELS. WILLIAM J. JONES, Gregory, S. D. Filed June 28, 1920. Serial No. 392,487. 4 Claims. (Cl. 301—44.)



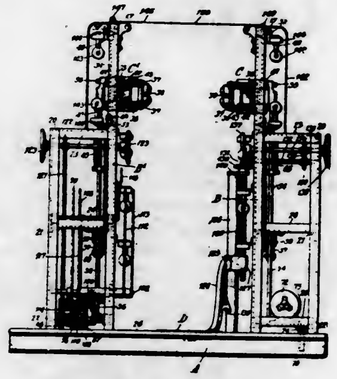
3. In ground-engaging devices for the tires of tractor-wheels, a plurality of wedge-shaped appendages each being provided with an aperture L-shaped in plan, a plurality of bars adapted to be disposed transversely of the tire, each being adapted to be inserted within and to approximately fill the aperture of an appendage, and set-screws or equivalent members engaging the appendages and said bars for maintaining the appendages at a predetermined distance from the tire.

1,384,069. COLLAPSIBLE CARTON. FRANK M. JOSLIN, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Filed May 15, 1916. Serial No. 97,577. 6 Claims. (Cl. 229—29.)

3. A collapsible carton or box having a top closure consisting of two overlapping parts, one part formed with a slot and the other a tongue, a partition having a tab adapted to extend through said slot and said tab having a slot adapted to receive said tongue.

1,384,070. CONCRETE RAILROAD-TIE. HERMAN KAPOLKIN, New York, N. Y. Filed July 17, 1920. Serial No. 396,912. 3 Claims. (Cl. 238—92.)

1. A railway tie comprising a body portion constructed from plastic setting material; a metal reinforce therefor, embodying longitudinally disposed tie rods and positioning couples therefor, said couples forming operatively opening sockets; a plurality of yielding bolsters mounted on said body between the ends of said couples; a plurality of rigid wearing plates mounted on said bolsters; fastening means for holding said wear plates in position, said means engaging said couples; and a plurality of foot plates, each engaging one of said fastening members to be drawn upon the flange of a railway rail in service.



1,384,071. WATCH-STAND. HENRY C. KARR, Washington, D. C., assignor of one-fifth to Emil Bönnelycke, Washington, D. C. Filed Feb. 18, 1921. Serial No. 446,067. 5 Claims. (Cl. 211—24.)

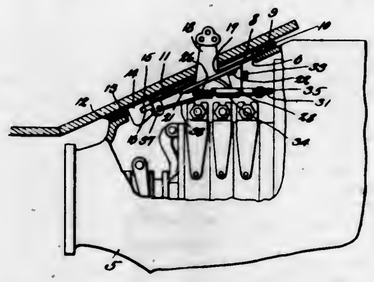
1. A watch stand, comprising an upwardly-extending body portion having a stem-engaging part adjacent its

upper end and a self-sustaining base at its lower end, said base embodying a pair of spaced spring supports for engagement with the body of a watch; said supports having pockets to receive the lower portion of the watch and adapted to be forced laterally away from each other incidental to the engagement of the watch in said pockets.

1,384,072. MASSAGING-MACHINE. JOHN KERCHER, Chicago, Ill. Filed Oct. 19, 1917, Serial No. 197,498. Renewed Dec. 16, 1920. Serial No. 431,276. 9 Claims. (Cl. 128—57.)

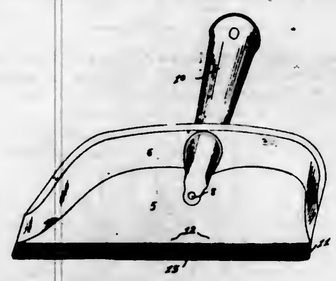
8. In a device of the class described, a pair of oppositely disposed frames carrying massaging instrumentalities, means for operating said instrumentalities, flexible closures for inclosing the space between said frames, and means for heating said space.

1,384,073. BRAKE-OPERATING MECHANISM. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Company, Chicago, Ill. Filed Sept. 7, 1920. Serial No. 408,459. 16 Claims. (Cl. 188—204.)



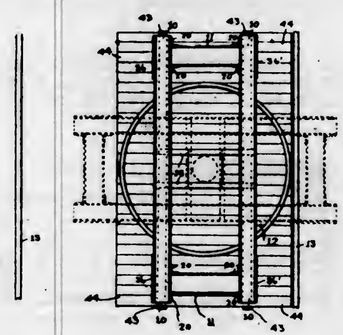
1. A device of the character described comprising brakes, a plurality of brake operating levers, brake operating mechanism operated by said levers, and a lost motion connection between said brake operating mechanism and each of said levers whereby said brakes may be operated from either of said levers.

1,384,074. SASH-WEIGHT. ELOF R. LEONARD, Mountain Lakes, N. J. Filed Mar. 19, 1921. Serial No. 458,829. 7 Claims. (Cl. 16—218.)



2. In sectional sash-weights, the combination of a plurality of duplicate, integral sections each provided at one end with a reduced and extended portion provided with a lug connecting element, a locking flange projecting from the unreduced portion, and a transverse groove behind said locking flange, and at its other end with a reduced and extended portion provided with a socket connecting element, a locking flange projecting from the unreduced portion, and a transverse groove behind said locking flange.

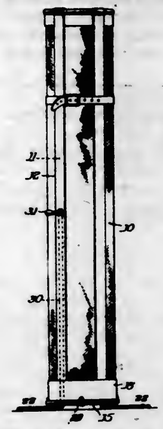
1,384,075. AUTOMOBILE-LOCK. WILLIAM A. LOWERY, Summit, Ga., assignor to The Lowery Lock Company. Filed Apr. 23, 1920. Serial No. 376,048. 5 Claims. (Cl. 70—90.)



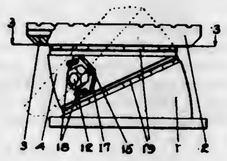
1. In combination with a motor fly wheel, a locking device including a body portion, a pivoted locking arm having teeth formed on one of the edges thereof, means for normally holding the arm out of engagement with the fly wheel, said means including a controlling arm having an elongated opening formed adjacent to one end thereof, a pivot pin on the locking arm and operating in the opening, whereby the locking arm will automatically adjust itself to the fly wheel associated with the lock, and means having connection with the pivoted locking arm for moving the locking arm into its locked position.

1,384,076. DUSTPAN. ARTHUR MCCALLAN, Ottawa, Ontario, Canada. Filed Jan. 29, 1921. Serial No. 440,912. 1 Claim. (Cl. 65—20.)

As a new article of manufacture, the herein described dust pan comprising a base, the said base having its edge portion sheared to form a series of alternately disposed lips, each alternate lip adapted to be bent outwardly of the next succeeding lip, said lips being resilient, a strip of resilient material having its end received between said lips, washers bearing against said material adjacent the adjacent edges of separated lips, and staples having extensions adapted to pass through the said extensions and resilient lips and resilient strip.



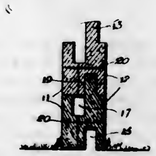
1,384,077. ROAD-CONSTRUCTION MACHINERY. HARRY P. MARTIN, Clearfield, Pa. Filed Apr. 23, 1921. Serial No. 463,912. 17 Claims. (Cl. 104—44.)



1. In a device of the class described, in combination a track, wheels operating on said track, a pair of substantially parallel girders adapted to carry a load, means substantially centrally positioned with respect to said girders and secured thereto to pivot said girders for rotation and for carrying part of the load on said girders, means substantially co-axial with said pivoting means and providing a supporting surface for said pivoting means and a plurality of arched transverse members coöperating with said girders and said pivoting means.

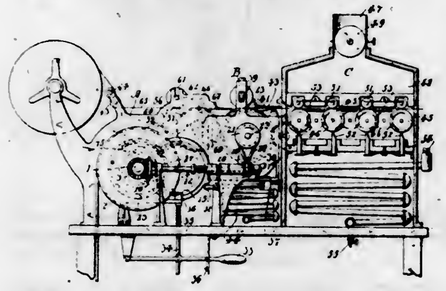
1,384,078. SELF-SUPPORTING GOLF-BAG. THEODORE W. MAY, Chicago, Ill., assignor of one-half to William F. Buckingham, Chicago, Ill. Filed May 3, 1918. Serial No. 232,201. 17 Claims. (Cl. 224—45.)

1. In a bag of the class described, the combination with the body thereof, of a plurality of supporting feet carried thereby and each comprising angularly-disposed arms one of which is pivotally connected to said body, said feet being adapted to fold together with the contiguous arms thereof nesting upon each other when in such folded relation, and means for actuating the supporting feet to move the same to supporting and non-supporting positions.



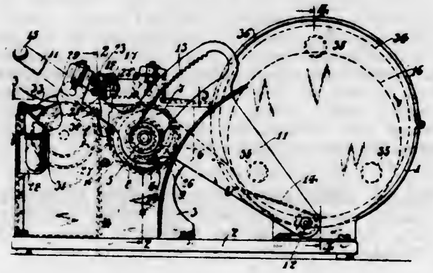
1,384,079. WORK-HOLDER. HERMAN W. MELLING, Jackson, Mich. Filed May 29, 1920. Serial No. 385,308. 6 Claims. (Cl. 90—58.)

1. In a structure of the class described, the combination of a base, an intermediate member rotatably mounted on said base, a top member rotatably mounted on said intermediate member, said members having coacting annular flat bearing faces, the coacting bearing faces of said base and intermediate members being inclined to their axes of rotation, the inner edges of the bearing faces of the top and bottom members being inwardly beveled, and the intermediate member being provided with coacting beveled bearing segments, clamping members mounted on said intermediate member opposite to its said bearing segments and provided with beveled clamping lugs coacting with the bevels of said top and bottom member, said clamping members being provided with clamping bolts disposed through said intermediate member, and a pair of stop screws for each clamping member.



1,384,080. SELF-LINING INTERLOCKING BUILDING-BLOCK. JOHN JAY MERREN, Port Arthur, Tex. Filed May 10, 1920. Serial No. 380,175. 2 Claims. (Cl. 72—38.)

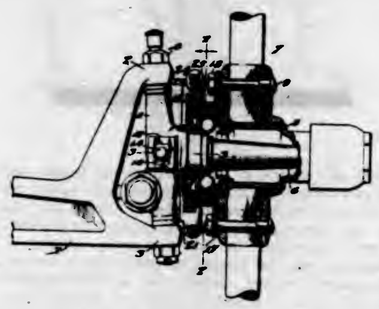
1. A building block having a rectangular body provided with parallel directly opposing inner and outer surfaces



and having continuous ribs and rib receiving grooves along respectively opposite sides and ends located in the same plane parallel to the said surfaces and nearer to the outer surface than the inner surface, said block having grooves along one edge and one end located between its inner surface and the first mentioned ribs and grooves.

1,384,081. STRIP-SERVING DEVICE. CHARLES GREENOUGH MORTIMER, East Orange, N. J., assignor to National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1914, Serial No. 812,692. Renewed Oct. 30, 1920. Serial No. 420,851. 13 Claims. (Cl. 91—14.5.)

1. In a strip serving apparatus, the combination with means for supporting a roll of tape, of means adapted to feed the tape and to sever the tape automatically into strips of predetermined length, means for conveying the successive severed strips automatically from said severing device, means to render adhesive one side of the severed strips, and means for absorbing moisture from the adhesive material on said severed strips whereby said strips may be in prime condition for immediate application to a box, package or the like.



1,384,082. STRIP-SERVING MACHINE. CHARLES G. MORTIMER, East Orange, N. J., assignor to National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed June 25, 1915, Serial No. 36,199. Renewed Oct. 30, 1920. Serial No. 420,852. 7 Claims. (Cl. 91—14.5.)

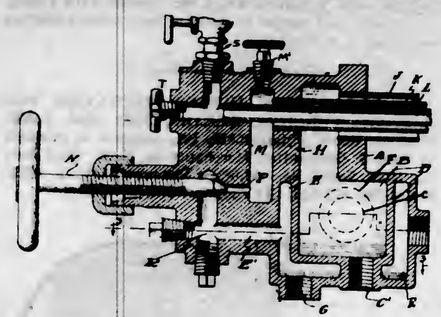
1. In a machine adapted to deliver a severed strip of adhesive tape for manual application to a package or the like, the combination of a holder for a supply of tape, feeding means, a moistener, severing means including an end pivoted scissors blade having a normal inoperative position above the path of the tape and means whereby said blade may be moved to a position below the path of the tape before each cutting stroke thereof.

6. In a machine for serving adhesive strips of tape, the combination of a tape support, a bath for moistening fluid, and a porous moistening member adapted to carry water therefrom and absorb moisture therefrom without increasing its volume, and to transfer moisture to said tape by absorption and superficially.

1,384,083. WHEEL-HUB-LOCKING DEVICE. DANIEL R. MURPHY, Uniontown, Pa., assignor of one-half to R. M. Fry, Uniontown, Pa. Filed Feb. 19, 1920. Serial No. 359,858. 3 Claims. (Cl. 301—122.)

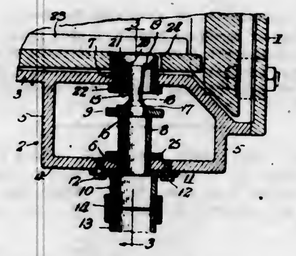
1. A hub locking device including with an axle having a bearing spindle, a hub mounted on said spindle and provided with a bearing flange concentrically around the spindle bearing, a pair of casing members fitted around the axle and having bearing flanges interfitting with the flange of the hub, and bolts carried by said axle to rigidly secure the casing members against movement thereon.

1,384,084. COMBINED INCUBATOR AND BROODER. JOHN R. MYERS, Buffalo, N. Y. Filed Apr. 4, 1917. Serial No. 159,841. 4 Claims. (Cl. 119—30.)



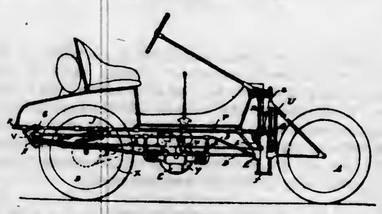
3. A device of the character described consisting of a chamber adapted to be used as either an incubator or as a hover inclosed by walls and a roof, one of said walls being formed in part by a horizontally hinged door which when the chamber is used as an incubator lies in the plane of the rest of said wall, and, when said chamber is used as a hover in connection with a brooder secured thereto, is swung up to allow passage between said hover and said brooder and to act as a portion of the roof of said brooder.

1,384,085. OIL-BURNER. ROBERT PAPENDELL, Detroit, Mich. Filed Jan. 31, 1920. Serial No. 355,525. 5 Claims. (Cl. 158—74.)



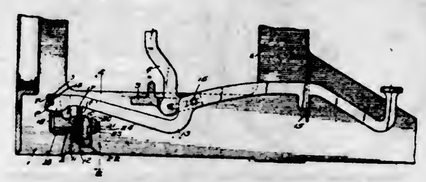
3. In an oil burning apparatus, the combination with a plurally chambered and apertured shell, of a corresponding number of concentrically arranged discharge nozzles leading therefrom, means for admitting oil and live steam into each of said shell chambers independently of the others, means for additionally heating the oil in that one

of the chambers with which the largest diametered discharge nozzle is connected, and means adapted to control



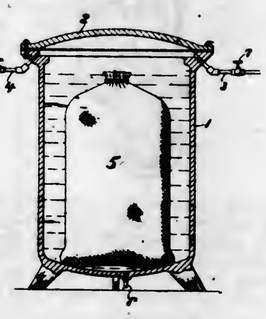
the possible escape of mingled steam and oil particles from said nozzles, whereby its direction of egress and further volatilization may be regulated.

1,384,086. NOZZLE AND NOZZLE-FITTING. HERMAN A. POPPENHUSEN, Hammond, Ind., and ARTHUR P. STRONG, Chicago, Ill., assignors to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Aug. 22, 1919. Serial No. 319,110. 10 Claims. (Cl. 299—107.)



7. The combination with a pipe section, of an open bracket secured to and projecting outward from said pipe section, a nozzle discharging into the pipe section and located in the space between the same and said bracket, the outer end of the nozzle terminating short of said bracket, and means releasably connecting the outer end of said nozzle with said bracket.

1,384,087. MOTOR-VEHICLE. ANDREW J. PURDY, San Francisco, Calif. Filed June 26, 1920. Serial No. 392,051. 3 Claims. (Cl. 180—2.1.)

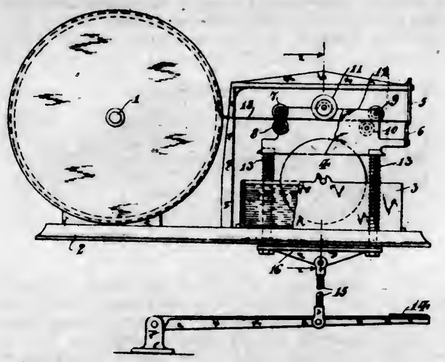


1. In a motor vehicle of the character described, a main frame, a secondary frame with a supporting wheel intermediate the wheels of the main frame, the axles of the main and secondary frame wheels being on fixed different planes, the motor and power plant carried by said secondary frame, means movably connecting said frames, and means for raising the main frame and allowing the vehicle to run on the wheel of the secondary frame.

1,384,088. KEY-LEVER SPRING-LOCK. ADOLPH J. PRUSZYNSKI, Chicago, and ALFRED O. H. EBERT, Woodstock, Ill., assignors to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Feb. 4, 1918. Serial No. 215,238. 11 Claims. (Cl. 197—33.)

1. In a typewriter, a plurality of key levers, a tension spring for each of said key levers, an adjusting screw for each of said tension springs, and resilient means for separately holding each of said adjusting screws in various positions of rotation, said resilient means comprising a plurality of spring tongues, one for each screw, each tongue being arranged to engage its respective screw at one side thereof and to exert pressure laterally on said screw.

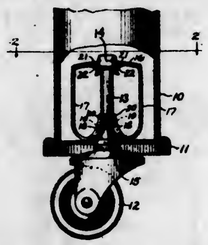
1,384,089. PROCESS FOR SOLIDIFYING CARBON AND SIMILAR MATERIALS. CHESTER J. RANDALL, Naugatuck, Conn., assignor to The Goodyear's Metallic Rubber Shoe Company, a Corporation of Connecticut. Original application filed July 26, 1919, Serial No. 313,660. Divided and this application filed July 30, 1920. Serial No. 400,275. 6 Claims. (Cl. 100—56.)



1. The process of treating carbon particles, comprising exhausting air from between the particles and subjecting them to pressure.

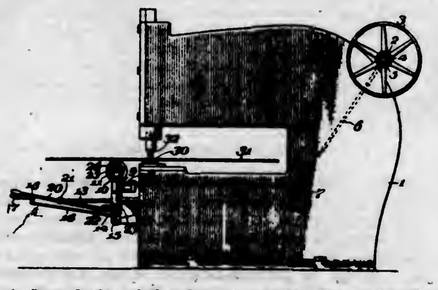
5. The process of compacting carbon or similar materials, comprising placing the carbon within a bag constructed to permit the passage of air therefrom, immersing the bag in a fluid contained in a chamber, closing the latter and exhausting it of air whereby the air associated with the carbon bubbles through the fluid and is removed by the exhaust, shutting off the exhaust and admitting fluid under pressure to compact the carbon, and then removing the bag and its contents.

1,384,090. STRIP-SERVING DEVICE. ARTHUR E. RIDEOUT, Chicago, Ill., assignor to National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1914, Serial No. 832,705. Renewed Oct. 30, 1920. Serial No. 420,853. 4 Claims. (Cl. 91—14.5.)



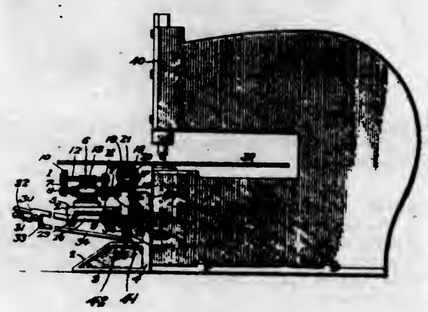
1. A device for serving adhesive strips of tape comprising in combination, a support for a supply of tape, means for moistening the tape to render it adhesive, a

yielding support having guide rollers for the free end of the tape, and severing means, comprising a fixed blade



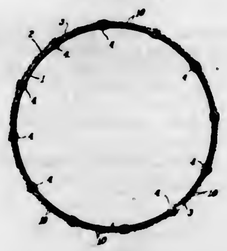
and a blade mounted on the yielding support and adapted to coact with the fixed blade to sever a strip of tape at the will of the operator.

1,384,091. TUBULAR-LEG CASTER-RETAINER. FRANK L. ROWNTREE, Meriden, Conn., assignor to Foster, Merriam and Company, Meriden, Conn., a Corporation of Connecticut. Filed Mar. 5, 1921. Serial No. 449,697. 1 Claim. (Cl. 16—4.)



A tubular leg caster retainer made from resilient strip metal, and comprising a cross piece having pintle locking lugs struck inward therefrom, spring arms extending from the cross piece, and upwardly and inwardly turned pintle bearing members provided with centrally located grooves therein, at the ends of said spring arms.

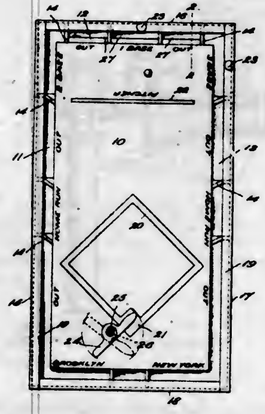
1,384,092. PLATE-MOVING MECHANISM FOR PRESSES, PUNCHES, AND SHEARS. HERBERT RUFF, Philadelphia, Pa., assignor of one-half to Leon G. Buckwalter, Merchantville, N. J. Filed July 12, 1918. Serial No. 244,659. 18 Claims. (Cl. 164—49.)



1. In a device of the character stated, the combination of driving mechanism of a punch, press or shear, a constantly rotating, freely revoluble plate-joggling wheel operatively connected with said driving mechanism, means to bring said plate actuating wheel into contact with a plate to be moved, and means to position said plate actuating wheel about a vertical axis.

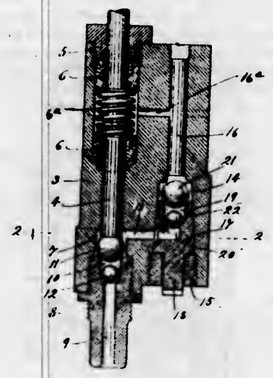
1,384,093. PLATE-MOVING MECHANISM FOR PRESSES, PUNCHES, SHEARS, AND THE LIKE. HERBERT RUFF, Philadelphia, Pa., assignor of one-half to Leon G. Buckwalter, Merchantville, N. J. Filed July 12, 1918, Serial No. 244,660. Renewed May 21, 1921. Serial No. 471,523. 19 Claims. (Cl. 271—51.)

4. The combination of a suitable framework, a vertical shaft rotatably mounted therein, a stud projecting laterally from said shaft, a notched or serrated wheel carried by said stud and having gear teeth thereon, a gear loosely mounted on said vertical shaft, and means for rotating said gear.



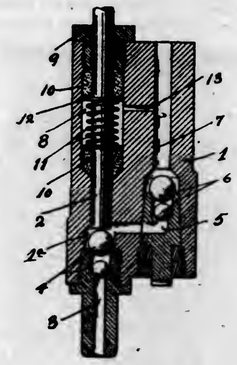
1,384,094. RESILIENT PONTOON. ALOIS B. SALIGER, New York, N. Y., assignor to Saliger Ship Salvage Corporation, New York, N. Y. Filed July 13, 1920. Serial No. 395,976. 3 Claims. (Cl. 114—54.)

1. A resilient pontoon, comprising a plurality of independent concentrically assembled casings, each of which casings being attached to the one adjacent to it at a multiplicity of approximately evenly distributed points, a means for inflating and a means for quickly deflating said pontoons, and a pressure regulating device adapted to automatically regulate the air pressure within the pontoon substantially as shown and described.



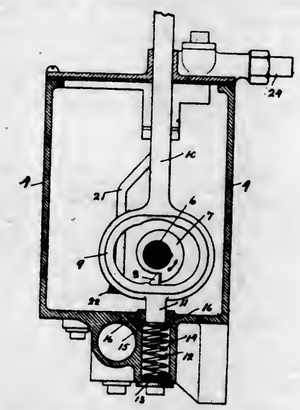
1,384,095. GAME. FERDINAND F. SCHAUBA, Brooklyn, N. Y. Filed Dec. 31, 1920. Serial No. 434,200. 2 Claims. (Cl. 46—61.)

1. A game board comprising a central field having a projection center thereon, and means for impelling game pieces from said center, combined with a gutter at the marginal edge of the field, said gutter having an upwardly and outwardly inclined back wall adapted to elevate and check projected game pieces deposited in the



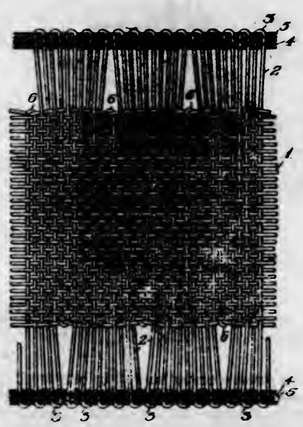
gutter, and having an inwardly projecting ledge overhanging said inclined wall for deflecting elevated game pieces back into the gutter.

1,384,096. CHECK-VALVE STRUCTURE. WILLIAM J. SCHLACKS, Chicago, Ill., assignor to McCord and Company, Chicago, Ill., a Corporation of Delaware. Filed July 25, 1918. Serial No. 246,736. 2 Claims. (Cl. 103—75.)



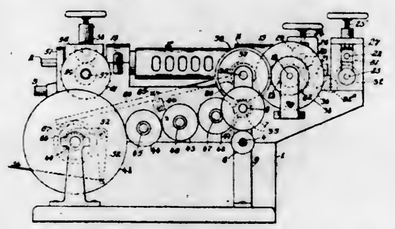
1. A pump mechanism comprising an integral pump body of oblong cross section, two parallel bores extending therethrough, a transverse passage connecting the same near the lower end, a plunger fitted in the upper end of one bore, a ball chamber formed near the lower end of said bore and a longitudinally apertured plug in the lower end of said bore, said plug forming an intake conduit, and a ball valve coöperating with the upper end thereof, the second bore being tapered near its lower end, a tapered check valve cage fitted therein, a plug screwed into the end of said bore having an aperture therein, and a stem on said cage extending through said aperture, a lateral opening in said cage communicating with the passage in said pump body, and a ball valve carried in said cage, the second bore above the cage forming an outlet passage for the pump.

1,384,097. PISTON-PACKING. WILLIAM J. SCHLACKS, Chicago, Ill., assignor to McCord & Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 8, 1918. Serial No. 248,976. 2 Claims. (Cl. 103—61.)



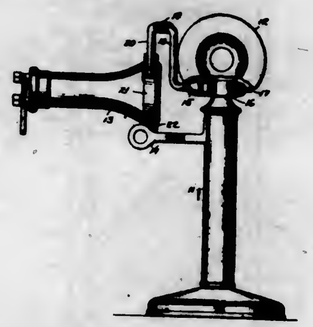
1. A high pressure pump having in combination a pump casing, intake and discharge check valves arranged therein, a pump piston chamber and a pressure chamber extending parallel thereto, spaced packing members disposed about said piston, the pressure chamber communicating with the space between said members whereby said packing will be subjected to the pressure produced by the piston in the said pressure chamber.

1,384,098. LUBRICATOR-PUMP. WILLIAM J. SCHLACKS, Chicago, Ill. Filed Aug. 31, 1918. Serial No. 252,229. 6 Claims. (Cl. 184—27.)



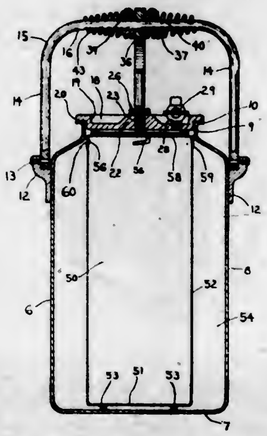
4. In a force feed lubricator, the combination with a reciprocating pump, wherein the plunger is the movable element, of a pump actuating mechanism, comprising a rotary cam, a coöperating retracting spring, and a transmission device, which cam has a camming surface of substantially 360 degrees continuous increase from its lowest to its highest point and is positively operative on said transmission device and pump plunger throughout substantially 360 degrees of its rotation to impart to said pump plunger a substantially continuous oil delivery movement and also serves to set said retracting spring under increased tension, and which spring, when released by said cam, becomes operative through said transmission device to impart a substantially instantaneous yielding return or suction stroke to said pump plunger, substantially as described.

1,384,099. AEROPLANE FABRIC. CHARLES P. SCHLEGEL, Rochester, N. Y., assignor to The Schlegel Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 9, 1918. Serial No. 249,051. 4 Claims. (Cl. 139—9.)



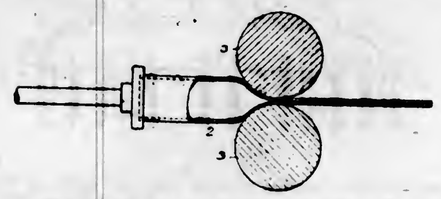
3. A fabric for aeroplanes comprising a body portion having a plurality of warp threads and a continuous weft interwoven therewith, and a selvage thereon formed of a plurality of warp threads spaced from the body warp and interwoven with the weft, which is bent to form a bight about the outermost thread of the selvage warp, said weft being bent at fixed intervals to form bights about the outer threads at each side of the body warp, the bights at one side being staggered in relation to those at the other side.

1,384,100. WIRE STRAIGHTENING AND CUTTING-OFF MACHINE. ELMORE F. SHUSTER, New Haven, Conn. Filed Apr. 28, 1920. Serial No. 377,318. 2 Claims. (Cl. 140—140.)



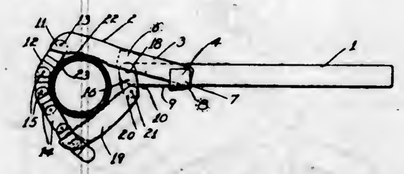
1. In a machine of the character described having a head, a straightening arbor journaled in the head, a worm on the arbor, cam shaft, and cutting off lever, forward and rear feed roll shafts, feed rolls mounted thereon, of a motor shaft, motor shaft gear, a worm gear shaft, a worm gear thereon meshing with the arbor gear, a gear on the latter shaft meshing with the motor shaft gear, a clutch shaft, a clutch plate and a clutch gear mounted thereon, a gear on the worm gear shaft meshing with the clutch gear, a pivoted lever connected with the clutch plate, a cam on the cam shaft controlling said lever, a gear and a sprocket wheel mounted on one of the rear feed roll shafts, a gear on the clutch shaft meshing with the feed roll shaft gear, a sprocket wheel mounted on one of the forward feed roll shafts, and driving means uniting the sprocket wheels to rotate all of the feed rolls.

1,384,101. SERVICE-BRACKET FOR TELEPHONE-RECEIVERS. SIDNEY C. SLADDEN, New York, N. Y. Filed July 31, 1919. Serial No. 314,455. 4 Claims. (Cl. 179—149.)



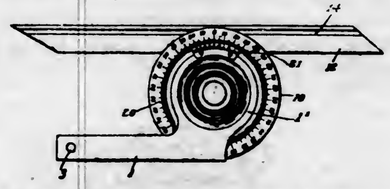
1. A support as characterised comprising, an arm for engaging a telephone receiver; means for pivotally mounting said arm so that the end thereof holding said receiver may be moved to dispose said receiver upon the receiver hook of the telephone associated therewith to establish the inactive condition of said telephone; and means for adjusting at will the active position of said arm.

1,384,102. STEAM COOKING VESSEL. JOHN T. SLOCOMB, Providence, R. I. Filed June 9, 1920. Serial No. 387,556. 3 Claims. (Cl. 53—1.)



2. In a cooking apparatus, a steam confined outer receptacle, a cover on the receptacle, a post on the cover provided with a seat, a resilient clamping bail on the receptacle supported in the seat, and an inner receptacle comprising a body centrally mounted in the outer receptacle and spaced therefrom, and provided with bayonet depressions upon its margin, a cover embracing the body and provided with bayonet shoulders engaging the depressions, and a bail on the second cover.

1,384,103. METHOD OF FLATTENING PIPE. HOWARD W. SMITH, Ellwood City, Pa. Filed Feb. 4, 1920. Serial No. 356,247. 4 Claims. (Cl. 153—54.)



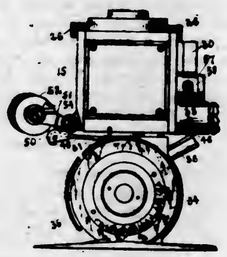
1. The method of scrapping defective pipe, consisting in forcing the pipe longitudinally between rolls with the end entering the rolls being of its original shape and diameter, and allowing the metal to spread laterally without restraint.

1,384,104. PIPE-WRENCH. JOHN G. SMITH, Falls Mills, Va. Filed Feb. 25, 1921. Serial No. 447,761. 1 Claim. (Cl. 81—66.)

A pipe wrench comprising a handle; a jaw forked at its rear end for straddling the forward end of the handle and pivoted thereto at a point back from the handle end; a loop connecting the rear ends of the forks across the under side of the handle so as to leave a space thereunder; a flat spring attached by one end to the forward end of the handle at the under side and having its free end disposed under said loop; another jaw; a knuckle pivotally connecting the rear end of the last named jaw with the forward end of the handle; and means for releasably locking together the forward ends of the two said jaws.

1,384,105. FINE-ADJUSTMENT BEVEL-PROTRACTOR AND THE LIKE. LEROY S. STARRETT and JOHN A. ADELL, Athol, Mass., assignors to The L. S. Starrett Company, Athol, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1920. Serial No. 363,690. 17 Claims. (Cl. 33—102.)

1. In an instrument of the class described, a frame, a turret revolubly mounted therein, an auxiliary adjusting means for said turret including an operating member permanently embodied in said instrument and positionable in an engaged or disengaged relation to said adjusting means.

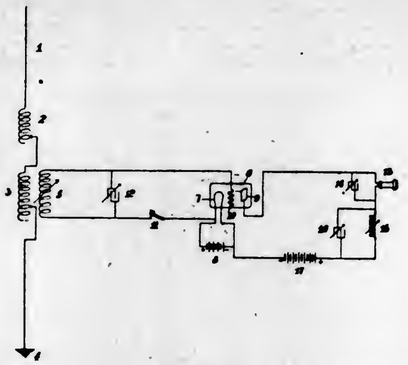


1,384,106. SIGN-HOLDER. JOSEPH TAUSSIG, Chicago, Ill. Filed Jan. 15, 1921. Serial No. 437,425. 1 Claim. (Cl. 40—146.)

A sign holder comprising a sheet metal base portion having an upwardly struck-up recessed part formed with a transverse slot near one edge of the base portion, a flat strip of metal comprising a standard and having a sign holding member secured to its upper end and having a right angle bent portion at its lower end adapted to be contained in said recessed part with the upright portion of the standard bearing against one edge of the slot, and a screw extending through the top of said recessed part

and threaded in the laterally bent part of the standard and acting to detachably secure together the base portion and standard, with the standard in engagement with said edge of the slot, said base portion being adapted to be folded up against said standard and held against disconnection therewith by said screw when inserted in said right angle bent portion of the standard.

1,384,107. CUTTING-MACHINE. EDWARD M. WARING, Brooklyn, N. Y. Filed May 26, 1916. Serial No. 100,015. 5 Claims. (Cl. 164—76.)



1. In a cloth cutting machine, the combination of a knife, a guard for the same, sharpening wheels for said knife, a member for moving said sharpening wheels into contact with the knife, a pivoted arm for actuating the said member and a guard operating lever pivoted on the said arm.

1,384,108. MEANS FOR GENERATING ELECTRICAL OSCILLATIONS. ROY A. WEAGANT, Roselle Park, N. J., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 9, 1914. Serial No. 830,584. 7 Claims. (Cl. 250—36.)

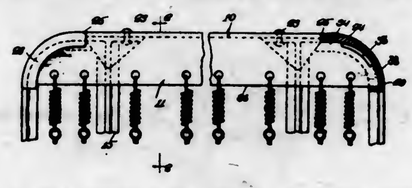
1. An oscillation generator system including a sealed evacuated vessel in which oscillations are generated, said vessel inclosing three electrodes, means for maintaining current through one of said electrodes, two circuits exterior to said vessel and connected each between two of said electrodes, one of said circuits contain-

ing an electrode not in the other circuit and including a source of continuous current causing the production of

oscillations in said vessel, and one of said circuits containing sufficient ohmic resistance to materially and favorably affect the production of oscillations.

1,384,109. WOODEN HEEL. WILLIAM ORLANDO WIPPERT and WALTER D. SPITZER, Marion, Ohio. Filed Oct. 22, 1919. Serial No. 332,397. 5 Claims. (Cl. 36—34.)

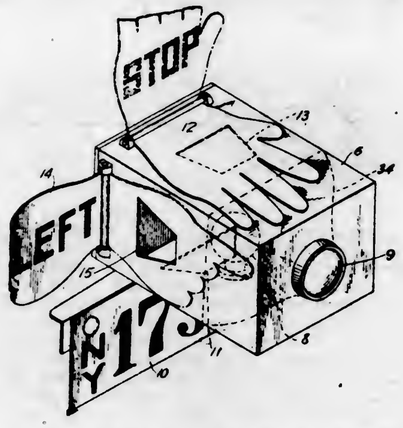
1. A heel having the major portion thereof made of wood and provided with an aperture extending through said wooden portion, a bottom wooden section attached to the heel, a post provided with an interiorly threaded end inserted in the aperture leaving the threaded end extending below the bottom of said wooden portion and means to attach a lift to the post and bottom section.



1,384,110. SURFACE-FINISHING OF BITUMINOUS-COMPOSITION ROOFING. JAMES C. WOODLEY, Evanston, Ill. Filed Feb. 24, 1915, Serial No. 10,239. Renewed Oct. 25, 1919. Serial No. 333,367. 7 Claims. (Cl. 154—2.)

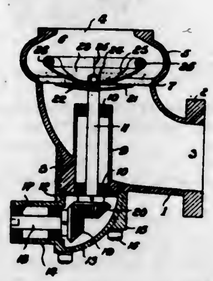
1. The method of manufacturing bituminous composition roofing which consists in forming the composition into sheets and pressing the surface of said sheets against a sheet of textile material while such surface is in a plastic condition to emboss on said roofing sheets a design in imitation of said textile material, said sheet of textile material being wet to prevent adhesion of the roofing sheets thereto.

3. The herein described process which comprises the step of forming upon the surface of a sheet of roofing material, integral raised portions predetermined as to size and location, said portions being less than one inch apart.



1,384,111. SPRING-BED-BOTTOM STRUCTURE. WILLIAM B. ANDERSON, Chicago, Ill., assignor to Haggard & Marcusson Co., Chicago, Ill. Filed Sept. 22, 1920. Serial No. 411,891. 2 Claims. (Cl. 5—63.)

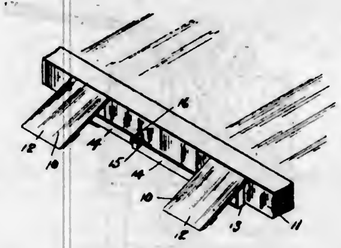
1. A bed bottom corner bracket comprising an arm having a socket at one end for holding a side rail, an outwardly curved vertical web at the upper end of the arm and against which the curved end of an end rail may abut,



and a ledge extending inwardly from the upper curved edge of the web for overlying and covering the joint with the end rail and strengthening the same.

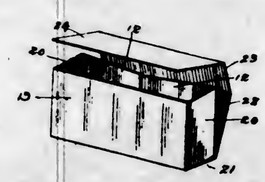
1,384,112. AUTO-SIGNAL. JOHN E. ANDREGG, Warren, Conn. Filed Jan. 24, 1921. Serial No. 439,534. 14 Claims. (Cl. 116—45.)

1. In a signal device, a box having light passages on the top and on the sides, signal members having characters thereon and hinged to said box and normally covering said passages, a lamp within said box adapted to illuminate said signal members, and means for selectively moving said signal members to uncover any one of said passages and permit the light to illuminate the characters on the moved signal member.



1,384,113. VALVE-GOVERNOR. ALBERT ARNOLD, Detroit, Mich. Filed Aug. 23, 1919. Serial No. 319,440. 7 Claims. (Cl. 137—140.)

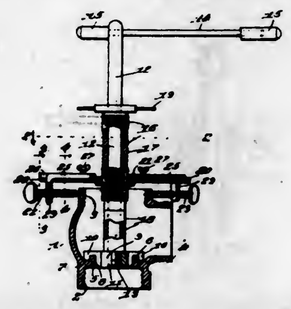
7. The combination of a conduit, and a rotary valve in said conduit and having its central portion in a horizontal



plane and its peripheral edges above said plane and adapted to be lowered toward said plane to restrict the passage between said conduit and said valve.

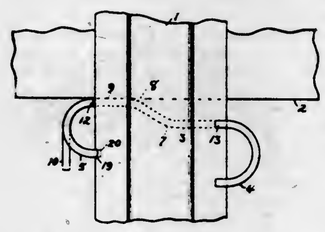
1,384,114. RUNWAY. LINCOLN R. ARNOLD, Providence, R. I. Filed Nov. 5, 1920. Serial No. 422,020. 4 Claims. (Cl. 94—31.)

1. A runway comprising a pair of spaced apart short inclined bridge members each having a rest block at one end for supporting said end the height of a curbstone, and a pair of foldable spacing arms or bars connecting said members whereby said members may be positioned adjacent each other.



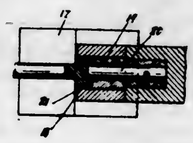
1,384,115. PACKAGE-WRAPPER. DANIEL L. BAXTER, Pawtucket, R. I. Filed Apr. 30, 1920. Serial No. 377,825. 1 Claim. (Cl. 229—16.)

As a new article of manufacture a protecting wrapper of bendable sheet material comprising a front wall having marginal wings folded back to form end walls, their extremities extending a substantial distance toward each other across the back of the wrapper and bound between the rear wall of the wrapper and the package contained within it, the lower edge of said front wall having an integral foldable member extending rearwardly forming the bottom, then upwardly forming the rear wall, then forwardly forming the top of the wrapper, the front edge of the top portion being provided with a flap having a depth substantially one-half the height of said front wall and adapted to be tucked inside of said front wall to be bound between said wall and the package within to securely lock the wrapper about the package, the extremity of said flap being formed without laterally-extending tabs.



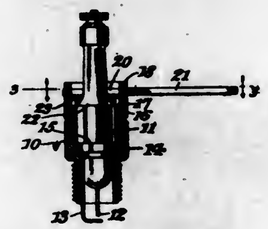
1,384,116. COMBINED FORCE-FEED AND OPERATING DEVICE. ISAAC J. BLAIR, Spokane, Wash. Filed June 1, 1920. Serial No. 385,856. 5 Claims. (Cl. 90—12.5.)

1. In a combined forced feed and operating device for valve seat dressing tools, an operating spindle having a dressing tool for engagement with the seat of the valve, a forced feed sleeve rotatably telescoping said spindle and engaging said tool, and means radially adjustable against the exterior of valves of different sizes and having threaded engagement with the exterior of said sleeve to steady



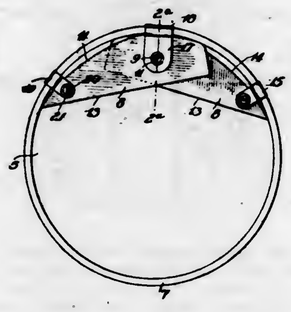
and center the latter and said spindle whereby said sleeve may be rotated to force said tool gradually against said seat as said spindle is rotated to dress said seat.

1,384,117. RAILWAY-RAIL ANCHOR. ROLANDIS A. BLAIR, Fort Wayne, Ind., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 4, 1919, Serial No. 321,687. Renewed May 31, 1921. Serial No. 473,778. 7 Claims. (Cl. 238—330.)



1. In a rail anchor, a spring plate formed with back turned ends and an off-set formed between its ends, and having a recess between its ends for the reception of the foot of the rail, there being a notch formed in the plate at one end of the recess and also in the extremity of each of the back turned ends.

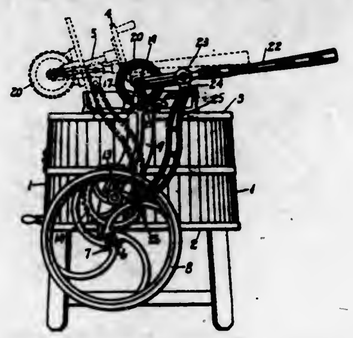
1,384,118. MANUFACTURE OF NUTS AND SIMILAR ARTICLES. JOHN R. BLAKESLEE, Cleveland, Ohio, assignor to The Ajax Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 23, 1919. Serial No. 312,722. 3 Claims. (Cl. 10—86.)



1. A method of making nuts and the like, which consists in upsetting the end of such stock bar into a nut of the desired size and shape with a flash of metal at the base thereof, and then cutting off such flash and simultaneously punching centrally through such nut and cutting the same from such stock bar.

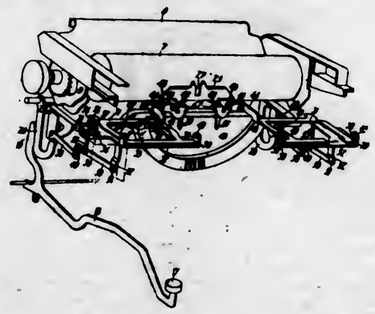
1,384,119. SPARK-PLUG. WILLIAM BOHLERMS, New York, N. Y. Filed Jan. 26, 1917. Serial No. 144,612. 14 Claims. (Cl. 123—169.)

1. A spark plug comprising a bushing, a removable core for the bushing, a hollow rotatable lock-nut screw-threaded to the bushing, in combination with a member adapted to rotate the same, said member having a bifurcated portion for straddling the upper portion of the core and adapted to apply pressure to the latter, and means for equalizing the pressure upon said core.



1,384,120. ATTACHMENT FOR CONTAINERS. CHAUNCEY CRAFT, Rochester, N. Y. Filed Aug. 6, 1919. Serial No. 315,750. 3 Claims. (Cl. 220—90.)

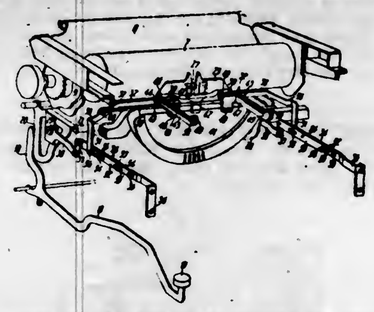
1. The combination with a container having an open top, of an attachment therefor comprising a plurality of substantially plate-like members movably connected with one another to permit the conformation thereof to the interior wall of containers of different dimensions, and securing means arranged to engage over the top edges of the container for removably attaching said members to the container adjacent its top in position for removing excess material from a dispensing implement or for supporting the same.



1,384,121. OPERATING DEVICE FOR WASHING-MACHINES. LOUIS E. DIETZ, Cincinnati, Ohio. Filed Jan. 24, 1916. Serial No. 73,870. 2 Claims. (Cl. 74—7.)

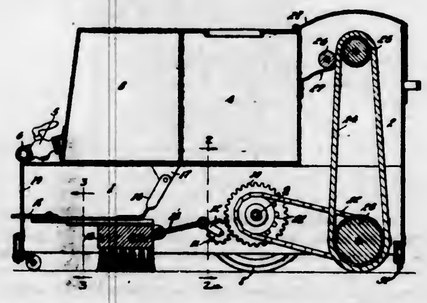
2. Operating mechanism for washing machines comprising a substantially vertical bracket provided at its lower end with a horizontal shaft, a small spur gear and a fly wheel mounted on said shaft and jointly movable, a stud shaft carried by the bracket, a large spur gear mounted on the stub shaft and meshing with the small spur gear, a hinged support, an oscillating shaft carried by the hinged support and provided with an arm which is fixed to the oscillating shaft and extends in a direction opposite to the pivotal point of the hinged support, a pitman pivotally connected to said arm and to said large spur gear, a dasher shaft operatively connected with the oscillating shaft, a bracket carried by the hinged support and supporting the oscillating shaft, said last named

bracket being provided with a projecting lug, the substantially vertical bracket having a recess in which the lug normally rests, and a weighted lever pivotally connected to the substantially vertical bracket and engaging said projecting lug.



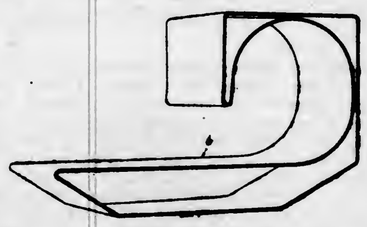
1,384,122. TYPEWRITING-MACHINE. JOHN C. DOANE, East Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1918. Serial No. 265,325. 21 Claims. (Cl. 197—190.)

1. The combination with a typewriting machine having a segment and a pair of ribbon-supporting devices one at each side of the segment, of a platen, a shift-frame for the platen, a scale in front of said platen, a support for each end of said scale pivoted to the corresponding ribbon-supporting device, and a linkage between said shift-frame and each of the scale-supports for shifting said scale with said platen.



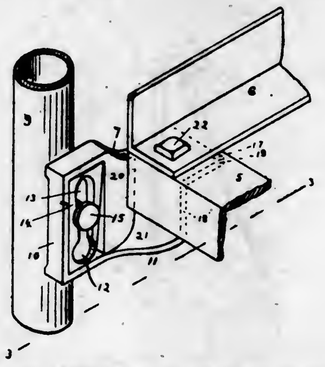
1,384,123. TYPEWRITING-MACHINE. JOHN C. DOANE, East Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1918. Serial No. 266,200. 23 Claims. (Cl. 199—190.)

1. In a typewriting machine, the combination with a platen and a shift-frame therefor, of a type-guide, a scale extending across the type-guide between the platen and the type-guide and having depending arms, linkages between said shift-frame and said arms for shifting said scale correspondingly when said platen is shifted, and a



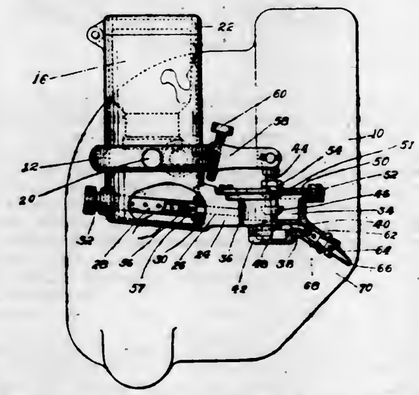
link pivoted to the frame of the machine and connected to the scale for guiding the scale relatively to the platen.

1,384,124. FLOOR SCRUBBING AND MOPPING MACHINE. WICENTY DROMZE, Cleveland, Ohio, assignor of one-half to Eugene Borowski, Cleveland, Ohio. Filed Dec. 12, 1919. Serial No. 344,334. 1 Claim. (Cl. 15—14.)



In a scrubbing machine, the combination of a wheeled casing having a slot in the front wall thereof, a guide in the casing, having a handle at its front end projecting through said slot, whereby said guide may be swung up or down, means to hold said guide in adjusted position, links pivoted to the side walls of the casing and secured to the rear end of said guide, a brush reciprocating in said guide, and means to reciprocate the brush.

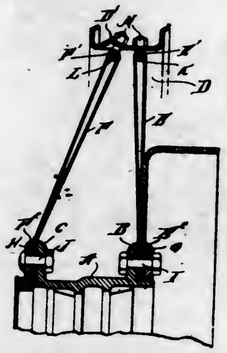
1,384,125. CONVEYER-APRON. GLEN M. DYE, Minneapolis, Minn., assignor to Photographic Appliances Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 12, 1918. Serial No. 257,850. 1 Claim. (Cl. 34—1.)



A drying conveyer apron comprising a facing and a backing, said facing being a fabric that will readily absorb moisture, and said backing being made up of vegetable fiber stems laid in close parallel arrangement transversely of the apron so as to stiffen said apron transversely, and warp threads connecting said fiber stems and extended longitudinally of the apron so as to give the apron great flexibility in that direction, the said facing and backing being connected so that they act as a single unit.

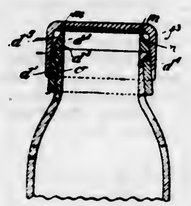
1,384,126. CORNER-FASTENING FOR BEDSTEADS. WILLIAM B. FOSTER, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a Corporation. Filed Mar. 22, 1920. Serial No. 367,747. 1 Claim. (Cl. 5—55.)

In a corner fastening for bedsteads, the combination of a corner post, a corner block having a post engaging portion adapted to be detachably secured to said post and having a vertical bracket portion extending inwardly and laterally of the bedstead with a horizontal supporting web and a vertical supporting web adjacent thereto and both at right angles to the bracket portion, an angle bar of the mattress-supporting frame having its horizontal web resting upon the horizontal web of the bracket portion and having its vertical web against the said vertical web of the bracket portion and with its end butted against the bracket portion, the second member of the mattress-supporting frame placed on the horizontal web of said angle bar and over the horizontal web of the bracket portion and means extending through said horizontal web of the bracket portion and both frame members for permanently fastening them together.



1,384,127. DISPENSING DEVICE. FREDERICK M. FURBER, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 7, 1917. Serial No. 166,939. 28 Claims. (Cl. 91—43.)

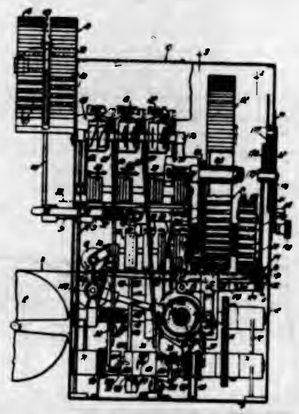
1. A dispensing device comprising a fluid receptacle provided with an outlet passage, and relatively movable



manually operable means associated with said passage for closing the same against delivery and for positively expelling the liquid from the outlet.

1,384,128. SHEET-METAL WHEEL. GEORGE A. GAER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 30, 1918. Serial No. 256,180. 7 Claims. (Cl. 301—58.)

1. A wheel comprising a felly, a hub, having front and rear flanges, a series of spokes fastened to the front flanges, a series of spokes fastened to the rear flange, each spoke having its ends fastened to its respective flange, the intermediate portion of each spoke being connected to the felly.



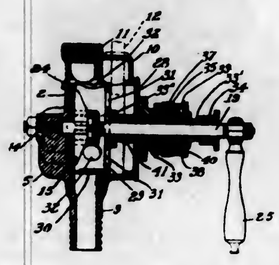
1,384,129. MILK-BOTTLE. FRANK GRANT, Westfield, Mass. Filed Jan. 17, 1916, Serial No. 72,410. Renewed Apr. 19, 1919. Serial No. 291,411. 2 Claims. (Cl. 215—38.)

1. A bottle closure consisting of a bottle having a neck provided with an external shoulder, a plastic collar molded on the neck and having an extension fitting over the shoulder, said extension having a beveled outer surface providing a sharp terminal edge for said collar, the outer surface of said collar being tapered, the narrower end of said tapered collar being uppermost, a cap having a pendant flange adapted to snugly fit the tapered outer surface of said collar, the top of said cap having a circular groove registering with the sharp terminal edge of said collar, and a yielding packing ring disposed in said groove and adapted to be compressed by said sharp terminal edge, the cap extending below and inclosing said shoulder and being frictionally held in place.

2. A bottle closure comprising a bottle having a relatively sharp edge extending from the neck thereof, a cap having a pendant flange adapted to embrace the edge and neck and provided with a circular groove in its top portion, and a yielding packing ring in said groove to engage the sharp edge of said neck, the upper portion of the neck being externally beveled, whereby an air space is provided between said beveled neck portion and the pendant flange of the cap, adapted to permit of a partial vacuum against the joint formed by said sharp edge and the gasket, the cap extending below and inclosing said shoulder and being frictionally held in place.

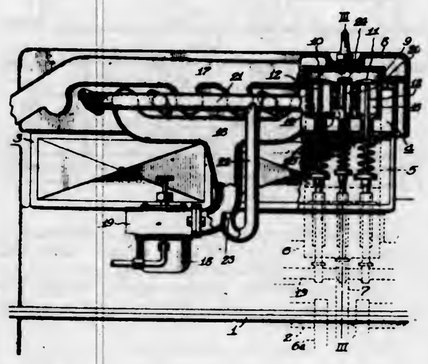
1,384,130. FARE-RECORDING AND TRANSFER-ISSUING MACHINE. HERMAN G. HALVERSON, Los Angeles, Calif. Filed Mar. 12, 1917. Serial No. 154,130. 11 Claims. (Cl. 235—31.)

5. In combination, transfer point printing mechanism capable of being set to print different transfer points, time printing mechanism capable of being set to print different times, and interconnective means whereby the setting of one mechanism effects automatically the setting of the other.



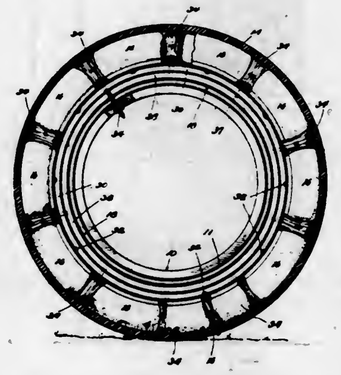
1,384,131. PISTON-RING. OSCAR W. HANSON, Salina, Kans., assignor of one-half to Joseph J. Sullivan, Salina, Kans. Filed Dec. 2, 1919. Serial No. 342,002. 2 Claims. (Cl. 74—109.)

1. A composite piston packing comprising a pair of coaxially disposed resilient ring sections of equal minor and major diameter and initially of a combined cross-section to loosely engage the piston groove in which they are to fit, one of said ring sections being of materially greater cross-sectional area than the other, the abutting faces of said ring sections extending on a diagonal line between their inner and outer peripheries, said diagonal line forming an angle of less than 30° with the end faces of the ring members, the outer periphery of the narrower ring section being reduced to a comparatively thin edge arranged for wearing contact with the cylinder wall, whereby, in the wearing of said ring sections and the cylinder wall and the resulting loosening of the packing in the piston groove, the ring sections will spring outwardly



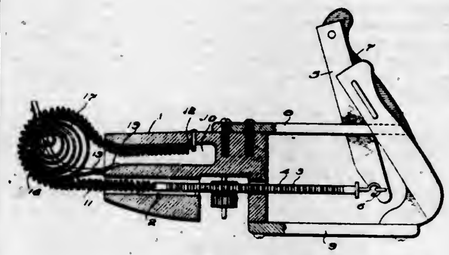
and the thin edge of the narrower ring section will engage and be rapidly worn away by the cylinder wall for a rapid seating action and adjustment of said narrower ring section to force the broader ring section outwardly and bind both ring sections against the walls of the piston groove.

1,384,132. MIXING-VALVE. SVEN N. HOLM, Dorchester, Mass. Filed July 5, 1919. Serial No. 308,784. 11 Claims. (Cl. 277—69.)



1. In a mixing fixture, a mixing chamber having independent pairs of inlet and discharge openings, and independent valves mounted coaxially within said mixing chamber and controlling said openings.

1,384,133. INTERNAL-COMBUSTION ENGINE. GEORGE D. HOWE, Davison, Mich. Filed Jan. 27, 1920. Serial No. 354,496. 1 Claim. (Cl. 123—119.)

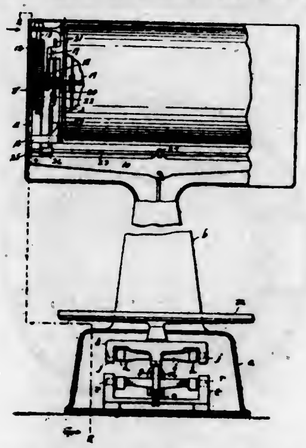


In an internal combustion engine, the combination with cylinders, an intake manifold therefor, and intake and exhaust valves controlling the admission of fuel to said cylinders from said intake manifold and the exhaust of burned gases from said cylinders, of an auxiliary manifold establishing communication between said cylinders and said intake manifold, said engine cylinders being proportioned to receive a greater quantity of fuel than usual so that the excess quantity of fuel may be heated and expelled from the cylinders to the intake manifold, and means controlling the expellation of the excessive fuel from said cylinders.

1,384,134. PNEUMATIC TIRE. NORMAN JACKSON, Washington, D. C. Filed Oct. 9, 1920. Serial No. 415,794. 9 Claims. (Cl. 152—22.)

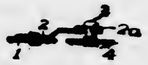
1. A tire comprising main sections, emergency sections arranged in juxtaposition to the main sections, and a supply tube having a chamber communicating with said main sections and a chamber communicating with said emergency sections.

1,384,135. ACTUATING MECHANISM. DEMETRIOS KARAMANOUS, Donora, Pa. Original application filed Oct. 25, 1919, Serial No. 333,270. Divided and this application filed May 28, 1920. Serial No. 385,028. 4 Claims. (Cl. 185—9.)



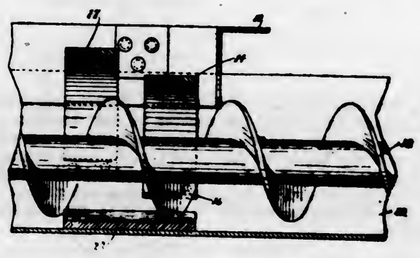
1. In a device of the type described, a reciprocable member, means for moving the member in one direction, a guide, a suitably supported clockwork spring having one end operating within the guide, and a coiled tension spring having one end fixed and extending about said clockwork spring, the free end of said tension spring being secured to said reciprocable member to move it in the opposite direction.

1,384,136. SCALE. BERT W. KING, Detroit, Mich. Filed Sept. 15, 1919. Serial No. 323,921. 8 Claims. (Cl. 265—69.)



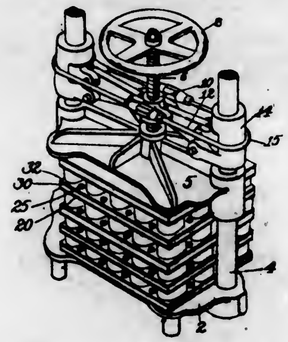
1. In a weighing scale, the combination of parallel levers pivotally supported at one end, a member connecting the ends of the levers, an actuating lever, a link or actuator

between one of the parallel levers and the actuating lever, and means on one of the latter two levers for shifting the



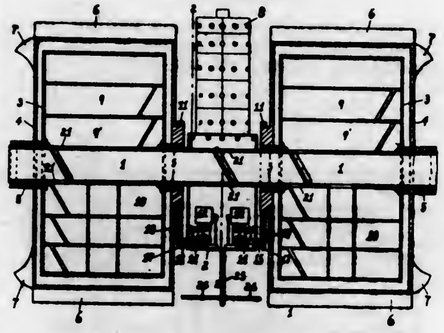
point of contact between the link and the lever in obedience to thermal changes.

1,384,137. CORSET. AUGUSTE J. LECOUTRE, Worcester, Mass., assignor to Royal Worcester Corset Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1919. Serial No. 339,139. 4 Claims. (Cl. 2—74.)



3. In a fastening for corsets and the like, a stud having a head and a base, said head tapering toward said base, and an eyelet member providing a keyhole slot having an enlarged portion to admit said head of said stud, and a narrowed portion too narrow to permit passage of the head of said stud therethrough, said eyelet member of greater effective thickness adjacent the narrowed portion of said slot than adjacent the enlarged portion thereof.

1,384,138. FUEL CONVEYING AND CRUSHING MECHANISM. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Nov. 25, 1919. Serial No. 340,496. 9 Claims. (Cl. 83—52.)

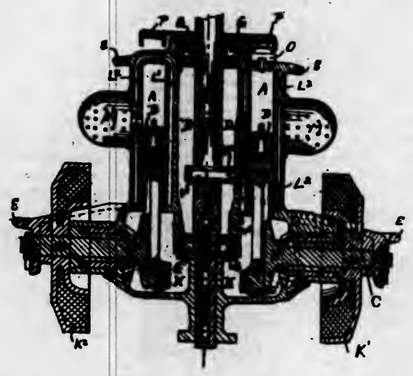


1. In a fuel conveyer and crusher, in combination, a conduit, fuel advancing means within the conduit, and a crushing abutment arching over the advancing means and co-acting therewith, such abutment being in the form of a plate having its inner face parallel with the axis of the conduit.

1,384,139. APPARATUS FOR AND METHOD OF TREATING HEELS. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1918. Serial No. 245,705. 17 Claims. (Cl. 12—48.)

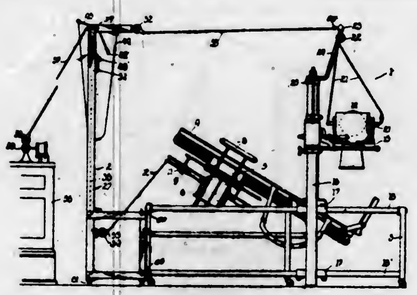
1. Apparatus for treating heels comprising, in combination, a press, and a heel-carrying board for insertion therein, said board having a heel engaging face constructed and arranged for equalizing pressure on heels of varying height.

1,384,140. SHIP. BYNUM B. MCCROSKY, Oakland, Calif. Filed Nov. 11, 1919. Serial No. 337,246. 7 Claims. (Cl. 114—58.)



1. A ship including a transverse shaft, an intermediate compartment mounted on said shaft, paddle wheels journaled on the ends of said shaft, power means in the lower part of said intermediate compartment for driving said paddle wheels, and a passenger cabin mounted on said intermediate compartment.

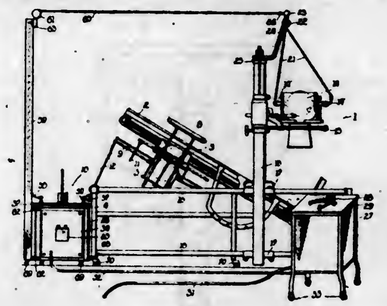
1,384,141. AMMONIA-SODA PROCESS. JAMES H. MACMAHON, Saltville, Va., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Aug. 18, 1920. Serial No. 404,403. 4 Claims. (Cl. 23—22.)



3. The improvement in the ammonia-soda process, which comprises separating water gas into hydrogen and carbon monoxid, producing synthetic ammonia by combining the hydrogen with netrogen, absorbing the ammonia in a brine solution adapted for use in the ammonia-soda process, burning the carbon monoxid from the water gas with a combustion supporting gas rich in oxygen, and thereby forming a gaseous mixture rich in carbon dioxid, and supplying the resulting gas to the carbonating towers of the ammonia-soda process.

1,384,142. WHEEL HAVING SELF-CONTAINED MOTOR. DALE MARSHALL, Cheltenham, England. Filed Nov. 7, 1917, Serial No. 200,852. Renewed June 21, 1920. Serial No. 390,669. 4 Claims. (Cl. 123—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In wheels containing motors which use a piston within a cylinder as part of their construction, the combination of a wheel hub formed to serve as a power cylinder, of collar-shape with peripheral flanges and so constructed as to centrally accommodate the carrying shaft or axle about which it is intended to operate, and a piston of like shape within the said cylinder moving lengthwise to the carrying shaft connected so as to give rotary motion to one of the co-acting members.

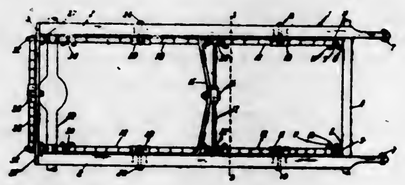


1,384,143. X-RAY APPARATUS. WILLIAM MEYER, Chicago, Ill. Filed May 20, 1918. Serial No. 237,213. 25 Claims. (Cl. 250—34.)

21. In combination, a frame, a table top carried by said frame, a tube-stand comprising an upright column adjustable along the frame independently of said table top, a carriage adjustable along the column, a tube supporting arm extending laterally from the carriage and above the table top, a tube adjustable along said arm, said tube having a terminal, a relatively stationary bracket extending from the column above the arm, a terminal mounted in insulated relation on said bracket, and an extensible conductor connecting the two terminals.

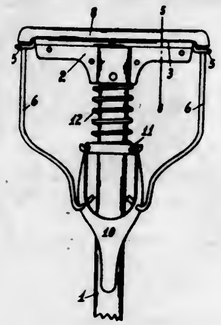
1,384,144. X-RAY APPARATUS. WILLIAM MEYER, Chicago, Ill. Filed May 31, 1918. Serial No. 237,379. 26 Claims. (Cl. 250—34.)

1. In combination, an independent X-ray table having an X-ray tube for the same, an independent generator cabinet for supplying electrical energy for an X-ray tube, means for joining said table and said cabinet into a



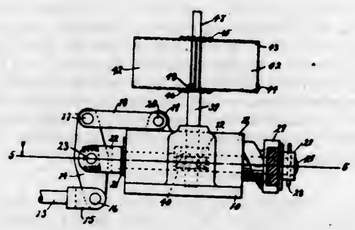
single movable unit, and a plurality of bearing members for facilitating movement of the table and cabinet over the supporting surface.

1,384,145. SHELL MAGAZINE AND FEEDER. BASIL MONLON, Palms, Calif., assignor of one-half to Harold David Coles, Palms, Calif. Filed May 27, 1920. Serial No. 384,752. 4 Claims. (Cl. 224—18.)



1. A cartridge holder, comprising a cartridge carrying magazine with pockets for carrying cartridges in parallel relation and with their heads in a common plane; a retaining member arranged over the magazine and covering the cartridges except at a withdrawing location; the cover member having a part to successively engage under the rims of the cartridges; and means for advancing the magazine to successively present the cartridges to the engaging means.

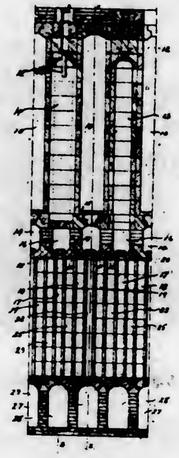
1,384,146. SPRING FOR MOTOR-VEHICLES. DONN H. MONTGOMERY, Denver, Colo. Filed May 18, 1920. Serial No. 382,420. 10 Claims. (Cl. 267—40.)



3. The combination with a vehicle frame and its associated front and rear axles, of springs pivotally connected to the sides of the frame and longitudinally thereof, a spring pivotally supported transversely of the frame, means pivotally supported by the rear axle for pivotally connecting one set of the side springs and the transverse spring, means carried by the front axles for pivotally connecting the other set of side springs to the frame, and means for pivotally connecting the adjacent ends of the side springs.

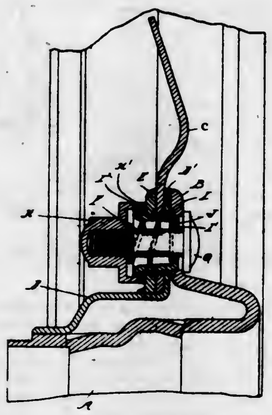
1,384,147. MOP-HEAD. JAMES W. MORRIS and JACOB L. RUDDICK, Oakland, Calif. Filed Apr. 14, 1920. Serial No. 373,820. 1 Claim. (Cl. 15—56.)

A mop holder including a handle, a rigid holding member secured on the end of said handle formed with a transverse tubular part, a wire extending through said tubular part, the ends of said wire being bent into eyes beyond the ends of said tubular part, a wire extending parallel and outside said holding member, said wire being bent into arms extending through said eyes, a V-shaped clamping member mounted on said outside wire, and means connected to the ends of said arms to draw said V-shaped clamping member upon said tubular part.



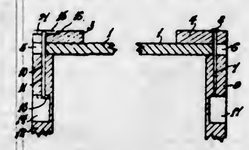
1,384,148. SWITCH STAND AND TARGET. DANIEL C. MULVIHILL, Hannibal, Mo. Filed Dec. 20, 1920. Serial No. 432,084. 11 Claims. (Cl. 246—405.)

1. Switch operating means comprising, in combination, a switch rod, a switch stand, a reciprocating member mounted on the stand, means to transmit motion of said member to said rod increased in amplitude, and means to vary the amount of such increase.



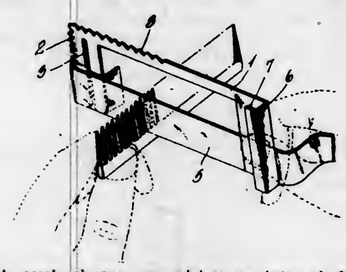
1,384,149. OVEN-HEATING SYSTEM. EMILE PIRON, New York, N. Y. Filed May 8, 1920. Serial No. 379,771. 2 Claims. (Cl. 202—9.)

1. A horizontal oven, a series of vertical combustion chambers adjacent the side wall of the oven, a burner at the upper end of each combustion chamber, a series of vertical air ducts adjacent the side wall of the oven, each air duct being located between a pair of the combustion chambers and communicating with the upper end of one of the combustion chambers, a horizontal waste gas flue extending beneath the floor of the oven and communicating with the lower ends of the combustion chambers, a horizontal air duct beneath the lower ends of the combustion chambers and communicating with the lower ends of the vertical air ducts, and a recuperator located beneath said horizontal flues, and comprising a plurality of vertical ducts, each relatively high and narrow in cross section, a plurality of alternate ducts of said recuperator crosswise of the axis of the oven being connected to said



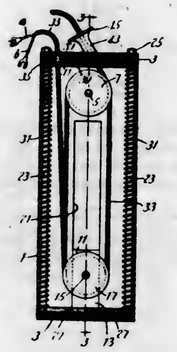
horizontal air duct and the remaining ducts of said recuperator being connected to said horizontal waste gas flue.

1,384,150. SECURING DEVICE FOR DEMOUNTABLE WHEELS. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed June 27, 1919. Serial No. 307,141. 7 Claims. (Cl. 301—9.)



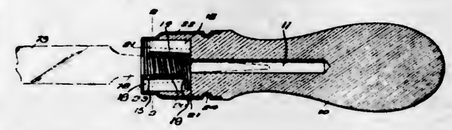
7. In a wheel, the combination with a hub having an outwardly extending annular flange of a wheel body mounted upon said hub and abutting against said flange, said flange and wheel body having registering tapering apertures, a tapering sleeve engaging in said apertures, a supporting element for said sleeve extending freely therethrough and a spring coiled upon the last named element within said sleeve, and pressing the latter into said apertures.

1,384,151. FASTENER FOR LIDS OF CASES. RICHARD HENRY ROBERTS, Henderson, and PERCY NICHOL KINGSWELL, Epsom, Auckland, New Zealand. Filed Jan. 4, 1919. Serial No. 269,678. 3 Claims. (Cl. 217—56.)



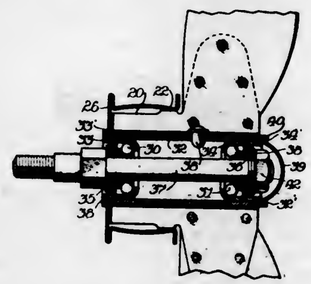
1. A fastener for lids of cases, comprising a headed nail, projecting from one end of a case and engaged by a notch made in one end of a lid, and a pin turnable in the other end of the case and having a right angled member which is engaged by a notch in the other end of the lid and when the pin is turnable toward the locked position bears down upon the lid with increasing pressure as it is further turned toward the locked position.

1,384,152. COMB-CLEANER. MATTHEW J. ROONEY, Bloomfield, N. J. Filed Jan. 21, 1921. Serial No. 438,897. 4 Claims. (Cl. 132—27.)



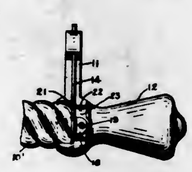
4. A comb cleaner comprising an integral frame, a toothed gripping portion at one end of said frame, said gripping portion being provided with a slot parallel with and adjacent thereto, the ends of said slot being flared to more readily receive the cleaning medium, and an angularly disposed handle portion at the opposite end of said frame.

1,384,153. TELEPHONE-CORD-TAKE-UP DEVICE. DELMAR G. ROOS, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Jan. 12, 1916. Serial No. 71,783. 3 Claims. (Cl. 267—70.)



1. A device for automatically withdrawing and compactly storing the slack of a telephone cord having a free end comprising a casing comprising sides, one or more pulleys mounted adjacent an end of said casing, a pulley block engaging the sides of said casing and arranged to slide thereon, a telephone cord trained over the pulleys and springs to space said block from the other pulleys.

1,384,154. TOOL-HANDLE. HEYMAN ROSENBERG, New York, N. Y. Filed Dec. 15, 1919. Serial No. 344,770. 8 Claims. (Cl. 279—99.)



1. A handle for tools provided with an elastic thread cutting element formed of coiled wire and adapted to receive and cut threads in the end of a tool.

1,384,155. FAN. RAGNAR A. ROSSOE, Chicago, Ill., assignor to U. S. Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1918. Serial No. 209,857. 13 Claims. (Cl. 170—173.)

1. In a fan, a plurality of sections, each comprising a segmental hub portion lying in a substantially circumferential plane, an integral blade portion lying in a radial plane, an attaching portion, the attaching portions of the sections being connected to the respective blade portions of adjacent sections.

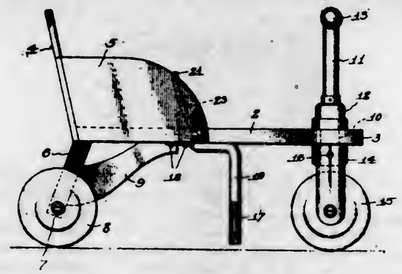
1,384,156. CASKET-HANDLE. EDWARD R. SARGENT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed May 14, 1920. Serial No. 381,319. 12 Claims. (Cl. 16—103.)

4. In a casket handle, a handle bar, a supporting arm therefor, a brace for said arm provided with an opening for the reception of said bar, and means on said brace adapting it for use in reversed positions with the arm at either end of said bar.

1,384,157. STOVE OR RANGE. FRED J. SASS, Peoria, Ill., assignor to Culter & Proctor Stove Co., Peoria, Ill., a Corporation of Illinois. Filed Sept. 7, 1918. Serial No. 253,072. 7 Claims. (Cl. 126—19.)

1. An oven including an outer casing and an inner receptacle having walled rear ends in juxtaposition, open front ends, and spaced relatively to each other to provide a flue surrounding the sides and top and bottom of said receptacle, the walls constituting the inner receptacle and outer casing, at the front of the oven, being formed respectively, with flanges bent toward each other, an approximately flat rectangular plate spanning the open end of said flue and closing the same and connected to the flanges of said inner receptacle and outer casing, a thimble connected to said plate and surrounding the opening leading into the inner receptacle, and a hinged door to close said opening.

1,384,158. PISTON-RING. MICHAEL B. SETTER, Chicago, Ill. Filed Aug. 30, 1918. Serial No. 252,066. 3 Claims. (Cl. 74—109.)



1. The combination, in a piston ring of inner and outer end portions which are curved at their respective ends (3 and 13) and which are shaped to overlap one upon the other, so that two lap joints are formed in planes at an angle to each other, with one lap joint substantially longer than the other, the shorter lap joint being disposed in a plane between the two flat sides of the ring and terminating in a butt joint between the two curved ends (3 and 13), and an inwardly projecting portion (18) which is rigid with said outer end portion and which projects inwardly beyond the inner surface of said outer end portion.

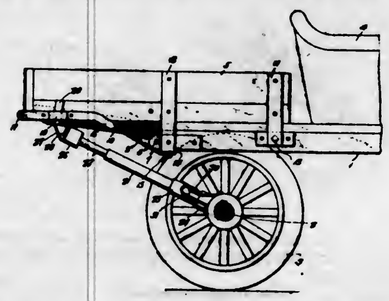
1,384,159. COCK. ABRAHAM W. SCHENKER, Brooklyn, N. Y. Filed Nov. 3, 1920. Serial No. 421,524. 5 Claims. (Cl. 251—152.)

1. In a device of the character described, a rotary plug, a casing in which the plug rotates, a washer secured to the plug and provided with a stop on its inner face extending parallel to the axis of the plug and fixed shoulders on the inner side of the casing for coöperating with the said stop.

1,384,160. CHILD'S CART. FRANCIS J. SCHROEDER, Detroit, Mich. Filed Nov. 3, 1919. Serial No. 335,350. 1 Claim. (Cl. 208—165.)

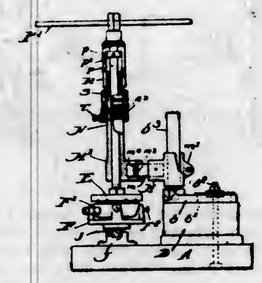
In a child's three wheel cart having a seat board, two wheels at the rear end thereof, and a steering wheel at the forward end of said board; an axle member for the two rear wheels said member being disposed at an angle so as to maintain the two rear wheels in a plane behind the plane of the rear edge of the seat board to prevent rearward tilting thereof by a child on the seat board, and angular legs having flattened ends secured to the lower face of the seat board at the side edges and forward end thereof and having lower ends well outside of the planes of travel by the rear wheels to prevent side tilting of the cart.

1,384,161. LARDING-NEEDLE. BABETTE SCHWINZER, Harrison, N. J. Filed Nov. 5, 1920. Serial No. 421,998. 5 Claims. (Cl. 99—2.)



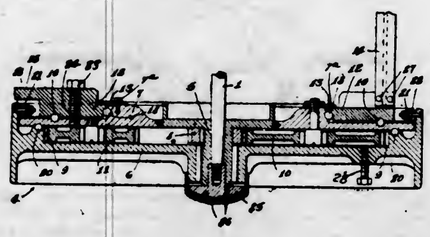
1. A larding needle comprising a bar tapered to a point at one end, a fixed integral jaw at the other, a complemental jaw pivoted to said bar, and teeth in both of said jaws, said jaws when in contact constituting a head.

1,384,162. DETACHABLE TRUCK-BODY FOR AUTOMOBILES. JOHN KNOX SHANNON, Marshall, Mo. Filed Feb. 14, 1920. Serial No. 358,695. 8 Claims. (Cl. 296—37.)



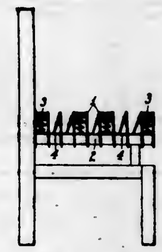
1. A detachable truck body comprising a box body, means for detachably connecting said body to the frame of a motor vehicle with the box body extending beyond the frame, a bottom having a section closing the rear end of the box body, means for hinging the front end of the section to the frame, resilient supports arranged between

the rear end of the section and the rear axle housing, means for guiding the section at its rear end with respect to the box body in its vertical movement, said means



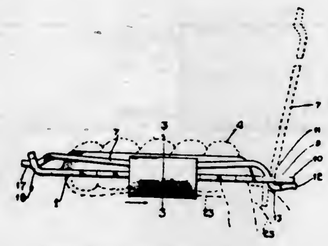
comprising arms on the section extending upwardly alongside the body, and keepers on the body with which the arms engage.

1,384,163. MACHINE FOR DRESSING FITTED BEARINGS AND THE LIKE. FRANK L. SMITH and CHARLES R. HAWKINS, Chicago, Ill. Filed Nov. 13, 1919. Serial No. 337,849. 13 Claims. (Cl. 90—16.)



1. In a machine for the purpose indicated, a tool-carrying member comprising a base standard of which the two parts are relatively adjustable longitudinally, and a clamping bolt for securing them in their relative adjustment; said bolt extending vertically through both members and serving to secure the base standard bodily to the work or its support.

1,384,164. TRACTOR ATTACHMENT FOR MOTOR-VEHICLES. LEO ALMONT SPRAGUE, Henderson, N. Y. Filed Dec. 17, 1917. Serial No. 207,590. 8 Claims. (Cl. 74—7.)

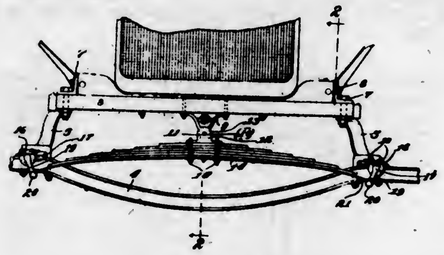


1. In a tractor wheel unit of the class described, the combination of a hub, a driving gear mounted thereon, a wheel loosely mounted on the hub and formed with an internal annular gear opposed to the driving gear, a gear carrier concentric with the hub, and trains of gears mounted on the carrier and including gears meshing with the driving gear and other gears meshing with the internal gear at points spaced apart, the trains having gears in common, substantially as and for the purpose described.

1,384,165. ARM-FORM FOR FURNITURE. GEORGE STACKHOUSE, Berkeley, Calif., assignor to Pacific Spring Bed Co., Berkeley, Calif., a Corporation of California. Filed July 19, 1920. Serial No. 397,447. 2 Claims. (Cl. 155—198.)

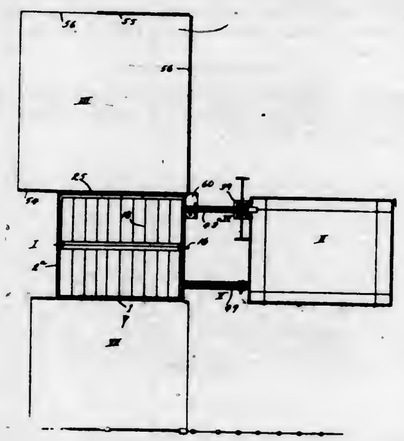
1. The combination with a rigid arm member, of a spirally formed form surrounding said member, and a plurality of springs spaced between the arm member and the form.

1,384,166. HAIR-WAVER. BERNARD A. STERLING, Chicago, Ill. Filed Oct. 20, 1919. Serial No. 331,944. 11 Claims. (Cl. 132—41.)



1. In a hair waver adapted for waving hair on the head of the user, comprising a flat base bar, a longitudinally extending thin central rib on its upper face, a longitudinally slotted member hinged at one end to the base member and adapted to straddle the rib, means for securing the free end of the slotted member to the free end of the base member, and a split clamping member adapted to surround the base and the side bars of the slotted member and hold the two members tightly clamped upon the strand of hair to be waved.

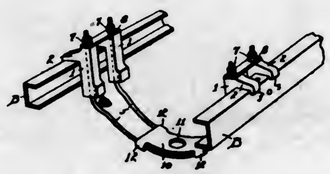
1,384,167. SPRING SUSPENSION FOR AUTOMOBILES. JOSEPH SUNNEN, Mexico, Mo. Filed Jan. 26, 1920. Serial No. 353,914. 2 Claims. (Cl. 261—44.)



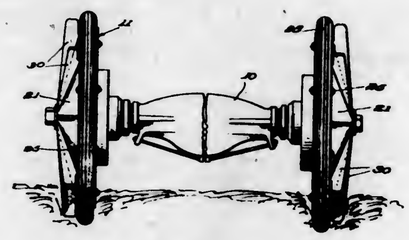
1. An auxiliary spring for motor vehicles comprising in combination with the chassis and front axle thereof, of a semi-elliptical spring, U-shaped members carried by the axle, U-shaped members swivelly mounted therein, a semi-elliptic spring having its ends secured within the second U-shaped members and carried thereby, a tube carried by the

chassis, a bracket carried by said tube, a second bracket swivelly secured to the last mentioned bracket and adapted

to hold and support said spring, said spring being so arranged as to allow tilting and impart the road shock to both ends.



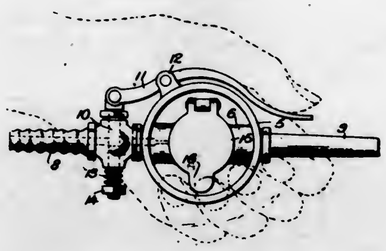
1,384,168. DISMOUNTABLE AND PORTABLE PLANT FOR DIPPING SHEEP AND THE LIKE. CARLOS BERNARDO SVENSEN, Buenos Aires, Argentina. Filed Dec. 3, 1919. Serial No. 342,245. 8 Claims. (Cl. 119—158.)



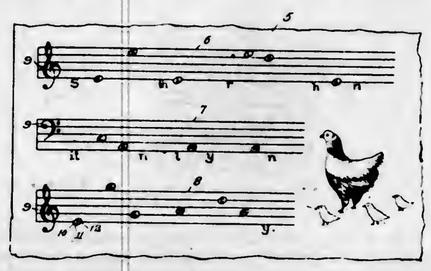
1. A portable and dismountable animal dipping plant comprising in combination, a dipping pen having a floor, side walls hinged to the floor, front and rear doors hinged to the floor; clamping means on the side walls and end doors coöperating to hold the same together to form a tank; means for rendering the tank watertight; a false door adjacent the rear door; folding grates at the top of the tank to confine the animals within the tank; and means for filling the tank with liquid and draining the liquid from the tank.

1,384,169. ENGINE-SUPPORT. JOSEPH C. THEBERATH, Lakewood, Ohio, assignor to Ralph A. Rohrich, Cleveland, Ohio. Filed Mar. 11, 1918. Serial No. 221,634. 7 Claims. (Cl. 180—64.)

4. An automobile engine support comprising a pair of suspension members arranged to pass beneath the engine, means connecting the corresponding ends of the pair of members together in spaced relation to each other and to the adjacent side member of the automobile frame, and a saddle sustained by the suspension members and having parts coöperating therewith to maintain the central portions of said members closer together than their corresponding ends.

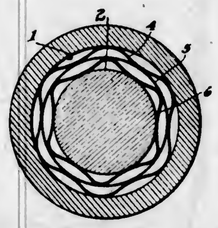


1,384,170. TRACTION-WHEEL. JOHN G. VINCENT, Tulsa, Okla. Filed Nov. 14, 1919. Serial No. 337,044. 6 Claims. (Cl. 301—38.)



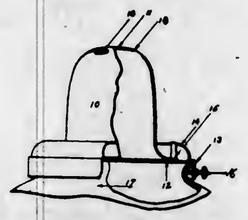
4. The combination with a wheel having a tire, of a conical body plate arranged at one side of said tire and having an annular attaching flange, and a plurality of radial fins secured to said conical body plate and terminating inwardly of the tread of said tire, the inner end portions of said radial fins being tapered and terminating adjacent the axis of said conical body plate.

1,384,171. HAND-TORCH. MORRIS VOLKES, Brooklyn, N. Y. Filed Apr. 12, 1920. Serial No. 373,161. 2 Claims. (Cl. 158—27.4.)



1. In a torch, the combination of a connecting pipe having an inlet and an outlet and an intermediate pocket, a spring actuated cover to the pocket and adapted to remain normally open, and a spring pressed control valve adapted to close the inlet pipe; both cover and valve adapted to be operated singly or simultaneously by the hand that holds the torch.

1,384,172. MUSICAL CHART. BETTIE VON RAGUÉ, Chicago, Ill. Filed Nov. 17, 1920. Serial No. 424,624. 3 Claims. (Cl. 84—471.)

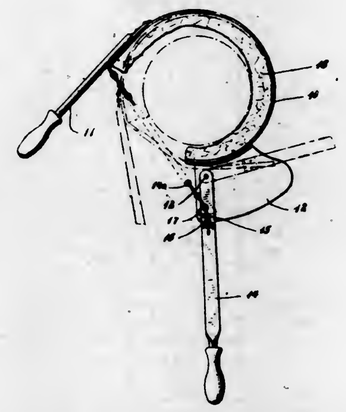


3. A musical chart comprising a staff having portions of a song printed thereon partly in letters, and having perforations in the staff in combination with note-indicating disks fitting in the perforations and having associated letters thereon to complete the song.

1,384,173. FLEXIBLE BUSHING. OSCAR RAGNAR WIKANDER, Pittsburgh, Pa., assignor, by direct and mesne assignments, to S K F Ball Bearing Company, Hartford, Conn., a Corporation of Connecticut. Filed May 10, 1918. Serial No. 233,695. 2 Claims. (Cl. 64—10.)

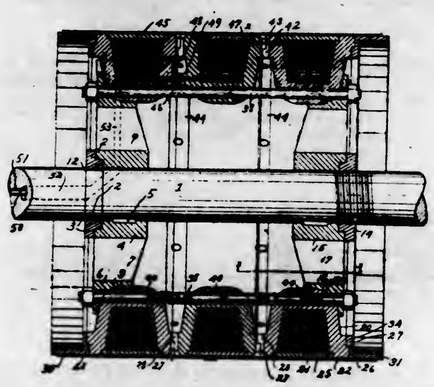
1. A flexible bushing comprising a plurality of alternately arranged corrugated continuous annular sheet springs and a cylindrical continuous annular sheet spring in direct contact with and separating the corrugated springs, all concentrically arranged and with the crests of the outermost corrugated annular sheet forming the outside contacting diameter and those of the innermost corrugated annular sheet forming the inside contacting diameter of said bushing.

1,384,174. HOLDER FOR LIGHTING-FIXTURES. HORACE R. YARDLEY, Chicago, Ill., assignor to R. Williamson & Co., a Corporation of Illinois. Filed Aug. 21, 1919. Serial No. 318,844. 2 Claims. (Cl. 240—111.)



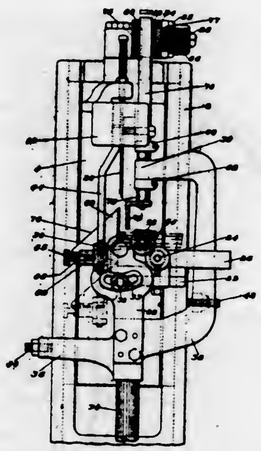
1. A holder for lighting fixtures comprising a cap flared at its lower extremity a ring, means to secure said cap and ring in spaced relation, and a globe secured in spaced relation to said cap and ring to provide a continuous ventilating space between the inner periphery of the upper opening in the globe and the base of the holder, and a continuous ventilating space between the inner surface of the ring and the outer surface of the lower part of the cap.

1,384,175. TWIN GATE FOR HOPPERS. FRANK B. ALLEN, Ben Avon, and MAX C. SHERMAN, Philadelphia, Pa., assignors to Baker-Dunbar-Allen Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 7, 1919. Serial No. 309,231. 4 Claims. (Cl. 193—45.)



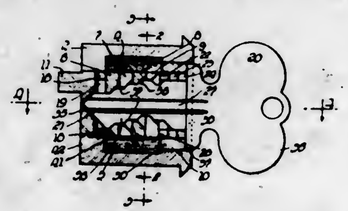
1. Apparatus of the character described, in combination with a pair of adjacent hoppers having bottom discharge openings, of horizontal ways at opposite sides of said discharge openings, track members connecting the horizontal ways of the two hoppers, a horizontally movable gate for each of said hoppers supported on said ways, and means for moving said gates in opposite directions, whereby each of said gates in opening moves onto said connecting track members.

1,384,176. JAR-HOLDER. CHARLES A. BARTLETT and LYMAN H. EASTMAN, Campbell, Nebr.; said Eastman assignor of his right to Henry Erickson, Campbell, Nebr. Filed Aug. 11, 1919. Serial No. 316,826. 1 Claim. (Cl. 81—3.2.)



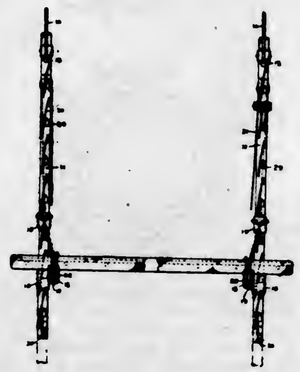
A jar holder of the class described comprising a resilient metal gripping band, a rigid handle secured to and projecting from one end thereof, a plate secured to and projecting laterally from the opposite end of said band, a locking lever, pivotally secured to said plate, an adjusting element secured to one end of said band, a lug extending laterally from the lever and said lug having a slot formed therein to receive said adjusting element, and a stop carried by said plate to engage one edge of said lever.

1,384,177. MAGNETIC PULLEY. JOHN P. BETHEA, Milwaukee, Wis., assignor to Magnetic Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1918. Serial No. 251,104. 13 Claims. (Cl. 88—71.)



1. A magnetic pulley comprising a hollow magnetic spool having an open end and peripheral perforations, and an exciting coil wound upon said spool.

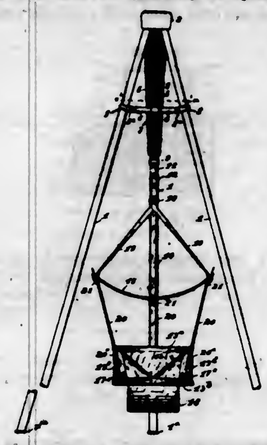
1,384,178. HEEL-BREASTING MACHINE. LOUIS A. CASGRAIN, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 8, 1917. Serial No. 147,478. 15 Claims. (Cl. 12—47.)



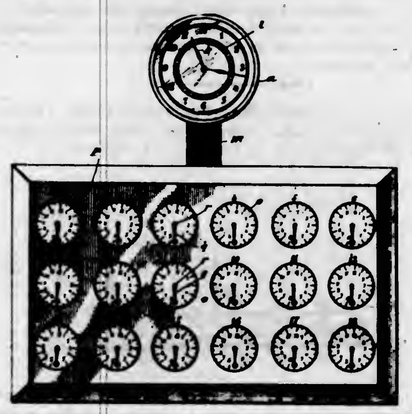
1. In a machine for breasting unattached heels, the combination of a vertically reciprocating knife, a cutting block, a gage arranged for vertical movement across one end of the block into a position where its top is above the heel when the heel is fed and for movement out of gaging position relatively to a heel on the block when the breasting is completed, and means for operating the gage to maintain the vertical distance between the top of the gage and the knife edge constantly less than the height of a normal heel.

1,384,179. LOCK. EDWARD A. CHRISTOPH, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,579. 16 Claims. (Cl. 70—46.)

1. In a lock, a stationary element, a rotatable element, a pair of diametrically opposite grooves in said stationary element, a plurality of tumblers carried by said rotatable element, means normally projecting said tumblers into cooperation with said grooves to bar said rotatable element against rotation, and means for limiting the projection of said tumblers, said means comprising a spring arranged longitudinally through said tumblers.



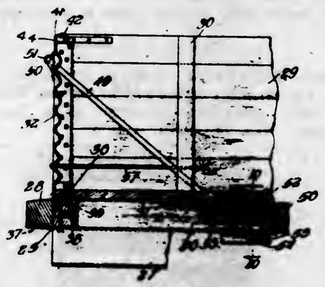
1,384,180. SHIFTING STAGE. CHARLES W. CLODFELTER, Fall River, Mass. Filed June 29, 1920. Serial No. 392,800. 2 Claims. (Cl. 304—15.)



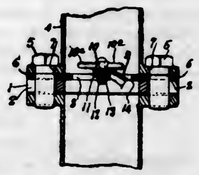
1. In a shifting stage, the combination with a main supporting member provided with means adapted to secure the same to a building, of platform supporting means slidably mounted upon said supporting member, a socket in said supporting member, a pawl on said sliding means adapted to engage with said socket, and means on said supporting member adapted to guide said pawl away from said socket when said sliding means is lowered.

1,384,181. BABY-JUMPER. GEORGE B. CONLEY, Cleveland, Ohio. Filed Oct. 22, 1919. Serial No. 332,487. 3 Claims. (Cl. 155—20.)

2. In a baby-jumper, a sling comprising a flexible fabric body-encircling member, said member being provided with an upper and a lower hem, and having flaps for opening and closing the front of said body member, said flaps being formed by slitting the member vertically, shaping members confined in the hems, a crotch seat member attached to and depending from the lower shaping member, an overhead spreader frame, open in front, and having buckles attached thereto, straps connected with the upper shaping member of the body element and adjustably connected with said buckles, suspension members connecting the overhead frame with a hanger ring provided, a secondary hanger ring located above the first named ring, an adjustable strap connecting the upper and lower rings, a supporting tripod, and a plurality of spiral springs attached to and depending from the head of said tripod, the lower terminals of said springs being connected with the upper hanger ring.

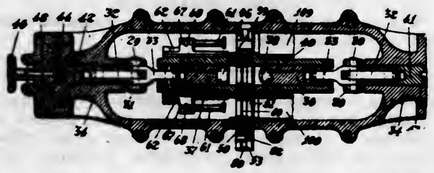


1,384,182. ROOM-CALLING SYSTEM FOR HOTELS. ORESTE CONTI, Viareggio, Italy. Filed Jan. 20, 1920. Serial No. 352,883. 1 Claim. (Cl. 161—2.)



In a call system, the combination of a series of electric bells, a master clock having an hour hand, a series of contacts on the clock adapted to be successively engaged by the hour hand, a control board, a plurality of sets of stationary contacts on the control board, means connecting each contact on the clock with a corresponding contact in each of the sets of contacts on the control board, manually shiftable circuit-closers on the control board each associated with one of said sets of stationary contacts and movable into engagement with either contact of the set, means connecting one terminal of each bell with the same terminal of the battery, independent electrical connections between the other terminals of the bells and the manually shiftable circuit-closers, and means controlled by the master clock for intermittently electrically connecting the other battery terminal and the hour hand of the clock during the engagement of the hour hand with each of the contacts on the clock.

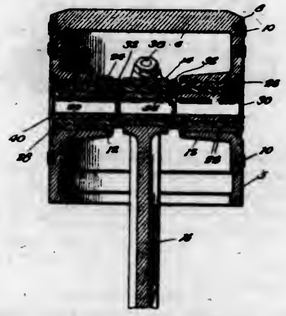
1,384,183. RAILWAY-CAR OF THE GONDOLA TYPE. SAMUEL H. CONWELL and CLARENCE W. COURT, Chicago, Ill., assignors to Walter P. Murphy, New York, N. Y. Filed Feb. 15, 1919. Serial No. 277,265. 15 Claims. (Cl. 105—406.)



5. In a railway car of the gondola type, the combination with the underframe and side walls of the car, of a sheet metal end panel formed with rigidifying corrugations and with an angularly disposed flange at its upper edge, means for attaching said panel to the side walls and underframe of the car, and a top chord member angular in cross-section attached to said side walls and to the flange at the upper edge of the panel.

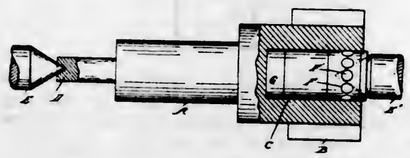
1,384,184. GAS-MIXER FOR INTERNAL-COMBUSTION ENGINES. HARRY N. EASTMAN, Dayton, Ohio, assignor of one-third to Thomas F. McDonald and one-third to Arthur A. McDonald, Dayton, Ohio, and one-third to Carrie J. Eastman, Portsmouth, Ohio. Filed July 3, 1919. Serial No. 308,565. 4 Claims. (Cl. 48—180.)

1. In combination with the intake manifold of an internal combustion engine, an auxiliary fuel mixer supported in said manifold consisting of an apertured frame arranged transversely in said manifold and having a bridge diamond shaped in cross section and inclined to an apex and integral with the diaphragm and spanning said aperture, and a propeller mounted on said bridge and having the cutting edges of its blades in advance of the center line of their axis.



1,384,185. COMPRESSING-MACHINE. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 16, 1919. Serial No. 304,641. 15 Claims. (Cl. 12—48.)

1. In a compressing machine, the combination of means for exerting pressure horizontally upon a blank, a hori-

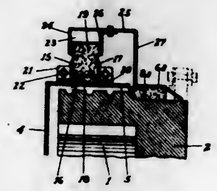


zontally movable ejector for ejecting a compressed blank, a mold block having a plurality of blank containing molds, means for reciprocating the mold block to present one mold to the action of the pressure means and another mold to the ejector, and means for simultaneously actuating the pressure means and ejector to discharge a compressed blank while another blank is being compressed.

1,384,186. WRIST-PIN. JOHN H. FULLINGTON, Huntsville, Ala., assignor of one-half to Isadore Wind, Huntsville, Ala. Filed June 12, 1920. Serial No. 388,557. 5 Claims. (Cl. 74—108.)

1. The combination with a piston having bosses, of a wrist pin fitted through said bosses and inclusive of inner and outer interfitting sections, and means for adjustably connecting said sections, and constituting a stop element for a rod adapted for connection with the pin.

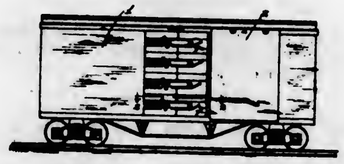
1,384,187. CENTER-BEARING. ANDREW A. GAGARIN, Detroit, Mich., assignor to The Gear Grinding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1919. Serial No. 336,207. 8 Claims. (Cl. 82—44.)



1. The combination with a supporting center, of an anti-friction bearing therefor, the rolling members of which are adapted to contact with the work to hold the same in co-axial relation to said center.

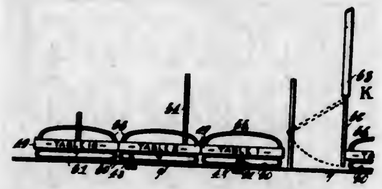
1,384,188. CELLULOSE-ACETATE SOLUTION. GUSTAV W. GOEBNER, Boston, Mass., assignor to The Roessler and Hasslacher Chemical Company, Perth Amboy, N. J., a Corporation of New York. Filed June 9, 1920. Serial No. 387,677. 6 Claims. (Cl. 134—79.)

2. A solution of a cellulose ester of a monobasic fatty acid in methylene chlorid.



1,384,189. BULL-GEAR DUST-SHIELD FOR TRACTORS. JAY L. GOODWIN, Stockton, Calif., assignor of one-half to William Thomas, Stockton, Calif. Filed Sept. 15, 1920. Serial No. 410,355. 6 Claims. (Cl. 74—7.)

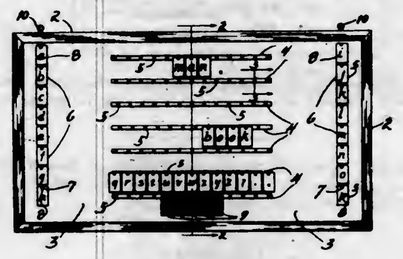
4. A dust shield for tractor-bull gears comprising in combination with a stationary hood projecting partly over the gear and spaced from the outer periphery thereof, a hood fixed to the gear beyond the first named hood, and projecting thereover, a channel formed with the outer hood concentric with the inner hood and open theretoward,



and a packing ring clamped about the inner hood and projecting into the channel, and spaced from the outer face thereof, whereby a lubricant may be introduced therebetween.

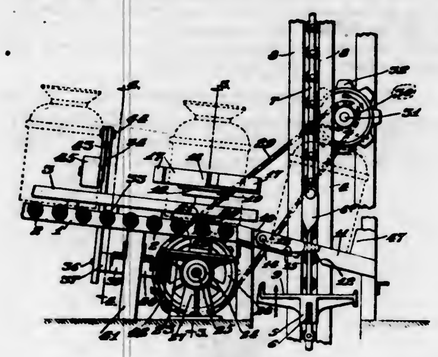
1,384,190. COLLAPSIBLE GRAIN-DOOR. BENJAMIN F. GRAHAM, Chicago, Ill. Filed July 19, 1920. Serial No. 397,375. 5 Claims. (Cl. 20—30.)

2. A collapsible grain door having an abutment at each end, one of said abutments comprising a longitudinally adjustable screw member, and an adjustable support for said member.



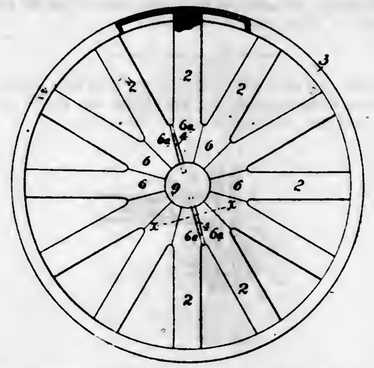
1,384,191. DINING-SERVICE APPARATUS. HARRY STEUBEN GREENBERG, Danville, Va. Filed Mar. 25, 1921. Serial No. 455,415. 5 Claims. (Cl. 186—1.)

1. In apparatus of the class described wherein are provided a dining room and a kitchen, a table in the dining room and conveyers for bringing the trays of food from the kitchen to the table, of stop devices on the table and trays for engaging one another to arrest the travel of a tray at the particular station where the tray is intended to be delivered.



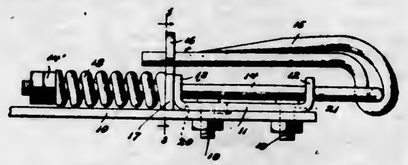
1,384,192. PRIMARY-INSTRUCTION BOARD. CHRISTIAN F. HEINE, Hinckley, Ill. Filed Jan. 3, 1920. Serial No. 349,236. 7 Claims. (Cl. 35—9.)

6. In a display device, a board, a series of horizontal strips on said board, screw-hooks each passing through said strips into said board, and each having a shank projecting from its strip, the hooks on any one strip being equally spaced along said strip, a series of equal rectangular plaques each bearing indicia, the thickness of each plaque being less than half the length of one of said shanks, the width of each plaque being slightly less than the distance between the neighboring hooks, each plaque having a hole near the middle of one end of suitable size to pass onto said hooks, the length of each plaque being slightly less than the distance between two strips, an additional series of hooks on said board nearer the edge of the board than the hooks on said strips, certain of said plaques being hung on each of said



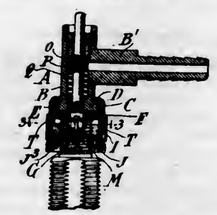
last-named hooks, all the plaques on any one of said last-named hooks having the same letter thereon, and the letters being in alphabetical order along said last-named series of hooks, and an extra series of hooks having plaques thereon, the letters on said extra hooks being all vowels, all the plaques on any one of said extra hooks being alike and the letters being in the alphabetical order of the vowels along said extra series of hooks.

1,384,193. FEEDING MECHANISM FOR CONVEYERS. GEORGE N. HINCHMAN, Webster Groves, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 28, 1919. Serial No. 293,173. 5 Claims. (Cl. 193—8.)



1. In a package conveyer, a vertically traveling conveyer having carriers thereon, a stationary way communicating therewith, a pair of oppositely disposed rotating feeders located one on each side of said way near the discharge end thereof and operating in timed relation to the carriers of said traveling conveyer, and a pair of oppositely disposed stops located one on each side of said way adjacent to said feeders and operatively connected therewith to be actuated thereby crosswise of said way, said pair of stops operating in timed relation to said pair of feeders and adapted to be moved toward each other into the path of the line of packages on said way prior to their engagement by said feeders, said pair of stops being adapted to be moved away from each other out of the line of packages on said way to permit a package to be engaged by said pair of feeders while said feeders are delivering a package to said traveling conveyer.

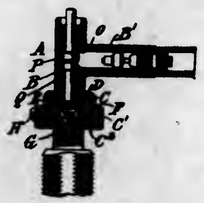
1,384,194. WHEEL. RUSSELL HOOPES, West Chester, Pa. Filed Apr. 2, 1920. Serial No. 370,635. 6 Claims. (Cl. 301—85.)



1. A wheel comprising a rim, a plurality of spokes fitted thereto and having tapered hub ends adapted to form an annular hub portion, and a tightening key interposed between two of the tapered spoke ends and driven radially between them, said key being tapered both longitudinally and transversely whereby it may be inserted sidewise between the hub ends of the spokes and then driven radially between them.

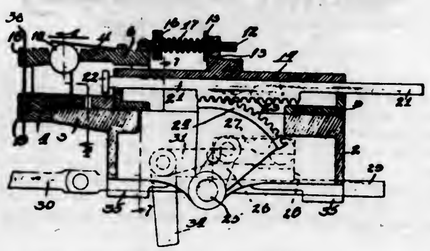
1,384,195. AUTOMATICALLY-RELEASING COUPLING. ALBERT B. HULSEBOS and GERRIT DEN BESTEN, Corsica, S. D., assignors to Safety Release Clevis Company, Corsica, S. D., a Partnership consisting of Albert A. Hulsebos, Gerrit Den Besten, Henry Ketel, and H. N. Waite. Filed Apr. 2, 1920. Serial No. 370,697. 4 Claims. (Cl. 213—67.)

1. In a device of the class described, a member adapted to be secured to a vehicle or implement, a draft bolt, said member having two spaced bearings slidably carrying said bolt, a coiled spring operative at one end on said bolt and at the other on said member for resisting forward movement of the draft bolt, an arm pivoted to the forward end of the draft bolt, and a keeper for the arm held against displacement by said bolt and spring, substantially as set forth.



1,384,196. PUMP-COUPLING OR THE LIKE. HENRY P. KRAFT, Ridgewood, N. J. Filed June 26, 1917. Serial No. 177,005. 18 Claims. (Cl. 284—17.)

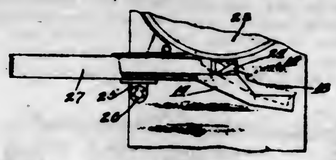
1. A coupling or the like having a body portion with a passage therein, the body portion being provided with



a coupling end adapted to receive a member such as the end of a tire valve, a detachable nut non-rotatively connected within said coupling end, and means movable independently of said coupling end and acting to retain the nut in fixed relation therewith.

1,384,197. PUMP-COUPLING OR THE LIKE. HENRY P. KRAFT, Ridgewood, N. J. Filed June 30, 1917. Serial No. 178,027. 3 Claims. (Cl. 285—124.)

1. A coupling comprising a body and a member adapted to engage a valve or the like swiveled to said body, a packing washer between said body and swiveled member; said swiveled member being made in two separable parts, which when connected overlies said washer and retains it in place, and which when separated permit the removal and replacement of said washer, and one of said parts being screw-threaded to engage a tire valve and having a manipulating part or surface thereon, adapted to be grasped in connecting and disconnecting the coupling, and means for normally preventing the separation of the parts of the swiveled member.



1,384,198. FEEDING AND FORMING MECHANISM FOR WRAPPING-MACHINES. CHARLES J. LIETZ, Newark, N. J., assignor to Ideal Wrapping Machine Company, a Corporation of New York. Original application filed Mar. 17, 1917, Serial No. 155,420. Divided and this application filed Feb. 13, 1920. Serial No. 358,479. 8 Claims. (Cl. 93—2.)

1. The combination with a wrapping machine, of a forming box for articles passed therethrough and resilient mechanism forming a part of said forming box to bear yieldably upon the article.

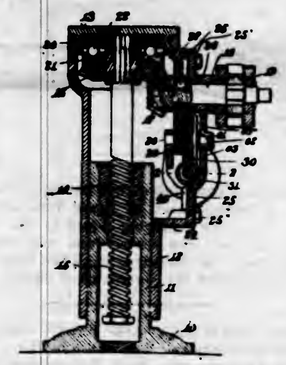
1,384,199. RECEIVING AND TRANSFER MECHANISM FOR WRAPPING-MACHINES. CHARLES J. LIETZ, Newark, N. J., assignor to Ideal Wrapping Machine Company, a Corporation of New York. Original application filed Mar. 17, 1917, Serial No. 155,420. Divided and this application filed Feb. 13, 1920. Serial No. 358,480. 12 Claims. (Cl. 93—2.)

8. In a wrapping machine the combination with the wrapping wheel of yieldably mounted receiving means in contact therewith and movable therefrom by discharge of an article thereto, a receiving chute, resilient means therein on which the articles are supported, and coacting devices between said resilient means and said receiving

means whereby the former is moved by the latter prior to the transfer of an article from the latter to the former.

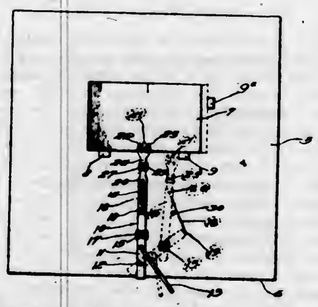
1,384,200. ENGINE. HAROLD M. LOCHRANE, Fort Wayne, Ind. Filed May 23, 1919. Serial No. 299,350. 2 Claims. (Cl. 74—108.)

1. The combination with a piston having a ball socket within it, a crank box, a wrist pin mounted on the crank box, a connecting rod pivotally mounted at one end upon the wrist pin, a ball at the opposite end of the rod engaging the ball socket, a socketed nut removably engaging the ball socket and also engaging the ball, and a lock washer engaging the inner wall of the piston and adjustably secured to the socketed nut.



1,384,201. SCREWDRIVER AND THE LIKE. WALTER E. LOMBARD, Arlington, Mass. Filed July 1, 1920. Serial No. 393,464. 23 Claims. (Cl. 145—50.)

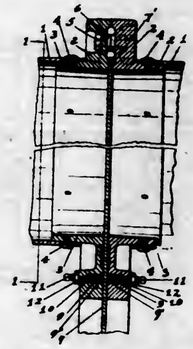
23. In a hand tool of the class described, a cylindrical member having a rectangular socket in one end and a longitudinal slot extending transversely of the inner end of said socket; two tool-supporting jaws partially disposed within said socket; a pin for pivoting both jaws to said member; a threaded collar on said member and



slidable lengthwise thereof; a pin in said collar extending through oppositely inclined slots in the inner ends of said jaws and said longitudinal slot; a handle to which said member is secured; and a revoluble nut coacting with said collar and adapted in its rotation to impart end movement thereto.

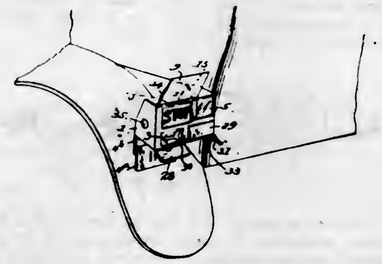
1,384,202. GOVERNOR MECHANISM FOR LIFTING-JACKS. WALTER E. LOMBARD, Arlington, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed Aug. 2, 1920. Serial No. 400,824. 9 Claims. (Cl. 188—184.)

1. The combination with a lifting jack having a driving shaft adapted to be rotated in either direction; a disk revoluble therewith; a worm gear loosely mounted on said driving shaft; a ratchet revoluble with said gear; pawls on said disk coacting with said ratchet; a worm adapted to be driven in one direction only by said worm gear; and a governor actuated by said worm.



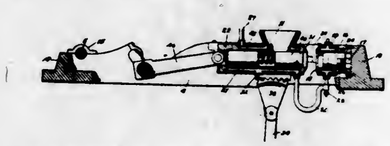
1,384,203. PRINTING-PRESS ATTACHMENT. AUGUST LUNDQUIST, Chicago, Ill. Filed Dec. 9, 1920. Serial No. 429,350. 3 Claims. (Cl. 101—414.)

2. An attachment for printing presses comprising in combination a pair of fingers, a pivotal connection between said fingers permitting one of the fingers to be adjusted with respect to the other finger while maintaining the pivotal relationship, a spring connection between the fingers tending to maintain them in alinement, and suitable prongs on the free end of the swinging finger, substantially as described.



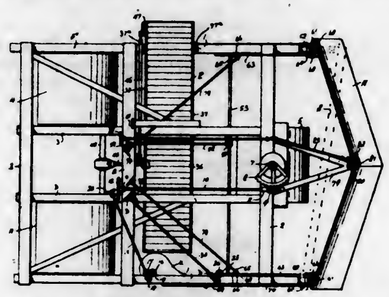
1,384,204. BLAST-GATE. FRANCIS MCMURDIE, Kalamazoo, Mich. Filed Apr. 6, 1920. Serial No. 371,659. 2 Claims. (Cl. 251—51.)

2. In a blast gate structure, a frame with guide for the slide with entrance throat therefor, packing means for said slide comprising diametrically opposed recesses within said throat, packing material in the recesses, and bars



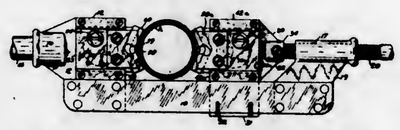
back of the material with means of compressing the same, as specified.

1,384,205. DANGER OR STOP AND DIRECTION SIGNAL. JOSEPH G. MARIS, Detroit, Mich. Filed Feb. 16, 1921. Serial No. 445,382. 1 Claim. (Cl. 116—42.)



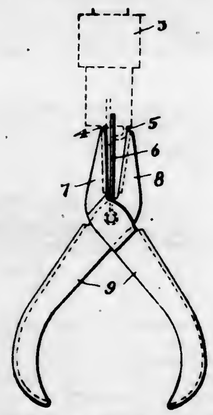
In a direction signal, a housing having an illuminated interior and provided with a transparent rear wall, a portion of said rear wall being surface colored to provide a tail light reflection, a greater portion of the rear wall being surface colored darker than the first colored portion, said rear wall having white colored arrows and a danger or stop signal applied thereto, through which the interior illumination of the housing reflects, and spring tension shields normally covering said signals of the rear wall, and means for operating one of said shields individually, or one of said shields and one of the other shields simultaneously.

1,384,206. BRIQUET-MACHINE. SWAN E. MOREN, Biwabik, Minn. Filed Dec. 23, 1920. Serial No. 432,747. 6 Claims. (Cl. 25—56.)



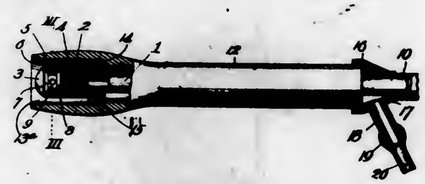
1. In a briquet machine, the combination of a stationary cylinder, a reciprocatory cylinder arranged to abut and form a close joint with the stationary cylinder, a combined compressing jaw and ejector block mounted in the stationary cylinder, a plunger slidably mounted in the reciprocatory cylinder, means for reciprocating the plunger and the said cylinder, and means for heating the walls of the two cylinders.

1,384,207. ROAD-WORKING MACHINE. DAVID C. MOWRY, Geneva, Nebr. Filed Aug. 13, 1919. Serial No. 317,253. 6 Claims. (Cl. 37—48.)



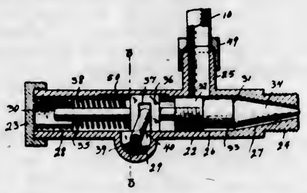
1. A machine of the class described comprising a portable frame, a pair of substantially parallel beams slidably supported by the frame and extending beyond the end thereof, a single means for imparting endwise movement to said beams in unison but in reverse directions one with respect to the other, and a working member supported by the extended portion of the beams.

1,384,208. PIPE-CUTTER. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Feb. 9, 1920. Serial No. 357,237. 10 Claims. (Cl. 81—191.)



6. In a pipe cutting tool, the combination with a supporting member of a knife carrier, a guide carrier, a notched rocking member carried by the supporting member, and pins carried by the guide carrier and the knife carrier respectively engaging the notches of said rocking member.

1,384,209. SPARK-PLUG-ADJUSTING DEVICE. JOHN O'TOOLE, Los Angeles, Calif. Filed July 3, 1920. Serial No. 393,780. 1 Claim. (Cl. 81—15.)

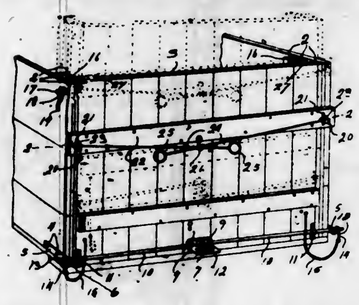


In a device of the class described, in combination with tongs, a spacing member disposed between the jaws of the tongs so as to come between the points of a spark plug when the jaws are placed over such points for forming a proper gap between the points automatically when the tongs are applied to the points, the spacing member having means for cleaning such points and thereby automatically spacing the points properly when the tongs are applied and removed.

1,384,210. SANITARY DOUCHE. WILLIAM A. E. PFAFF, Kansas City, Mo. Filed July 10, 1919. Serial No. 309,865. 3 Claims. (Cl. 128—240.)

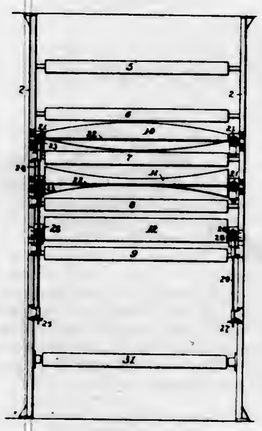
1. A douche comprising a tube having a nozzle for discharging a conical sheet of liquid forwardly and outwardly, a hose for supplying liquid to the tube, and a sheath fitting over and spaced from and adapted to receive and direct the discharge from the tube and to also receive and drain off the contaminated liquid.

1,384,211. AUXILIARY-AIR VALVE AND HEATER. DENNIS J. PLEDGER, New Orleans, La., assignor to Pledger Appliance Co., Inc., New Orleans, La., a Corporation of Louisiana. Filed Feb. 5, 1919. Serial No. 275,090. 5 Claims. (Cl. 251—132.)



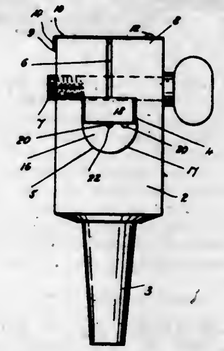
1. The combination with the intake manifold of an internal combustion engine having cylinders and a carbureter connected thereto, of a valve casing discharging into the manifold between the carbureter and the cylinders and having a longitudinally extending bore, the bore having a uniform diameter for a certain distance and then gradually tapering to the discharge end of the bore, the valve casing having an air inlet port inward of the tapered portion of the bore, a valve operating longitudinally of the casing, the valve having a portion of uniform diameter fitting that portion of the casing having a uniform diameter and closing the inlet opening, and the valve having a tapered portion adapted to fit the tapered portion of the bore and to project through the opening at the discharge end of the bore and into the manifold when the valve is closed, the portion of the valve having a uniform diameter normally closing the inlet opening but moving beyond the inlet opening when the valve is fully retracted, and manually operable means for longitudinally shifting the valve to control the amount of air discharged through the bore, the axis of the valve being disposed at right angles to the direction of current in the manifold.

1,384,212. TAIL END-GATE FOR WAGONS. EARL M. PRICE, Percival, Iowa, assignor of one-half to Marion B. Holsclaw, Percival, Iowa. Filed Sept. 18, 1920. Serial No. 411,157. 1 Claim. (Cl. 296—59.)



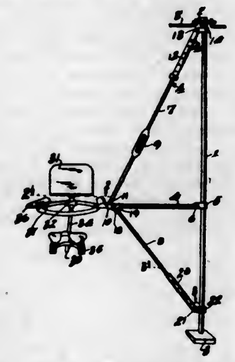
In an end gate construction, a wagon body, parallel spaced guides on the inner faces of the sides of the body

adjacent the end gate opening, an end gate for the end gate opening, cleats permanently fastened to the inner face of the end gate adjacent its side ends, additional cleats slidably engaging said guides, means for detachably connecting the additional cleats to the ends of the end gate adjacent the outer faces of the first cleats, means for pivotally connecting the upper and lower portions of the gate on the additional cleats, so that either the upper or lower end of the gate may be swung open when the



first means are extended, the construction and arrangement of each of the pivotal means being such that by their removal when the first means are returned to folded or retracted positions, the additional cleats may slide vertically on the first cleats and carry the gate therewith, said means for detachably connecting additional cleats to the ends of the gate being extensible through the end gate and located between the upper and lower pivoting means, for limiting the gate in its opening movement, when swung either from the top or the bottom.

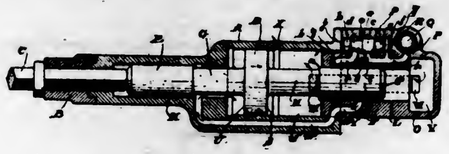
1,384,213. METHOD AND MEANS FOR STRAIGHTENING WEFT-THREADS. WILLIAM S. ROWLEY, West New Brighton, N. Y., assignor to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Filed June 29, 1920. Serial No. 392,676. 8 Claims. (Cl. 26—2.)



4. In a machine of the character stated, the combination of a plurality of guide rollers for guiding a web of fabric, with means for straightening the weft threads of the fabric comprising a weft thread straightening roll having its largest diameter at the middle and tapering toward its ends and movable against the fabric and between two of the guide rolls, a second weft straightening roll parallel to the first mentioned weft straightening roll and having its smallest diameter adjacent to its middle portion and gradually increasing from the center toward each end and movable against the fabric and between two of the guide rolls, independent means for adjusting the two weft thread straightening rolls, a third weft thread straightening roll of cylindrical form, and means adjusting the ends of said roll independently, whereby said roll is movable against the fabric and between two of the guide rolls and with capacity for applying greater pressure toward one edge of the fabric than the other, and vice versa.

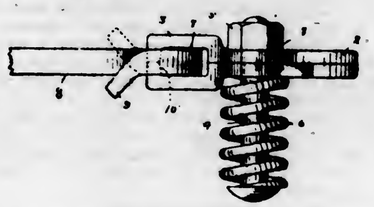
1,384,214. INSULATOR. RICHARD SANDS, Osawatomie, Kans. Filed Sept. 18, 1919. Serial No. 324,344. 1 Claim. (Cl. 173—314.)

In an insulator, a supporting frame provided with a chamber extending horizontally through its middle part and having a rounded bottom, said frame having a slot extending from its top to the said chamber, a lower insulating block having a rounded bottom and fitting in the lower part of the said chamber, a tapering upper insulating block normally slidable in the upper part of the said chamber and adapted to clamp the line wire against the lower block, and a clamping device extending through holes in the upper part of the frame and adapted to clamp its upper portion upon the insulating blocks and lock them in place.



1,384,215. INVALID-EXERCISER AND BABY-WALKER. JAMES H. SCOTT and JOHN D. WHITCOMB, Long Beach, Calif. Filed May 20, 1920. Serial No. 382,728. 3 Claims. (Cl. 155—23.)

1. A device of the character described comprising a rotatable upright, a radially extending supporting arm,



a supporting carrier upon said supporting arm, a yieldable brace between said supporting arm and said rotatable upright, and means for adjusting the length of said yieldable brace.

1,384,216. ROCK-DRILL. WILLIAM A. SMITH, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,354. 4 Claims. (Cl. 121—18.)

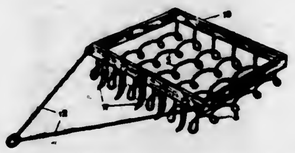
1. In a fluid operated rock drill of the hammer type, the combination of a cylinder and reversible piston, means controlled by the piston for supplying motive fluid to the forward end of the cylinder, a forward admission port and another admission port rearward of said forward admission port for supplying motive fluid to the rearward end of the cylinder, and a fluid actuated valve subjected to fluctuating pressure on one operative surface and to constant pressure on an opposed operative surface for controlling communication between forward and rearward admission passages leading to said forward and rearward admission ports.

1,384,217. SLIP-CLEVIS. ALAN B. STARKEY, Duluth, Minn. Filed Mar. 31, 1920. Serial No. 370,062. 2 Claims. (Cl. 24—233.)

1. A device of the character described comprising two like, pivotally attached halves, the ends of said halves, upon one side of the pivotal connection thereof, being hooked at right angles to their pivotal connection, and the opposite ends hooked in parallelism with said connection whereby a rectangular shaped opening is formed intermediate of the last mentioned ends at right angles to the pivotal connection, and a circular opening is formed parallel with said pivotal connection in the opposite ends when the halves are in their coöperatively registering position, a bolt forming said pivotal connection of the halves, an expansive spiral spring intermediate of the head of the bolt and the engaged halves and a hook, rectangular in cross section, coöperatively engaged within the rectangular openings formed by the first mentioned hooks, substantially as and for the purpose described.

1,384,218. PUMP. FREDERICK STICKEL, Chicago, Ill. Filed July 23, 1920. Serial No. 398,404. 4 Claims. (Cl. 230—27.)

1. In a tire pump, a foot plate, a pump cylinder rising from the foot plate, an indicating cylinder also rising from the foot plate and arranged parallel and adjacent to the pump cylinder and shorter in length, a spring held plunger projecting out of the top of the indicating cylinder and adapted to be forced out by the pressure produced in the pump cylinder, a pressure scale on the pump cylinder above the indicating cylinder and adapted to cooperate with the outer end of the plunger to indicate the



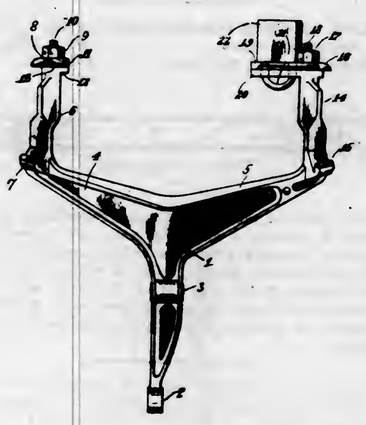
pressure produced by the operation of the pump, and means adapted to freely connect the lower end of the indicating cylinder with a tire.

1,384,219. PROCESS OF TREATING WASTE LIQUOR FROM SULFITE-CELLULOSE FACTORIES. ROBERT WILHELM STREHLENERT, Gottenborg, Sweden, assignor to And. H. Kiaer & Co., Ltd. of Norway, Glemminge, Norway. Filed Feb. 7, 1918. Serial No. 215,907. 8 Claims. (Cl. 252.)

1. The process of treating sulfite liquors to recover organic and inorganic constituents therefrom, which comprises concentrating the said liquors and subjecting the concentrated solution to decomposition by heating under pressure.

1,384,220. TILLING-TOOL. GEORGE SYKES, Warwick, England, assignor to Eagle Engineering Company, Limited, Warwick, England. Filed Mar. 6, 1920. Serial No. 363,824. 3 Claims. (Cl. 97—41.)

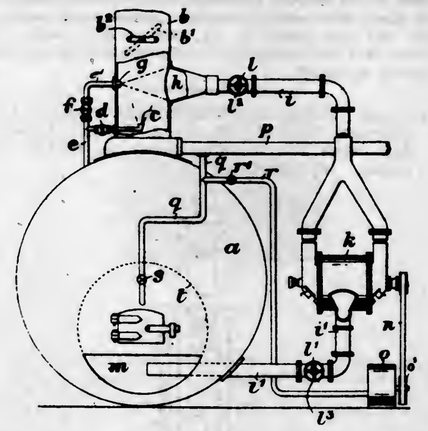
1. A tilling tool having in combination a frame, and spirally formed non-rotary members, said members being fixedly secured at each end to said frame, and being adapted to enter the soil and having a substantially horizontal disposition, so that the axis of each of said members is parallel to the soil.



1,384,221. TAPER AND ANGLE GAGE. JOHN M. WALL and CHARLES MELDRUM, Syracuse, N. Y. Filed Apr. 23, 1917. Serial No. 163,949. 11 Claims. (Cl. 33—171.)

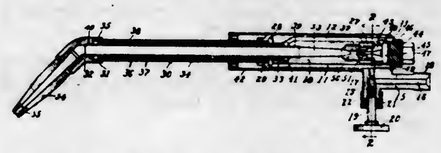
1. In a taper gage, the combination of a support having a straight surface, an arm pivoted to said support to swing in a plane at right angles to said surface and provided with a straight edge radial to its pivotal axis and means for adjusting the arm about said axis and for holding it in its adjusted position, said straight edge

having a point therein a known distance from said axis from which the sine of the arc in which the arm is set may be measured.



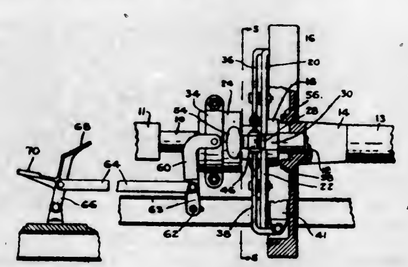
1,384,222. TIRE-RIM CARRIER. CHARLES F. WASSERFALLEN, Detroit, Mich., assignor to Detroit Tire Carrier Co., Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1917. Serial No. 199,154. 3 Claims. (Cl. 224—29.)

1. As a means for supporting spare tires, a pair of independent devices secured to the vehicle at points to locate the devices in position to receive a spare tire or rim with the devices positioned at substantially diametrically-opposite points of the rim, each device comprising a bracket adapted to be secured to the vehicle body and having oppositely-disposed arms, said arms each carrying a lateral extension integral therewith, said extensions being spaced apart in the direction of length of the rim to be carried, an integral rim lug carried at the base of each extension, each extension also having its end formed with an integral member projecting therefrom at substantial right angles to the direction of length of the arm and opposite to that of the rim lug, an element projecting from the end of the arm and forming a continuation thereof, a detachable clamping member mounted on said element and supported by the integral member to engage the opposite side of the tire or rim, and means carried by the element to retain the clamping member in clamping position.



1,384,223. APPARATUS FOR ECONOMIZING FUEL. WILLIAM ANDREW WATTERSON, Euchareena, New South Wales, Australia. Filed Sept. 3, 1919. Serial No. 321,486. 8 Claims. (Cl. 110—49.)

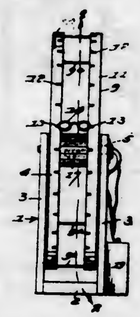
1. In an apparatus of the character described, the combination with a furnace, of a main steam jet entering the flue of the furnace and directed across the direction of flow, an auxiliary steam jet entering the flue below the main jet and directed in the direction of flow, an ex-



haust conduit communicating with the flue opposite the main jet, and communicating with the ash-pit of the furnace.

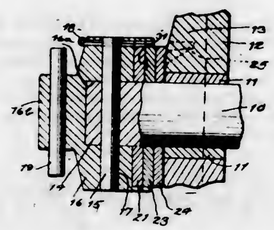
1,384,224. OXYACETYLENE-BLOWPIPE. ISAIAH ALLISON, Downers Grove, and WILLIAM J. LEIGHTY, Chicago, Ill. Filed Feb. 20, 1919. Serial No. 278,222. 13 Claims. (Cl. 158—27.4.)

10. In a blowpipe of the class described, a plurality of gas passages and a mixed gas-conveying passage, an injector disposed intermediate of the gas passages and the conveying passage, and means whereby one of the gases is made to flow about and lengthwise of the conveying passage before delivery to said injector, to act as a cooling medium.



1,384,225. CLUTCH. GILBERT AMONSEN and GEORGE H. AMONSEN, Minneapolis, Minn. Filed Jan. 19, 1920. Serial No. 352,306. 4 Claims. (Cl. 192—53.)

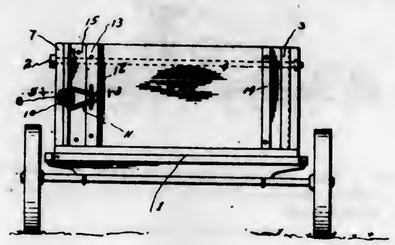
1. A clutch comprising two shafts in longitudinal alinement and having their ends adjacent each other, cooperating frictional clutch members secured to said shafts



respectively, two arms secured to one of said shafts, levers pivoted to said arms, a collar slidably carried by said last-mentioned shaft, jaws carried by said collar, said jaws having inclined surfaces which engage the inner ends of said levers to cause said frictional clutch members to engage when sliding movement is imparted to said collar, and lugs carried by the other of said shafts with which said jaws engage when said collar is given a further sliding movement.

1,384,226. COMBINATION EYEGLASS TESTING AND DISPLAY DEVICE. THOMAS Z. BASSETT, Judsonia, Ark. Filed July 6, 1920. Serial No. 394,175. 10 Claims. (Cl. 88—22.)

1. In a combined eye glass testing and displaying device, a wheel having a revolubly adjustable illuminated hub, an eye testing chart in surrounding relation thereto, and provided with a plurality of different sizes of eye testing readings, and means on the periphery of the wheel for the support of a plurality of eye glasses arranged in spaced intervals on the wheel.

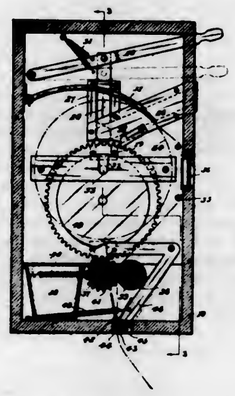


1,384,227. THRUST-TAKE-UP DEVICE. FRANK W. BELK and ANDREW ELIAS VARNER, Oxford, Miss. Filed Jan. 19, 1921. Serial No. 438,463. 4 Claims. (Cl. 64—25.)

1. In a thrust take-up for the crank shafts of internal combustion engines, a member secured to the crank shaft forwardly of the front end bearing thereof, a stationary plate surrounding the shaft and abutting the forward end of the front end bearing, a second plate surrounding the shaft adjacent the rear face of a member and provided in its forward face with sockets, an anti-friction device disposed intermediate said plates, adjusting screws extending through said member and having their rear ends engaged in the sockets of the second plate and thereby holding said second plate against rotation with relation to the member.

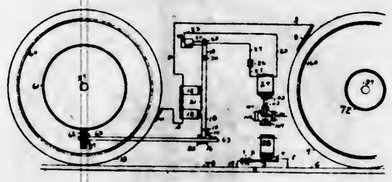
1,384,228. END-GATE. LOUIS E. BIEGER, Absarokee, Mont. Filed Sept. 22, 1920. Serial No. 411,888. 3 Claims. (Cl. 296—53.)

1. The combination with a wagon box provided at its rear end on one side with spaced standards and at its opposite side with a single standard having its inner side rabbeted toward its rear edge, an end gate having one end adapted to be engaged between the spaced standards and its opposite end adapted to seat within the rabbet



of the other standard, and a latch yieldably mounted upon the wagon bed between the same and the rabbeted standard and adapted to engage the rear side of the end gate at that end thereof fitting within the rabbeted standard.

1,384,229. HOLDER FOR LICENSE-PLATES. CHARLES M. BOLICH, Allentown, Pa. Filed Apr. 2, 1921. Serial No. 457,945. 13 Claims. (Cl. 40—125.)



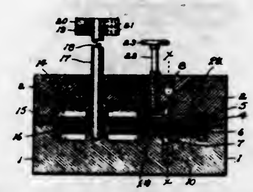
13. A device of the class described comprising, in combination, a member, a plate overlying said member, said plate being provided with slots, slidable members carried by the first named member, each of said slidable members extending within the slot of the plate, and means for constantly urging the slidable member in a direction to engage the portion of the plate defining an end of the slot.

1,384,230. COIN-CONTROLLED MACHINE. FRANK A. BONENBERGER, Louisville, Ky. Filed July 3, 1920. Serial No. 393,959. 4 Claims. (Cl. 194—69.)

1. In a device of the kind described, a rotatable wheel having a pocket at its periphery, a member fitting said pocket removably and having a recess therein adapted to receive and hold a coin, and means to hold said member releasably in position in said pocket.

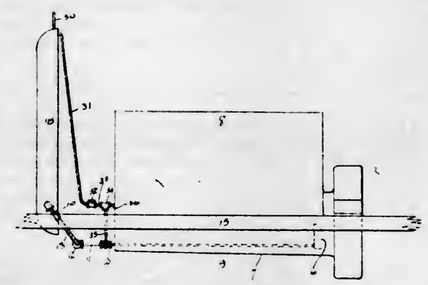
1,384,231. AUTOMATIC TRAIN-CONTROLLING DEVICE. ABRAM I. BOWER, Boyertown, Pa. Filed Oct. 15, 1913. Serial No. 795,301. 27 Claims. (Cl. 246—179.)

16. In combination, a railway vehicle, means thereon arranged to change gradually toward an ultimate condition, apparatus controlled by said means for governing the vehicle, and devices located in the trackway for causing said means to be restored away from said ultimate condition, said means being adapted to automatically resume its change toward said ultimate condition after such restoration.



1,384,232. DRAWING-PEN. CHARLES E. BURNAP, Chicago, Ill.; Sarah Burnap, administratrix of said Charles E. Burnap, deceased, assignor to The C. F. Pease Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1913, Serial No. 781,711. Renewed Dec. 9, 1920. Serial No. 429,602. 11 Claims. (Cl. 120—100.5.)

11. An instrument of the class described comprising two pens, and means for effecting a relative movement of said pens to present either of them in position for use, the movement of one of said pens taking place along an axis passing through the point of the other pen.

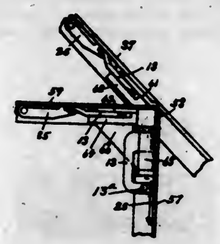


1,384,233. MOTOR-VEHICLE LOCK. EMERY F. CALIFF, Detroit, Mich. Filed Sept. 12, 1919. Serial No. 323,279. 2 Claims. (Cl. 251—6.)

1. In an automobile lock, the combination with a vehicle having a driver's compartment and dashboard and a fuel supply line, of a casing within the fuel supply line forming a chamber and provided with a passage for fuel communication with the supply line and opening at its inner ends through faces of the chamber at opposite points thereof, a plurality of disks in said chamber with their faces in firm contact with the faces of the walls of the chamber and their opposed faces in firm contact with each other, said disks having openings therein transversely thereof adapted to be alined with the fuel passage in the casing by a turning movement of the disks, said disks

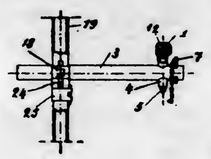
being also provided with peripheral teeth, gears in the casing in engagement with the peripheral teeth on the disks, means for turning the gears extending from the casing to a point within the driver's compartment inside the dashboard, and indicating means carried by said means for turning the gears, said indicating means being also located at the inner side of the dashboard.

1,384,234. OIL-COOLING SYSTEM FOR EXPLOSIVE-ENGINES. EVERETT S. CAMERON, West Haven, Conn. Filed Apr. 29, 1920. Serial No. 377,508. 2 Claims. (Cl. 184—104.)



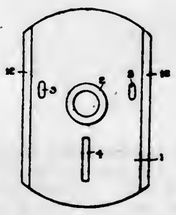
1. An oil-cooling pressure system for explosive engines, having an engine, an oil-tank therefor, a pressure pump, a pressure radiator to which the oil is pumped under pressure from the tank and from which it is delivered under pressure, oil-distributing means leading from the radiator to the working parts of the engine to which the oil is supplied under pressure, and means in the system for cutting out the radiator without interfering with the pumping of the oil under pressure to the working parts of the engine.

1,384,235. BUILDING STRUCTURE. NATHEN K. CAPLAN, Detroit, Mich. Filed Apr. 26, 1920. Serial No. 376,589. 11 Claims. (Cl. 189—1.)



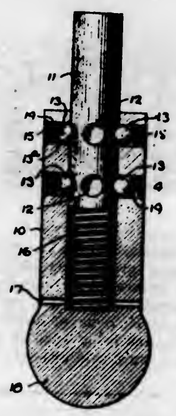
1. In a metal frame, the combination of a series of units meeting at right angles, a plurality of the units being

formed with sockets having openings extending longitudinally of the units and the remainder of the units having



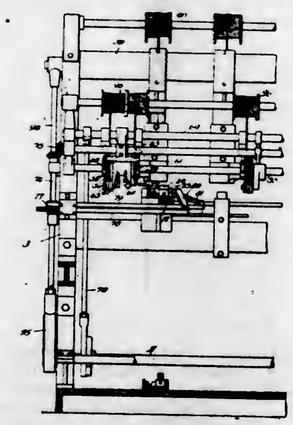
laterally extending tongues projecting into adjacent sockets.

1,384,236. UNIVERSAL COAL-CUTTING MACHINE. ALBERIC LOUIS CHOPIN, Paris, France. Filed July 7, 1919. Serial No. 309,127. 1 Claim. (Cl. 255—53.)



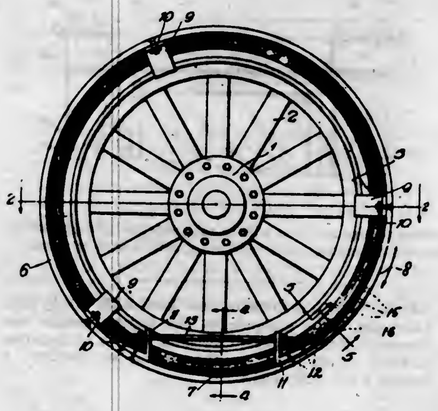
The combination of a supporting column, an arm having a transverse opening and also having a bore extending through one end, means adjustable on the column to secure said arm to said column at an angle thereto, and means to secure a pneumatic hammer to said arm and having an arm for insertion either in the said opening or the said bore thereof.

1,384,237. ADJUSTABLE CHUCK. WILLIAM HUGH CLIFFORD, Ealing, London, England. Filed Dec. 31, 1919. Serial No. 348,689. 3 Claims. (Cl. 279—112.)



1. A lathe chuck comprising a face plate adapted to be mounted on the mandrel of the lathe, parallel edges respectively arranged on opposite sides of said face plate, a plate adapted to engage and slide over the parallel edges of said face plate and provided with a central channel with edges parallel with the edges of said face plate when the sliding plate is in position thereon, a gripping member mounted on said plate, a plate adapted to engage and slide in said central channel, a gripping member mounted on said cental channel plate and means for locking said plate to said face plate in the position to which they are set.

1,384,238. SHOCK-ABSORBER. ALVIN M. CRAIG, New Haven, Conn. Filed Oct. 1, 1918. Serial No. 256,868. 4 Claims. (Cl. 267—8.)



3. A shock absorber comprising a tube, a plunger movable longitudinally in the tube and provided with concaved sockets, and spring pressed balls held to move freely in the recesses of the tube and to fit in the sockets of the plunger.

1,384,239. BOX-BLANK MACHINE. EDWARD CRAIG, St. Joseph, Mich. Filed Sept. 13, 1919. Serial No. 323,494. 30 Claims. (Cl. 1—8.3.)

1. A machine for making folding box-blanks by attaching wires and cleats to sheet material, comprising means to feed the cleats and sheet material forward, with the cleats omitted at intervals on each blank, mechanism to staple the wires to the sheet material and cleats, cams on said means, and devices associated with said means and periodically operated by said cams during the forward feeding movements of the sheets and cleats for automatically controlling said mechanism to drive long staples into the cleats and short staples where the cleats are omitted.

1,384,240. AUXILIARY TIRE FOR VEHICLE-WHEELS. GEORGE A. CRANE, Chicago, Ill. Filed Nov. 6, 1919. Serial No. 336,093. 7 Claims. (Cl. 301—39.)

1. The combination of a wheel having a yielding and resilient tire, a one-piece resilient band encircling the wheel and seated on the tread of said tire, said band being flat in cross section and annular in form to provide a resilient auxiliary tire for the wheel, the band being divided at one side to provide integral lapping end portions which form a splice and which can be adjusted relatively to increase or reduce the diameter of the band, according to the diameter of said yielding and resilient tire, while maintaining a continuous or unbroken tread surface for the band, adjusting devices within the area circumscribed by the band, and means on the inner surface of the band to support said devices and thereby adjustably connect the end portions of the band together for relative adjustment, so that by tightening said devices one end portion of the band will slide upon the other end portion to contract the band upon the resilient tire, and whereby the auxiliary tire and everything necessary for the attachment thereof to an ordinary wheel are readily removable therefrom.

1,384,241. WASHING-MACHINE. JOSEPH T. DAVIESS, Battle Creek, Mich. Filed Feb. 12, 1920. Serial No. 358,183. 4 Claims. (Cl. 68—19.)

1. In a washing machine, a pounder support having a plurality of radial arms of different lengths, and a pounder carried by the end of each arm.

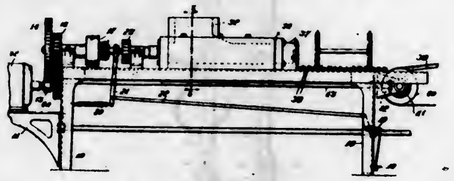
1,384,242. BIT. HARRY L. DAUGHERTY, Carson City, Nev. Filed Feb. 17, 1920. Serial No. 359,371. 1 Claim. (Cl. 54—6.)

A bit comprising flat longitudinal curved cheek plates having their intermediate portions enlarged laterally, a bit bar connected to the enlarged intermediate portions of said flat cheek plates, the upper portions of said plates having strap receiving openings, strap fastening tongues contacting with the outer sides of said flat plates above said openings and having loops passed through said plates beneath said openings, and sphere shaped rosettes attached to the outer sides of said plates at the ends of said bit

bar and having spaced upper and lower alined strap receiving openings defining spaced keeper means for the straps, said rosettes being directly beneath said strap receiving openings and of a diameter less than the width of the enlarged intermediate portions of said cheek plates.

1,384,243. PUNCTURE-PROOF TIRE-INSERT. REUBEN B. DISBROW, St. Paul, Minn. Filed Oct. 31, 1918. Serial No. 260,463. 1 Claim. (Cl. 152—18.)

A casing liner for pneumatic tires having embedded therein an articulated puncture proof insert made up of thin metal sections disposed end to end around the liner, said sections being formed at their ends with longitudinal slits forming central tongues therebetween, the sections being arranged with their ends overlapping and with the central tongue of one section on the opposite side of the adjacent section from the portions at the sides of said tongue.

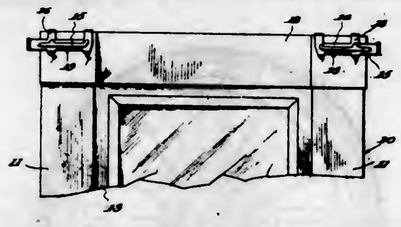


1,384,244. INNER TUBE. REUBEN B. DISBROW, St. Paul, Minn. Filed June 16, 1919. Serial No. 304,574. 1 Claim. (Cl. 152—13.)

An inner tube for pneumatic tires having its outer portion relatively thick and formed with circumferential and transverse exterior channels forming rectangular bearing lugs for engagement with the inner surface of the tire casing, the thickness of the tire below the bottom of said

lugs being greater than that at the inner portion of the tire, the bearing lugs being arranged in longitudinal rows but staggered transversely of the tire.

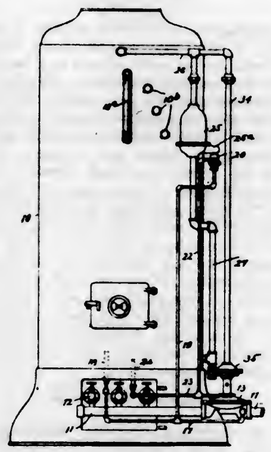
1,384,245. BUTTER-PRINT MACHINE. HENRY H. DOERING and CHARLES DOERING, Chicago, Ill. Filed Sept. 2, 1920. Serial No. 407,644. 5 Claims. (Cl. 31—65.)



1. In a machine of the character described, a main body portion provided with a pair of cylindrical grooves arranged parallel and in communication with each other at a point in line with the longitudinal axes of said grooves, and a wooden screw or worm disposed lengthwise of each groove, with the spirals of one worm arranged in staggered relation with those of the other, the grooves or spaces intermediate of the spirals of said worms being deeper adjacent the forward sides of the spirals than at the rear sides thereof.

3. In a machine of the character described, a main body portion provided with a pair of cylindrical grooves disposed parallel with each other from end to end, the top of said portion at one end being provided with a feed-opening having a gradually and forwardly slanting wall to provide a flared connection with the cylindrical grooves, a pair of screws or worms, composed of wood, disposed lengthwise of said grooves and provided with spirals approximating the perpendicular to the longitudinal axes of said worms, while the grooves intermediate of the spirals are deeper adjacent the forward sides of the spirals, and a molding head removably secured at the delivery ends of the grooves in the main body portion, communicating with both grooves and provided with an adjustable delivery orifice.

5. A machine of the character described, comprising a horizontally disposed main portion composed of wood and provided with a pair of cylindrical grooves arranged parallel and in communication with each other, said grooves being provided at one end with a feed opening flared forwardly at the bottom thereof, a wooden worm rotatably mounted in and extending lengthwise of each groove and provided with spaces or grooves intermediate of the spirals of greater depth adjacent the forward sides of the spirals, the spirals of one worm being arranged in staggered relation with those of the other worm, means whereby the worms are rotated in opposite directions, a uniformly perforated plate of predetermined thickness disposed at the delivery end of the worm whereby the butter is separated into a plurality of vermicular portions, and a tapered molding head secured to the main portion in abutting relation with said plate, adapted to force the vermicular portions of butter into a compact mass so as to incase the moisture entrained with said vermicular portions.



1,384,246. SHADE AND CURTAIN BRACKET. CECIL M. DURNELL, Daytona Beach, Fla., assignor to John F. Phillips, Wilson, Fla. Filed Jan. 22, 1920. Serial No. 353,284. 1 Claim. (Cl. 156—23.)

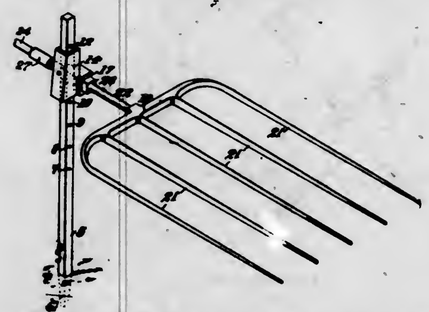
A device of the class described comprising a length of metal having one end portion extended angularly and constituting a supporting arm, said length of metal being provided adjacent its other end with a pair of spaced parallel longitudinal struck up flanges of elongated formation, a strip having one end portion arranged flatly in contact with said length of metal and engaged on opposite sides by said flanges, the said end portions of said strip being provided in opposite sides with notches, said length of metal being provided with a pair of struck up

locking prongs received within said notches, and oppositely directed attaching arms carried by said length of metal.

1,384,247. FUEL CONTROL FOR BOILERS. OTTO FOX, Lakewood, Ohio, assignor to The Bryant Heater and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1919. Serial No. 304,365. 9 Claims. (Cl. 122—504.)

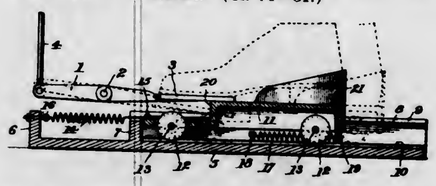
1. In combination with a boiler having a gas supply pipe, a shut-off valve in said pipe provided with a pressure responsive device for closing the same, a normally closed connection between the gas supply pipe and the pressure responsive device, and means whereby when the water in the boiler reaches a predetermined low level said connection is opened so as to permit the shut-off valve to be closed by gas pressure.

1,384,248. DIRECTION-INDICATOR. LOUIS FRANK, Miami, Ariz. Filed Apr. 7, 1921. Serial No. 459,313. 9 Claims. (Cl. 116—50.)



1. In a direction indicator of the kind described, a channel member having a web provided with a slot having inwardly tapered edges to form guide rails, a lamp carrier having rollers running on said guide rails, and means to prevent spreading of the guide rails and release of the carrier.

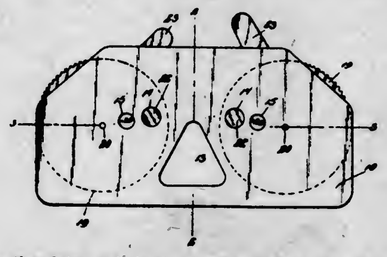
1,384,249. DIRECTION-INDICATOR. LOUIS FRANK, Miami, Ariz. Filed Apr. 22, 1921. Serial No. 463,519. 13 Claims. (Cl. 116—50.)



1. In combination, a pair of guide members adapted to be supported at opposite ends of an automobile and having display openings therein, a lamp carrier mounted on each of the guide members, and a connection between said carriers arranged to move both carriers simultaneously in the same direction.

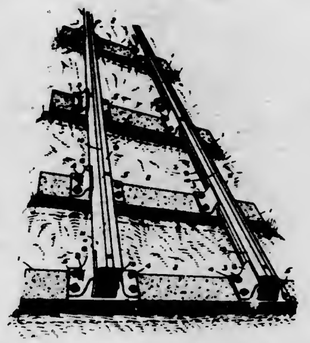
1,384,250. COMBINATION BARBECUE IRON AND GRATE. ACEL H. FROOM, Santa Maria, Calif. Filed Aug. 5, 1920. Serial No. 401,441. 1 Claim. (Cl. 126—30.)

In a device of the character described, a post, a series of perforations therein, a slide movable vertically on said post, a pin on said slide adapted to selectively engage any one of said perforations, a spring in said slide adapted to lock said pin in said perforation, a slot of angular cross-section in said slide, a barbecue iron with a handle thereon being of partly angular and partly round cross-section and adapted to be selectively either rigidly or rotatably supported in said slot.



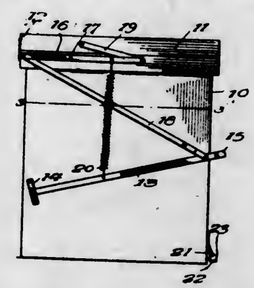
1,384,251. SAFETY-LOCK FOR FOOT-LEVERS. HYMAN GELLMAN, New York, N. Y. Filed May 7, 1920. Serial No. 379,467. 7 Claims. (Cl. 74—81.)

1. The combination with a foot lever, of a carriage to normally support said lever and lock the same against operation, and foot holding means on said carriage whereby the latter may be withdrawn from below the lever by the foot of the operator and the lever actuated by the same foot while on the carriage and holding the same in withdrawn position.



1,384,252. EYE-TESTING DEVICE. JAMES F. GIDDENS, Morehead City, N. C. Filed May 29, 1920. Serial No. 385,236. 2 Claims. (Cl. 88—22.)

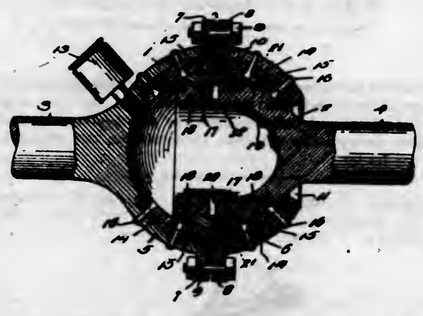
1. An eye testing device embodying a plurality of spaced plates having registering openings to admit the nose and spaced registering openings upon each side of the nose openings, perforated disks mounted for rotation between the plates and having lenses in said perforations adapted to be brought into register with certain of the spaced openings, other disks rotatably mounted be-



tween the plates and also having lens covered perforations adapted to be brought into register with the first mentioned lenses and indicia carried by all of said disks and visible through the openings to determine the character of the lenses.

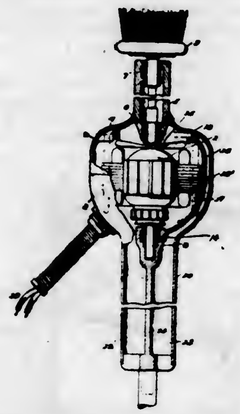
1,384,253. CONTINUOUS RAIL. WILFRID J. GIRARD, San Francisco, Calif. Filed Oct. 30, 1918. Serial No. 260,248. 4 Claims. (Cl. 238—139.)

1. A rail comprising a plurality of longitudinal sections of corresponding width having engaging means therebetween, and a holding chair provided with a removable key for locking said sections together.



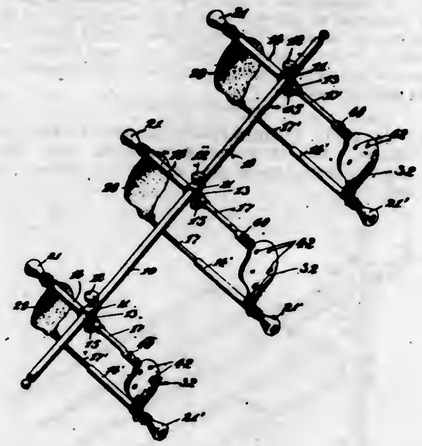
1,384,254. LID-OPERATING DEVICE. WILBERT C. HAGLEY and EDWARD O. HAGLEY, Huntington, W. Va. Filed Aug. 13, 1919. Serial No. 317,275. Renewed Dec. 28, 1920. Serial No. 433,742. 3 Claims. (Cl. 220—36.)

1. In a lid operating device, the combination with a receptacle having a hinged lid, a U-shaped treadle pivoted



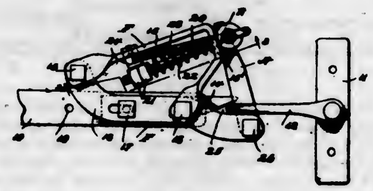
at its free ends against the opposite sides of the receptacle and extending across the front thereof, a lever pivoted on each side of the receptacle near the top thereof, a pair of links between the treadle and one end of each of said levers, a second pair of links between the other ends of said levers and the lid, a spring between the treadle and the adjacent lever at each side of the receptacle for urging the treadle upwardly to close the lid, and foot releasable means on the lower end of the receptacle adapted to engage the treadle for holding the lid open against the tension of the spring.

1,384,255. UNIVERSAL JOINT. OSCAR W. HANSON, Salina, Kansas. Filed Dec. 2, 1919. Serial No. 342,001. 5 Claims. (Cl. 64—91.)



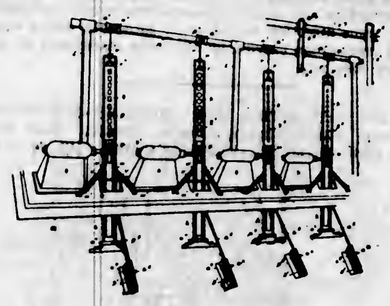
1. A universal joint comprising a ball member, a transversely divided socket member composed of detachably connected section, the outer peripheral surface of said ball member and the inner peripheral surfaces of the sections of the socket member being provided with opposed sets of grooves in the plane of the longitudinal axis of the joint, sectional keys fitted in said grooves and secured to the socket member, and circular disks fitted to oscillate in said ball member to permit movement of said members in a plane transverse to the longitudinal axis of the joint, said disks having grooves slidably receiving said keys.

1,384,256. MOTOR. ANNIE L. HARRELL, Seattle, Wash. Filed June 7, 1920. Serial No. 387,105. 5 Claims. (Cl. 172—36.)



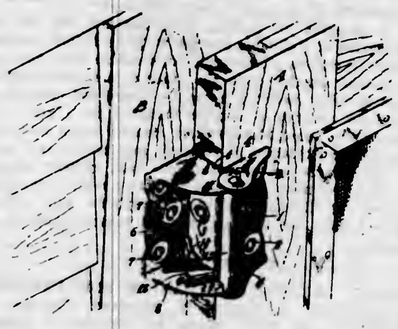
1. A portable hand motor, including a shell in which the motor is mounted, said shell having a tubular extesion divided by a longitudinal web into two channels, a fan operated by the motor within the casing remote from said extension, and a fluid channel formed within the casing in communication with one of said first mentioned channels and opening adjacent the fan.

1,384,257. LIMB-STRAIGHTENING DEVICE. JOHN HILGERS, Binghamton, N. Y. Filed Jan. 8, 1921. Serial No. 435,814. 16 Claims. (Cl. 128—80.)



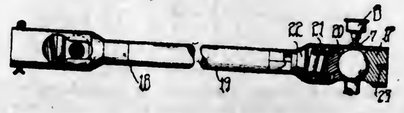
1. A device of the character specified, in combination, a main supporting member, a plurality of compression members slidably carried by the supporting member, means for fixedly attaching the compression members at predetermined positions upon the supporting member, means for allowing an angular movement of the compression members with respect to the supporting member, means for fixedly attaching the compression members to the supporting member at predetermined positions with angular respect to the supporting member and means for contracting and expanding the compression members.

1,384,258. AUTOMATICALLY-RELEASING COUPLING. ALBERT B. HULSEBOS and GERRITT DEN BESTEN, Corsica, S. D., assignors to Safety Release Clevis Company, Corsica, S. D., a Partnership consisting of Albert A. Hulsebos, Gerritt Den Besten, Henry Ketel, and H. N. Waite. Filed Oct. 4, 1920. Serial No. 414,546. 5 Claims. (Cl. 213—67.)



1. In a device of the class described, a frame adapted to be secured to a vehicle or implement, an arm pivoted to said frame and adapted to releasably retain a clevis or link connected to a power device, and means including a latch, keeper and spring for releasably securing the free end of said arm to said frame.

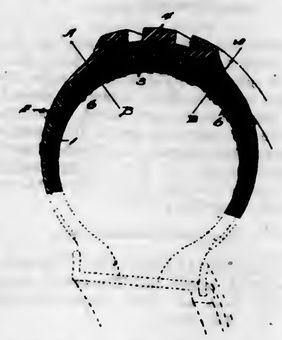
1,384,259. VERTICALLY-OPERATED BUFFING DEVICE FOR METAL CASES. MARTIN JELALIAN, Cranston, R. I. Filed Nov. 9, 1920. Serial No. 422,962. 4 Claims. (Cl. 51—91.)



1. In combination with a buffing bench having standards arranged upon the top of the same, a vertical support member forwardly of each of said standards and having pivotally connected to the floor beneath said bench and projecting through the same in a slanting vertical position and having reduced sections extending vertically and supporting a horizontal shaft upon the upper ends thereof, a pull-rope extending from each of the inner slidable members of the said vertical support members and passing through a pulley secured upon said shaft of the reduced sections of said vertical support members and adapted to spin between each pair of collars of a horizontal shaft arranged above said bench, a buffing-grease applying arm for each of said vertical support members and having pivotally connected to the reduced sections of the same and having a bar of buffing grease secured at its forward end and provided with pull-spring connections at the rear ends thereof to apply buffing grease to the buff-wheels of said standards.

1,384,260. HINGE. WILLIAM KANTER, Cleveland, Ohio, assignor to The Kanters Stamping & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 19, 1917. Serial No. 148,210. 5 Claims. (Cl. 16—25.)

3. A hinge comprising an angle plate adapted to engage the front and side surfaces of a closure, wings extending from the ends of the plate in substantially parallel relation to each other, a second plate offset rearwardly from the plane of the front surface of the closure and having wings which extend forwardly and overlap the wings of the former plate, a pintle pivotally connecting the overlapping wings of the plates, a spring surrounding the pintle and having one end in engagement with the front portion of the angle plate, the other plate having a projection on one of its end wings for holding the opposite end of the spring, a sleeve disposed between the opposed end wings of the plates and inclosing the spring, the second plate having a portion constituting a stop to be engaged by and limit the movement of the first plate in the direction in which it is impelled by said spring.

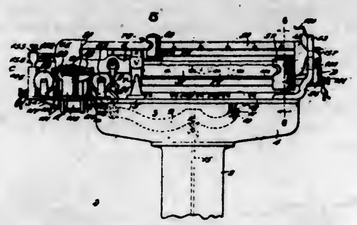


1,384,261. DRAG-LINK. REYNOLD E. KLAGES, Columbus, Ohio. Filed Apr. 19, 1920. Serial No. 375,067. 6 Claims. (Cl. 113—112.)

1. A drag-link or the like comprising hollow end sections having reduced inner ends and a tubular intermediate section to which said reduced ends are welded, said end portions being each formed from a pair of semi-bottle shaped parts welded together longitudinally.

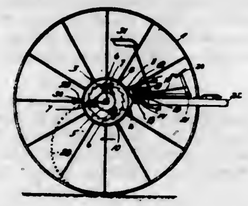
6. The method of manufacturing hollow metal drag-links for vehicles which consists in shaping sheet metal to form troughs each consisting of one half of a socket and one of which is pierced to receive a steering arm, thereafter uniting said troughs in pairs along their edges to form bottle shaped sockets, and butt-welding the reduced ends of said sockets to the corresponding ends of a tube.

1,384,262. TIRE-TREAD. CHAUNCEY L. LANDON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 20, 1918. Serial No. 218,249. 6 Claims. (Cl. 152—13.)



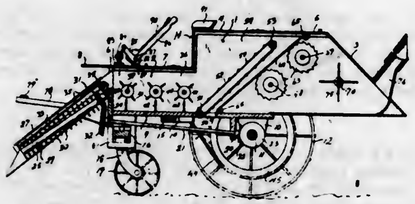
1. In a tire casing, the combination with a tread portion, of a body portion having a plurality of resilient strips of more elastic composition than the tread portion incorporated in the body of the tire, the strips being entirely located in the half of the tire embodying the tread.

1,384,263. AUTOMATIC WEIGHING-MACHINE. ARNOLD LARSEN, Cleveland, Ohio, assignor to The William Gent Vending Machine Company, Cleveland, Ohio, a Corporation of Ohio. Continuation of application No. 876,423, filed Dec. 10, 1914. This application filed June 20, 1918. Serial No. 240,923. 13 Claims. (Cl. 265—56.)



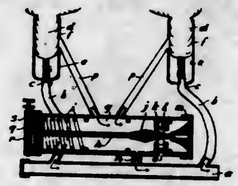
1. In an automatic weighing machine, the combination of a load carrying member, a branched scale beam operatively connected thereto, a weight on each of the branches of said beam, said beam and load carrying member being normally overbalanced by said weights, means

energized upon the depression of the load carrying member for automatically moving one of said weights along its beam branch until said weight is overbalanced by the



load, means operating thereafter to automatically move the other weight along its branch to load balancing position, and means for thereafter returning both of said weights to initial position.

1,384,264. SELF-DUMPING HAY-RAKE. JAMES L. LEONARD, Pleasant Hill, Mo. Filed Apr. 14, 1920. Serial No. 373,770. 7 Claims. (Cl. 56—388.)

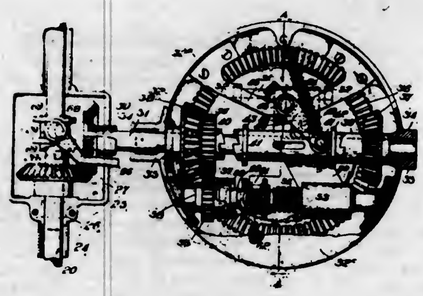


1. A self-dumping hay rake, comprising an axle provided with rake teeth, parts rigid with the axle and provided with spindles alined with the axle, wheels journaled on said spindles, disks rotatable around the axis of the axle adjacent the said parts, pawl and ratchet mechanisms for transferring power from said wheels to said disks when the wheels are turning forwardly, and means for securing the said disks in rigid relation to the said parts, to effect turning movement of the axle to lift the rake teeth from the ground.

1,384,265. COTTON-HARVESTER. WILLIAM F. LOCKWOOD, BEALIE H. SCOTT, and WILLIAM G. ROYAL, Hollis, Okla. Filed June 12, 1920. Serial No. 388,442. 6 Claims. (Cl. 56—35.)

3. A machine of the class described comprising a portable body, gathering means carried thereby and extending in advance thereof and delivering upon the forward end portion of the body, a plurality of upstanding fingers carried by the forward end of the body portion, a plurality of braking members carried by the body portion and cooperating with the upstanding fingers, the said braking members being so arranged that the articles delivered to one of the braking members are delivered by the said braking member to the remaining braking members, a sprocket on the end of each of the braking members, a chain passing around all of the said sprockets, means for rotating one of said sprockets and thereby transmitting rotary movement in the same direction to the other sprockets, and a separating mechanism carried by the body rearwardly of the braking members.

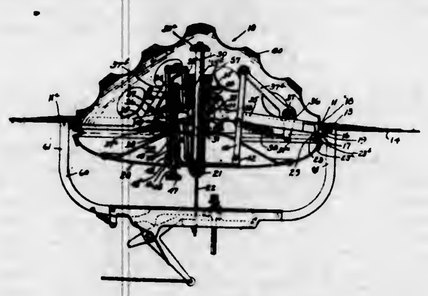
1,384,266. PULSATOR FOR MILKING-MACHINES. ROBERT MAES, Calgary, Alberta, Canada. Filed Dec. 27, 1920. Serial No. 433,349. 3 Claims. (Cl. 31—99.)



1. A pulsator for milking machines and the like consisting of a cylindrical chamber or cylinder provided with a solid ended piston subject to atmospheric pressure and retained by a coil spring placed around the stem or piston rod, a cam secured upon the piston rod in relation to a hollow slide valve, a hollow valve slidable within the said chamber and adapted to open and close ports in the cylinder shell, a coil spring interiorly fitted to the said slide adapted to expand when the cam engages it and to travel along the said cam as the result of contraction of the said coil spring carrying the slide in a direction opposite to that of the piston all substantially as described.

2. A pulsator for milking machines and the like, in combination with a teat cup and vacuum extracting device a hollow cylindrical member a piston slidable within the said cylinder, a cam securely mounted around the central rod of the piston, an expanding member adapted to engage around the surface of the said cam, a slide valve exteriorly engaging the interior walls of the said cylinder, having an interior groove within which the expanding member is retained, the said slide being given motion by the action of the expanding member coacting upon the tapering surface of the cam and operating air and vacuum valves so as to reverse the direction of the vacuum and air pressures all substantially as described.

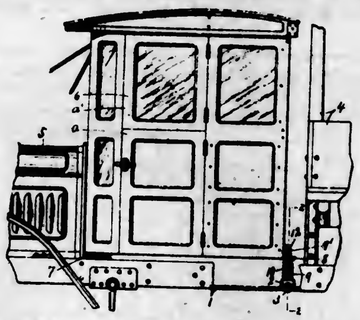
3. A pulsator for milking machines and the like the combination of a slidable plunger within a hollow cylinder adapted to receive atmospheric air pressure upon one face and vacuum suction upon the other face simultaneously, a cam securely mounted upon the piston rod adapted to engage an expanding member mounted in a groove in a slide valve the said expanding member when the point of maximum expansion is reached, contracting and causing the slide to travel within the said cylinder closing one set of cylinder ports and opening another set which reverses the direction of the atmospheric and vacuum influence upon the said plunger, all substantially as described.



1,384,267. DRIVING MECHANISM FOR LAUNDRY-MACHINES. LAWRENCE W. MAMMEN, Chicago, Ill. Filed Nov. 13, 1916. Serial No. 131,141. 7 Claims. (Cl. 74—50.)

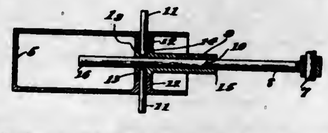
1. Driving mechanism of the character described, comprising, a gear adapted to transmit motion to the device to be operated, a shaft disposed transverse of said gear, a pair of gears loosely mounted on said shaft and arranged in mesh with the first gear at diametrically opposite points, a double clutch slidably keyed to said shaft, intermediate of the loosely mounted gears, adapted to alternately have clutching engagement with said pair of gears, a second shaft disposed parallel with the first shaft, a member adapted to travel lengthwise of the second shaft and parallel with the direction of movement of said double clutch, gearing intermediate of one of the loosely mounted gears and said second shaft whereby the latter is rotated alternately in opposite directions and

said member caused to travel in opposite directions lengthwise of said second shaft, and spring-controlled means operatively connected with said member and adapted to move into engagement with said double clutch whereby the latter is forced into clutching engagement with the selective gear of said loosely mounted gears.



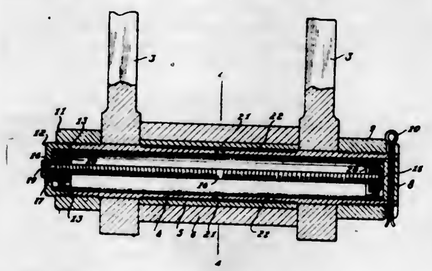
1,384,268. AUTOMATIC GAS-VALVE. ALGER G. MARANVILLE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 331,197. 21 Claims. (Cl. 244—31.)

1. In an apparatus for controlling the flow of fluid, a valve seat, and an automatically operating valve adapted to open under fluid pressure and with decreasing resistance to said pressure.



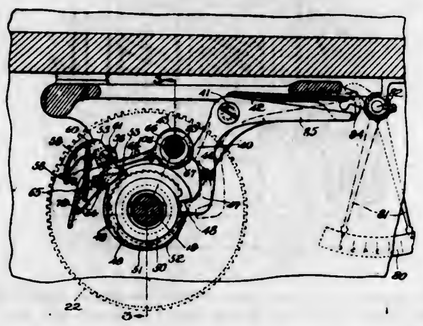
1,384,269. ROAD-VEHICLE OF THE MOTOR-TRUCK TYPE. NUGENT MILNER, Watertown, N. Y., assignor to H. H. Babcock Company, Watertown, N. Y., a Corporation of New York. Filed Nov. 26, 1919. Serial No. 340,690. 2 Claims. (Cl. 280—106.5.)

1. In combination with a chassis frame having opposite lengthwise side bars and a cross bar, a cab hinged at its front end to the chassis and having its rear end provided with a cross bar overlying the first-named cross bar, springs interposed between the cross bars, bolts passed through the cross bars and spring and having their upper ends provided with shoulders, and separate springs



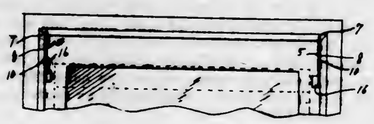
of less resistance than that of the first named spring interposed between the second named cross bar and shoulders.

1,384,270. SAFETY CONNECTING-ROD FOR AUTOMATIC STOKERS. MICHAEL MURPHY, Youngstown, Ohio. Filed Jan. 20, 1921. Serial No. 438,697. 1 Claim. (Cl. 74—48.)



In a device of the class described, a safety connecting rod, one end of the same being connected to a crank, the other end extending through a sleeve, a soft steel shearing pin passing through said sleeve and connecting rod, the said sleeve having an enlarged end provided with two holes, a plunger provided with an inner flange and provided with two holes through the outer walls of said plunger and extending through said inner flange, two rods passing through said holes and seated in the two holes formed in enlarged end of the sleeve, substantially as described for the purpose set forth.

1,384,271. LUBRICATING-BOLT. HARRY M. NAUGLE, Canton, Ohio, assignor to The Alloy Parts Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 19, 1919. Serial No. 339,094. 6 Claims. (Cl. 64—27.)



1. A hollow bolt forming a journal in the bearing of a spring eye or the like, an aperture in the bolt at the middle of the bearing, plungers in each end of the bolt, and means for simultaneously moving the plungers from the ends of the bolt to and from the middle aperture.

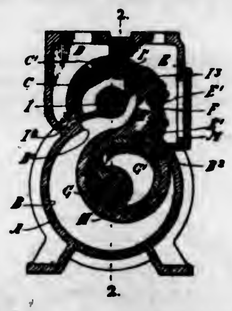
1,384,272. SPRING-MOTOR-CONTROLLING MECHANISM. BERNARD S. NICKERSON, Boston, Mass. Filed Sept. 10, 1917, Serial No. 190,458. Renewed June 23, 1919. Serial No. 306,206. 30 Claims. (Cl. 185—43.)

20. A spring motor comprising a spring, a rotatable spring-driven element, a rotatable spring-winding element, a ratchet on said winding element, a yielding pawl associated with said ratchet and permitting a limited reverse rotation of said winding element, a movable member for holding said driven element against rotation, and a second member frictionally engaged with the winding element for moving said first-mentioned member into and out of active position, whereby said driven element is held against rotation during the rotation of said winding element to wind the spring.

1,384,273. CURTAIN AND SHADE FIXTURE. FREDRICK C. PALOSKY and SIMON ZIMMERMANN, Pontiac, Mich. Filed July 28, 1920. Serial No. 399,641. 1 Claim. (Cl. 156—24.)

As an article of manufacture, a curtain and shade fixture consisting of an elongated blank of material having spaced extensions projecting from one longitudinal edge of the blank in the plane of said blank, said extensions including hooks, said hooks being disposed in spaced parallel relation to said longitudinal edges of the blank, a portion of one end of said blank being offset laterally with respect to said longitudinal edge of the blank, said offset portion terminating in a plane parallel to the plane of the opposite longitudinal edge of the blank and having an aperture adapted to receive the pintle of a curtain roller.

1,384,274. DEMOUNTABLE RIM. ORREL A. PARKER, Cleveland, Ohio. Filed Jan. 10, 1917. Serial No. 141,704. 5 Claims. (Cl. 301—28.)

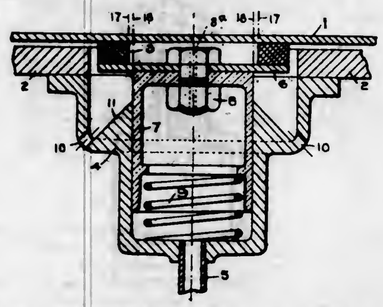


1. The combination with a wheel the body portion proper of which is eccentric, of a demountable tire carrying rim, means exerting radial pressure only upon said rim, and means coöperating with said radial pressing means to prevent lateral displacement.

1,384,275. SUNSHADE FOR AUTOMOBILE-WINDSHIELDS. AUSTIN PEARCE, Memphis, Tenn. Filed July 15, 1920. Serial No. 396,888. 2 Claims. (Cl. 296—97.)

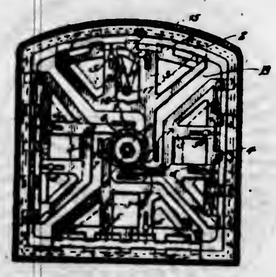
1. A sunshade for automobile windshields comprising a flat strip of fabric of single ply throughout and of a size at least equal to the area of the shield to be covered, straps attached to one longitudinal edge of the fabric near the ends thereof and adapted to be connected to the other longitudinal edge of the fabric so that the fabric and straps encircle the windshield but without connection to it, so that the fabric may be adjusted to cover different portions of the windshield, substantially as described.

1,384,276. ROTARY PUMP OR COMPRESSOR. GUSTAV B. PETSCHE, Yonkers, N. Y. Filed Nov. 2, 1920. Serial No. 421,272. 3 Claims. (Cl. 230—30.)



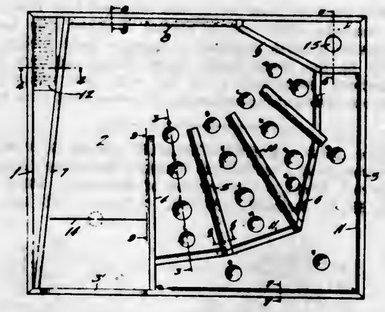
1. In combination with a rotary pump having a rotary eccentric ring piston and a piston extension forming a partition between the admission and exhaust ports, a valve for closing the admission port, means for moving said valve whereby it closes said port during the period when the piston is out of contact with its cylinder and leaves the port open at all other times and a valve for closing the delivery port opening under the pressure of the fluid in the pump and closing with the back flow when said pressure ceases.

1,384,277. PADLOCK. ANTONI SKUTNIK, Dickson City, Pa. Filed Oct. 14, 1920. Serial No. 416,995. 3 Claims. (Cl. 70—105.)



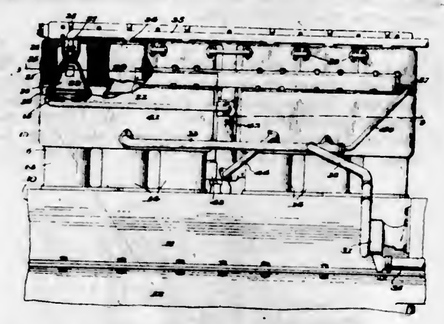
2. A padlock comprising a casing having a head at one end adapted for the insertion of a key, a shackle projecting into said casing a short distance from the opposite end, a pair of tumbler arms hinged at the last end of the casing and extending forwardly on opposite sides of the said shackle and adapted to have locking engagement with the latter, the said tumbler arms presenting key actuable surfaces to the rear of the said shackle, said shackle being slotted at its end to permit of passage of a key therethrough.

1,384,278. APPARATUS FOR GRINDING AND POLISHING PLATE-GLASS. FRANK EDWIN SLOCOMBE, St. Helens, England, assignor to Pilkington Brothers Limited, St. Helens, England, a Limited Liability Company of Great Britain. Filed Sept. 26, 1918. Serial No. 255,729. 16 Claims. (Cl. 51—234.)



1. In a sucker device adapted to hold glass on to a grinding or polishing table the combination with a sucker movable relatively to the table and to which the glass is attached by atmospheric pressure, of pneumatic means operatively connected to the sucker for allowing the glass to be pressed against the table by atmospheric pressure, the relative areas of the glass and pneumatic means which are subjected to the said pressure being such that, of the total atmospheric pressure on the glass due to whatever degree of vacuum there may be in the sucker device, a portion determined by the dimensions of the latter operates to press the glass on to the table while the remainder presses the glass on to the sucker.

1,384,279. BURIAL-VAULT CLOSURE. HENRY C. SPONHAUER, Galion, Ohio. Filed Oct. 20, 1919. Serial No. 331,962. 2 Claims. (Cl. 292—89.)



1. In a burial vault, the combination of a vault body, a closure therefor, a locking means for the closure consisting of a series of locking bolts, and means to operate said bolts comprising a two part shaft on the closure, a pinion connected with one part of said shaft and engaging the locking bolts to operate the latter in one direction and a disk carried by said part of the shaft adapted to engage the bolts and move them in another direction, the other part of the shaft being movable with the first named part to cause the pinion to actuate the bolts, and being movable relatively independently of said first named part to cause the disk to actuate the bolts, the pinion being arranged to cause sliding movement of the bolts and the disk being arranged to cause a lever-like movement of the bolts.

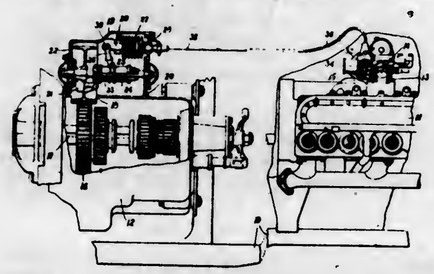
1,384,280. GAME-BOARD. DON L. STERLING, Dallas, Tex., assignor to Sterling Games Company, Dallas, Tex., a Corporation of Texas. Filed July 12, 1919, Serial No. 310,308. Renewed Jan. 19, 1921. Serial No. 438,526. 10 Claims. (Cl. 46—61.)

1. A game board having a banking cushion, a playing field, a shooting field, and a cushion overlapping both fields, the shooting field having a width such as to permit lateral positioning of a cue ball to bank the same at various angles into the playing field, the playing field having radial divisions.

1,384,281. HYDROCARBON-MOTOR. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed May 11, 1914, Serial No. 838,622. Divided and this application filed Feb. 21, 1916. Serial No. 218,556. 8 Claims. (Cl. 123—173.)

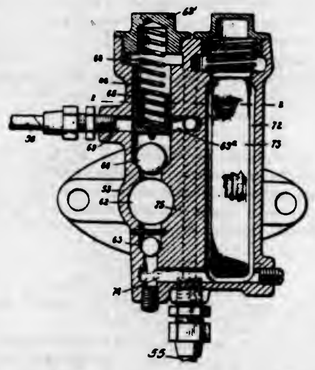
1. In a hydrocarbon motor, the combination with a plurality of water jacketed cylinders and water jacketed head pieces for each cylinder having water jackets separate from the cylinder water jackets, of means for circulating water through several of said head pieces in series.

1,384,282. ARTIFICIAL TOOTH. CLARENCE E. TUTTLE, Readville, Mass. Filed Jan. 18, 1918. Serial No. 212,424. 1 Claim. (Cl. 32—9.)



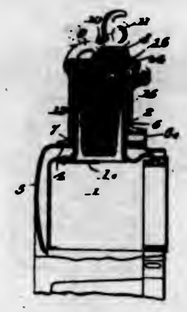
As an article of manufacture an artificial tooth adapted to be used either for plate work or to crown a tooth stump, said artificial tooth having a base face which is concaved from the front to the back of the tooth and also having a flat bottom cavity situated within its body and extending

from its base well toward the tip, said cavity having a progressively-decreasing cross-sectional area from said flat bottom to a point near the concaved base face of the tooth and having a progressively-increasing cross-sectional area from said point to the base face, said concaved base face being arranged to fit a plate when the



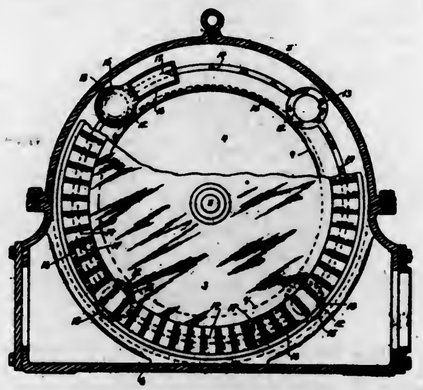
tooth is used for plate work, said concaved base face being of a material which can be ground off when it is desired to provide a tooth suitable to crown a tooth stump, the cavity in the tooth being unobstructed and free from projections extending from its wall and adapted to receive a cementitious substance for cementing it in place.

1,384,283. MOTOR-VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 30, 1916. Serial No. 117,772. 6 Claims. (Cl. 264—2.)



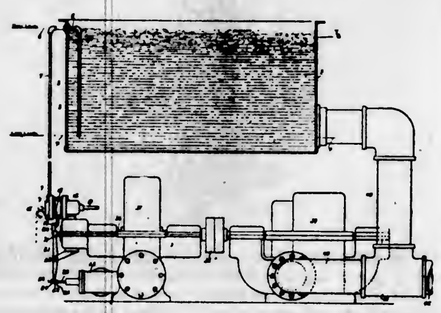
1. In a motor vehicle, in combination, a hydrocarbon motor having a throttle valve, a gear box having a sliding gear therein, a gear having a relatively long face in constant mesh with said sliding gear, a governor operated by said long faced gear, and connections from said governor to the throttle valve.

1,384,284. HYDROCARBON-MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Oct. 14, 1912, Serial No. 725,741. Divided and this application filed Aug. 30, 1916. Serial No. 117,773. 9 Claims. (Cl. 184—27.)



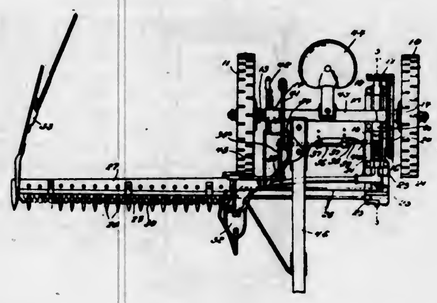
9. In a hydrocarbon motor, an oil distributing system having a passageway receiving oil under pressure, a control valve for said system comprising a cylinder having a main outlet and an overflow outlet beyond the main outlet, a piston controlling the outlets, and a spring to maintain the piston in a position normally closing both outlets and permitting it under pressure to first open the main outlet and later the overflow outlet.

1,384,285. RADIATOR FOR MOTOR-VEHICLES. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 13, 1917. Serial No. 174,640. 3 Claims. (Cl. 257—125.)



1. The combination with a radiator including a tank provided with a filler tube, of a removable shell for covering the tank and having a sleeve to inclose the filler tube, the upper end of the sleeve fitting snugly around the tube, and a cap pivoted to the sleeve and adapted to close the filler tube, said sleeve and cap, when the latter is closed, entirely covering the filler tube.

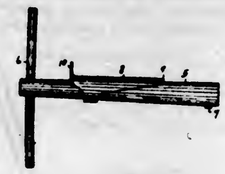
1,384,286. STEAM-TURBINE. LUCIUS E. WHITON and HENRY B. LEE, New London, Conn., assignors to The D. E. Whiton Machine Co., New London, Conn., a Corporation. Filed Mar. 13, 1920. Serial No. 365,589. 2 Claims. (Cl. 253—78.)



1. A steam-turbine having one of the side walls of its steam-chamber formed with equi-distant positioning-recesses united by an annular positioning-groove, in combination with steam-nozzles having hubs entering the said recesses, and fingers entering the said groove, whereby the nozzles are positively held against lateral displacement.

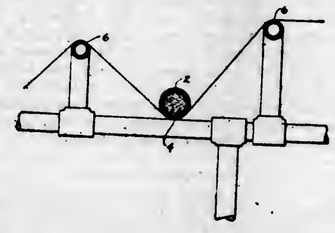
1,384,287. AUTOMATIC CONTROLLING APPARATUS FOR TANK-PUMPS. LUCIUS E. WHITON and HENRY B. LEE, New London, Conn., assignors to The D. E. Whiton Machine Company, New London, Conn., a Corporation. Filed Mar. 13, 1920. Serial No. 365,654. 1 Claim. (Cl. 103—86.)

In an automatic controlling apparatus for tank-pumps, the combination with a tank, of a tank-pump, a motor therefor, a motor-controller, and a hydraulic motor-controller operator including a siphon the high and low points of which substantially coincide with pre-determined high and low water-levels in the tank.



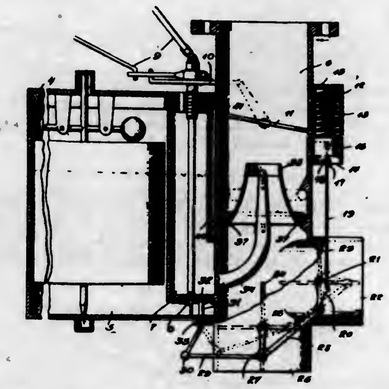
1,384,288. MOWING-MACHINE. FRANK R. WILSON and ANDREW O. RINGO, Williston, N. D. Filed July 24, 1918. Serial No. 246,563. 1 Claim. (Cl. 56—274.)

A mowing machine comprising a frame, means for pivotally supporting said frame transversely beneath the axle of the machine, a cutter bar, a driving gear mounted upon the axle of the machine, mechanism including gear operated cranks supported in said frame for operating the cutter bar from the driving gear, a clutch included in said mechanism, a pivoted clutch lever and a rock shaft engageable with one end of the pivoted clutch lever for controlling the operation of the clutch lever to disconnect the gear operated cranks.



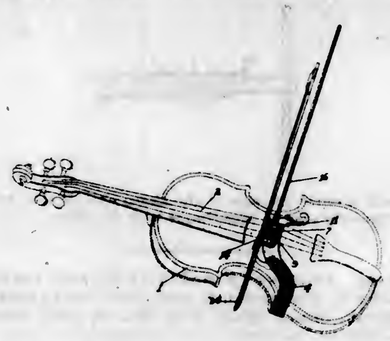
1,384,289. SLEEVE-PULLER. JOSEPH H. WILSON, Houston, Tex. Filed Apr. 22, 1920. Serial No. 375,733. 3 Claims. (Cl. 29—88.2.)

1. A sleeve puller including a tubular member, a rigid laterally projecting stud at one end thereof and adapted to engage with the sleeve to be pulled, and a wedge shaped member slidably mounted on said tubular member, and



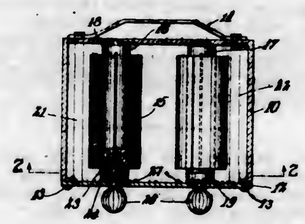
adapted to enter the side of the sleeve opposite the stud to secure said stud in engagement with the sleeve.

1,384,290. PROCESS OF MAKING COLORED PAPER. LESTER P. WINCHENBAUGH, Hyde Park, and LAWRENCE GENTILE, Melrose, Mass. Filed Dec. 28, 1920. Serial No. 433,619. 3 Claims. (Cl. 91—68.)



1. A process of making colored paper which comprises taking a paper which varies in thickness at different points therein and applying to one side thereof a penetrative coloring liquid in regulated quantity sufficient to cause the same to strike through the paper at least at the thin points therein.

1,384,291. METHOD OF OPERATING AND A CONTROLLING MEANS FOR CARBURETERS. DAVID L. WINTERS, Edgewater, Md. Filed Oct. 15, 1919. Serial No. 330,799. 4 Claims. (Cl. 123—122.)

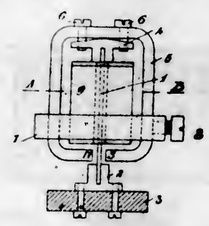


1. In a carbureter, in combination, an intake for the engine, a hot air intake, a cold air intake, a fuel valve, means operated by the vacuum existing in said engine intake to control the admission of hot and cold air and said fuel valve.

1,384,292. VIOLIN-BOW GUIDE. SPENCER L. YATES, Oakland, Calif. Filed Aug. 28, 1920. Serial No. 406,742. 5 Claims. (Cl. 84—283.)

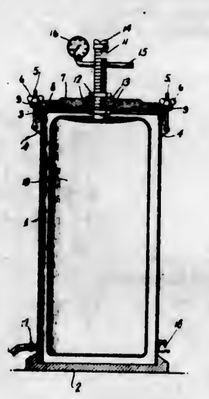
1. A violin bow-guide comprising a support adapted to be secured to the violin body and projecting over the bridge thereof, and a rod mounted on the support and extending transversely of the violin and beyond one side thereof, said rod being passed through the hand of the user of the violin bow, and a guide fork positioned at right angles to the belly of the violin fixed to the end of the rod adjacent the bridge and projecting into the plane of the violin-bow, the latter passing therethrough.

1,384,293. TOY SCENERY-BOX. JOHN ZIEBA, Scranton, Pa. Filed July 29, 1920. Serial No. 399,811. 4 Claims. (Cl. 40—86.)



1. In a toy of the character described, a roll adapted for having a sheet rolled thereon, said roll having a recess extending inwardly from one end thereof, a cap covering said recess and secured to said roll, said cap having an elongated opening therethrough, and means adapted to be inserted through said opening and engage the inner face of said cap whereby the said roll may be rotated.

1,384,294. MIRROR AND METHOD OF BACKING THE SAME. CARL E. ANDLEY, New York, N. Y. Filed Mar. 19, 1919. Serial No. 283,645. 3 Claims. (Cl. 88—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



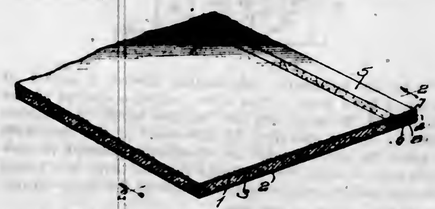
1. A mirror provided with an annular member secured to the outer edge thereof, a hub, and means for centrally supporting said hub within said annular member and out of contact with said mirror.

1,384,295. ELECTRIC REPRODUCER FOR PHONOGRAPHS. HENRI ARMAGNAT and PIERRE PERLY, Paris, France. Filed May 19, 1919. Serial No. 298,185. 3 Claims. (Cl. 179—100.1.)

1. In a phonograph, a stylus-carrying arm for coaction with a disk, a magnetic blade having an extremity secured to said arm, a permanent magnet secured to the free end of the said blade and arranged with its poles in juxtaposition with said blade, and a spool having a hollow hub in which said blade oscillates transversely and thereby creates an electromotive force to transmit to a distance the sounds registered by the disk.

1,384,296. SPRAYING DEVICE. HENRY C. BAUMGARDNER, Ann Arbor, Mich. Filed May 14, 1920. Serial No. 381,242. 1 Claim. (Cl. 299—92.)

A spray device of the class described comprising a casing, a removable cover therefor, a collapsible container within the casing, a screw threaded filling spout secured to the container and passing through the cover, nuts for holding the spout to said cover, a cap for closing the spout, a nozzle connected with the spout and a pressure gage connected with the spout.



1,384,297. DRILL. HENRI BERNAY, San Francisco, Calif., assignor to Fred W. Thurston, San Francisco, Calif. Filed Apr. 5, 1920. Serial No. 371,741. 27 Claims. (Cl. 255—64.)

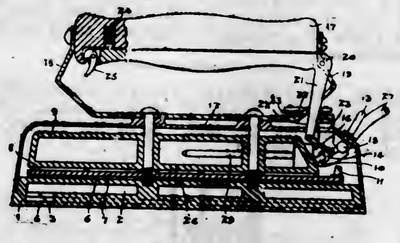
1. A drill comprising a stock having oppositely inclined slots therein on opposite sides of the axis of said stock; and bevel-edged bits removably mounted within the slots, the outer beveled surfaces being of greater area than the inner beveled surfaces whereby a pressure applied to the

cutting edges of said bits will tend to move said cutting edges toward the axis of the stock.

1,384,298. PLASTER-BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 19, 1920. Serial No. 404,670. 4 Claims. (Cl. 154—45.9.)

1. A plaster board comprising a plaster body and opposed sheets of fibrous material adhering to and forming a covering for said plaster body, one of said sheets being wider than the opposed sheet and inclosing the edges of the plaster body and overlapping the marginal parts of the other sheet, the said other sheet having its marginal parts depressed below said overlapping marginal parts of the opposed sheet with a substantial plaster layer interposed between the adjacent parts of the overlapping and underlapping marginal parts of said sheets.

1,384,299. BRACE OR SUPPORT. HUBARD BROWN, Buford, Ga. Filed Feb. 7, 1920. Serial No. 356,886. 1 Claim. (Cl. 2—93.)

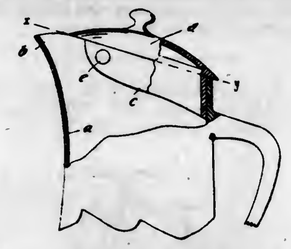


In a brace of the character described, stays, means for attaching the stays to the legs of a user, plates pivotally connected at the upper ends of the stays and having projections below the pivots, rigid members attached to the said plates, body encircling members carried by the rigid members, means for limiting the movement of the rigid members with relation to the stays, and springs connected to the ends of the plates and to the stays.

1,384,300. BICYCLE SIDE CAR. GEORGE GARDNER BUCKLAND, San Francisco, Calif. Filed Aug. 5, 1920. Serial No. 401,517. 3 Claims. (Cl. 208—45.)

1. A side car attachment for bicycles or motorcycles consisting of a wheel bolted within a substantially U-shaped inverted yoke, the yoke being in turn bolted to a horizontal laminated spring load carrying frame set at a right angle to the bicycle frame, the inner end of said spring frame being adjustably bolted to the vertical limb of a right angle spring attaching frame mounted within and clipped to the rear bicycle forks and frame.

1,384,301. PRESSING-IRON. SAMUEL G. BUSKARD, Hamilton, Ontario, Canada, assignor to The Manutil Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 19, 1919. Serial No. 318,525. 6 Claims. (Cl. 68—26.)



1. A pressing iron comprising, a base having steam passages leading to the face, a two element electric heater secured to said base, a hollow casing secured against said heater, means for conducting steam from said hollow casing to said steam passages, and means for directing electric current to either element of said heater.

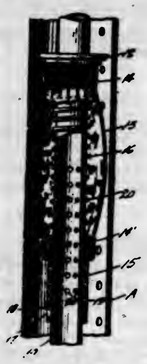
1,384,302. COVERED HOLLOW WARE. CHARLES CLARKE-BRUFF, Coalport, England. Filed July 9, 1920. Serial No. 395,084. 4 Claims. (Cl. 65—31.)

1. In a covered vessel of the type described, in combination, a vessel component, a loose removable cover component, said cover component having a rigid verge the back of which is adapted to bear against the interior of the neck of the vessel to counter a tilting movement of said cover component toward the pouring side of the vessel, and said components, on the pouring side thereof, having

corresponding plain faced wall parts with appertaining intermediate elastic means as local friction grips on one

component for frictionally reacting with the other component to form a plain face friction grip lock.

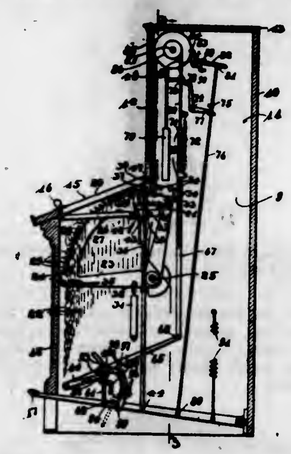
1,384,303. SPECTACLE-FRAME. STEPHEN J. CLULEE, Attleboro, Mass., assignor to Bay State Optical Company, a Corporation of Maine. Filed Nov. 8, 1920. Serial No. 422,440. 5 Claims. (Cl. 88—53.)



1. In spectacles of the type set forth, a non metallic frame comprising a body and ears supported by the body provided with openings, metallic tubes in the openings, metallic pivot members extending through the tubes, and temples mounted on the pivot members.

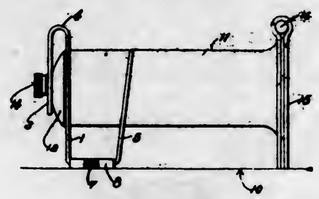
1,384,304. SPRAY. FRANK C. COOK, Washington, D. C. Filed Dec. 15, 1920. Serial No. 431,044. 2 Claims. (Cl. 167—6.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A spray composed of a mixture of a solution of sulfate of copper and a solution of barium hydroxid.



2. As a new product a barium water spray consisting of a mixing of a solution of copper salt and a solution of barium salt.

1,384,305. WELL-WASHER. FRANK E. CROTTO, Dallas, Tex., assignor to Robert T. Meador, trustee, Dallas, Tex. Filed Jan. 29, 1921. Serial No. 404,849. 5 Claims. (Cl. 166—20.)

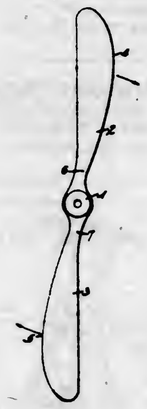


1. In a well washer, a pipe, a flexible sleeve surrounding the pipe and having one end fastened thereto, and a valve slidable on the pipe and connected with the sleeve, the pipe being perforated within the sleeve and also within the valve, said valve uncovering the perforation when slid.

1,384,306. AUTOMATIC INFORMATION DEVICE. WILLIAM C. CUTLER, North Glendale, Calif. Filed Feb. 3, 1921. Serial No. 442,243. 10 Claims. (Cl. 40—65.)

1. In an automatic information device, a series of tables, a hand lever, a foot lever, means operative by the hand lever to move any one of the tables to selective position, means operative by movement of the foot lever to move the selected table out of selective position to view position, and means for retaining the foot lever in a locked position until released by the action of the table returning to said selective position.

1,384,307. PASTE-DISPENSING DEVICE. WILLIAM A. DANIEL, Earl, Ark. Filed July 28, 1920. Serial No. 398,422. 2 Claims. (Cl. 248—20.)

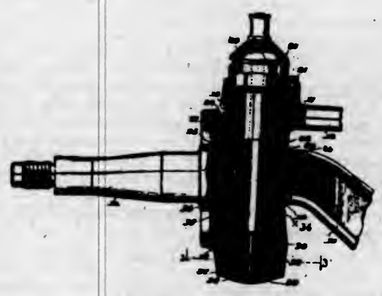


1. In a device for dispensing paste from flexible tubes, a holder comprising tube-gripping forward arms merging into a loop-shaped head forming an abutment for the forward end of the tube, the forward arms being prolonged to form rear tube-gripping arms; and a base, the holder being connected to the base between the forward and rear arms.

1,384,308. AIRPLANE-SCREW. CLARENCE A. DE GIERS, Keyport, N. J., assignor to William Hendry Barker, New Brighton, N. Y. Filed Oct. 23, 1917. Serial No. 198,017. 7 Claims. (Cl. 170—159.)

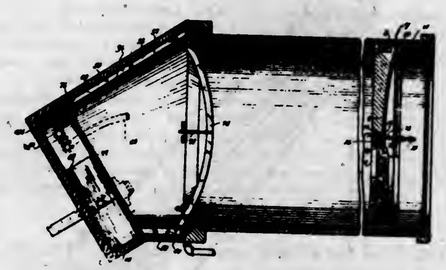
1. An aeronautical propeller, consisting of a complete finished structure comprising a "fillet" completely inclosed in a shell of vulcanised material.

2. An aeronautical propeller, consisting of a complete finished structure comprising a "fillet" completely inclosed in a shell of vulcanisable material and means permitting portions of the vulcanized material to become embedded in the "fillet" for securing such material and the "fillet."



3. A propeller formed as a complete structure from a vulcanisable material vulcanized about a fillet, said fillet having the general contour of the finished propeller and provided with openings, said vulcanisable material extending through said openings to form areas of homogeneous material through the finished propeller.

4. A complete propeller consisting of a fillet having the general outlines of the finished propeller and a vulcanisable covering surrounding said fillet and vulcanised thereupon and joined at intermediate points through said fillet, the fillet having openings to permit the passage of the vulcanisable material.

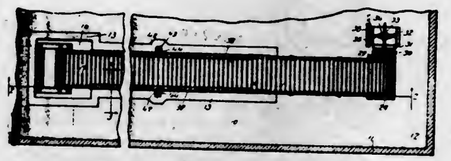


5. A propeller consisting of a fillet having the general contour of the finished propeller, and laminæ of vulcanisable material completely inclosing said fillet and vulcanized thereto and therethrough.

1,384,309. MOTOR-VEHICLE. FRANK J. DRUAR, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 10, 1919. Serial No. 275,941. 6 Claims. (Cl. 280—96.1.)

1. A steering knuckle having a spindle knuckle member, an axle, a pivot pin, an oil retaining cup mounted between the pin and knuckle member and having a supporting flange engaging the upper surface of said member, a flange extending longitudinally of the cup from said supporting flange, said axle being grooved to receive said second flange.

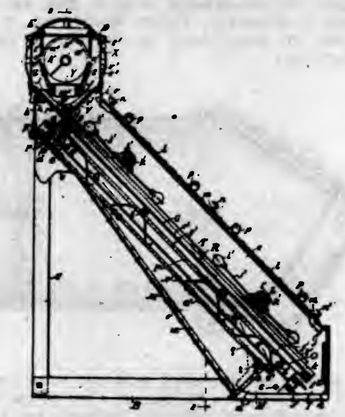
1,384,310. MACHINE FOR DISPENSING SEMISOLID SUBSTANCES. JOHN E. DUNGAN, Canton, Ohio, assignor, by direct and mesne assignments, of seven-sixteenths to Walter S. Bryson, one-sixteenth to Benjamin F. Bone, one-sixteenth to Frank M. Howard, one-sixteenth to James A. Schaub, one-sixteenth to Allen C. Scroggins, Jr., one-sixteenth to H. J. Zink, and one-sixteenth to Everett E. Koonts, Moundsville, W. Va. Filed Nov. 15, 1919. Serial No. 338,160. 21 Claims. (Cl. 107—14.)



1. A machine for dispensing semi-solid substances including a container open at one end, a cut off plate normally closing the open end of the container and a fluid pressure operated piston within the container for forcing the contents from the container when the cut off plate is opened.

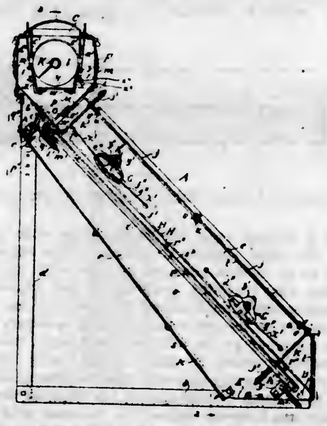
4. A machine for dispensing semi-solid substances including a cylinder, a fluid pressure operated piston for forcing the contents from the cylinder, a cooling coil, and means for admitting fluid under pressure through said coil to the cylinder.

10. A machine for dispensing frozen substances including a cylinder surrounded by a cooling chamber and provided with a discharge opening, a plunger located in the cylinder and a fibrous lubricating ring located around the periphery of the plunger and adapted to lubricate the interior of the cylinder to prevent frost from forming directly upon the interior walls of the cylinder.



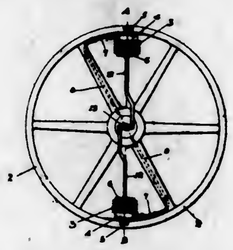
11. A machine for dispensing semi-solid substances including a cylinder, a fluid pressure operated piston for forcing the contents from the cylinder and means for cooling the fluid before it is admitted to the cylinder.

1,384,311. COOLING-TANK. HERBERT C. FOLLINGER, Chicago, Ill., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 10, 1919. Serial No. 303,223. 4 Claims. (Cl. 198—4.)



1. In a cooling tank, the combination with a trough having the sides slightly overhanging the edges of the bottom, of an endless conveyer therein with its edges on its upper run traveling underneath and adjacent said overhanging sides, longitudinal supports for the edges of said conveyer on its upper run, rotating members supporting the conveyer at the ends of the trough, one of said members being above the plane of the top of the trough, means for driving the conveyer, and an abutment on each side of the trough extending over the edges of the belt on its upper run but not beyond the vertical plane of the overhanging sides, and located at the point where the top run of the conveyer turns upward to carry the cans out of the water.

1,384,312. **FEEDER OR REGULATOR FOR SCREENING APPARATUS.** GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed June 15, 1906, Serial No. 321,856. Renewed Dec. 27, 1915, Serial No. 68,919. Divided and this application filed June 11, 1915. Serial No. 33,464. 3 Claims. (Cl. 83—44.)



1. In combination, housing means affording an elongated distributing chamber, a reversibly revoluble longitudinally feeding laterally discharging distributing screw conveyer mounted in said chamber, stationary means affording a trough for said conveyer affording a discharge outlet at and extending longitudinally of each side of said conveyer, adjustable means adjustably mounted as to and extending longitudinally of said stationary means for varying said outlets respectively and affording at each side of said conveyer an adjustable discharge edge extending longitudinally of said conveyer and spaced apart from the longitudinal walls of said chamber to afford a passage at each side of said trough for material distributed by said conveyer, and adjusting means for adjusting said adjustable means respectively.

1,384,313. **FEED-REGULATOR FOR SCREENING AND OTHER APPARATUS.** GEORGE HOLT FRASER, Brooklyn, N. Y. Original application filed Dec. 31, 1907, Serial No. 408,772. Divided and this application filed June 11, 1915. Serial No. 33,465. 5 Claims. (Cl. 83—44.)

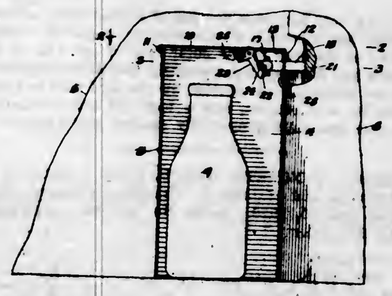
1. In combination, a casing affording an elongated distributing chamber, a trough or member mounted in said casing and having longitudinally extended edges at its front and rear sides opposite and spaced apart from the adjacent walls of said casing and affording downwardly extending conduits or passages between said walls and said trough for material discharged from said trough, a revolving distributer mounted in said trough for discharging material over either edge thereof in a wide thin stream, means exteriorly of said casing for adjusting said trough, and means for revolving said distributer in either direction for discharging material into either one or the other of said conduits according to the direction of revolution of said distributer.

1,384,314. SPEED-RESPONSIVE DEVICE. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Sept. 5, 1916. Serial No. 118,540. 19 Claims. (Cl. 264—19.)

1. In combination with means to be controlled, a rotary member, a weight mounted thereon to move in response to centrifugal force, means on said rotary member maintaining a fluid in direct operative relation to said weight whereby movement of said weight directly varies the pressure on said fluid, and connections for transmitting the pressure on said fluid to said means to be controlled.

1,384,315. MOUTHPIECE FOR LIQUID-RECEPTACLES. SPIRO DENIS GARRIS, Calcutta, British India. Filed Oct. 27, 1920. Serial No. 420,001. 4 Claims. (Cl. 220—39.)

1. A mouthpiece with means for closing the same adapted for use with receptacles for holding liquids, characterized by having an internally screwed cylindrical part, a fastening ring adapted to engage such internal screw thread, an inwardly projecting flange on the outer or exterior end of the cylindrical portion to prevent removal of the fastening ring, an inwardly projecting flange at the inner or interior end of the cylindrical part adapted to form a shoulder against which the fastening ring may compress and hold a closing disk, and a closing disk of suitable material.



1,384,316. METAL TIE. NATHANIEL O. GOLDSMITH, Norwood, Ohio, assignor to The Weir Frog Company, Norwood, Ohio, a Corporation of Ohio. Filed Apr. 18, 1919. Serial No. 291,052. 1 Claim. (Cl. 238—51.)

In a metal tie, the combination with a rail supporting member having means at its end for engaging the outer flange of a rail base, and a clamping member pivotally mounted on the supporting member and having a shoulder formed on a cam curve to abut tightly against the edge of a rail flange upon driving of the member into place, and a terminal piece shaped to overlie the inner rail base

flange and likewise cam-curved at the end, said terminal piece being thickened at the portion thereof located away from the rail when the clamping member is open.

1,384,317. THEFTPROOF RECEIVER-BOX. HONORÉ HANNOTTE, Morsemere, N. J., assignor to Louis Wilke, Morsemere, N. J. Filed July 17, 1920. Serial No. 396,909. 10 Claims. (Cl. 232—42.)

1. A receiver box of the class described provided with a closure member and a lock mechanism for said closure member, said lock mechanism being provided with a part adapted to be placed between a door and the door frame thereof when the door is in its closed position for retaining the lock mechanism in its operative position.

1,384,318. PROCESS OF MAKING BUTTER. WILFRID PAUL HEATH, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,949. 4 Claims. (Cl. 99—8.)

1. The improvement in the process of manufacturing butter, which consists in confining the cream in a suitable churn, injecting a sterile gas into said churn, and thereby expelling the air therefrom, and creating in the churn an atmosphere of sterile gas, and agitating or stirring said cream while confined in said gaseous atmosphere, thereby causing the gas to be incorporated in the resulting butter.

4. The improvement in the process of manufacturing butter which consists in confining the cream in a suitable churn, injecting carbon dioxid gas into the lower part of the mass of cream whereby the gas will pass up through said cream and expel the air therefrom and from said churn, creating, in the churn, an atmosphere of carbon dioxid gas, and agitating or stirring said cream while confined in said gaseous atmosphere, thereby causing the gas to be incorporated in the resulting butter.

1,384,319. PROCESS OF MANUFACTURING CANDY. WILFRID PAUL HEATH, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,950. 2 Claims. (Cl. 99—8.)

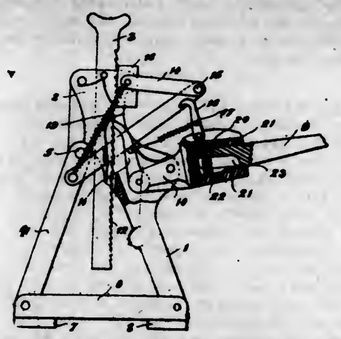
2. The process of manufacturing candy which consists in confining the candy mixture, while in a liquid or semi-liquid condition, in a suitable container, injecting carbon dioxid into said container, and thereby driving the air therefrom, agitating or stirring said candy mixture to incorporate the gas into said mixture, and thereby reducing the specific gravity of said mixture and imparting a gaseous flavor thereto.

1,384,320. PASTE BAIT. JOHN M. HICKSON and DONALD A. YOUNG, Portland, Oreg. Filed Sept. 27, 1919. Serial No. 326,906. 4 Claims. (Cl. 99—11.)

2. A composition bait consisting of one hundred pounds of fresh salmon eggs previously treated with five pounds of common salt in combination with one-half pound of saltpeter and three pounds of sugar.

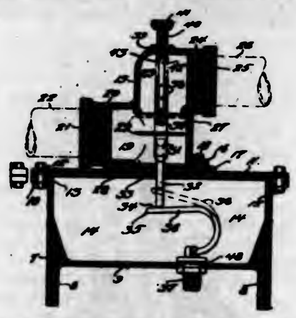
3. A method for converting salmon roe into a permanent, attractive, soluble paste bait consisting of treating fresh salmon roe with common salt until the cellular coverings have been weakened and the surplus moisture extracted, then removing as much more moisture as is possible with moderate pressure, then sweetening, curing and preserving the bait in a paste or putty-like form.

1,384,321. IGNITION DEVICE FOR INTERNAL-COMBUSTION MOTORS. LEON F. HOFFMAN, Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1920. Serial No. 375,985. 5 Claims. (Cl. 123—145.)



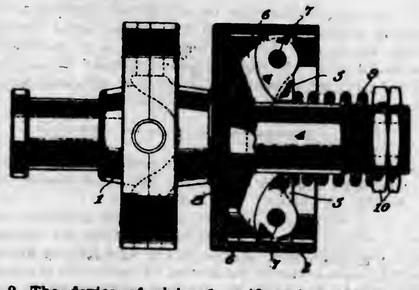
1. The combination with the combustion chamber of an internal combustion motor, of an ignition device carried within the walls of said chamber adapted to be operatively positioned with said chamber and withdrawn to an inoperative position without said chamber at will, and means for locking said device in both said positions.

1,384,322. LIFTING-JACK. CHARLES ALLAN JONES, Gloucester, England. Filed Dec. 29, 1919. Serial No. 348,068. 3 Claims. (Cl. 254—106.)



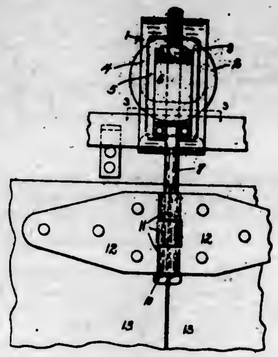
1. In a lifting jack, a base, a rigid leg pivotally connected at its lower end to the base, a lifting bar slidable vertically in the upper portion of the rigid leg and having ratchet teeth, a second leg having its upper end pivotally connected to the rigid leg, its lower end pivotally connected to the base and provided with an articulation at a

point intermediate its ends, a lever pivotally connected to the rigid leg, a pawl mounted on the lever and arranged



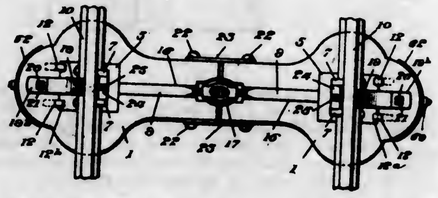
to engage the ratchet teeth of the lifting bar, and means, operable by said lever to bend or straighten the second leg.

1,384,323. AUTOMATIC GAS-REGULATOR. WILLIAM KANN, Philadelphia, Pa. Filed May 15, 1920. Serial No. 381,602. 8 Claims. (Cl. 236—26.)



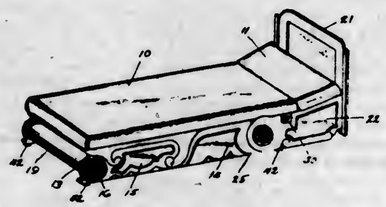
2. A regulator of the character described including a valve casing having two communicating compartments and a portion providing a ledge surrounding the communicating portions of said compartments; a valve movable toward and from said ledge, said valve having a stem; an adjusting screw in screw threaded connection with said valve casing and having a portion in sliding connection with said valve stem; and means automatically movable to different extents due to variation in fluid pressure and adapted to move said valve toward said ledge; substantially as described.

1,384,324. CLUTCH. THOMAS J. KELLY, Ashkum, Ill. Filed June 5, 1920. Serial No. 386,740. 2 Claims. (Cl. 64—106.)



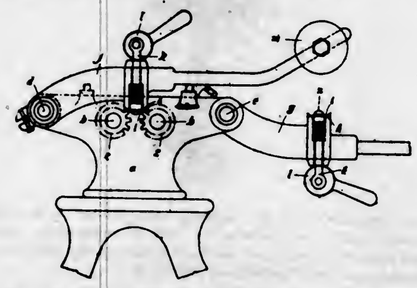
2. The device of claim 1, said spring being coaxial with said second shaft.

1,384,325. DOOR-HANGER. LEO KULBS, Mount Washington, Pa. Filed Aug. 23, 1920. Serial No. 405,380. 6 Claims. (Cl. 16—7.)



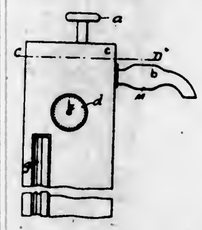
4. In a door hanger, a housing of substantially inverted U-shape, and a bracket of substantially elongated U-shape secured at its ends to the outer face of one arm of the housing and disposed longitudinally thereof, a suspending bolt, an adjusting nut carried by the said bolt and supported by said bracket, and a lock nut also carried by said bolt and bearing upwardly against said bracket.

1,384,326. CONCRETE RAILWAY-TIE. WILLIAM J. LANKFORD and WALTER H. CHAPPELL, Chanute, Kans. Filed Oct. 30, 1920. Serial No. 420,605. 10 Claims. (Cl. 238—81.)



1. In a concrete railway tie, two body sections, means for holding said sections in endwise relation, the said means including a longitudinal connecting bar having at the opposite ends clamping members for engaging the outer flanges of the rail bases mounted thereon, and other means embedded in each body section for clamping the inner flanges of the rails mounted thereon.

1,384,327. CONVERTIBLE FURNITURE. PETER LINDBO, Chicago, Ill. Filed Sept. 24, 1920. Serial No. 412,515. 6 Claims. (Cl. 155—41.)



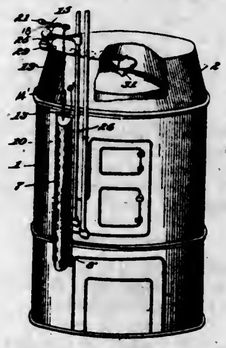
1. A couch comprising a top consisting of a main body section and a separate head section, the main body section having depending side walls, a base frame to which said side walls are pivotally connected to permit the main body section to be swung to upright position and serve as a chair back, the side walls forming arm rests, a seat adapted to be associated with said chair back and the arm rests, and detachable and separate therefrom, and a frame on which the aforesaid head section is detachably supported, said frame being pivotally connected to the head end of the base frame and having side pieces forming extensions of the aforesaid side walls, said frame also having an upstanding end wall and being adjustable to place said end wall in horisontal position to serve as a table top.

1,384,328. DOUBLE-ACTING MACHINE FOR CUTTING THE TEETH IN SAFETY-RAZOR GUARDS. ROBERT MIDDELDORF, Solingen, Germany. Filed Nov. 13, 1919. Serial No. 337,891. 1 Claim. (Cl. 90—18.)

In a double-acting machine for cutting the teeth in guards of safety-razors having two cutting-edges, in combination, two pairs of cutters, and two counterweighted levers for the reception of said guards located to bring two guards with their longitudinal edges successively one within reach of one pair and the other within reach of the other pair of cutters, substantially as and for the purpose set forth.

1,384,329. WATER-METER. KATSUKICHI MORI, Tokyo, Japan. Filed Jan. 24, 1917. Serial No. 144,114. 4 Claims. (Cl. 73—167.)

1. A method of discharging a constant proportionate quantity of fluid from a pipe which consists in creating back pressure of the fluid in the pipe and then discharging a portion of the fluid from the pipe at the point at which the back pressure is created.

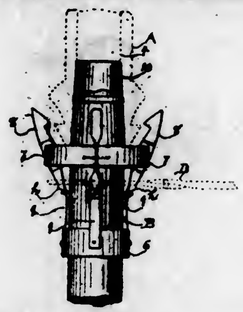


1,384,330. HAMMERING-HANDLE WITH INTERCHANGEABLE TOOLS. JAMES WINFIELD MOSHIER, Bristol, Conn., assignor to The Wallace Barnes Company, Bristol, Conn., a Corporation. Filed Feb. 3, 1921. Serial No. 442,192. 2 Claims. (Cl. 145—61.)

1. The combination with a hammering-handle having a longitudinal chamber closed at its outer end and having a throat intersecting the inner end of the said chamber and smaller in cross-section than the same; of a removable tool the shank of which is adapted in cross-section to freely reciprocate in the said chamber and throat, and a pair of outwardly-bowed retaining-springs applied to the outer end of the tool-shank and adapted, when compressed, to

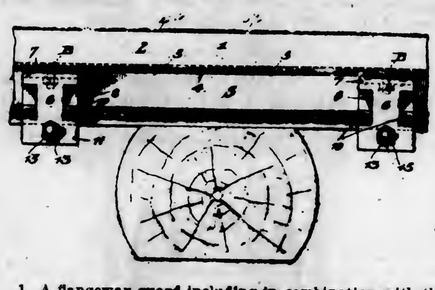
pass in either direction through the said throat of the handle but normally clearing the side walls of the said chamber therein to permit the relative longitudinal movement of the handle and tool without friction.

1,384,331. AIR-MOISTENER FOR HOT-AIR FURNACES. BERNHARD A. MUELLER, East St. Louis, Ill. Filed Aug. 23, 1919, Serial No. 319,425. Renewed May 26, 1921. Serial No. 472,886. 6 Claims. (Cl. 126—113.)



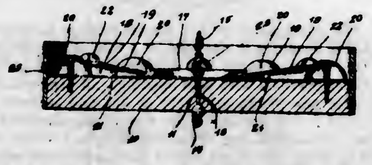
2. The combination with a hot air furnace having upper and lower openings in one side, of a tube or flue secured to the side of the casing and communicating at its upper and lower portions with said openings, an atmospherically controlled bar within said tube or flue and secured at its lower end to the bottom of the flue, a rod extending from the bar through the top of the flue or tube, a water supply valve to which the upper end of the rod is connected, and a trough leading from the discharge side of the valve into the hot air chamber.

1,384,332. HOSE-COUPLING. BAISCO J. MULLENUX, Afton, N. Y. Filed Sept. 25, 1920. Serial No. 412,875. 1 Claim. (Cl. 285—172.)



In a hose coupling, the combination of a tube having an undercut annular shoulder thereon, and a tapered socket in one end thereof with a tube having a tapered end, and a resilient cover thereon, adapted to engage with the tapered socket of the opposite tube end, a channel inlet in said covering, a resilient ring mounted therein, a

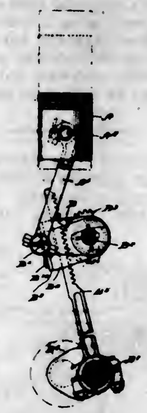
collar on said tube, pawl levers pivotally mounted in said collar, adapted to yieldingly engage said shoulder, a hand



spring supporting each lever in engagement with the shoulder, a lug projecting from the lower outer surface of each lever.

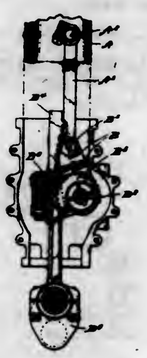
1,384,333. FLANGEWAY-GUARD. JOHN WILSON OSBOCK, Westmount, Quebec, Canada. Filed Sept. 8, 1920. Serial No. 409,625. 12 Claims. (Cl. 238—8.)

1. A flangeway guard including in combination with the rail, a channeled guard member offset from the gage side of the rail and having an engagement beneath the head thereof, and a supporting member fastened to the rail base and arranged to sustain the guard member in position.



1,384,334. SOUNDING-TOY WHEEL. GUIDO PITONI, Rochester, N. Y. Filed May 29, 1920. Serial No. 385,253. 3 Claims. (Cl. 46—47.)

2. A toy comprising a wheel, a plurality of radially arranged tubes carried by the wheel, a sound element located at the outer ends of each of the tubes and movable elements within the tubes and adapted to contact with the sound element when the wheel is rotated.

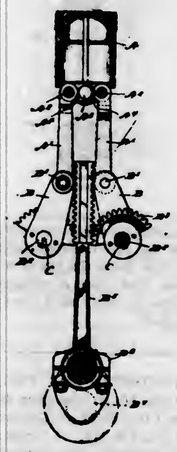


1,384,335. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,168. 4 Claims. (Cl. 74—14.)

2. In a transmission member, the combination of an engine, a piston in said engine, a lever pivoted in relation to said engine, means for connecting said piston to said lever, a pinion having a pitch diameter different from the length of said lever, means for moving the lever and pinion

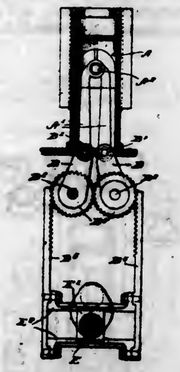
synchronously, a rack engaging said pinion, a pivoted slidable guide for holding the rock in engagement with said pinion, and a power shaft rotatable by the movement of said rack, substantially as described.

1,384,336. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,170. 4 Claims. (Cl. 74—14.)



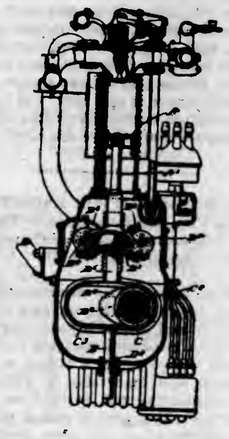
1. In an engine, the combination of a piston, a link from said piston, a supporting pin, a lever on said pin, means connecting said lever with said link, a segmental pinion having a pitch curve of varying distance from the axis of rotation mounted on said pin and rotatable with said lever, a toothed connecting rod the teeth of which engage the teeth of said segmental pinion, means by which the pitch line of the teeth of said toothed connecting rod will vary with the variations of the pitch line of the teeth of the meshing segmental pinion, a pivoted oscillating member whereby the teeth of the said toothed connecting rod will maintain engagement between the said meshing members, a crank, means for connecting said rod with said crank, and a shaft to which said crank is connected, substantially as described.

1,384,337. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,171. 4 Claims. (Cl. 74—14.)



2. In a transmission for engines, the combination of variably moving pistons, one slidable in the other, cranks, connecting links from one piston to said cranks, pins supporting said cranks, segmental pinions on said pins rotatable with said cranks, a rack, a rod from a second piston connecting with the said rack the teeth of which engage the teeth of said segmental pinions, a cross-head connected with said rack, crosshead guides, a crank, a connecting rod from the crosshead to said crank, power means for operating said primary piston, and an opening in the secondary piston to govern compression and vacuum between said pistons, substantially as described.

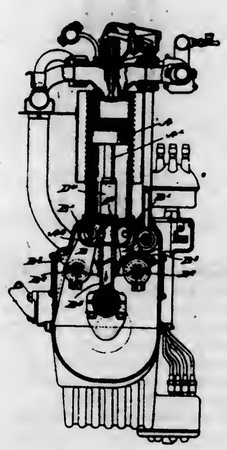
1,384,338. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,172. 2 Claims. (Cl. 74—14.)



1. In a differential transmission member, the combination of a piston, lugs on said piston, a bar pivoted on said lugs, supporting pins, levers mounted on said pins, pins in said levers, links from the said bar to the said last mentioned pins, segmental pinions eccentrically mounted on the said supporting pins, a crank shaft, a crank, a connecting rod, racks on said connecting rod, and means whereby the said racks engage the said eccentrically mounted pinions, for the purpose herein described.

1,384,339. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,173. 1 Claim. (Cl. 74—14.)

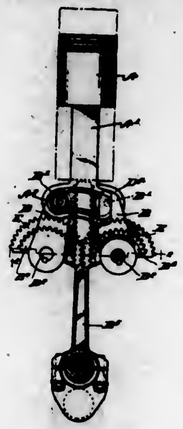
In a transmission member, the combination of a piston, links hung from said piston, oppositely placed pins carrying pinions and levers arranged to rotate on said pins, said pinions meshing with each other; pins in said levers engaging the before mentioned links, vertically disposed racks meshing with the said pinions, bars holding the said racks, the said bars composing a crosshead guide, a crosshead block operating in crosshead, a wrist pin in said block, a crank, and means for connecting said wrist pin to said crank, for the purpose hereinbefore described.



1,384,340. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,174. 1 Claim. (Cl. 74—14.)

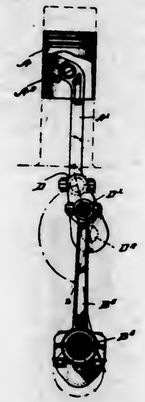
In a transmitting member, the combination of a slotted crosshead guide, a crosshead moving therein, an engine

crank, a pin from said crosshead to said engine crank, a vertical toothed bar from said crosshead guide, pinions meshing with said toothed bar, rotatable pins supporting said pinions, levers mounted on said pins and rotatable with the said levers, rollers on said levers, slotted forks engaging said rollers, a yoke supporting said forks, a bar supporting said yoke, an engine piston, and means for attaching said bar to said piston, in the manner and for the purpose hereinbefore described.



1,384,341. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,175. 1 Claim. (Cl. 74—14.)

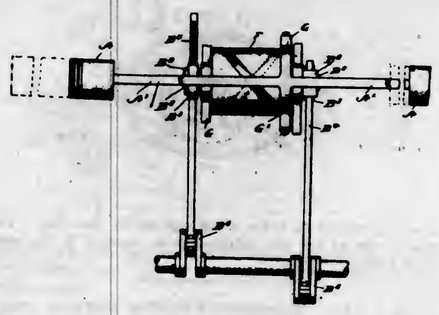
In a differential transmission member, the combination of pins, rocking levers mounted on said pins, segmental pinions eccentrically mounted on said pins and rotatable with said levers, eccentric rollers on said levers, slotted forks engaging said eccentric rollers, a yoke supporting said forks, a bar extending from said yoke, a piston, means of attaching the bar to said piston, a rack, a crank connecting rod forming part of said rack, and means whereby the teeth of the before mentioned pinions mesh with said rack, for the purpose hereinbefore described.



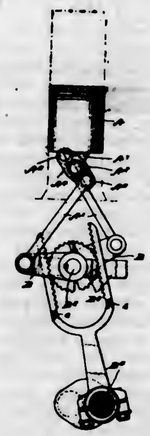
1,384,342. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,176. 1 Claim. (Cl. 74—14.)

In a differential transmission member, the combination of pins, rocking levers mounted on said pins and keyed thereto, rollers on said levers, a yoke, slotted forks supported by said yoke, means for engaging the said rollers in the slots of said slotted forks, a piston, a bar extending to to said piston and connecting it with said yoke, a vertical crank connecting rod, toothed on opposite sides and passing between said pins, a pinion mounted on and keyed to one of the pins, the teeth meshing with the teeth on the vertical connecting rod, a loose pinion mounted opposite to the before mentioned pinion and meshing with the teeth on the vertical connecting rod, segmental pinions on said pins, meshing with each other, and a

wrist pin holding the crank rod to the crank of an engine shaft, as hereinbefore described.



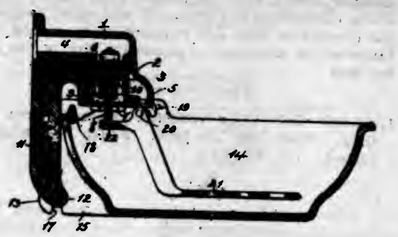
1,384,343. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,177. 1 Claim. (Cl. 74—14.)



In a differential transmission member, the combination of cranks of different pitch, supporting means for said cranks, a piston, a link from the crank of greater throw to said piston, a crank shaft, and a connecting rod from the crank of lesser throw to said crank shaft, for the purpose hereinbefore described.

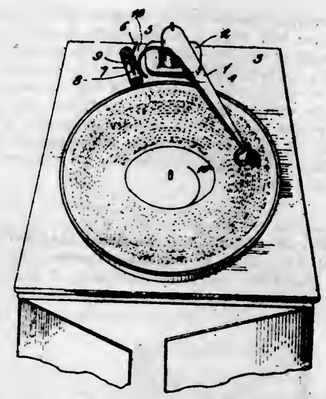
1,384,344. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,178. 1 Claim. (Cl. 74—14.)

In a differential transmission member, the combination of a cylinder, spiral grooves in the circumferential surface of said cylinder, a supporting shaft revoluble with said cylinder, slidable blocks operable in said grooves, a connecting rod to a source of power and supporting the said blocks, segmental pinions on the cylinder shaft, racks engaging said pinions, movable guides for said racks, and means for connecting said racks to the cranks of a power shaft, substantially as described.



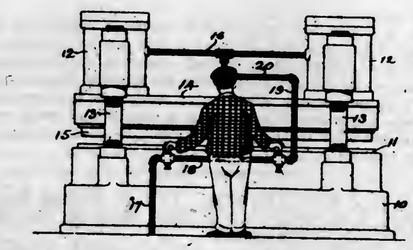
1,384,345. TRANSMISSION FOR ENGINES. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Miles City, Mont., a Corporation. Filed Dec. 8, 1920. Serial No. 429,179. 1 Claim. (Cl. 74—14.)

In a differential transmission member the combination of supporting shafts, cranks on said shafts, segmental pinions rotatable with said cranks, a yoked connecting rod having racks meshing with the segmental pinions, pins in said cranks, a pivoted movable bar, a piston, a crank on a crank shaft, and means for attaching the yoked connecting rod to the said crank on said crank shaft, substantially as described.



1,384,346. WATERING DEVICE FOR CATTLE. HUGO C. RASSMANN, Beaver Dam, Wis. Filed Apr. 29, 1918. Serial No. 231,464. 4 Claims. (Cl. 119—75.)

1. In a watering device, the combination of a valved fount, a bowl, one of said parts having separated mountings for a lever, an animal-operated lever coöperable with the valve of the valved fount, and means for pivotally supporting said animal-operated lever at either of said separated mountings, whereby said lever may be supported



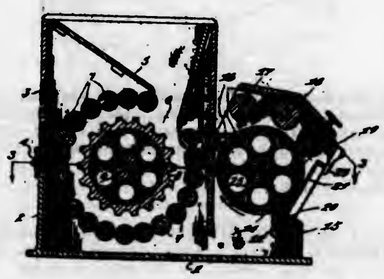
in the bowl in operative relation to the valve of the valved fount or out of operative relation to said valve.

1,384,347. TALKING-MACHINE. HOWARD E. REACH, Los Angeles, Calif., assignor to Thomas R. Barrabee, Los Angeles, Calif. Filed Dec. 27, 1919. Serial No. 347,862. 2 Claims. (Cl. 192—116.)

1. In a phonograph, the combination of a support having a pivotal axis for the tone arm tilted to the vertical, a tone arm swiveled on said support so it will tend to gravitate toward the center of the turntable, and a brake mechanism actuable by the tone arm at a selected point in its movement.

1,384,348. SAFETY DEVICE FOR HYDRAULIC PRESSES. WALTER L. RIEDY, Houghton, Mich. Filed Oct. 25, 1920. Serial No. 419,403. 4 Claims. (Cl. 138—10.)

1. In a hydraulic press, a bed, and a reciprocating head, the latter operated by fluid pressure, and a pipe for



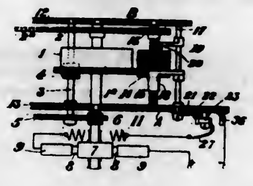
conducting the fluid for operating the said head, in combination with a safety device for controlling the fluid pressure exerted upon the reciprocating head, said safety device comprising two separated stop-cocks coupled into the conducting pipe and required to be turned by the hands of the workman to permit the flow of the operating fluid.

1,384,349. KNITTING-NEEDLE. MARY E. ROSS, Baker, Oreg. Filed Jan. 29, 1920. Serial No. 354,838. 5 Claims. (Cl. 66—17.)

5. A knitting needle having a round shank provided at its working end with a substantially conoidal terminal and formed in one side inwardly of the terminal with a notch of a depth not greater than the radius of the shank and of a width not greater than the diameter of the shank, the wall of the notch next adjacent the terminal of the needle shank being inclined from the bottom of the notch in the direction of the said terminal, this and the bottom wall of the notch forming an angle of not less than ninety degrees.

1,384,350. MACHINE FOR MAKING MACARONI AND NOODLES. STEFANO SANTILLI, Canton, Ohio. Filed July 22, 1920. Serial No. 398,253. 4 Claims. (Cl. 107—20.)

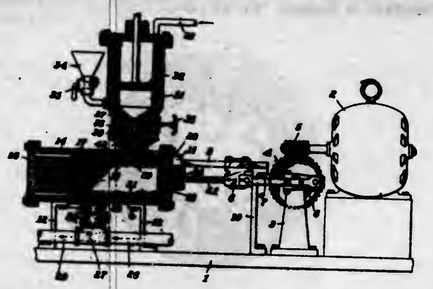
1. A device of the character described comprising a large roll, a plurality of smaller rolls located around a portion of the periphery thereof, means for rotating the large roll in one direction, means for rotating the smaller rolls in the opposite direction to produce a flat sheet of dough, and a screen comprising a plurality of wires cooperating with said large roll to cut the sheet of dough into ribbons.



1,384,351. DISPLAY-STAND. CARL G. SATHER, Sioux Falls, S. D. Filed July 26, 1920. Serial No. 398,899. 3 Claims. (Cl. 211—24.)

3. A display stand comprising a standard, a sleeve non-rotatably but vertically movable theeron, a lateral flange carried by the sleeve for detachable connection to the base of a form, a collar fitted on the sleeve, a set-screw passing through the collar and against the sleeve,

and a plurality of brace arms carried by the collar, the lower ends of the arm adapted to be secured to the base of the form.



1,384,352. ELECTRIC WINDING DEVICE. FRITS SAUTER, Basel, Switzerland. Filed Dec. 13, 1919. Serial No. 344,590. 2 Claims. (Cl. 58—41.)

1. In electric winding-up devices for clockworks and other mechanisms of this kind, the combination with a motive member for the mechanism of a toothed crown connected therewith, an electric motor for winding-up the motive member, connection means between the electric motor and the toothed crown of the motive member, a rotary screw threaded spindle, means to drive the same from the running mechanism, a toothed pinion screwed upon said screw threaded spindle and arranged to engage the toothed crown of the motive member, said pinion being capable of axial movement along the screw threaded spindle to the one or other side, a rocking shaft parallel to the screw threaded spindle, a three-armed lever system mounted on said rocking shaft and comprising two reversing lever arms arranged respectively on either side of said pinion with means to alternately reverse the same according to whether the pinion travels to the one or other side, and a positioning arm to be positioned by said reversing lever arms, a control lever arranged to be controlled by said positioning arm and means for switching in or out the current supply to said electric motor in dependence of said control lever, substantially as and for the purpose described.

1,384,353. LUBRICATOR. HENRY J. SHAVERS, Goldsboro, N. C. Filed Oct. 16, 1920. Serial No. 417,340. 7 Claims. (Cl. 184—37.)

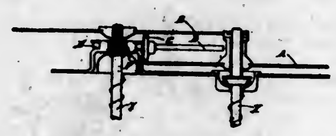
6. A lubricator for locomotives comprising a base, cylinders mounted on said base, hollow plungers provided with inlet aud outlet ports therein mounted in said cylinders, said cylinders provided with inlet and outlet ports, a reservoir for the lubricant and means therein for exerting pressure on the lubricant, discharge feed extending from said reservoir to the inlet ports in said cylinders, means inserted in the said feed for regulating the amount of feed to said plungers, discharge pipes leading from the outlet ports in said cylinders and provided with check valves, a motor and means connected to said motor and to said plungers for operating the same to draw the lubricant into said plungers and expel the same under pressure to the discharge pipes when the outlet ports in said cylinders

register with the outlets in said hollow plungers, and additional means for forcing the lubricant through the discharge pipes.

1,384,354. APPARATUS FOR WALKING ON THE WATER. ALBERT N. SHELDON, Ventura, Calif. Filed Oct. 18, 1920. Serial No. 417,732. 6 Claims. (Cl. 9—21.)

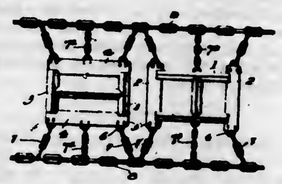
1. In an apparatus of the character described, a frame, floats beneath the frame, means shiftably supporting the frame on the floats, pulleys on the ends of the frame, and cables fastened at their opposite ends to the respective floats along the center line thereof and engaging the pulleys.

1,384,355. HYPODERMIC NEEDLE. ARTHUR E. SMITH, Chicago, Ill. Filed Jan. 20, 1920. Serial No. 352,712. 7 Claims. (Cl. 128—221.)



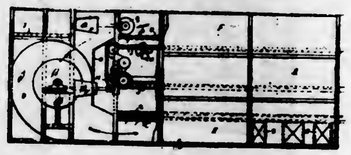
4. A device of the character described comprising a nozzle and a needle attached to said nozzle in combination with a guard attached to said nozzle, said guard comprising a metallic spiral which frictionally engages the said needle.

1,384,356. DISK FOR PEELING-MACHINES. CHARLES F. SMITH, Chicago, Ill., assignor to Maxim Manufacturing Company, a Corporation of Illinois. Filed July 22, 1920. Serial No. 398,291. 5 Claims. (Cl. 146—14.)



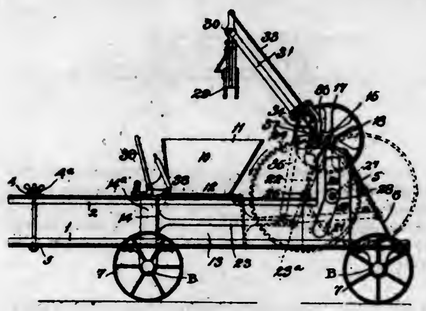
5. A peeling disk having vertical steps upon its upper surface, the circumferential portions between said steps having radial ascents and slopes whereby a swirling motion is adapted to be imparted to a vegetable.

1,384,357. TRANSMISSION-GEAR PROVIDING AUTOMATIC COMPENSATION FOR VARIATIONS IN THE SPEED AND POWER TRANSMITTED. KELVIN TALENT SPENCER, Harmondsworth, and LEONARD GODWIN WILLS, London, England. Filed Nov. 22, 1920. Serial No. 425,875. 6 Claims. (Cl. 74—26.)



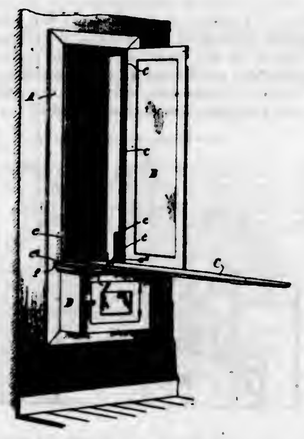
1. In transmission gearing, the combination with the driving and driven shafts having disks thereon, of a spring tensioned frame mounted to swing on an axis coincident with the axis of the driven shaft, and a transmission element slidably carried on said frame and contacting with said disks.

1,384,358. ANTISKID DEVICE FOR AUTO-TIRES. WILLIAM F. STAGGERS, Mannington, W. Va. Filed Dec. 23, 1920. Serial No. 432,669. 1 Claim. (Cl. 152—14.)



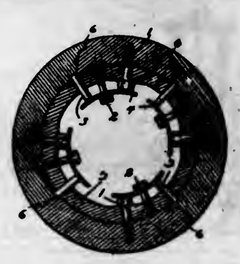
As a new article of manufacture, an anti-skid device consisting of I-shaped anti-skid bars, flat strips formed integrally on the ends of said I-shaped bars, opposite short chains hooked to the ends of said flat strips, rings to which said short chains are attached, and means secured to said rings for removably mounting the said anti-skid bars on and securing them over the tread of the tire.

1,384,359. MACHINE FOR DRYING LEATHER, YARNS, JUTE, AND LIKE MATERIALS. CHARLES STEPHENS, London, England. Filed Nov. 14, 1918. Serial No. 262,626. 2 Claims. (Cl. 34—12.)



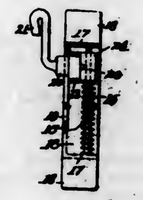
1. A machine of the type described for sammying and drying leather, and for drying yarns, jute, and the like, comprising a long horiontal drying chamber, means for longitudinally traversing the material in forward and return directions through said chamber, an air-pressure inlet duct extending from end to end of said chamber, an air-suction outlet duct extending from end to end along the opposite side of said chamber, two flat sets of steam or other coils interposed between said chamber and said suction and pressure ducts respectively, a fan adapted to create a closed continuous circulation of air passing between said coils and through both lines of material in said chamber, and means for continuous extraction of moisture from the closed circulation of air within said chamber, substantially as herein set forth.

1,384,360. MACHINE FOR TRANSLATING ROTARY INTO RECIPROCATING MOVEMENTS. NORRIS D. STEWART, San Antonio, Tex. Filed July 19, 1917, Serial No. 181,583. Renewed Oct. 15, 1920. Serial No. 417,265. 8 Claims. (Cl. 100—8.)



1. The combination with the plunger of power transmitting devices connected to the plunger and comprising a bodily movable wheel rotating around its central axis, a shifting fulcrum moving in synchronism with the bodily movements of the wheel, and means independent of the wheel for resisting the movement of the fulcrum with varying amounts of force.

1,384,361. IRONING-BOARD. EARL M. TRAMMELL and WILLIAM C. CAROTHERS, Waco, Tex. Filed Dec. 27, 1920. Serial No. 433,285. 1 Claim. (Cl. 68—10.)

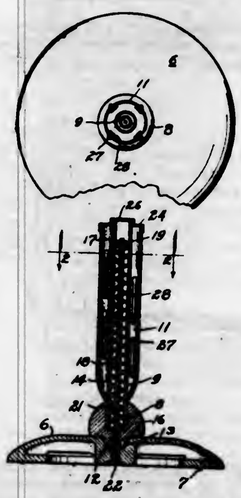


The combination with a cabinet having a horizontal bottom and vertical side walls and having a recess in its back wall and a groove in each side wall near its front and above its bottom, each of said grooves having an upper, straight, vertical portion and a rearwardly curved lower portion terminating above the bottom of the cabinet, and an ironing-board having studs on its opposite sides entering the grooves in the side walls of the cabinet, and a rear portion adapted to enter the recess in the rear wall of the cabinet and to rest on the bottom of the cabinet when the ironing-board is in a horizontal position and also to rest on the bottom of the cabinet when the ironing-board is in a vertical position.

1,384,362. VULCANIZING DEVICE. JOHN TRAUM, Coshocton, Ohio. Filed Mar. 8, 1920. Serial No. 364,240. 4 Claims. (Cl. 18—45.)

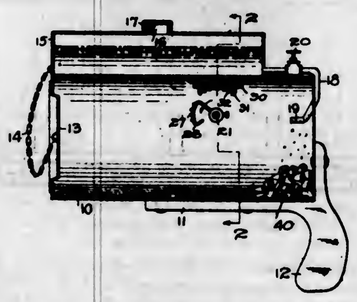
1. In an expansible core the combination with sections of expansion springs adapted to impulse the sections, a continuous ring, cap screws adapted to secure the sections to the ring by engaging and extending through radial openings in the ring, and engaging radial threaded openings in the inner periphery of the sections, and by their proper manipulation to control the expansive action of the section, lugs and corresponding recesses in the abutting ends of companion sections adapted to correctly aline the sections.

1,384,363. INDICATOR FOR PLATE-HOLDERS. ALFRED JOSEPH VIGNEAULT, Worcester, Mass., assignor of one-half to George N. Vigneault, Worcester, Mass. Filed Apr. 8, 1920. Serial No. 372,339. 8 Claims. (Cl. 95—71.)



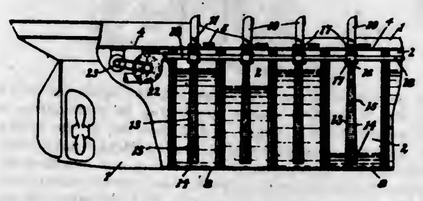
1. The combination with a plate holder and its plate covering slide, of means on the plate holder for locking the slide therein, said means being movable to two positions along the edge of the plate holder and showing by its position along said edge whether the plate covered by said slide has been exposed, said means having an arm pivoted thereon and adapted, in each position, to be turned to lock the slide.

1,384,364. MUSIC-LEAF TURNER. MARCUS A. WALDEN, San Francisco, Calif. Filed Mar. 30, 1920. Serial No. 369,993. 2 Claims. (Cl. 84—505.)



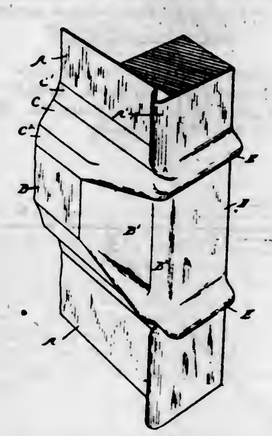
2. A music leaf turner, comprising a base adapted to support sheet music, a plurality of concentric rotary shafts mounted upon said base, a plurality of turning members secured to said shafts, and having their terminal portions disposed beneath the sheets to be turned, a plurality of rocking members mounted on said base and having their terminal portions adapted to engage said terminals when said members are rocked, a plurality of levers pivoted intermediate of their lengths on opposite sides of said shafts, flexible elements connected with certain ends of said levers, crossed and secured at their other ends to said rocking members on opposite sides of said rocking members.

1,384,365. STREET-SEMAPHORE. JOHN M. WALSH, Petaluma, Calif. Filed Apr. 16, 1919. Serial No. 290,527. 3 Claims. (Cl. 40—145.)



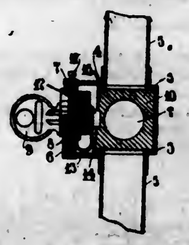
3. A semaphore for street traffic having a base with a central aperture and recess, a ball having a flat face seating on the base and having a centering lug entering the recess, a hollow standard extending from the ball, a flexible device in the aperture of the base and passing through the ball and into the standard, a rod attached to said device and having a plate slidably fitting the standard, and a spring seated in the ball and compressed in the standard between the plate and said ball by said device and rod to maintain the standard upright and the ball seated flat on the base.

1,384,366. GAS-GUN. EDWARD P. WELCH, Wilsonville, Conn. Filed Dec. 13, 1920. Serial No. 430,870. 7 Claims. (Cl. 89—7.)



5. In an acetylene gas gun, the combination of a casing for holding a charge of calcium carbid, a handle connected with the casing for supporting it, means for introducing drops of water into the casing on the carbid, a shaft extending through the casing and supported at its opposite ends thereby, a crank on the shaft outside the casing, a piece of steel yieldingly mounted on the shaft and provided with teeth on the surface concentrically arranged, and a piece of flint mounted in the casing and having teeth thereon concentrically arranged with respect to the shaft, to permit of the steel engaging the teeth of the flint as it rotates and passes along its toothed surface.

1,384,367. METHOD AND APPARATUS FOR CONTROLLING THE CONDITION OF AIR IN COMPARTMENTS. WILLIAM B. SMITH WHALEY, Malden, Mass., assignor to American Whaley Engine Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 4, 1916. Serial No. 134,900. 9 Claims. (Cl. 98—27.)

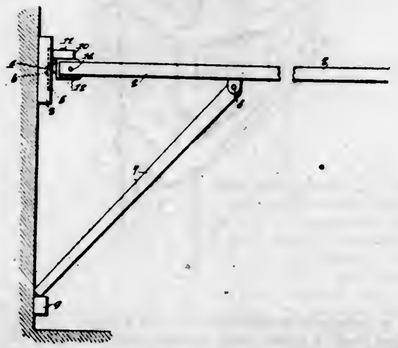


7. An air-scavenging device for variably supplied matter-storing-compartments, consisting of an upright and tapered air supply member having the top and smaller end thereof open to atmosphere, said tapered member projecting into the compartment proper and provided with perforations communicating with the interior of said compartment, said perforations increasing in size with the length of projection of said air supply member; a similarly tapered and perforated upright draw-off member also communicating with the interior of said compartment and provided with an outlet at the top and smaller end thereof projecting through said compartment; and a suction member coupled with the outlet of said draw-off member and adapted to draw contaminated air from the unoccupied space of said compartment and to discharge the same therefrom.

1,384,368. CAR-END CONSTRUCTION. FREDERICK M. WHYTE, Tarrytown, N. Y. Filed Oct. 8, 1919. Serial No. 329,226. 13 Claims. (Cl. 105—410.)

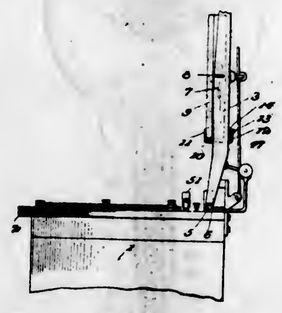
2. A fashioned metal plate of a form which can be developed from a plane sheet without material drawing or stretching of the metal, said plate having portions lying in spaced parallel planes, and an end portion lying in a plane transverse to said parallel planes.

1,384,369. VALVE OPERATING AND LOCKING DEVICE. WILLIAM GEORGE WIBBENBS, Sydney, New South Wales, Australia. Filed June 23, 1919. Serial No. 306,146. 2 Claims. (Cl. 251—6.)



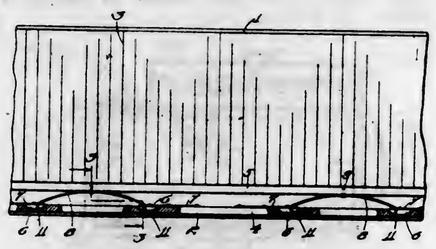
1. A locking device for controlling the operation of an internal combustion engine comprising in combination a fuel supply pipe, a sealed casing inserted in the piping and having a conoidal seating, a cylindrical rotary valve in the casing with a conoidal portion at one end that engages the seating of the casing and means which both presses the valve upon its seating and indicates its position when in the open and closed positions.

1,384,370. TIE-FRAME. SAMUEL WILLIAMSON, Leeds, England. Filed July 24, 1919. Serial No. 313,080. 1 Claim. (Cl. 2—84.)



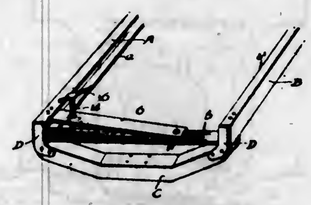
An improved neck tie frame comprising in combination an approximately crescent shaped plate having wings designed to engage the ends of two strips, a U-shaped loop at the back of the plate and fixed centrally thereof and designed to engage one of the strips when both are knotted to form a tie, and a pin carried by the loop and extending rearwardly thereof and adapted for detachable engagement with a stud, as and for the purpose specified.

1,384,371. IRONING-BOARD CONNECTION. CHARLES EARNEST WINTEMUTE, Vancouver, British Columbia, Canada. Filed July 1, 1920. Serial No. 393,441. 2 Claims. (Cl. 68—10.)



1. An ironing board connection, comprising the combination with an ironing board, of hooks secured to and projecting from its larger end, the points of said hooks being directed toward the board, plates secured to the wall, which plates have provision to engage the hooks of the ironing board, a strut hinged to the under side of the board supporting it in a substantially horizontal position, and an eccentric pivotally mounted adjacent each hook member and designed to bear against the wall plates and retain the hooks in engagement therewith.

1,384,372. PHOTOGRAPHIC-PRINTING MACHINE. WILLIAM D. WOOD, Seattle, Wash. Filed Aug. 26, 1920. Serial No. 406,084. 1 Claim. (Cl. 95—73.)

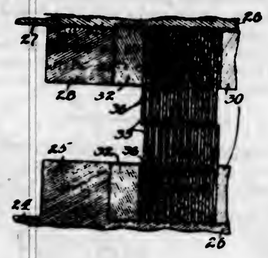


In a photographic printing machine, a base having a source of light, an opening therein covered by transparent material to receive the negative, a carrying frame pivotally mounted on the base, a pressure pad carried by and having a limited free movement with respect to the frame, a spring rod supported on the machine and having a sliding connection with the carrying frame, a light circuit having spaced contacts arranged in the path of movement of said rod in the operation of the carrying frame, whereby said rod is adapted to close and open said circuit as the carrying frame is moved to an operative or inoperative position.

1,384,373. GALLEY SIDE-STICK. JESSE G. ZIM, Malden, Mass. Filed Jan. 28, 1921. Serial No. 440,770. 2 Claims. (Cl. 276—42.)

1. A side stick for type galleys comprising two side bars, a plurality of springs each fixedly secured intermediate its ends to one of the side bars, the other side bar being formed with elongated slots in its inner face, and each of said springs being formed at its opposite ends with lugs which engage with said slots, said lugs being connected with the body of the spring by neck portions, and guard members secured to the slotted face of the bar which form a narrow entrance to the said slots and form a passageway for the necks of the springs.

1,384,374. RIVETING-TOOL. ASA IVY ALBRIGHT and FRANCIS LAMAR MYATT, Monroe, La. Filed June 24, 1920. Serial No. 391,469. 5 Claims. (Cl. 78—53.5.)

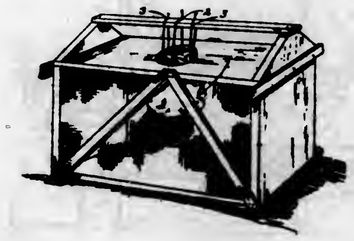


1. A rivet holder adapted for use with channel members comprising a bed plate adapted to rest upon one of the flanges of the channel member, a dolly-bar carried by the bed plate and having an opening in one end and a head formed at its opposite end, a loose connection between the dolly-bar and the bed plate comprising a bolt extending through the aperture of the dolly-bar, and an adjusting screw carried by the dolly intermediate the loose connection and the head and operatively engaging the bed plate.

1,384,375. PROCESS FOR MANUFACTURING TAILORS' CHALK. AUGUST ANDER and FREDERICK T. MCGUIRE, Seattle, Wash. Filed Dec. 9, 1919. Serial No. 343,463. 1 Claim. (Cl. 106—5.)

The process for manufacturing tailors' chalk, consisting in mixing a plastic clay substance with a coloring matter, forming the mixture into cakes, drying the latter under a mild heat, submerging the dried cakes in a liquid oleaginous substance to become saturated therewith, and finally drying the same.

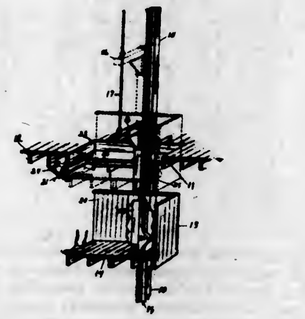
1,384,376. EXPANDED-METAL-LATH MACHINE. FRED C. ABEY, Oak Park, Ill. Filed Jan. 27, 1919. Serial No. 273,302. 6 Claims. (Cl. 164—6.6.)



1. The combination with a lath machine, of rotatable arbors forming a part thereof, spacers on said arbors, and a plurality of diagonally positioned cutter segments securely disposed between each pair of said spacers to form cutters adapted to act upon a metal sheet to diagonally cut slots in parallel longitudinal sections of said metal sheet leaving plain sections separating the cut sections, said cutters being positioned so that the slots in two sections separated by a plain section are diagonally directed in different directions.

1,384,377. FEEDER FOR SOFT CANDY. EUGENE B. AULT, Calallen, Tex. Filed May 29, 1920. Serial No. 385,358. 4 Claims. (Cl. 6—5.)

1. A bee feeder composed of flexible porous material provided with means for suspending it and permitting the longitudinal collapse thereof.

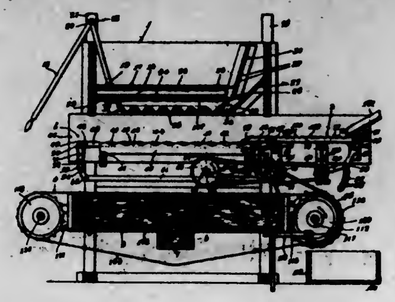


2. A bee feeder comprising a bag composed of flexible porous material having a suspending element threaded longitudinally therethrough and equipped with means for connecting it to a support.

3. A bee feeder comprising a bag of woven flexible material having laterally spaced drawing strings run longitudinally therethrough and suspending means arranged between said strings.

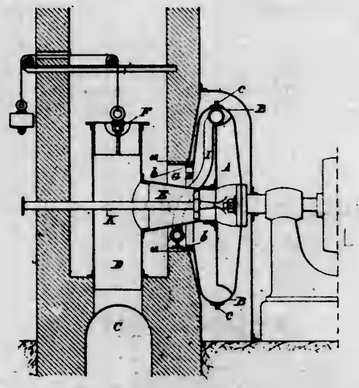
4. A bee feeder comprising a cloth bag open at one end and closed at the other, a wire threaded longitudinally through said bag from one side edge of the opening to the other midway the width of the bag and adapted to be connected with supporting means, and draw strings extending longitudinally of the bag on opposite sides of said wire.

1,384,378. SAFETY DEVICE FOR ELEVATORS. JOHN H. BERGHAUS, Jr., Louisville, Ky. Filed Feb. 16, 1920. Serial No. 358,849. 2 Claims. (Cl. 187—98.)



1. In combination a floor, having an opening, an elevator guide at the side of said opening, an elevator movable through the opening, a wing pendent below said floor in a plane substantially the same as a side of said opening, means normally biasing the lower edge of said wing away from the opening, a bar pivoted to said wing and extending through the elevator guide, and means on the elevator to move said bar against the action of said biasing means.

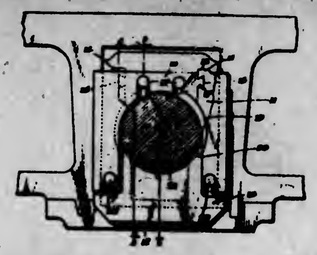
1,384,379. PROCESS OF PEELING TOMATOES. WILLIAM D. BOST and HARRY M. MILLER, Los Angeles, Calif., assignors, by mesne assignments, to said Miller. Filed May 21, 1919. Serial No. 298,595. 4 Claims. (Cl. 146—14.)



1. The process of peeling tomatoes, which consists in treating the tomatoes with a skin-loosening agent, cutting

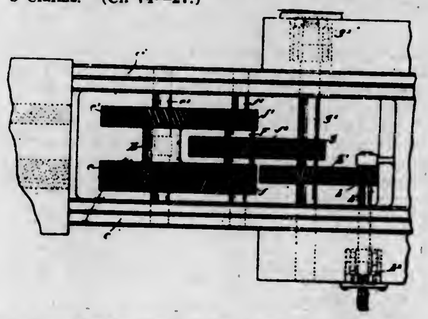
slits in the skins, and then causing water to fall on the tomatoes in comparatively large volume without other

force than that acquired by its fall from a slightly higher level than the tomatoes.



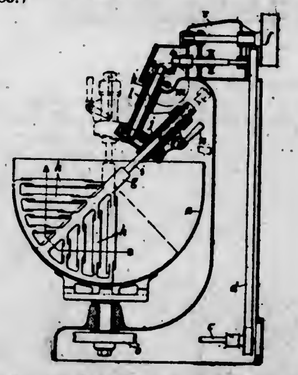
1,384,380. GAS-PURIFIER. CHARLES BOURDON, Paris, France. Filed Feb. 28, 1920. Serial No. 362,094. 5 Claims. (Cl. 183—77.)

1. An apparatus for purifying gas containing solid particles in suspension, comprising a blast fan for such gas having a convex rim formed by the union of the walls of the fan and providing a peripheral receptacle to collect the solid particles separated by centrifugal force from the gas; a chimney for the gas discharged by the fan; a supply conduit for the gas to be purified disposed in said chimney; a pipe connecting the supply conduit and the fan inlet; a valve enabling the passage of the gas alternatively through the supply conduit directly into the chimney, or through said connecting pipe into the fan, said fan having an outlet opening communicating with the chimney; and a spiral discharge pipe for the separated solid particles arranged within the fan and curving in the opposite direction to the direction of rotation of the fan, said spiral pipe terminating at one end in a flared inlet mouth which is located in close proximity to the wall of said rim to collect said particles from the rim.



1,384,381. LOCOMOTIVE DRIVING-BOX. FELIX CANNON, Hamlet, N. C. Filed June 18, 1920. Serial No. 389,866. 10 Claims. (Cl. 64—10.)

1. A locomotive driving box of U-shape having a lower integral portion provided with a lubricant cellar, and a laterally shiftable and detachable locking saddle connect-



ing and reinforcing the upper portions of the side walls of the box.

1,384,382. DRIVING-GEAR FOR METAL-PLANERS. FORREST E. CARDULLO, Cincinnati, Ohio, assignor to The G. A. Gray Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 15, 1921. Serial No. 461,538. 8 Claims. (Cl. 74—27.)

1. A drive for a metal planer, having in combination, a planer table having on its under side two helical cut racks of opposite angle, helical gearing for driving each of said racks, the angles of said gears so arranged that all unabsorbed end thrust will be so transmitted to the table as to tend to balance the normal side thrust of the cutting tool.

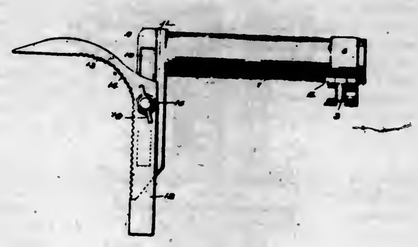
1,384,383. MIXING AND AERATING MACHINE. WILLIAM VANSON DAWKINGS, Whitstable, England. Filed Jan. 13, 1921. Serial No. 437,059. 1 Claim. (Cl. 259—85.)

The herein described machine for mixing and aerating materials for cakes and like goods, consisting of a pan,

a beater, means for rotating said pan and beater, and means for imparting axial and oscillatory movements to the said beater in the manner and for the purposes set forth.

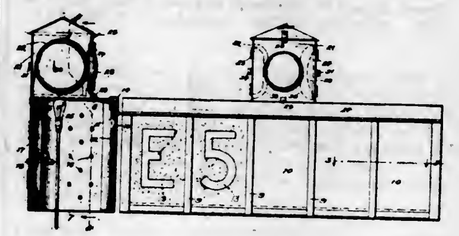
1,384,384. STUMP-PULLER. ANDREW DOW, Seattle, Wash. Filed Feb. 24, 1921. Serial No. 447,482. 2 Claims. (Cl. 254—179.)

1. In a machine of the character described, the combination of a drum having internal gear teeth, a frame serving as a journal bearing for said drum and provided with laterally extending arm elements disposed in substantially tangential relations to the pitch circle of said gear teeth, one of said arms serving to connect the frame with an anchor cable, the other of said arms serving to connect the frame to an end of a hauling cable whose other end is wound about said drum, a pinion having an arbor journaled in said frame and engaging the drum teeth, an operating bar, operative connections between said bar and the pinion for transmitting intermittent rotary motion to said drum, and a spring actuated dog for progressively engaging the drum teeth during the rotation of the drum.



1,384,385. COMBINATION AUTOMOBILE-TIRE TOOL. FRANK EMMENEGGER, St. Louis, Mo. Filed Sept. 13, 1920. Serial No. 409,810. 1 Claim. (Cl. 157—6.)

A tool of the character described comprising a straight, flat shank having a curved tapering tire lifting end, a post rigidly upstanding from the shank at a point spaced from said end, and an inverted U-shaped tire embracing member in a single piece pivoted at one end to said post and having its opposite free end shiftable on said pivot toward and away from the said end of the shank, and a tire engaging disk having a shank threaded laterally through the free end of said tire engaging member, as described.

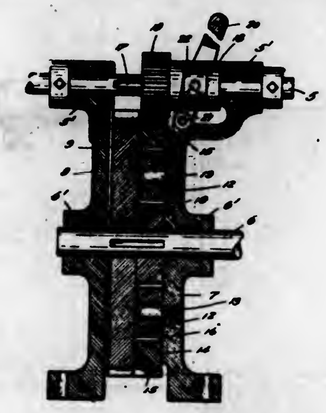


1,384,386. SHOULDER-REST FOR GUNS. SAMUEL G. GREEN, U. S. Army. Filed May 7, 1919. Serial No. 295,463. 2 Claims. (Cl. 42—72.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A shoulder rest including a member attachable to the rearwardly projecting cylindrical portion of a machine gun stock, a depending standard integral with said member at the rear end thereof, said standard provided with a longitudinal slot, a shoulder rest piece slidable on

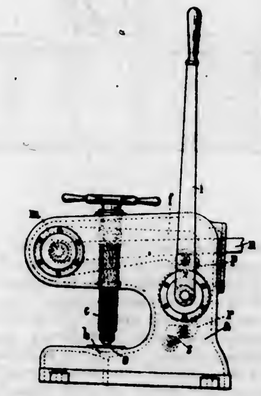
said standard and means passing through the slot and engaging the shoulder piece for clamping the piece in selected position upon the standard.

1,384,387. SIGNAL-LANTERN FOR LOCOMOTIVES. AUGUSTUS C. HINCKLEY, Pocatello, Idaho. Filed May 5, 1920. Serial No. 379,104. 1 Claim. (Cl. 240—22.)



A signal lantern for locomotives, comprising in combination, a casing formed with a relatively narrow upward extension and a relatively wide main portion; a changeable exhibitor of the interchangeable stencil type mounted in the main portion of said casing; a clear lens mounted in said upward extension immediately above said changeable exhibitor; a color screen for said lens hinged to one corner of said upward extension; a mask for said lens hinged to another corner of said extension; said screen and mask being capable of swinging to positions over said lens and also to inoperative positions against the sides of said upward extension; latches serving to hold said screen and mask both in their operative position over said lens and their inoperative positions against the sides of said extension; a light source; and reflecting means serving to project light from said source through said exhibitor and lens.

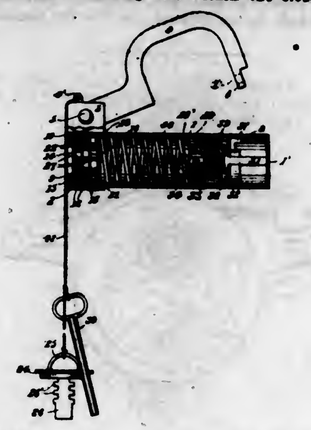
1,384,388. REVERSING-GEARING. THOMAS J. HUGHES, Seattle, Wash. Filed Oct. 12, 1920. Serial No. 416,426. 3 Claims. (Cl. 74—58.)



1. In a reversing-gear, the combination of a frame, a shaft extending therethrough, two gear-wheels of unequal diameters mounted upon said shaft, a gear-ring, a plurality of pinions rotatably connected to said frame and meshing with the smaller of said gear-wheels and the ring-gear, to

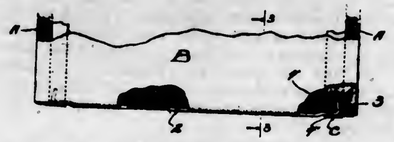
afford driving connections therebetween, a second shaft, a pinion rotatably mounted thereon, and means for moving

the last named pinion to engage either the larger of said gear-wheels or the ring-gear.



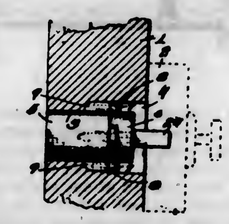
1,384,389. APPARATUS FOR TESTING THE HARDNESS OF MATERIALS. LAWRENCE JOHNSON and HARRY BREARLEY, Sheffield, England. Filed Sept. 27, 1919. Serial No. 326,796. 8 Claims. (Cl. 265—12.)

1. Apparatus of the type referred to, comprising in combination a hardened steel ball, a member supporting said ball, a lever carrying said member, an eccentric connected with said lever for applying the predetermined load and a second eccentric connected with said lever and with a second lever or lever system controlled by a weight, substantially as described.



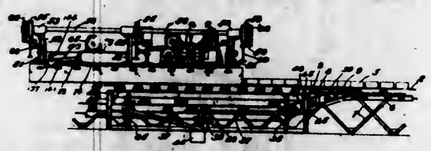
1,384,390. COMBINED KEY AND PERMUTATION-PADLOCK. CARL JUDYCKI, Athol, Mass. Filed Oct. 19, 1920. Serial No. 417,884. 5 Claims. (Cl. 70—112.)

1. A combined key and permutation padlock comprising a padlock barrel, a shackle pivoted thereto, permutation lock mechanism within the open end of the barrel, a permutation lock key normally retained in the permutation lock mechanism, a sliding bolt within the closed end of



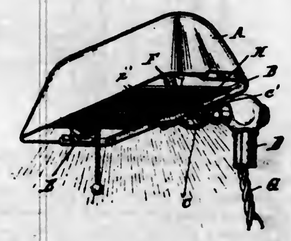
the barrel and a key for operating the sliding bolt adapted for insertion within the barrel upon removal of the permutation key.

1,384,391. BOX-PROTECTOR. WILLIAM C. KRAUSE, Milwaukee, Wis. Filed Nov. 22, 1920. Serial No. 425,740. 4 Claims. (Cl. 217—5.)



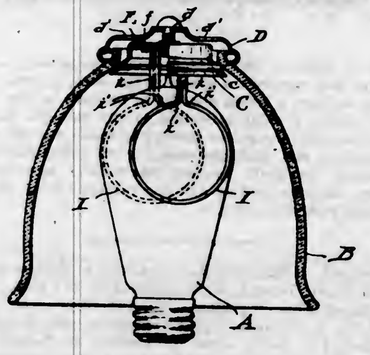
1. A rectangular crate of the character described, having wooden side and end panels, the bottom edges of the side panels being provided with longitudinal grooves, metallic runners fitted in the grooves adapted to project above the bottom surface of the panels, and means for securing the ends of the runners to said panels.

1,384,392. LOCK. ANTONY LASKI, Bridgeport, Conn., assignor to The Connecticut Lock Company, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed May 10, 1920. Serial No. 380,291. 4 Claims. (Cl. 70—46.)



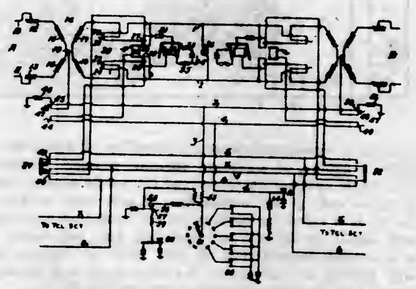
4. A lock comprising a tubular casing, a bolt rotatable in the casing and having tumbler mechanism for preventing rotation of the bolt until such mechanism is released by a key, an extension plate having a cross head, the bolt having a diametrical groove at the end remote from that engaged by the key for receiving said cross head, the casing having a cap shaped section detachably connected therewith through which the extension plate extends, said detachable section holding the extension plate in the groove.

1,384,393. PROCESS OF MANUFACTURING AND HANDLING BRICK. GRAFTON E. LUCE, Chicago, Ill. Filed Dec. 14, 1918. Serial No. 266,669. 16 Claims. (Cl. 214—152.)



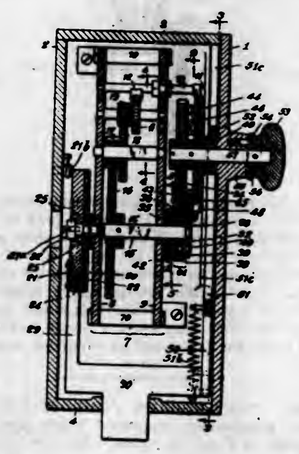
1. The process of handling articles during their continuous travel, which consists in moving a carrier against their line of travel, engaging said articles and then retracting said carrier at a speed equal to or greater than the travel of the articles.

1,384,394. ATTACHMENT FOR DESK-LAMPS. HARRISON D. MCFADDIN, East Orange, N. J. Filed Feb. 15, 1919. Serial No. 277,206. 7 Claims. (Cl. 240—1.)



1. A desk lamp embodying a source of light and a reflector supported by a standard, in combination with a single ply colored light screen, having a dull or frosted surface, positioned in the open side of said reflector, and a plurality of resilient gripping jaws, supported by the standard and supporting the screen in position, said screen serving to divest the light rays from the source of light passing therethrough of the deleterious colors of the spectrum and produce a soft diffused illumination, restful to the eyes.

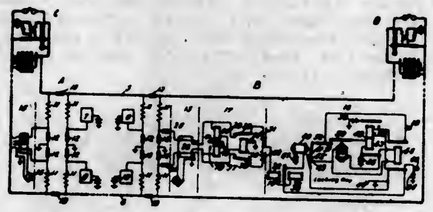
1,384,395. SHADE-HOLDER. HARRISON D. MCFADDIN, East Orange, N. J. Filed Feb. 23, 1917, Serial No. 150,373. Renewed Apr. 16, 1919. Serial No. 290,641. 2 Claims. (Cl. 240—111.)



1. A shade holder embodying an inverted frusto conical thimble on which a lamp shade is adapted to be seated, means for detachably holding the lamp shade to the thimble to permit of a change of shades, a pair of spaced loops positioned beneath the thimble and each of which is provided with a pair of upwardly extending resilient stems with the stems of each pair parallel to one another and contacting with one another throughout substantially their entire length and the upper ends of the corresponding stems of each pair being connected with one another by a substantially semi-circular portion, which is seated in the base of the thimble, and tongues stamped up from the thimble and bent over the semi-circular portions for securing them firmly to the thimble, whereby said loops are resiliently mounted upon the thimble and are adapted to embrace and resiliently grip the lamp bulb forced between the loops.

1,384,396. TELEGRAPH SYSTEM. BENJAMIN F. MERRITT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1917. Serial No. 195,715. 6 Claims. (Cl. 179—4.)

1. In a signaling system of simultaneous telegraphy and telephony, a plurality of line circuits, a central station and outlying stations connected by said line circuits, means for telegraphing over said line circuits, switching means for either selectively or collectively engaging said lines for telegraphing thereover, and resistances controlled by said switching means and substituted thereby for non-engaged lines.



1,384,397. TIME COMBINATION-LOCK. CHARLES MILLER, New York, N. Y. Filed May 31, 1919. Serial No. 300,966. 25 Claims. (Cl. 70—26.)

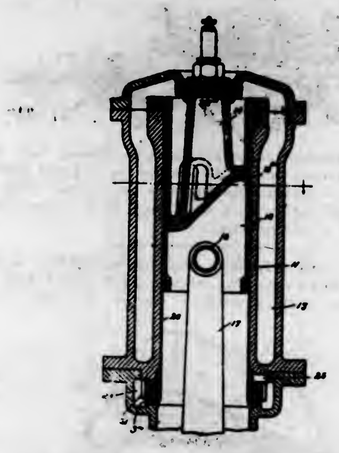
1. In a lock, a bolt, means for moving said bolt, normally idle timing mechanism controlling the movement

of said bolt, a winding gear for said timing mechanism, a member movable with said bolt moving means carrying means for driving said winding gear said member being arranged to co-act with the timing mechanism to control the interval of time that said timing mechanism shall run.

1,384,398. SIGNALING SYSTEM. LOUIS A. MORTIMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1917. Serial No. 180,145. 10 Claims. (Cl. 179—3.)

1. In a signaling system, a plurality of signaling devices, a source of signaling current, a relay responsive to a single application of current from said source, means operative due to the energization of said relay to actuate one of said signaling devices and to condition another of said signaling devices for operation and responsive due to a second energization of said relay by current from said source to disconnect the first-mentioned signaling device and to actuate the other signaling device.

1,384,399. HYDROMETER-SYRINGE. EINAR NEERUP, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,969. 2 Claims. (Cl. 265—45.)



1. In a hydrometer syringe, the combination of a transparent view casing having a marginal bead at top, a cap piece of elastic material formed with a skirt portion and with an annular recess at the upper end of the cavity of the skirt portion for engagement with the upper beaded end of the view casing, suction means consisting of an elastic hollow bulb, and a connecting means between said cap piece and bulb comprising a nipple having a shank portion, a bottom flange and an expanded top portion.

1,384,400. INDIA-RUBBER COMPOSITION. ARTHUR NIXON, Manchester, England. Filed Apr. 19, 1920. Serial No. 375,130. 3 Claims. (Cl. 106—23.)

1. The improved composition comprising a vulcanized mixture of a caoutchouc-like substance and vulcanized fiber.

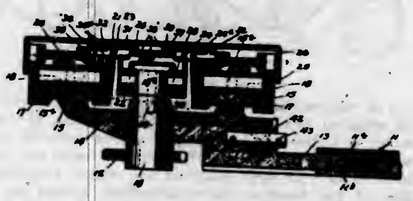
1,384,401. SLEEVE-VALVE ENGINE. WARREN NOBLE, Providence, R. I., assignor to N. C. L. Engineering Corporation, Providence, R. I., a Corporation of New York. Filed May 12, 1919. Serial No. 296,391. 14 Claims. (Cl. 123—75.)

1. In an engine, the combination with a ported cylinder and a piston therein, of a sleeve valve within the cylinder and surrounding the piston, said sleeve valve having a port opening and being flexible and distensible, whereby it travels in intimate gliding surface contact, as a stream in its channel, with the confining walls of the cylinder.

1,384,402. CONCRETE FOUNDATION AND METHOD OF MAKING SAME. WILLIAM H. PAVITT, Jr., Brooklyn, N. Y. Filed Nov. 15, 1919. Serial No. 338,374. 2 Claims. (Cl. 61—50.)

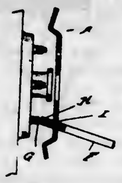
1. A sifter of the class described comprising a cylindrical body member, a spider in the lower portion of the body member, a screen disposed in the body member above the spider, a shaft extending axially through the body member and through the screen and spider member, means carried by said shaft and engaging the spider member for holding the shaft against longitudinal movement in either direction and an agitator member on the shaft co-acting with the screen.

1,384,403. STERILIZER. CHAUNCEY R. PELTON and JAY A. HAND, Detroit, Mich. Filed July 31, 1920. Serial No. 400,350. 5 Claims. (Cl. 167—8.)



1. In a steriliser, a basin provided with a cover, a basket, and handle arms for hanging the basket solely from the basin in an upper and in a lower position, and in the latter position with the cover closed upon the basin.

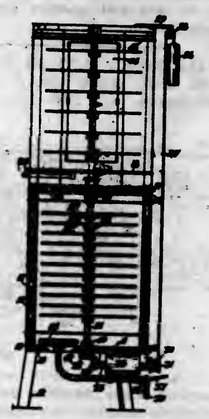
5. In a steriliser, the combination of a basin, a basket handles provided with arms pivoted to the basket, the arms being notched on the under sides to hook over the rim of the basin to hold the basket in lifted position and



the arms being bent at a substantial right angle to hook over the edge of the basin to hold the basket in its lower position with respect to the basin.

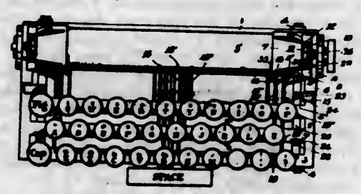
1,384,404. MINING-MACHINE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1920. Serial No. 402,349. 1 Claim. (Cl. 262—80.)

In a mining machine, the combination of a frame, a horizontally disposed ring rotatably mounted in said frame, a cutter bar comprising a chain-supporting element having a raised offset portion at one end thereof provided with a pair of upwardly extending arms, each connected to said ring by a substantially horisontal pivot mounted on opposite sides of the latter, upper and lower guiding flanges attached to said supporting element to form a channel about said cutter arm, a cutter chain adapted to move in said channel, a vertically disposed shaft extending through said offset portion of the cutter arm and having a driving sprocket for said cutter chain mounted on its lower end and in line with said channel, a horizontally disposed driving gear mounted on said ring, and a universal joint affording operative connection between said shaft and said driving gear.



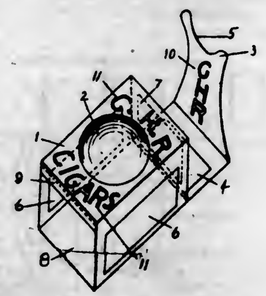
1,384,405. DEMOUNTABLE DISK WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed July 3, 1919. Serial No. 308,599. 4 Claims. (Cl. 301—9.)

1. The combination with a hub, of a demountable disk wheel for engagement with said hub, said wheel having an aperture in the disk thereof, engageable by the tool for lifting the wheel into proper registration with the hub, and the hub having a bearing, providing a fulcrum for such a tool.



1,384,406. BAKER'S OVEN. JAMES J. REID, San Francisco, Calif. Filed June 25, 1919. Serial No. 306,599. 5 Claims. (Cl. 107—60.)

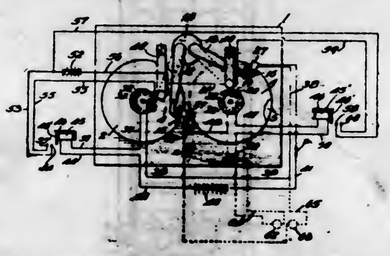
2. In a baking oven, a baking chamber, shelves therein, heating means for the chamber, means to effect relative rotation between the shelves and heating means, and



means to automatically cut off the heat supply after a predetermined interval of use.

1,384,407. TYPEWRITING-MACHINE. HENRY H. RIGGS, Harpoot, Turkey. Filed Nov. 28, 1917. Serial No. 203,540. 12 Claims. (Cl. 197—26.)

1. In a typewriting machine, a group of keys, a plurality of type arms each carrying a type head, means by which each type arm is operated identically by any one of a group of keys, and means by which the corresponding type head is rotated identically by any one of another group of keys, said two groups of keys having one key in common.

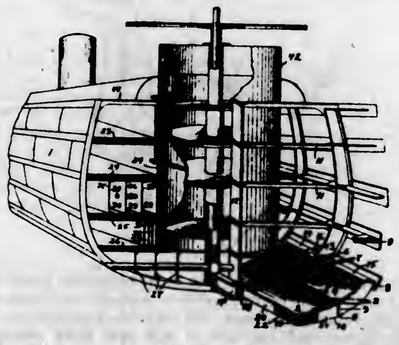


1,384,408. ADVERTISING NOVELTY. GEORGE H. ROWLES, Baltimore, Md. Filed July 17, 1920. Serial No. 396,966. 3 Claims. (Cl. 131—51.)

3. The providing of a case in which match boxes may be inserted and provided with means of permitting said match box to be opened and matches scratched on the side thereof and one face of said case being depressed to secure the match box in position, which depression may be used as an ash receptacle and a movable forked mem-

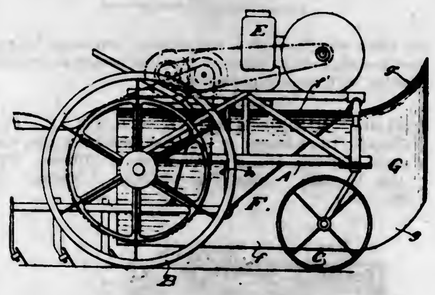
ber hinged to said case opening to hold one end of a cigar, the case holding the other end of the cigar and the combined weight of case and matches holding said forked member in open position.

1,384,409. TALKING-MACHINE OR THE LIKE. HENRY SHAFER, Ida, Mich. Filed Apr. 6, 1918. Serial No. 227,041. 10 Claims. (Cl. 274—10.)



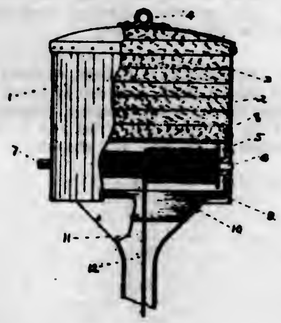
1. In a machine of the character described, a plurality of associated record carrying mechanisms, means common to both of said carry mechanisms for simultaneously driving the same, a plurality of sound transmitting mechanisms arranged to coöperate with the records carried by said carrying mechanism, in combination with operable means disposed within the path of travel of the transmitting mechanism for controlling said transmitting mechanisms whereby the same singly and successively coöperate with the records in a desired manner.

4. In a machine of the character described, the combination with a plurality of record carriers, driving means for operating said carriers at the same rate of speed, transmitting means arranged to coöperate with and engage the records on said carriers, means for automatically controlling said sound transmitting means, whereby when one transmitter reaches the end of a record the same will be lifted from operative relation therewith, and the other transmitter will be simultaneously moved into operative association with another record.



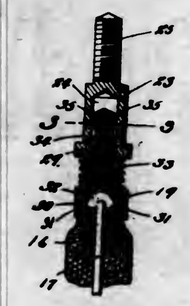
6. In a machine of the character described, a plurality of record carriers, independent sound transmitters, adapted to engage records carried by said carriers, means for successively placing said transmitters into operative association with the record, said means comprising controlling switches disposed well within the periphery of each record carrier and adapted to be controlled by said transmitters, circuits and electromagnets controlled by said switches for simultaneously placing one transmitter in position on its record while lifting a second transmitter from its record.

1,384,410. SHIP CONSTRUCTION. GEORGE K. SMITH, New York, N. Y. Filed May 17, 1917. Serial No. 169,255. 4 Claims. (Cl. 114—79.)



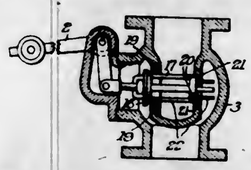
1. A metal hull construction for ships comprising flanged and nested plates, said plates having flanges of different heights, and means for securing the plates together extending between said flanges, there being a chamber between said plates.

1,384,411. CULTIVATOR MECHANISM. WILLIAM N. SPRINGER, South Bend, Ind. Filed May 17, 1916, Serial No. 98,105. Renewed Dec. 3, 1920. Serial No. 428,152. 5 Claims. (Cl. 97—13.)



1. A cultivating implement adapted to cultivate the soil adjacent to bushes or young trees, having, in combination, a framework having high arches over the plant row, earth-working tools carried by the frame and separated to have an open space on the central longitudinal lines of the machine, power-propelling devices on the frame applying power to the traction wheels behind the front end of the frame, and a guide projecting forward from the frame and adapted to engage with the plant limbs and stems and guide them and deflect them inward and upward from the longitudinal planes of the tool paths to the said central open space and arranged to leave said space unobstructed from the ground to a horizontal plane near the arches.

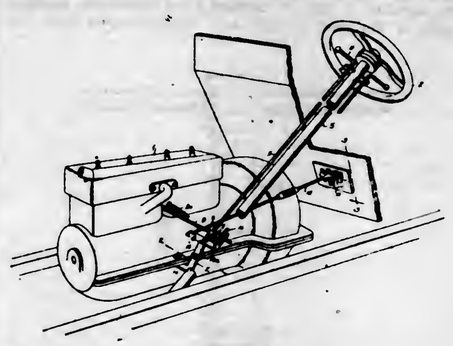
1,384,412. INDICATING AND ATTACHING DEVICE FOR SUNKEN SHIPS. JOHN E. STOLTS, Charleston, Wash. Filed May 14, 1920. Serial No. 381,371. 1 Claim. (Cl. 114—51.)



An apparatus of the class described, comprising in combination with a ship, a plurality of pairs of buoys oppositely located on a deck of said ship, each buoy having a casing, within the casing a plurality of watertight compartments carrying cork, below said compartments another compartment having rotatably mounted therein a reel carrying a line, the lower end of said second compartment being open and provided with inturned angular sections along its edge, a way for the line located adjacent the walls of the hull and extending around the interior of same, provided with fastenings having resistive strength against lifting and flared terminals opening out on said deck, each of said terminals adapted to afford a seat for the inturned angular sections of one of said buoys, a pair of said buoys located on the terminals and a line connecting the reels of said pair and slidably engaged through said way, means for reeling the line from either of said pair of buoys and through the line way.

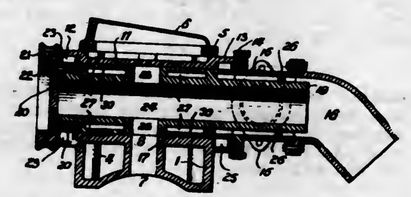
1,384,413. SPARK-PLUG. OSWALD TROVA, St. Louis, Mo., assignor, by direct and mesne assignments, of one-half to King Bee Spark Plug Company, St. Louis, Mo., a Corporation of Missouri, and one-half to Frederick J. Reppenhagen and John E. Curley, St. Louis, Mo. Filed Feb. 9, 1920. Serial No. 357,275. 10 Claims. (Cl. 123—169.)

1. In a spark plug, a shell, an insulating core positioned therein, an electrode extending through said core, a cap insulator inclosing the upper portion of said insulating core, and a self adjusting electrode carried by said cap insulator and adapted to bear upon the upper portion of the insulating core whereby an intensifying spark gap is formed between said self-adjusting electrode and the electrode that extends through said core.



1,384,414. FEED-WATER-REGULATOR VALVE. VINCENT V. VEENSCHOTEN, Erie, Pa., assignor to Northern Equipment Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1918. Serial No. 265,871. 2 Claims. (Cl. 251—83.)

1. A feed-water valve casing, said casing having an inlet and an outlet, a partition in said casing separating the inlet of said casing from its outlet, said partition having two opposing ports therethrough, and a valve plunger slidably mounted in and adapted to open and close said ports, said plunger having an annular beveled seat adjacent one end, and an annular square-edged seat adjacent the other end, one of said ports having an annular beveled seat and the other port having an annular square edged seat, the respective beveled seats being arranged to coöperate with said square seats when said ports are closed by said plunger.

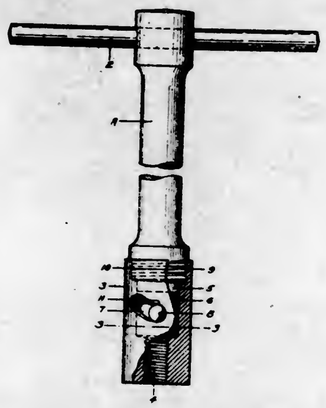


1,384,415. ACCELERATOR FOR ENGINES. PLEAS E. VINEYARD, Windom, Tex. Filed Dec. 5, 1919. Serial No. 342,708. 2 Claims. (Cl. 74—39.)

2. An accelerator for engines to control the throttle thereof, said accelerator being of the type which employs a bell-crank with a pedal and rod connection to work the bell-crank, and a rod connection from the bell-crank to the engine throttle, and characterised as new in that a

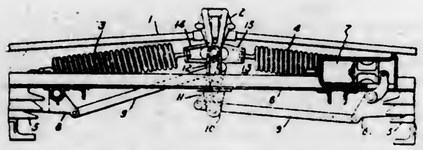
bracket made of hinged sections is anchored to any suitable point of support and pivotally supports the accelerator so that sufficient flexibility is derived to make a smooth operating mechanism.

1,384,416. OVERHEAD ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. SAMUEL L. WAREHAM and JOSEPH F. PANENSE, Detroit, Mich. Filed Nov. 24, 1919. Serial No. 340,367. 1 Claim. (Cl. 123—190.)



A rotary valve comprising a valve body having a port adapted to communicate with the cylinders of an internal combustion engine, collars at the ends of said valve body, a three-way inlet connection carried by one of said collars, an exhaust pipe connected to said three-way connection, a valve rotatable in said valve body having short and long reduced ends, and an exhaust bore throughout the length thereof, the long reduced end of said valve extending through said three-way connection into said exhaust pipe, a packing member about the long reduced end of said valve adjacent the exhaust pipe, said valve having opposed ports therein communicating with the exhaust bore thereof, said valve having chambers therein about the bore to be heated by the walls of the bore and the chambers communicating with said three-way connection, said valve having chamber ports to communicate with the port of said valve body, a power transmission wheel having a hub portion fitted on the short reduced end of said valve within said valve body and closing said bore and the other of said collars, and anti-frictional bearings in both of said collars against said valve and retained therein by the power transmission wheel and said three-way connection.

1,384,417. STUD-DRIVING WRENCH. HENRY A. WEICHHART, San Francisco, Calif., assignor to The California Tool Works, a Partnership composed of Henry A. and William E. Weichhart, doing business at San Francisco, Calif. Filed Feb. 12, 1919. Serial No. 276,488. 3 Claims. (Cl. 81—53.)



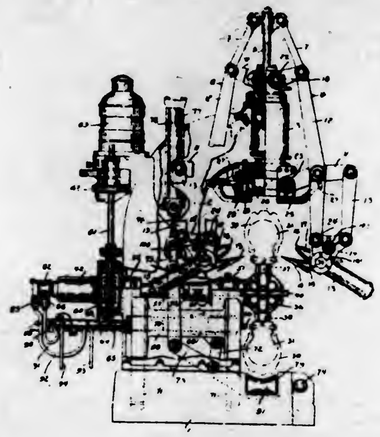
2. A stud driving wrench of the character described comprising a head member, a turning handle attached

thereto, a screw threaded stud engaging opening formed in the lower end of the head member, a chamber formed in the head member above the screw threaded stud engaging opening, a pair of inclined slots formed in opposite sides of the head member and communicating with the

chamber, a stud driving stop member vertically and turnably movable in the chamber and having pins projecting radially through the slots in the head, said inclined slots having flattened portions formed at the upper side of their lower terminals adapted to seat said radial pins when a stud is being driven.

1,384,418. TROLLEY. CHRISTIAN AALBORG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1917. Serial No. 162,998. 8 Claims. (Cl. 191—65.)

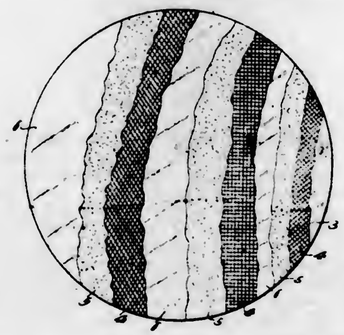
1. The combination with a pantograph trolley, of springs adapted to elevate said trolley, linkage members connecting the adjacent ends of said springs, and a cam member connecting said linkage members and adapted to readily decrease the distance between said linkage members.



2. The combination with a trolley, of a pair of actuating springs each having one of its ends connected to an adjusting member in spaced relation to the other spring, said adjusting member being mounted for rotation in a direction to vary the tension of the springs.

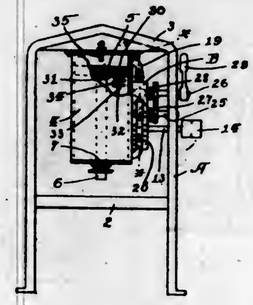
3. The combination with a pantograph trolley, of a plurality of elevating springs, a link connected to each of said springs, and an eccentric cam shaft interposed between said links and adapted to shorten the distance between the points of connection to said springs.

4. The combination with a trolley, of a pair of actuating springs each having one of its ends connected to an adjusting member in spaced relation to the other spring, said adjusting member being mounted for rotation about a center intermediate the said ends of the springs.



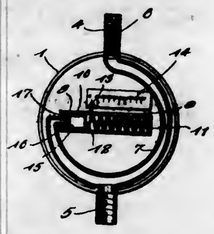
5. The combination with a trolley, of a spring adapted to elevate said trolley, a link connected to said spring, a supporting member, a cam shaft extending through said link and rotatably mounted on said supporting member, said cam shaft being adapted to occupy a plurality of positions to change the tension on said spring, and means for securing said shaft in any one of said positions.

1,384,419. TIRE-LOOSENING MACHINE. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed Apr. 22, 1920. Serial No. 375,792. 24 Claims. (Cl. 18—2.)



1. Apparatus for loosening tires from cores, including, in combination, a core support, tire loosening members, independent means supporting said members in spaced relation for operation on opposite sides of a core, means for inserting said members between a tire and its supporting core, and means for bodily moving the tire support and said members relative to one another to loosen a tire from a core.

1,384,420. METHOD OF BACKING MIRRORS. CARL E. AKELEY, New York, N. Y. Filed Mar. 19, 1919. Serial No. 283,647. 2 Claims. (Cl. 88—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



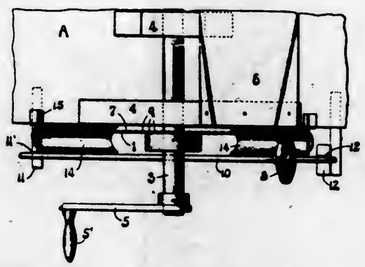
1. The method of backing a fragile metallic reflector which consists in, first laying a tough fabric over the back of said reflector, then covering the fabric with cementitious material and finally applying a coating of material impervious to water to said cementitious material.

1,384,421. HYDRAULIC RAM. ALBERT S. ANDERSON, St. Paul, Minn., assignor to Grant Waldref, St. Paul, Minn. Filed July 15, 1918. Serial No. 245,002. 1 Claim. (Cl. 138—10.)

A hydraulic ram, comprising, in combination, a frame having a bed, a cylinder supported by said frame over said bed, a piston in said cylinder having a shaft projecting over said bed, a pair of valves, a gear pump having ingress and egress ducts connected in multiple with said valves, a duct leading from the upper end of said cylinder to one of said valves, another duct leading from the lower end of said cylinder to the other of said valves, said valves in one position being adapted to direct the flow of liquid from said pump in one direction through said cylinder and in another position to reverse the flow of liquid through said cylinder, means for simultaneously operating said valves and means for driving said gear pump.

1,384,422. PRESSURE-GAGE. WILLIAM BASIL ANDERSON, Molson, Wash. Filed Dec. 22, 1919. Serial No. 346,458. 1 Claim. (Cl. 73—111.)

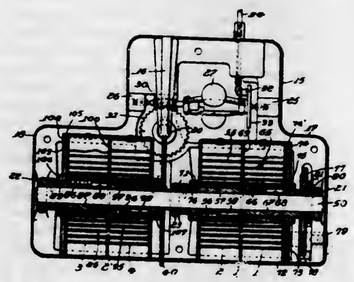
A pressure gage comprising a cylinder, open at one end and provided in one side with a slot which terminates adjacent the opposite end thereof, an air conduit extending into and closing the open end of said cylinder, an expansible bag arranged in the cylinder and connected at its open end to said conduit, a coiled spring arranged in the cylinder between the closed end thereof and the closed end of said bag, a disk follower in the cylinder between the bag and the spring, a pointer fixed to said follower and extending through the slot in the cylinder, a graduated scale in close proximity to the pointer which coacts with it, and means for connecting the conduit to a tire valve.



1,384,423. PREPARATION OF DRYING OILS. ELIAS BIELOUSS, Washington, D. C., assignor to Henry A. Gardner, Washington, D. C. Filed July 21, 1920. Serial No. 397,872. 2 Claims. (Cl. 134—56.)

1. A process of preparing drying oils from paraffin-type hydrocarbons, comprising effecting a limited chlorination of the oil, and thereafter dechlorinating the product at moderate temperatures and out of contact with an active catalyst, whereby excessive formation of objectionable by-products of reaction is avoided.

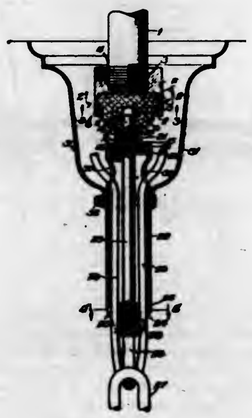
1,384,424. PYROTECHNICAL DEVICE. CHALFANT E. BIVINS, Brooklyn, N. Y., assignor to Edward H. Wagner, New York, N. Y. Filed Mar. 28, 1917. Serial No. 157,896. 2 Claims. (Cl. 52—23.)



1. The herein described composition of matter resulting from the combination of red gum, naval pitch, trinitro-phenol and nitric acid, substantially as described and for the purpose specified.

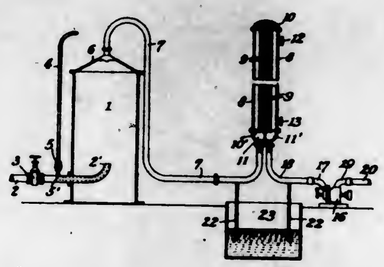
1,384,425. FEED-CUTTER. JOHN H. BRUNNER, Allenton, Mo. Filed July 26, 1920. Serial No. 398,953. 3 Claims. (Cl. 146—9.)

2. A machine of the character described comprising a shaft, a perforated cutter disk mounted on said shaft and secured thereto, supporting bearings at one end of said shaft, an operating handle at the other end of said shaft, a rod extending across the face of said cutter disk, a thrust roller rotatably mounted on said rod and bearing against said perforated cutter disk, and notched members for removably supporting said rod.



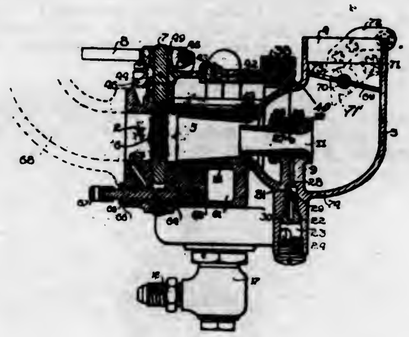
1,384,426. MULTIPLE-SPRING MOTOR. ISAAC FRANCIS BURTON, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 18, 1917. Serial No. 197,232. 16 Claims. (Cl. 185—37.)

7. In a multiple spring motor, a shaft, a driving gear mounted substantially centrally thereof, a sleeve connected to said driving gear, a spring barrel, a spring



wound between said sleeve and said barrel, a second sleeve in said barrel, and a second spring wound between said barrel and said second-mentioned sleeve in the opposite direction, a shaft extending through said sleeves, means to secure said second-mentioned sleeve to said shaft, a third sleeve secured to said shaft on the opposite side of said driving gear, a second spring barrel, a third spring wound between said third-mentioned sleeve and said second-mentioned barrel in the opposite direction to said second-mentioned spring, a fourth sleeve on said shaft within said second-mentioned barrel, a fourth spring wound between said second-mentioned barrel and said third-mentioned spring in the opposite direction to said third-mentioned spring, and means to prevent the rotation of said last-mentioned sleeve in one direction.

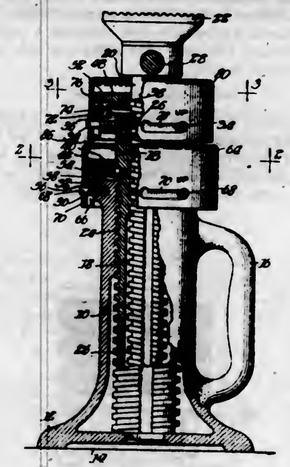
1,384,427. ELECTRICAL FIXTURE. FRANK LOWELL BUTLER, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,356. 4 Claims. (Cl. 240—85.)



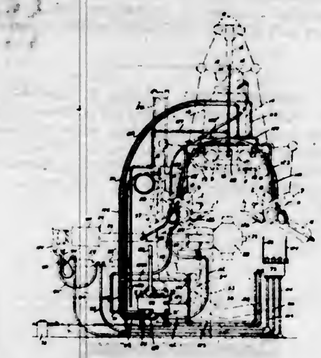
1. In an electrical fixture, a fixed supporting member, a coupling having its upper end secured thereto, said coupling having a socket formed in its lower end, an insulating member having an enlarged top portion, said top portion being disposed within said socket, an abutment projecting from the inside of said socket and arranged to enter a recess provided in the upper portion of said insulating member to prevent the latter from being rotatably moved, a spring member partly disposed within an annular recess in the inner surface of said socket at a point immediately beneath the enlarged portion of said insulating member, whereby said insulating member is maintained in position, a bolt having a non-circular head embedded in said insulating member and arranged to depend therefrom, a bushing having its upper end secured to the depending end of said bolt, said bushing having its lower end formed into a shoulder, a stem having its upper end seated against said shoulder, said stem having lateral openings therethrough near its upper end, a rod having its upper end secured to the lower end of said bushing and being arranged to extend through said stem, a nut screwed on the lower end of said rod, said nut being provided with a shoulder adapted to support the lower end of said stem, an eye member formed integral with said nut, a canopy slidably disposed on said stem, means for securing said canopy in position along said stem, and current carrying wires arranged to enter said stem through said lateral openings and to pass from said stem through diametrically opposed openings provided through said nut.

1,384,428. PROCESS FOR GENERATING FROM AIR AND HYDROGEN EITHER NITROGEN AND HYDROGEN MIXTURES OR NITROGEN. LUIGI CASALE, Terni, Italy. Filed July 7, 1920. Serial No. 394,474. 27 Claims. (Cl. 23—10.)

27. A process wherein atmospheric air is burned in a hydrogen atmosphere and the nitrogen product of said process conserved.



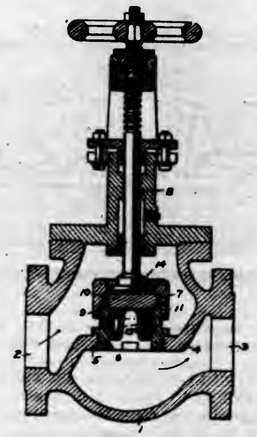
1,384,429. CARBURETER. DON COLE, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1918. Serial No. 216,439. 5 Claims. (Cl. 261—41.)



1. In a carbureter, a carbureting chamber having an air inlet and a mixture outlet, a throttle in said mixture outlet, a constant level liquid fuel supply chamber, a passageway having means for the admission of air at one end and terminating at the other end in a fuel nozzle feeding to said carbureting chamber, a restricted connection between said constant level fuel supply chamber and said passageway, said restricted connection feeding into said passageway below the fuel level in said supply chamber, a valve controlling the air admission end of said passageway, and means mechanically connecting said throttle and said valve.

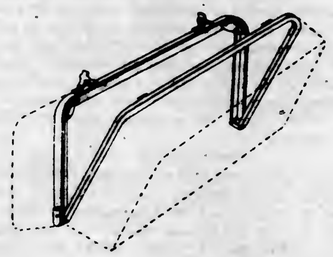
1,384,430. MULTIPLE-SCREW JACK. JOHN CORYELL, Coryell, Mich. Filed Feb. 6, 1920. Serial No. 356,802. 8 Claims. (Cl. 254—102.)

1. In mechanism of the class described, in combination with a case and a plurality of telescoping screws, means for manually rocking one of said screws on its axis, two sets of ratchet teeth oppositely disposed to each other between one screw and the case, corresponding sets of oppositely disposed ratchet teeth between each two screws, and means selectively operatable for throwing one set only of each set of ratchets into operative engagement whereby the operator can, by properly selecting the combination of operating teeth, make the jack operate continuously in a given direction with each stroke of the operating lever.



1,384,431. CONTROL FOR TIRE-STRIPPING MACHINES. MERRILL DAVIS, Detroit, Mich., assignor to Morgan and Wright, a Corporation of Michigan. Filed Aug. 31, 1920. Serial No. 407,077. 10 Claims. (Cl. 18—2.)

1. A tire loosening machine having a core support and loosening member one of which at least is revoluble, and mechanism operatively supporting the same, in combination with a fluid pressure system including valve blocks each containing a plurality of valves, and means for actuating the valves to progressively govern the extent of the several operations of the machine which are controlled thereby.

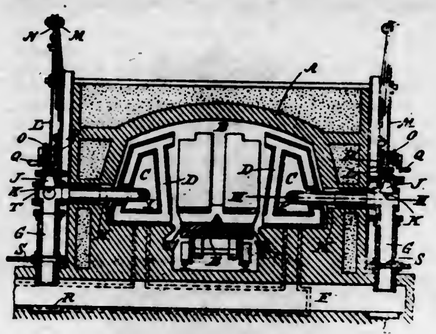


1,384,432. VALVE. GEORGE P. DEMPLER, Pittsburgh, Pa., assignor, by mesne assignments, to Protected Seat Valve Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1920. Serial No. 375,446. 1 Claim. (Cl. 251—28.)

A valve structure comprising a sleeve member and a closure member movable relatively to said sleeve member, said closure member being provided with a flange telescoping over the exterior surface of said sleeve member, said closure member comprising three parts: a valve stem with enlarged head, said flange, and a valve seat engaging

part, the two parts last named engaging one another by screw thread connection and forming together a cage whereby they are secured to the head of the valve stem, substantially as described.

1,384,433. FRAME FOR TRAVELING-BAGS. SAMUEL DRESSNER, Chicago, Ill. Filed Aug. 27, 1920. Serial No. 406,502. 2 Claims. (Cl. 190—50.)

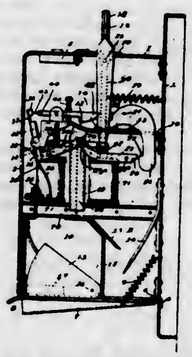


1. In a traveling bag frame, a pair of hingedly connected U-shaped angle members formed to be received one within the other, and a pair of devices having vertical bases secured to the corners of the outer member and having arched parts arranged approximately at right angles to the bases and spaced from the adjacent parts of the corners of said outer member, the free edges of the arched parts being formed to abut the adjacent vertical face of the inner member and to engage the other inner face of the inner member at the corners thereof so as to limit the extent of telescopic movement of the members and to hold the inner member against downward movement.

1,384,434. TUNNEL-KILN. PHILIP DRESSLER, Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1919. Serial No. 272,418. 6 Claims. (Cl. 25—142.)

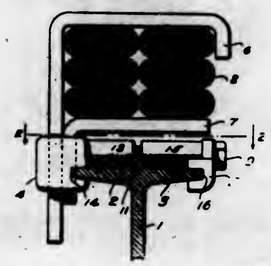
1. In a tunnel kiln and in combination with the combustion chambers, gas burners projecting into the combustion chambers through the sides of the latter and adapted

to project a supply of gas in a horizontal direction along the combustion chambers, gas supply flues located exterior



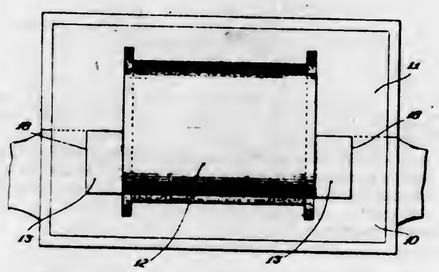
to the kiln and connected to the burners, and gas regulating valves between said gas supply flues and burners.

1,384,435. TUNNEL-KILN WITH SECTIONAL COMBUSTION-CHAMBERS. PHILIP D'H. DRESSLER, Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 27, 1920. Serial No. 369,414. 3 Claims. (Cl. 25—142.)



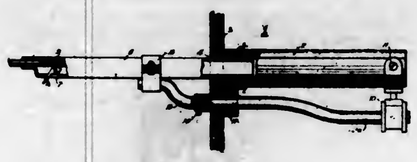
1. In a continuous tunnel kiln, the combination with a kiln chamber having an elongated hot zone, of a plurality of combustion chambers arranged in an end to end series extending longitudinally of the hot zone and having air and gas inlets at one end and an outlet for products of combustion at the other end and of such proportions that the distance between the inlet and outlet of each chamber is several times the maximum transverse dimension of the chamber.

1,384,436. COIN-COLLECTING, REGISTERING, AND CHANGE-DELIVERING APPARATUS. HARRY A. DARW, West New York, N. J., assignor, by mesne assignments, to Coin Device and Signal Co., Inc., New York, N. Y. Filed Nov. 8, 1919. Serial No. 336,643. 8 Claims. (Cl. 194—9.)



1. In means for the purpose described, the combination of a partition having an opening for the downward passage of a coin, a coin stop back of said opening, a movable chute to move a coin to a position in front of said stop, chute-moving means, a circuit-closing element movable by said chute-moving means, and a circuit-closing lever for coöperation with said element to complete a circuit; said lever movable by the coin only after the coin reaches a position in front of said stop.

1,384,437. BRACKET FOR SUSPENDING CABLES AND THE LIKE. OTTO EDELMANN, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1920. Serial No. 421,253. 3 Claims. (Cl. 248—32.)

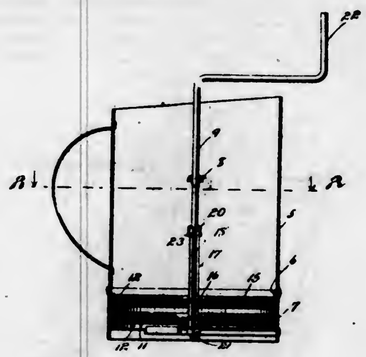


1. A cable bracket comprising a pair of jaw members having grooves for engagement with the support, one of said jaw members having an opening through it, a pair of cable holding members extending through said opening in said jaw member, means for connecting said jaw members together and binding said cable holding members in position.

1,384,438. CASTING-CORE. HARRY T. EDWARDS, San Francisco, Calif., assignor of one-half to Russell Berkenkamp, San Francisco, Calif., trading under the name of Ajax Foundry Company. Continuation of application No. 320,252, filed Aug. 27, 1919. This application filed Aug. 4, 1920. Serial No. 401,157. 20 Claims. (Cl. 22—166.)

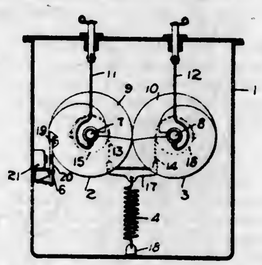
1. A casting core having core prints by which it is designed to be held immovable and non-rotatable, by the sand of the cope and drag portions of a mold.

1,384,439. ELECTRODE-HOLDER FOR ARC-WELDING. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 24, 1919. Serial No. 340,244. 7 Claims. (Cl. 219—8.)



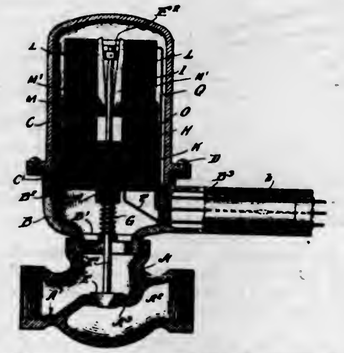
1. An electrode holder comprising a handle, a shield secured thereto, a tubular supporting member carried by the handle, and means for securing an electrode in the supporting member substantially in alinement with the axis thereof.

1,384,440. SUPPORTING-GARMENT. JACOB N. FAUST and CLYDE A. FAUST, Chicago, Ill. Filed Aug. 23, 1919. Serial No. 319,302. 2 Claims. (Cl. 241—8.)



2. A belt for supporting garments comprising, in combination, a plurality of sections, a pair of straps associated with the end sections and adapted to be adjustably interconnected, and looped lacing cords arranged to pass freely through adjoining ends of said sections and the ends of said straps whereby said belt may be adjustably fitted by the adjustment of said straps.

1,384,441. SIFTER. ANDREW W. FLANNIGIN, Milwaukee, Wis. Filed Nov. 21, 1919. Serial No. 339,573. 8 Claims. (Cl. 83—60.)



1. A sifter of the class described comprising a cylindrical body member, a spider in the lower portion of the body member, a screen disposed in the body member above the spider, a shaft extending axially through the body member and through the screen and spider member, means carried by said shaft and engaging the spider member for holding the shaft against longitudinal movement in either direction and an agitator member on the shaft co-acting with the screen.

1,384,442. CIRCUIT-INTERRUPTER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 18, 1916. Serial No. 132,087. 7 Claims. (Cl. 200—150.)

1. In a circuit interrupter, the combination with an inclosed oil-containing receptacle, of two rotatable contact members adapted to cause no appreciable displacement of oil in the circuit-opening and circuit-closing movements and having their conducting portions of such varied cross-sectional area that a relatively high resistance is inserted before they disengage.

1,384,443. ELECTRO VALVE MECHANISM. CHARLES P. FREY, Philadelphia, Pa., assignor to Brown Instrument Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1920. Serial No. 379,709. 8 Claims. (Cl. 137—139.)

1. A valve mechanism comprising in combination a reciprocating valve member having a valve closing tendency, means for moving said valve member into its open position, an electromagnet coil, means tending to retain the valve member in its open position comprising a pair of relatively movable parts of magnetic material longitudinally disposed in said coil and tending to move into position in which they hold the valve open when said coil is deënergized, and adapted to be separated by magnetic repulsion when said second coil is energized, and said parts are thereby similarly magnetized.

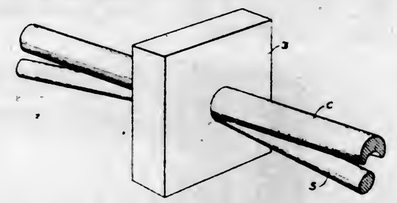
1,384,444. DIABETES REMEDY. WILLIAM L. FRAZIER, Boise, Idaho. Filed Jan. 15, 1921. Serial No. 437,585. 2 Claims. (Cl. 167—7.)

2. A medicinal preparation for the treatment of diabetes mellitus comprising a fluid suspension of the killed organisms causative of the said disease.

1,384,445. DIABETES REMEDY. WILLIAM L. FRAZIER, Boise, Idaho. Original application filed Jan. 15, 1921, Serial No. 437,585. Divided and this application filed June 6, 1921. Serial No. 475,352. 1 Claim. (Cl. 167—7.)

A medical preparation for the treatment of diabetes mellitus comprising the blood serum of an animal treated

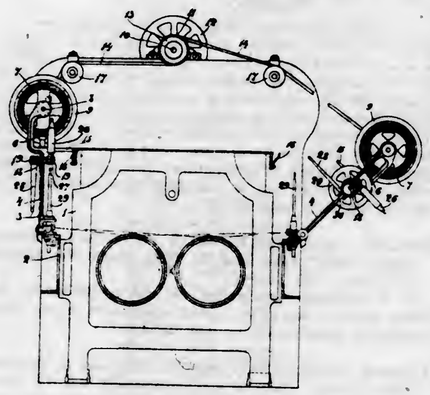
with organisms causative of the said disease, to produce anti-bodies antagonistic to the toxins and organisms causative of diabetes mellitus.



1,384,446. DRESSING AND DYEING MOLESKINS. HERMAN GABBE, Brooklyn, N. Y. Filed Apr. 30, 1919. Serial No. 293,696. 2 Claims. (Cl. 8—5.)

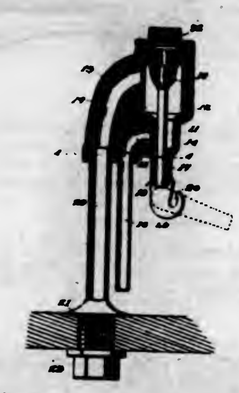
1. The herein described composition of matter to be used as a dyeing solution for moleskins, consisting of the following ingredients in about the proportions stated, namely: logwood dye, 50 parts; sal ammoniac, 25 parts; sumac, 25 parts; bluestone, 25 parts; and copperas, 50 parts.

1,384,447. PREPARATION OF DRYING OILS FROM HYDROCARBONS. HENRY A. GARDNER and ELIAS BIELOUSS, Washington, D. C.; said Bielouss assignor to said Gardner. Filed Dec. 9, 1919. Serial No. 343,458. 12 Claims. (Cl. 134—56.)



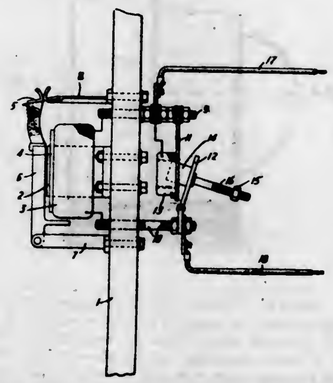
4. In a process of producing drying oils from chlorinated hydrocarbons, the step which consists in removing chlorin from the material in presence of a solvent for the chlorinated body.

1,384,448. METHOD OF WORKING METALS. OLIVER C. GILBERT, New York, N. Y., and EDGAR W. ADAMS, East Orange, N. J.; said Adams assignor to said Gilbert. Filed June 24, 1919. Serial No. 306,330. 12 Claims. (Cl. 205—21.)



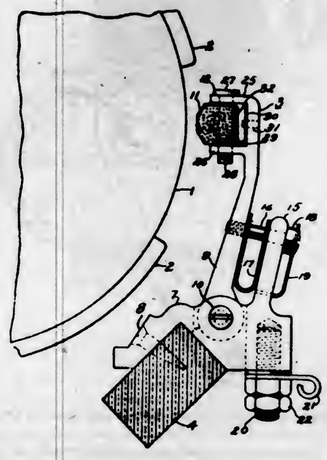
1. The method of working non-ferrous metals consisting in drawing a non-ferrous metal and a metal harder than the non-ferrous metal through a die together.

1,384,449. DOFFING APPARATUS FOR SPINNING AND TWISTING MACHINES. FREDRIK GRAF, Kroksätt, Sweden. Filed Dec. 22, 1919. Serial No. 346,618. 11 Claims. (Cl. 118—17.)



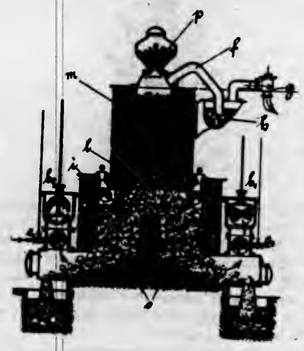
1. In a doffing apparatus for spinning and twisting machines, oppositely disposed threaded supports movable toward and away from the machine adjacent the spindle rail thereof, a holder rod extending between said supports and having its ends engaging and movable lengthwise on said supports from end to end of the latter, holders on said rod, movable with the latter from end to end of said supports and means for rotating the holders.

1,384,450. BALL-COCK. MERTON H. GREESON, Tampa, Fla. Filed Nov. 25, 1919. Serial No. 340,551. 2 Claims. (Cl. 137—104.)



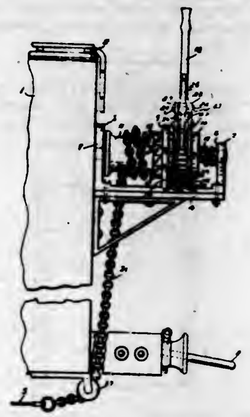
1. The combination with a casing, having a valve seat, and inlet and outlet means on opposite sides of said valve seat, a valve adapted for contact with said seat and having a depending stem, the lower portion of said casing being provided with a depending tubular guide slidably receiving said stem, a pair of spaced parallel ears depending from said tubular guide and provided with inclined slots opening out through the upper portions of the ears, a lever having its rear end rounded to form a cam engaging the lower end of said depending stem, a pair of trunnions extending from said lever forwardly of said cam and detachably arranged within said slots whereby the lever may be readily detached from said ears, and a float carried by said lever.

1,384,451. ELECTROMAGNETIC SWITCH. SAMUEL R. DODDS, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 20, 1916. Serial No. 98,805. 7 Claims. (Cl. 200—94.)



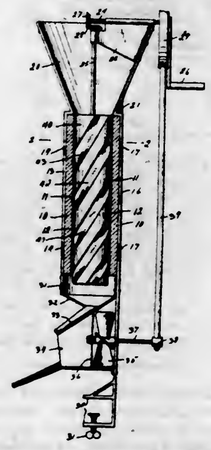
2. In a switch, the combination with a pair of coacting contact members and an electromagnet comprising a coil for effecting engagement of said contact members, of an electromagnetically operated switch for shunting said coil when the current traversing it exceeds a predetermined value.

1,384,452. CONTROL APPARATUS. SAMUEL R. DODDS, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 10, 1917. Serial No. 141,725. 4 Claims. (Cl. 200—170.)



1. A control finger having a shank terminating in two arms extending at substantially right angles thereto, a one-piece contact tip removably and pivotally mounted within said arms, and a U-shaped spring member extending substantially parallel to the pivotal axis and having one arm detachably secured to said shank and having its other arm bearing upon said contact tip.

1,384,453. PROCESS FOR PRODUCING GAS OF BITUMINOUS FUEL MIXED BY THE GAS OF THE DISTILLATION OF COAL. EUGEN DOLENSKÝ, Frankfort-on-the-Main, Germany. Filed May 31, 1916. Serial No. 100,979. 1 Claim. (Cl. 48—202.)



A process of gas generation from a column of solid fuel consisting of a blow period in which the lower portion only of said column is blown with air and a run period alternating therewith in which steam is passed upwardly through the said lower portion, air added to the water gas so formed, and the resulting products passed through the upper portion of the fuel column.

1,384,454. CAR-BRAKE. JOHN H. DUFF, Kansas City, Mo. Filed Sept. 27, 1920. Serial No. 412,055. 1 Claim. (Cl. 74—116.)

In a car brake, the combination with a car having brake rigging, of a frame mounted on the car, a shaft journaled in said frame, a drum secured on said shaft and having radially extending ratchet teeth on its inner end, a mobile member mounted idly on said shaft and having radially extending ratchet teeth on its inner end and adapted for engaging and disengaging the ratchet teeth on said drum and provided with a ratchet wheel section, a coiled spring loosely mounted on said shaft and normally pressing said mobile member to engagement with said drum, a lever rotatably mounted on said mobile member, a spring actuated pushing pawl mounted on said lever and engaging the ratchet wheel on said mobile member, a pawl normally detaining said mobile member from backward rotation, and a concentrically curved wedge shaped member on said frame and in the field of the back stroke of said lever and adapted for forcing the mobile member apart from the drum.

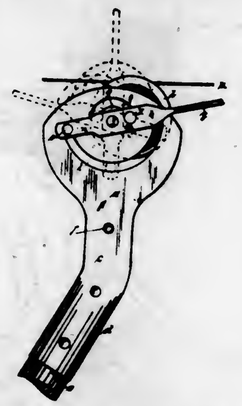
1,384,455. BERRY CLEANER AND STEMMER. PRESTON ERVIN, Emporia, Kans. Filed Mar. 14, 1921. Serial No. 451,998. 7 Claims. (Cl. 146—5.)

2. A fruit stemming and cleaning device of the character described comprising a body formed in two longi-

tudinally extending half sections, means yieldingly urging said sections toward each other but permitting the sections to move away from each other, and a rotatable berry carrier disposed within the passageway and approximately filling the same and formed with a longitudinally extending, helical groove opening upon the ends of the carrier.

1,384,456. METHOD OF REPAIRING SCORED CYLINDERS. ZEBULON J. EURY, Fort Worth, Tex. Filed May 1, 1919. Serial No. 294,126. Renewed June 6, 1921. Serial No. 475,558. 3 Claims. (Cl. 29—156.4.)

1. The method herein described which consists in drilling scores in cylinders and forming undercut edges with perforations therein, forming and forcing an alloy of high melting point into and filling the scores and interlocking the alloy in said perforations, and then polishing the alloy and making the same conform to the interior surface of the cylinder.



1,384,457. BAGGAGE-TAG. CHARLES A. FETTERS, Washington, D. C. Filed Nov. 27, 1917. Serial No. 204,168. 1 Claim. (Cl. 40—6.)

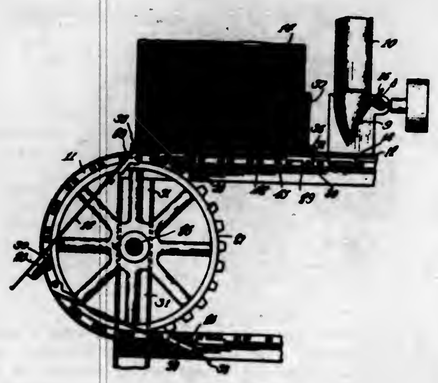
A baggage tag formed from a plurality of oblong shaped sections, scored lines between said sections and longitudinally disposed in relation to the sections, the adjacent oblong sections at one end of the plurality of sections being provided with apertured projecting portions adapted to extend beyond the ends of the other oblong sections when disposed between the sections having the projections, the apertured projections being so positioned that when they are folded on each other the apertures will register and detachable means passing through said apertures for holding the tag in folded position.

1,384,458. ADJUSTABLE TROLLEY-WHEEL FORK. DAVID M. FOWLER, Terre Haute, Ind., assignor of one-half to Robert H. Caton, Terre Haute, Ind. Filed Aug. 28, 1920. Serial No. 406,699. 3 Claims. (Cl. 191—73.)

1. A trolley-wheel fork comprising two side-plates, a bifurcated shank and a ferrule-like socket, said side-plates being perforated by semi-circular slots or orifices, adapted to receive and guide the axle of the trolley-wheel and a bolt adapted to connect the guide-levers, respectively, bearing-plates integral with said side-plates and adapted to support pivots upon which a pair of guide-levers revolve, a guide-lever mounted pivotally upon the outer side of each side-plate and adapted to receive and eccentrically guide the axle of a trolley-wheel suspended between said side-plates, a pair of finger-like guides in-

tegral with and projecting upwardly from said guide-levers, respectively, a pair of arms integral with and extending downwardly from said guide-levers, a bolt extending through semi-circular slots provided therefor in said side-plates and adapted to connect the lower ends of the said arms, a bolt passing through said bifurcated shank, a spiral-spring attached at either end to said bolts, respectively, all substantially as shown and described and for the purpose set forth.

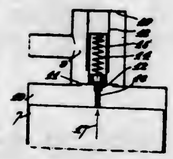
1,384,459. TUNING-PEG FOR STRINGED MUSICAL INSTRUMENTS. ALBERT D. GROVER, New York, N. Y. Filed Aug. 11, 1919. Serial No. 316,614. 7 Claims. (Cl. 84—305.)



1. A tuning peg for stringed musical instruments, comprising an integral shank having a cylindrical portion to enter a peg hole and a polygnal portion provided at one end with a thumb-piece, a pair of relatively slidable shoulders on said shank to engage the opposite faces of the peg-head, and elastic means for forcing said shoulders toward each other into frictional engagement with the opposite faces of the peg-head.

1,384,460. MINERAL-OIL EMULSION. CHARLES B. HALEY, Oklahoma, Okla. Filed Dec. 11, 1920. Serial No. 430,051. 2 Claims. (Cl. 167—7.)

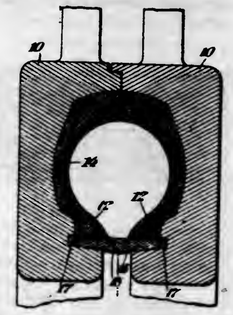
1. As an article of manufacture, an emulsion of mineral oil in milk of magnesia.



2. As an article of manufacture, an emulsion of mineral oil in an equal volume of milk of magnesia.

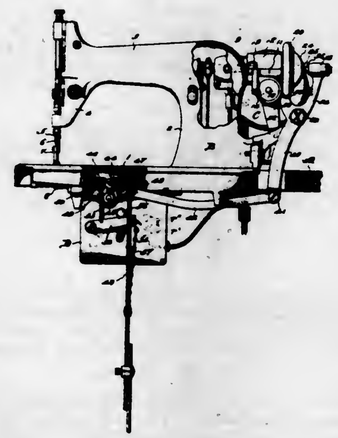
1,384,461. ICE-CREAM-CONE MACHINE. CHRIST HALSET, Chicago, Ill., assignor to Consolidated Wafer Company, Chicago, Ill., a Corporation of New York. Filed Jan. 9, 1920. Serial No. 350,309. 7 Claims. (Cl. 226—14.)

1. Ice-cream cone crating means comprising a cardboard sheet, said sheet having a plurality of openings therein adapted to receive ice-cream cones, and means for receiving ice-cream cones from a cone manufacturing machine and for passing an ice-cream cone into each of said openings.



1,384,462. AUTOMATIC VALVE MECHANISM. JACOB CHRISTIAN HANSEN-ELLEHAMMER, Copenhagen, Denmark. Filed Apr. 15, 1919. Serial No. 290,245. 3 Claims. (Cl. 121—152.)

1. In combination with an engine composed of a cylinder and a piston, of a chamber communicating with the cylinder and in connection with a source of supply of a driving medium, a valve for controlling the communication between said chamber and cylinder and acted on by the engine to open a small degree when the piston approaches the dead center whereby to put the valve in a condition of balance acted upon equally on both sides by the driving medium, and resilient means compressible by the engine as the piston approaches the dead point and connected to said valve whereby to cause the opening of the latter to a predetermined degree.

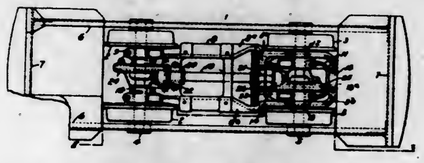


1,384,463. TIRE-SUPPORTING DEVICE FOR TIRE-MOLDS. ARCHER H. HARRIS, Barberton, Ohio, assignor of one-half to Evan A. Armstrong, Akron, Ohio. Filed Dec. 9, 1920. Serial No. 429,311. 3 Claims. (Cl. 18—38.)

1. The combination with a mold structure for tires of rubber and cord construction having basal annular beads, of a bead-supporting ring adapted to be associated with and to form a separable part of the said structure, said ring comprising a unitary body having spaced circum-

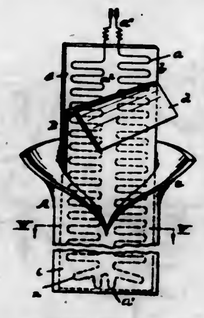
ferential bead-engaging flanges, said body and its flanges being split to permit contraction and expansion of the ring.

1,384,464. DRIVING AND CONTROLLING MECHANISM FOR POWER-OPERATED MACHINES. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 28, 1918. Serial No. 236,975. 18 Claims. (Cl. 172—179.)



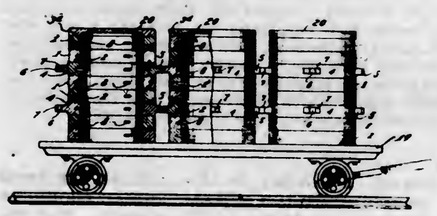
6. A sewing machine comprising, in combination, a frame including a bracket-arm, stitch-forming mechanism incorporated in said frame and including a main-shaft journaled lengthwise of said bracket-arm and having an outboard projection, a driving motor having a power-shaft disposed transversely of said main-shaft, and a manually operable clutch connection between the motor-shaft and the outboard projection of said main-shaft.

1,384,465. RECOVERY OF LEAD AND SILVER FROM SULFID ORES AND METALLURGICAL PRODUCTS. HARRY HEY, Melbourne, Victoria, Australia. Filed May 6, 1920. Serial No. 379,302. 6 Claims. (Cl. 75—18.)



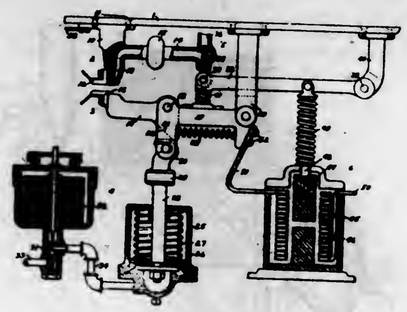
1. In the recovery of lead and silver from sulfid ores mixing the ore with hydrochloric acid and heating the mixture at a temperature substantially above 100° C. to effect a preferential chloridizing of the lead and silver present.

1,384,466. LOCOMOTIVE. GEORGE H. F. HOLT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1917. Serial No. 171,149. 18 Claims. (Cl. 105—118.)



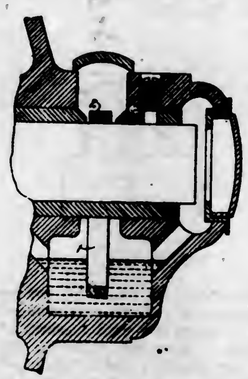
1. In a locomotive, the combination with two axles having driving wheels mounted thereon, and a motor provided with means for transmitting the driving effort of the motor through the axles to the driving wheels, of means for supporting the motor at two different points on one of said axles and for so pivotally supporting the motor on the other of said axles as to permit both a bodily vertical movement and a pivotal movement of said axle in a transverse perpendicular plane.

1,384,467. BANDAGE. JOHN G. HOMAN, Steubenville, Ohio, assignor to Electrothermal Company, Steubenville, Ohio, a Firm composed of John G. Homan and William J. Kirk. Filed Jan. 27, 1920. Serial No. 354,350. 14 Claims. (Cl. 219—46.)



1. A device of the class described comprising a flexible supporting member of non-conducting material having an adhesive surface, an electrical conductor secured by said surface, and a flexible covering over said conductor.

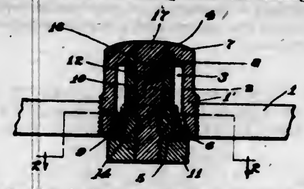
1,384,468. SAGGAR. DELTA B. HOWELL, Chicago, Ill., assignor of one-half to Ray Y. Cliff, Sebring, Ohio. Filed Mar. 26, 1920. Serial No. 368,849. 7 Claims. (Cl. 25—153.)



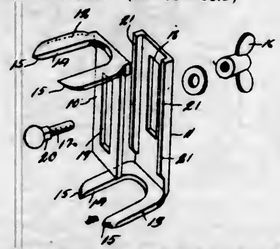
1. A saggar for holding articles to be fired, comprising a tier of superposed refractory rings, each adapted to support an article to be fired and engaging means upon certain of said rings for engaging corresponding rings in adjacent tiers.

1,384,469. CONTROL APPARATUS. MAURICE F. JONES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1917. Serial No. 184,238. 6 Claims. (Cl. 200—148.)

1. In control apparatus, the combination with a plurality of normally open electrical contact members, of means for actuating one of said contact members to a closed position, a valve opened by the opening movement of the contact members to direct a fluid blast upon the arc caused by their separation, and a coil in series circuit with said arc and associated with means for automatically permitting the closure of said valve only upon the rupture of the arc.



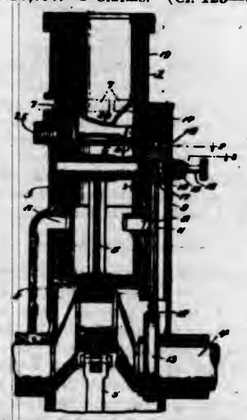
1,384,470. OIL-RING. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,495. 5 Claims. (Cl. 64—31.)



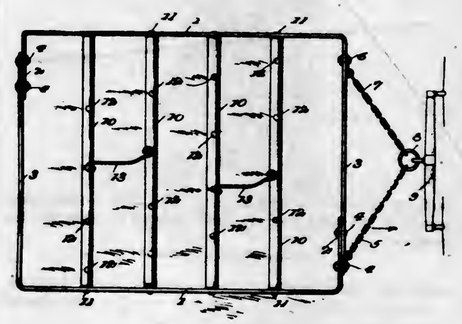
I. An oil ring comprising a comminuted material associated with a hardened binder and reinforcing strands of fibrous material disposed therein.

1,384,471. FUSIBLE PLUG. JOSEPH BERNARD KILKENNY, Oakland, Calif. Filed Feb. 26, 1920. Serial No. 361,525. 2 Claims. (Cl. 122—504.3.)

1. A safety appliance for steam boilers comprising a tubular shell communicating at one end with the boiler water space and at its opposite end with the boiler fire box, said shell provided on its interior with an enlarged chamber, relief ports connecting the shell with the boiler fire box, a tubular plug removably positioned within said shell to close its opposite ends, a fusible element closing the tubular portion of said plug with one end exposed to the boiler fire-box, said plug provided with lateral channels communicating with the enlarged chamber whereby the fusing of said element provides a connection between the boiler water space and the fire box through said enlarged chamber.

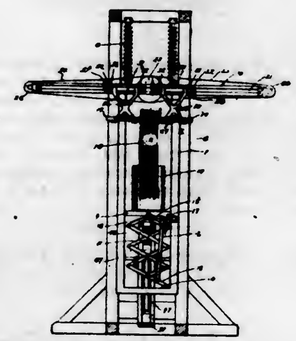


1,384,472. VALVE-SPRING HOLDER. WILLIAM A. LEAHY, Imogene, Iowa. Filed Aug. 4, 1919. Serial No. 315,185. 1 Claim. (Cl. 20—86.3)



A valve spring holder comprising two right angle members, the horizontal arms of each right angle member being provided with bifurcations forming recesses for the reception of a valve stem and arms for engaging the ends of a valve spring, the vertical arms of the angle members having longitudinally disposed slots therein registering with each other, a headed bolt passing through said slots and provided with a rectangular shaped portion adjacent its head and disposed in the slots, the shank of said headed bolt being threaded and provided with a nut whereby the parts may be clamped together, and flanges carried by the vertical edges of the outer vertical arm and engaging the sides of the inner vertical arms and preventing movement of the arms out of registration with each other sidewise, said bolt forming means for maintaining said vertical arms in engagement with each other frictionally and allowing said arms to be easily detached.

1,384,473. FUEL FEEDING AND IGNITION MEANS. ALBERT R. LONG, Ballston, Va. Filed Jan. 8, 1920. Serial No. 350,007. 3 Claims. (Cl. 123—65.)

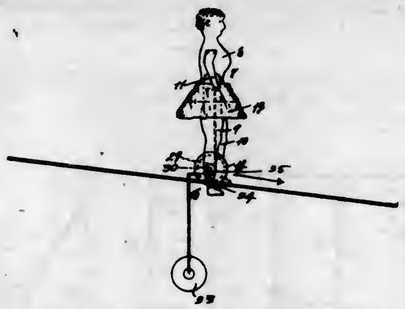


1. In combination with an engine cylinder, a housing adjacent to and communicating therewith, air and fuel supply means for the housing, said housing having a pocket in one side wall thereof and a valve operable in the housing for conveying fuel to said pocket whereat it is measured and then conveyed by continued operation of said valve for discharge into the cylinder.

1,384,474. HARROW. FRANK J. LUEDKE, Salteese, Mont. Filed May 10, 1920. Serial No. 380,327. 1 Claim. (Cl. 55—8.)

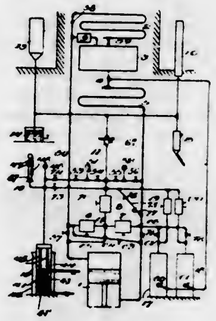
A harrow comprising a frame consisting of two similar L-shaped members each having the extremity of its longitudinal arm provided with an inwardly turned portion overlapping the end of the transverse arm of the other member, fastening devices inserted through said overlapping portions, tooth bars mounted in the longitudinal arms of said L-shaped members, and harrow teeth secured in said tooth bars.

1,384,475. HURL SIZER AND SHAKER. GEORGE L. MCARTHUR, Racine, Wis. Filed Aug. 30, 1919. Serial No. 320,816. 12 Claims. (Cl. 15—45.)



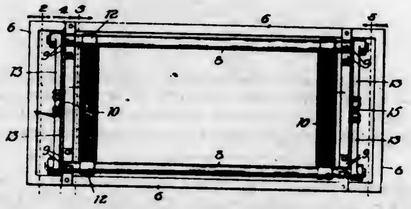
1. A device of the class described including finger members movable to engage in straws to be sized and then movable to clamp the straws therebetween, and means for shaking the fingers after being moved to clamping position.

1,384,476. BALANCING TOY. CHARLES MATHIEU, New York, N. Y. Filed Sept. 30, 1920. Serial No. 413,905. 3 Claims. (Cl. 46—40.)



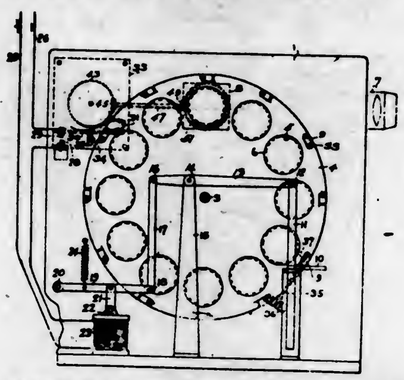
1. In a balancing toy, a body member, a pair of alined connected arms movably mounted on the body member

and normally extending outwardly therefrom, legs also slidably connected to said body member, the upper end of



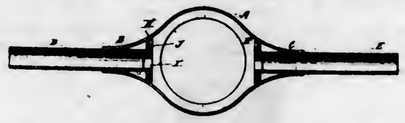
each leg alternately striking said arms, and a roller connected to the body member and arranged to move the leg members.

1,384,477. FLUID-PRESSURE APPARATUS. FRED E. MATTHEWS, Leonia, N. J. Filed Apr. 3, 1918. Serial No. 226,505. 18 Claims. (Cl. 62—2.)



1. In a fluid pressure apparatus, in combination, a normally fluid-tight chamber, automatic high pressure relief means for passing fluid into said fluid-tight chamber, means connected with said chamber and responsive to a relatively materially lower pressure for permitting discharge of the fluid from said chamber, and conserving means including a medium capable of absorbing the fluid at pressures below that necessary to actuate the fluid discharging means.

1,384,478. WEIGHT-SUPPORTING PLATFORM. MORTIMER B. MILLS, Chicago, Ill. Filed Sept. 4, 1920. Serial No. 408,312. 4 Claims. (Cl. 265—71.)

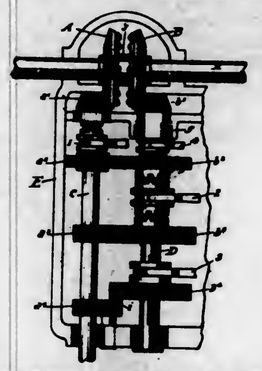


1. In combination with a base, rails secured thereon, rollers rotatably bearing on said rails, springs extending from the rails and winding in one direction about and secured to the rollers, seat-forming bars suspended at their ends by springs winding in the opposite direction about and secured to the rollers, and a weight-supporting platform on said bars.

1,384,479. TIME-CONTROLLED ADVERTISING DEVICE. THOMAS J. MOSURE, Niles, Ohio. Filed Nov. 20, 1919. Serial No. 341,505. 6 Claims. (Cl. 40—52.)

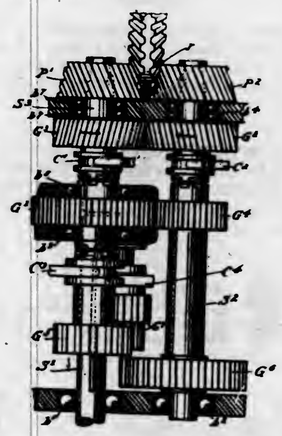
1. In an advertising device, the combination of a light source, a rotatable disk provided with means for carrying a series of advertisements, electrically operable means for imparting a step-by-step rotation to the said disk and time-controlled means for energizing the said rotating means, the said time controlled means comprising a clock, a fixed contact member associated with the said clock and insulated therefrom, a movable contact member adapted to coöperate with the said fixed contact member, and a cam operating the said movable member, the said cam being connected to rotate with one of the rotary parts of the said clock.

1,384,480. HOUSING FOR TRANSMISSION-GEARS AND AXLES OF AUTOMOBILES. THOMAS E. MURRAY, Jr., and JOSEPH B. MURRAY, Brooklyn, N. Y. Filed Feb. 20, 1920. Serial No. 360,066. 2 Claims. (Cl. 74—56.)



1. A housing for transmission gear and axle, comprising a middle section in form substantially annular with oppositely disposed tubular extensions and formed in two longitudinal half sections electrically welded together at their registering edges, a flanged ring in each of said extensions and electrically welded thereto at its circumferential periphery, and tubes entering said extensions and electrically welded to said rings; the said rings being butt-welded to the ends of said tubes.

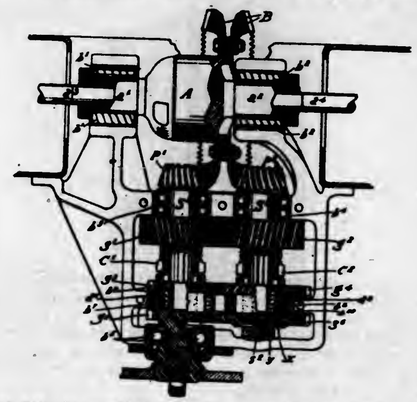
1,384,481. TRANSMISSION-GEAR FOR AUTOMOBILES. WILLIAM FRANKLIN PENROD, Cincinnati, Ohio, assignor to Anthony J. Wissel, trustee. Filed July 3, 1919. Serial No. 308,431. 3 Claims. (Cl. 74—59.)



2. In a transmission-gear-driving system a main shaft and a countershaft in parallel, each having a terminal bevel pinion; a plurality of spur gears of varying diameter fixedly carried on said main shaft; a corresponding plurality of spur gears carried loosely on said countershaft in constant mesh each with its opposite gear of the main

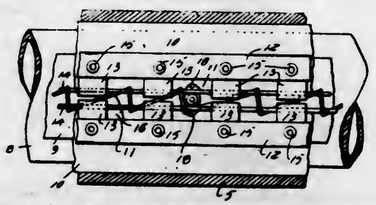
shaft; clutches for connecting either of said loose gears with the countershaft and for connecting or disconnecting the terminal pinion of the mainshaft with or from its shaft; a stud independently fixed to the frame; a loose

reversing gear thereon in constant mesh with one of the fixed gears; and a sliding clutch gear splined on the countershaft adapted to be moved laterally into mesh with the reversing gear.



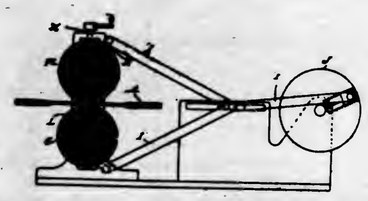
1,384,482. TRANSMITTING-GEAR SYSTEM. WILLIAM FRANKLIN PENROD, Cincinnati, Ohio, assignor to Anthony J. Wissel, trustee. Filed Nov. 24, 1919. Serial No. 340,301. 9 Claims. (Cl. 74—58.)

1. In a transmission gear system, the combination of a main shaft to which power is initially applied; an abutting extension thereof independently rotatable; a normally loose transmission gear journaled in bearings upon the general supporting frame of the system and itself constituting a journal bearing and support for the main and extension shafts in common at their contiguous end portions; and clutches, one at each side of the transmission gear upon the main and extension shafts, adapted to engage said gear in rotation with either or both as desired.



1,384,483. DRIVING-GEAR SYSTEM. WILLIAM FRANKLIN PENROD, Cincinnati, Ohio, assignor to Anthony J. Wissel, trustee. Filed Feb. 21, 1920. Serial No. 360,456. 5 Claims. (Cl. 74—99.)

1. In a transmission gear system of the character indicated, a structural unit independent of the speed changing mechanism, embodying in combination a yoke-shaped supporting frame adapted to engage the axle casing at its arm terminals; main and auxiliary shafts in parallel centrally located between the side arms of the yoke carrying equal terminal bevel pinions adapted to engage a double

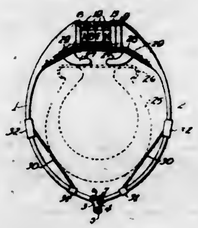


ring gear in constant mesh at opposite sides; equal spur gears in constant mesh on and between said shafts; a cross-bar support for the shafts adjacent to and between the said pinions and gears; and a similar cross support adjacently forward of the spur gears.

1,384,484. TIRE STRUCTURE. HARRY ELWOOD PENWELL, Turlock, Calif. Filed June 9, 1920. Serial No. 387,566. 1 Claim. (Cl. 152—18.)

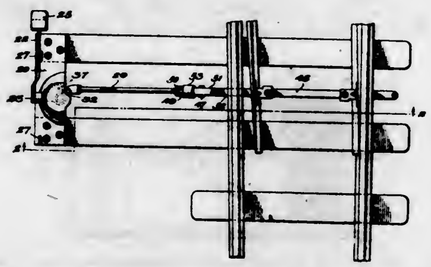
A tire structure of the character described comprising a tire casing including separable edges, a laminated reinforcing strip secured to each of said edges, the longitudinal edges of said laminations coinciding, loop members disposed between the laminations of said strips, a wire extending longitudinally of each of said separable edges through the loop members, and a lace adapted to alternately engage said wire between the loop members to draw said separable edges closely adjacent each other.

1,384,485. METHOD OF FORMING AXLE-HOUSINGS. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 25, 1918. Serial No. 255,639. 5 Claims. (Cl. 29—153.)



1. The process of forming axle housings, comprising the forming of a blank of varying gage, drop forging the thicker portions of said blank to fashion the same, and pressing the thinner portions.

1,384,486. VALVE FOR HEATING-RADIATORS. VAN VECHTON RIESBERG, Philadelphia, Pa. Filed Mar. 1, 1920. Serial No. 362,229. 3 Claims. (Cl. 137—122.)

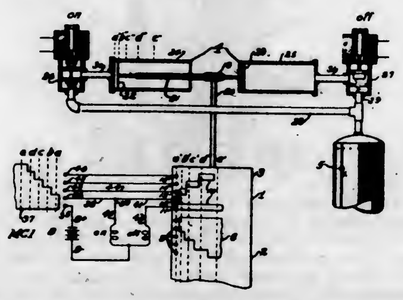


1. In a valve of the character stated, a casing, a cup vertically movable in said casing, an inverted float valve in said cup, and means on said cup whereby the latter is in communication with said casing, and said float valve is in communication with said cup, said cup being adapted to cause upward movement of the said valve by the upward force exerted on the cup.

1,384,487. AUTO-TIRE LOCK. WALDO A. RIGAL, Chicago, Ill. Filed Dec 20, 1920. Serial No. 431,944. 5 Claims. (Cl. 70—19.)

1. A device of the character described comprising a pair of substantially semi-annular arms, a plurality of links connecting said arms at one end, one of said arms being provided with a locking bolt and the other of said arms being provided with a lock casing adapted to receive said bolt, and combination controlled means co-acting with said lock casing to control the movement of said locking bolt relative to the lock casing.

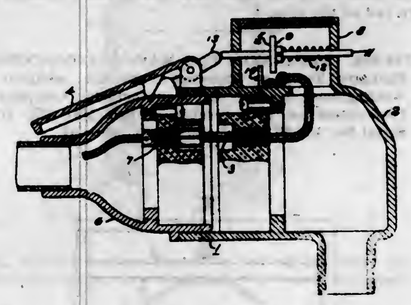
1,384,488. SWITCH-STAND. NEIL E. SALSICH, Bethlehem, Pa. Filed Nov. 8, 1918. Serial No. 261,629. 16 Claims. (Cl. 246—404.)



1. A switch stand including in combination, a base having a chamber therein, a pinion within the chamber mounted for turning about a horizontal axis, a gear in mesh with the pinion and held thereby against axial movement in one direction, said gear provided with an arm on its hub adapted to be connected to the switch operating rod, and means to turn said pinion.

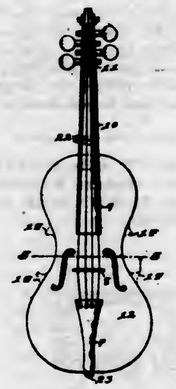
1,384,489. ROPE-SOCKET. WILLIAM D. SHAFFER, Santa Paula, Calif. Filed Sept. 13, 1920. Serial No. 400,754. 1 Claim. (Cl. 24—123.)

A rope socket, comprising a body member provided with a bore, cone slips adapted to grip a cable end mounted in said bore, a shank threaded into said bore, and shims interposed between the lower ends of said cone slips and said shank.



1,384,490. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1917. Serial No. 162,889. 11 Claims. (Cl. 200—17.)

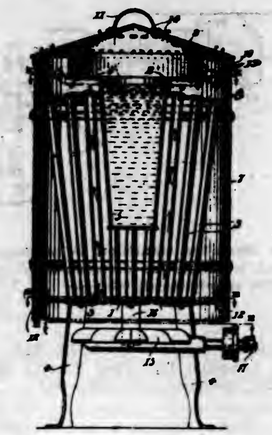
10. The combination with a stationary member, of a coöperating fluid-pressure-operated member adapted for step-by-step actuation, and means for causing steps taken at different portions of the movement to consume substantially equal time elements.



1,384,491. CONNECTOR. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 13, 1917. Serial No. 174,445. 3 Claim. (Cl. 173—332.)

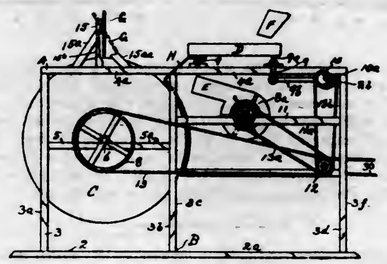
3. The combination with a receptacle having conductors therein, a door for the receptacle having a projection thereon, and a plug member having contact members therein that are adapted to engage the contact members in the receptacle, of a normally closed short-circuiting

switch in the receptacle, and means adapted to be engaged by the projection on the door to open the switch when the door is opened to permit the insertion of the plug member in the receptacle.



1,384,492. VIOLIN. REUBEN A. SIVARD, Oklahoma, Okla. Filed Dec. 8, 1919. Serial No. 343,268. 1 Claim. (Cl. 84—274.)

A violin including an arched front and arched back, said front and back engaging each other on a meeting plane without the interposition of the usual side walls, the back being provided on its outer or rear surface with an enlargement extending from its upper end downward with diminishing taper to the point of full total thickness of said violin, the outer or rear surface of the enlargement being in the same plane as the center of the arch formed by the back, a neck abutting the upper ends of said front and back and the upper end of said enlargement and glued thereto, and a back plate glued to said enlargement and neck.

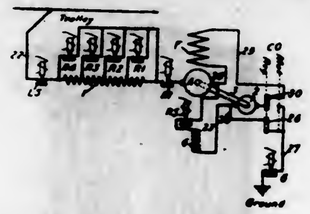


1,384,493. GAS-HEATER. JOHN L. SKUTTLE, Mason City, Iowa. Filed Feb. 5, 1921. Serial No. 442,732. 6 Claims. (Cl. 126—90.)

1. In a heater of the character described, a plurality of heating flues, head and base plates connecting the flues, a heater disposed beneath the base plate, a casing inclosing the plates and flues, there being a central open-

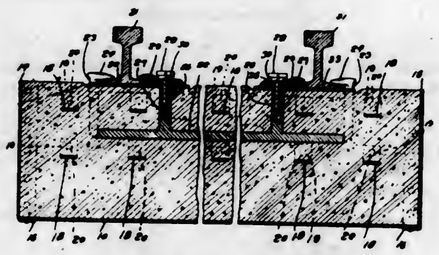
ing in said head plate and a tapering water receptacle suspended within the head plate opening.

1,384,494. RAISIN-CLEANER. WILLIAM STONER, Fresno, Calif. Filed Mar. 24, 1920. Serial No. 368,388. 3 Claims. (Cl. 130—18.)



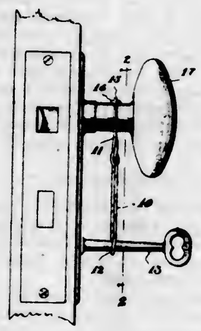
1. In a device of the character described the combination of a rotatable drum having a smooth outer surface and a plurality of pins extending radially therefrom, means for rotating the drum, a shaker adapted to deposit fruit to be cleaned upon the periphery of the drum at a point thereon where its rotation gives the periphery an upward movement, a fan adjusted to direct a current of air approximately toward the periphery of the drum and adjacent to the discharge of the shaker, substantially as described and for the purposes set forth.

1,384,495. SYSTEM OF CONTROL. NORMAN W. STORER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,540. 5 Claims. (Cl. 172—179.)



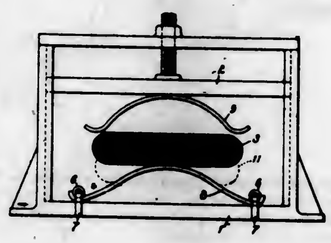
1. In a system of electric-vehicle control, the combination with a supply circuit and a dynamo-electric machine having an armature and a field winding, of means for initiating regenerative braking of the vehicle from rest down a grade including the manual establishment of exciting connections for said field winding and the manual

connection of a high-resistance circuit including said machine across the supply circuit, and means for excluding resistance from the machine circuit as the vehicle speed



increases to effect the transition to regeneration under certain speed conditions, as determined by the exciting-circuit and the supply-circuit voltages.

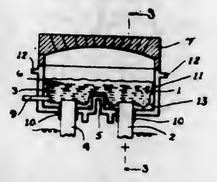
1,384,496. REINFORCED-CONCRETE TIE. DENIS R. SULLIVAN, Longville, La. Filed Nov. 17, 1920. Serial No. 424,726. 6 Claims. (Cl. 238—98.)



1. In a device of the class described, a body portion, reinforcing devices extending therethrough, and an additional reinforcing device including rail supporting elements, and comprising a plate embedded within the body, and rail engaging devices projecting upwardly from the ends of the plate, for engagement with the outer portions of the rail flanges, and means carried by said plate for securing the inner edge portions of the rail flanges.

1,384,497. KEY-HOLDER. EDWIN F. SYMONS, Sloatsburg, N. Y. Filed Mar. 28, 1918. Serial No. 225,249. 1 Claim. (Cl. 70—65.)

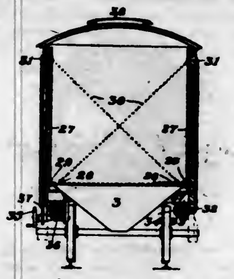
A key holder comprising a pair of resilient split rings of different diameters and each having an eye at its bight portion, a chain secured at its ends to the said eyes, the larger ring having an eye on one of its ends and a hook on its other end, and an elongated loop pivotally engaged in the last-named eye and arranged to engage with the said hook when the said hook end is flexed toward the eye end of the ring.



1,384,498. APPARATUS FOR MAKING CONDENSERS. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 27, 1916. Serial No. 100,391. 8 Claims. (Cl. 100—57.)

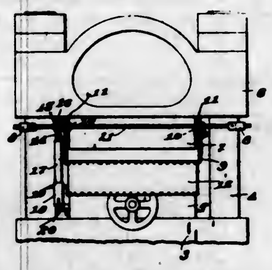
1. A press comprising a pair of platens adapted to cooperate to compress an object between them and a curved, resilient pressure-transmitting member attached to each of the said platens and adapted to progressively engage the said object.

6. A press comprising relatively movable platens, a bowed resilient member having portions adjacent to its edges slidably mounted upon one of the platens and its intermediate portions spaced therefrom and a second bowed resilient member carried by the other platen and coöperating with the first bowed member.



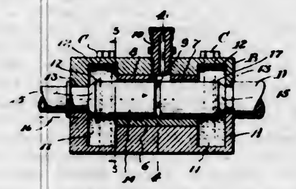
1,384,499. METHOD OF AND APPARATUS FOR REFINING METALS. SAMUEL A. TUCKER, New York, N. Y. Filed May 7, 1920. Serial No. 379,447. 12 Claims. (Cl. 204—19.)

1. A device for refining impure metal, comprising a container for the unrefined metal, a container for the refined metal, means for permitting communication between said containers through an electrolyte and for preventing communication between the metals in said containers.



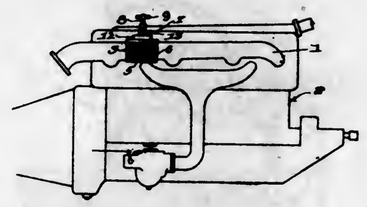
1,384,500. RAILWAY-CAR AND LIKE VEHICLE. JOHN WESTGATE, Brimstage, and CHARLES E. H. HAWKEN, Wallasey, England. Filed Jan. 18, 1919. Serial No. 271,881. 3 Claims. (Cl. 105—243.)

1. In a railway freight-car or like vehicle of the type convertible from a flat into a hopper-bottom vehicle, the combination with the vehicle sides, the side-sills, and hopper bottom, of triangular fillets inserted between the top of the hoppers and the vehicle sides, and a supplemental floor for said vehicle comprising a number of floor doors, each of which is pivotally connected to a



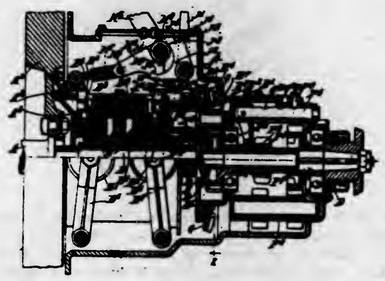
fillet, whereby to close any space between the lower edge of the floor doors when raised and the top of the hoppers.

1,384,501. GUARD FOR PROTECTING MACHINE OPERATORS. WILLIAM WOELFEL, Peabody, Mass. Filed Mar. 9, 1920. Serial No. 364,593. 6 Claims. (Cl. 74—105.)



1. A guard device for use with a power press having a movable jaw and a fixed jaw, and comprising a member normally arranged to lie substantially in the plane of the movable jaw, and link and lever connections between such movable jaw and said member so constructed and arranged as positively to move said member simultaneously with and in substantially the same direction as such movable jaw, said connections including a longitudinally extensible member.

1,384,502. JOURNAL-BEARING. JOHN T. YOUNG, Elmira, N. Y. Filed Aug. 3, 1920. Serial No. 400,896. 4 Claims. (Cl. 64—24.)

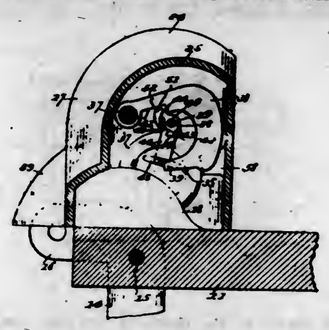


1. A device of the class described comprising a box, a shaft passing therethrough and journaled therein, said box being formed with lubricant-receiving wells into which said shaft is adapted to dip, bevels formed on said shaft at points where said shafts dip into said wells, said bevels being inclined upwardly and toward the bearing point of said shaft, to cause the lubricant to form beads on said shaft.

1,384,503. VULCANIZER. WINSTON RISTORIA YOUNGER, Alexandria, La. Filed Sept. 11, 1920. Serial No. 409,528. 3 Claims. (Cl. 18—18.)

1. A device of the character specified, comprising a base of heat conducting material having at one end a notch or recess for receiving the exhaust pipe of an internal combustion engine, means for clamping the pipe in the recess, an arm connected to that end of the base adjacent to the notch or recess and overlying at its front end the base at the opposite end, said base forming the fixed jaw of the vulcanizer, a screw threaded through the overhanging portion of the arm, a movable jaw rotatably connected with the screw to be moved toward and from the base.

1,384,504. CHANGE-SPEED GEAR. GILLIS VON ZWEIGBERGK, St. Annes on Sea, England. Filed July 23, 1918. Serial No. 246,356. 7 Claims. (Cl. 172—239.)



1. In an epicyclic change-speed gear the combination with one element of an epicyclic train of gearing, of a compound wound dynamo-electric machine whereof the armature is rotatively engaged with said element, the shunt winding is separately excited and the series winding is connected across the armature in such manner as to reinforce the shunt field when the armature is driven by said element, substantially as set forth.

1,384,505. SWITCH-STAND LOCK. NOAH J. BECKNER, Seattle, Wash., assignor to Progressive Commodity Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 27, 1920. Serial No. 426,840. 23 Claims. (Cl. 246—414.)

1. The combination with an operating member movable into or out of an operative position, of means for preventing the movement of the member from its inoperative position including a rigid abutment disposed in spaced relation to the operating member when in its inoperative position, a key operated obstructing member movable into the space between the abutment and the operating mem-

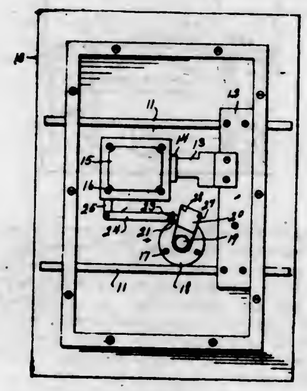
ber or out of such space, a weight operatively engaging said obstructing member and locking the obstructing mem-

ber from movement out of its obstructing position, and key actuated means for lifting the weight out of its obstructing position.

1,384,506. ANTIRATTLING DEVICE FOR AUTOMOBILE-DOORS AND THE LIKE. CHARLES C. BLACKMORE, Dayton, Ohio. Filed Nov. 22, 1920. Serial No. 425,662. 8 Claims. (Cl. 16—77.)

3. In a device of the character described, a pair of abutments adapted to be mounted on a door frame on opposite sides of the keeper of a latch and each having a contact surface extending obliquely both to a horizontal plane and to a vertical plane parallel with the door frame, a second pair of abutments adapted to be mounted on a door on opposite sides of the bolt of said latch and each having an oblique contact surface arranged to engage the contact surface of the corresponding abutments of the first mentioned pair when said door is in its closed position, the abutments of one pair being yieldable.

1,384,507. BINDER CONSTRUCTION. HIERONYMUS BRANHARD, St. Louis, Mo., assignor to George B. Gannett, University City, Mo., and Archibald B. Lewis, St. Louis, Mo. Filed Nov. 10, 1920. Serial No. 423,168. 4 Claims. (Cl. 129—23.)

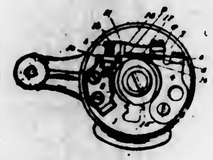


1. In apparatus of the class described, in combination, a screw, a cylindrical member adapted to coöperate with said screw, and a nut or cap adapted to coöperate with said screw and having a shoulder engaging in a recess in the cylindrical member.

1,384,508. TIRE-CORE. WALTER A. BLACK, Rocky Ford, Colo. Filed Feb. 25, 1920. Serial No. 361,197. 6 Claims. (Cl. 152—5.)

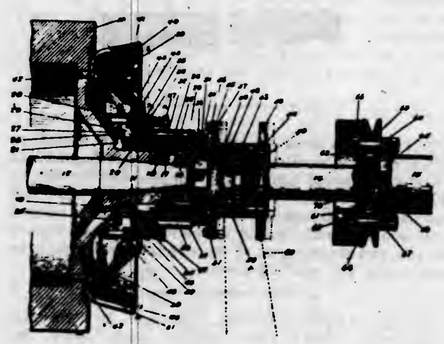
3. A core of resilient material containing a series of spaced chambers extending from each side thereof, the chambers of one series being positioned in staggered relation to those of the other, each of the chambers of each series being formed of a major cavity open to a side of the core and extending thereinto and a smaller cavity extending therefrom farther into the core between chambers of the other series, and there being circumferentially-extending ribs above and below the two series of smaller cavities and between the two series of major cavities.

1,384,509. SAFE. ARTHUR FRED BLECKSMITH, Dayton, Ky. Filed July 31, 1920. Serial No. 400,367. 2 Claims. (Cl. 109—3.)



1. The combination with a door of the class described embodying the usual shiftable locking bolts adapted to be shifted to locked and unlocked positions, and a combination lock controlling the shifting of said bolts, of a bar secured to said bolts to be shifted thereby, a plate secured to said door adjacent said bar and embodying a pivot pin, a counterweight pivotally mounted upon said pivot pin and inclining toward said bar, said counter weight being adapted when released to fall toward and engage said bar and prevent shifting thereof, the upper end of said counter weight being squared and having the leading shoulder thereof adapted to clear said bar during pivotal movement of the counter weight and the following shoulder adapted to engage directly with said bar and means for holding said counterweight against movement connecting said counter weight with the lock.

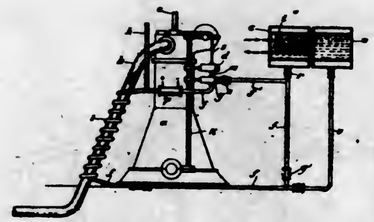
1,384,510. CIRCUIT-BREAKER. HENRY E. BORGER, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Sept. 9, 1918. Serial No. 253,250. 3 Claims. (Cl. 200—19.)



1. In a circuit breaker, the combination of a breaker box carrying two brackets, one of which is insulated there-

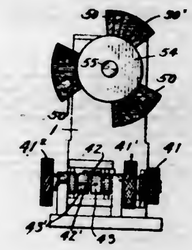
from, an adjustable contact carried by the insulated bracket, said second bracket having two arms displaced laterally and longitudinally from each other, a spring having little inertia mounted on one of said arms and carrying a contact to coöperate with said adjustable con-

tact, a spring mounted on the other arm and carrying a part normally positioned on the bracket carrying the adjustable contact and extending to a position closely adjacent the low inertia spring but not in engagement therewith and a cam for moving the spring on said other arm and said part carried thereby into engagement with the low inertia spring to open said contacts as described.



1,384,511. CLUTCH. LAWRENCE R. BUCKENDALE, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Oct. 14, 1919. Serial No. 330,670. 4 Claims. (Cl. 192—53.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A compound clutch having in combination with a drive shaft, a friction clutch member, a positive clutch sleeve having splines, and a bearing member mounted to rotate with the shaft, a coupling member having splines for engagement with the clutch sleeve splines, a sliding collar secured to the coupling member and mounted for rotary and longitudinal movement on the bearing member, a friction clutch member mounted on the sliding collar for yielding engagement with said friction clutch member mounted to operate with said shaft and a driven member connected to said coupling member.

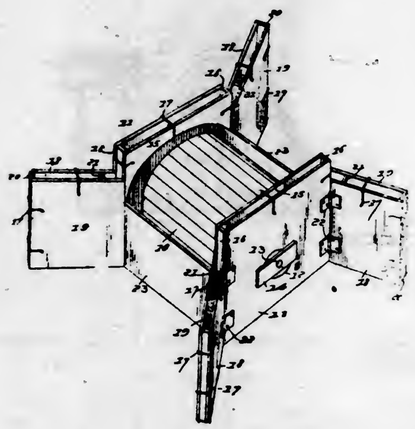


1,384,512. ENGINE-FUEL-SUPPLY SYSTEM. ALFRED BÜCHI, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 17, 1916. Serial No. 115,396. 12 Claims. (Cl. 123—122.)

1. The combination with an internal combustion engine using normally viscous fuel and a supply source of such fuel, of means for heating and circulating a mass of said fuel in liquid form between the source and the engine whereby the engine is served with liquid fuel drawn from

a circulation of heated oil in excess of its immediate requirements.

1,384,513. APPARATUS FOR COMPARING, MATCHING, AND MEASURING SHADES AND COLORS. HIBBARD S. BUSBY, South Manchester, Conn., assignor to Cheney Brothers, South Manchester, Conn., a Corporation of Connecticut. Filed June 8, 1920. Serial No. 387,485. 20 Claims. (Cl. 88—14.)



1. In an apparatus of the class described, the combination of primary, secondary and tertiary sectors fixed against axial movement relatively to one another, means for rotating said sectors simultaneously about a common axis, and means for angularly adjusting at least two of said sectors relatively to each other and to the third sector while they are being rotated, said means for adjusting each adjustable sector being independent of the means for adjusting any other sector.

1,384,514. BRIDGE AND CULVERT FORM. JAMES T. CLOSE, Newkirk, Okla. Filed Sept. 4, 1920. Serial No. 408,136. 4 Claims. (Cl. 25—131.5.)

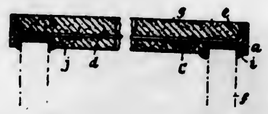
1. A form for building bridges, culverts and the like including an arch form, end walls adapted to be disposed against the ends of the arch form and clamped thereto, inner walls disposed above the arch form and spaced from the end walls, spacing blocks spacing these inner walls from the end walls at the ends thereof, detachable clamps holding the end walls and inner walls in conjoint relation, molds for the wing walls comprising detach-

able outer and inner walls held in spaced relation from each other, and clamps holding the walls in conjoint

relation, the inner wall of each of the wing forms being detachably hinged to the outer end walls of the culvert form.

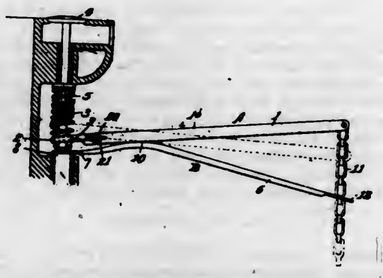
1,384,515. PAPER TOWEL. CONRAD M. CONRADSON and PRENTICE CONRADSON, Madison, Wis. Filed July 6, 1920. Serial No. 394,093. 4 Claims. (Cl. 92—68.)

1. As a new article of manufacture, a paper towel having a plurality of openings therein, the edges of said openings being rough and exposed for absorbing the moisture contacting therewith.



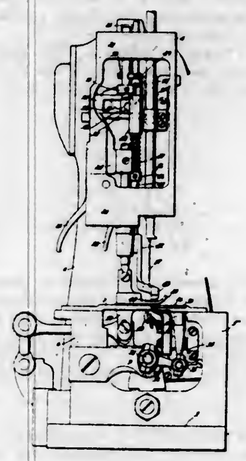
1,384,516. WINDOW-FRAME. EVERETT CRESSE, Omaha, Nebr. Filed June 29, 1920. Serial No. 392,801. 1 Claim. (Cl. 20—12.)

The combination with a window frame having upper and lower sashes slidably mounted therein between outer stops, inner stops and parting strips, said parting strips being carried by pivoted jamb sections, said jamb sections being pivoted adjacent the inner facing of the frame, the inner stops being provided with L-shaped lugs adapted to engage plates carried by the pivoted jamb sections, said inside stops terminating spaced from the top of the frame thereby allowing the L-shaped lugs to be moved out of engagement with the plates of the pivoted jamb sections, and spring actuated pins carried by the



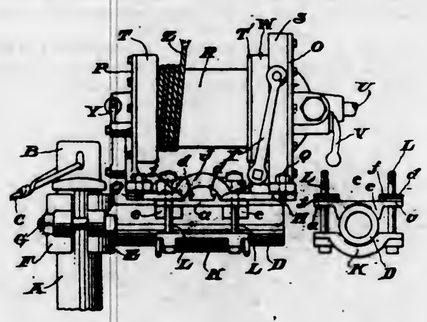
inside stops and adapted to engage apertures in the pivoted jamb sections for holding the L-shaped lugs in engagement with the plates of the pivoted jamb sections.

1,384,517. OVERBOX-COVER. HENRY R. CREWS, Totowa borough, N. J. Filed Apr. 23, 1921. Serial No. 463,930. 2 Claims. (Cl. 72—7.)



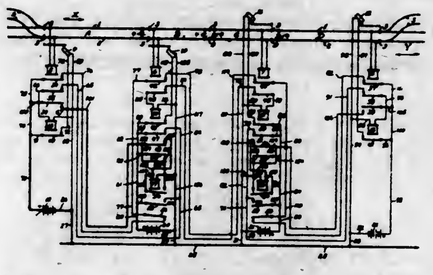
2. An overbox cover consisting of a flat slab of concrete and a marginal continuous metal wall surrounding and bearing all around against the concrete and having its vertical dimensions not less than that of said slab, said slab having in its under side a continuous groove parallel with said wall and adapted to receive the upper edge of the box, and the material of the slab intervening between said groove and wall all around.

1,384,518. VALVE-LIFTER. RICHARD L. CRISWELL, Lakewood, Ohio. Filed July 3, 1920. Serial No. 393,899. 6 Claims. (Cl. 29—86.3.)



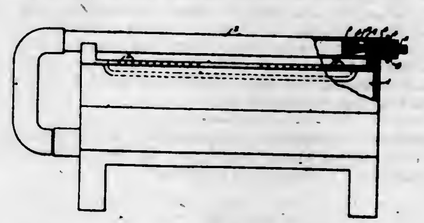
1. In a valve lifter, a lifting bar comprising a handle portion composed of connected companion channel members arranged in telescoping relation and terminated at one end by jaws for engagement with a valve spring, means for relatively adjusting said members, and a fulcrum element associated with said bar.

1,384,519. FABRIC CUTTING AND STITCHING MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Dec. 22, 1917. Serial No. 208,377. 29 Claims. (Cl. 112—123.)



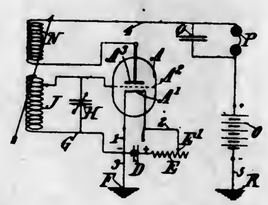
1. In a sewing machine, in combination, a trimming knife effective in a position removed from the general plane of the work, means for deflecting a portion of the body between the edges of one of a plurality of superposed plies to said knife, and means for securing the cut ply to the body of an uncut ply between the edges of the latter.

1,384,520. ADAPTER FOR SADDLE-CLAMPS. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 31, 1921. Serial No. 457,553. 4 Claims. (Cl. 248—3.)



1. As a new article of manufacture, an adapter for bar and column saddle clamps in the form of a cross bar saddle comprising a body portion having spaced centering lugs projecting from one face and clamping jaws projecting from the opposite face, the longitudinal axes of said lugs and jaws being substantially at right angles to each other, whereby a machine or other element may be secured to a bar or column either longitudinally or transversely of the said bar or column by means of the same set of clamps.

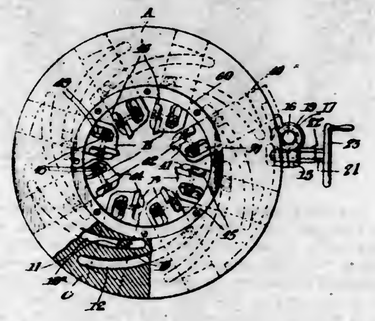
1,384,521. ABSOLUTE PERMISSIVE BLOCK-SIGNALING SYSTEM. FRANK L. DODGSON, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Oct. 15, 1915. Serial No. 56,047. 10 Claims. (Cl. 246—33.)



3. In a block signal system for single track railroads, three adjacent track sections each having a track relay, a stick relay, a pick-up circuit for the stick relay controlled by the track relays of two adjacent track sections, a preliminary stick circuit controlled by one of said two track relays, and a final stick circuit controlled by the other of said two track relays and the track relay of the third track section.

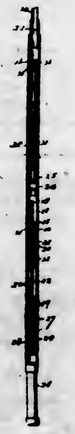
1,384,522. VAPORIZER FOR OIL-BURNERS. CHARLES E. ECKERLE, Birmingham, Ala. Filed July 17, 1920. Serial No. 396,924. 6 Claims. (Cl. 158—53.)

1. A vaporizer for hydrocarbon oils comprising a vaporizing tube, a conical plug therein providing a fine marginal clearance between its inner end and the tube, and means to feed the oil to be vaporized between the plug and inner wall of the tube, substantially as described.



1,384,523. WIRELESS SIGNALING APPARATUS. ATHELSTAN ARGYLE HALL, London, England. Filed Nov. 1, 1919. Serial No. 335,072. 3 Claims. (Cl. 250—3.)

1. Wireless signaling system comprising in combination, an oscillation valve, a source of current connected to the cathode for heating the same, an oscillatory circuit connecting the grid with the cathode, a plate-filament circuit arranged to carry high-frequency oscillations



connecting the anode of the valve with the cathode and comprising two earth connections spaced apart, the portion of earth between said connections constituting in effect the receiving or transmitting portion of the system, and a signaling device associated with said plate-filament circuit.

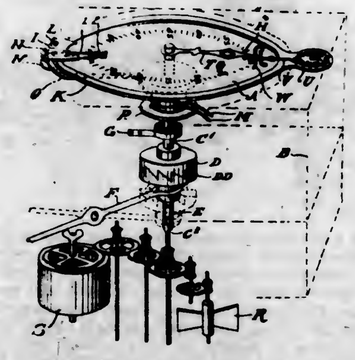
1,384,524. CUTTER-HEAD. LESLIE SAMUEL HALL, Brantford, Ontario, Canada. Filed Dec. 16, 1919. Serial No. 345,438. 3 Claims. (Cl. 10—122.)

3. In a cutterhead, in combination, a head having radial grooves, a plurality of cutter-holders movable in the grooves, a ring, means whereby movement of the ring relative to the head moves the cutter holder inwardly or outwardly, a bracket on the head, a shaft mounted in the bracket, a pinion on one end of the shaft, a worm gear on the opposite end of the shaft, a rack on the ring engaging the pinion, a shaft extending transversely to the first mentioned shaft, and suitably journaled in the said bracket, a worm on the said last mentioned shaft engaging the worm wheel, and means for turning the said last mentioned shaft.

1,384,525. OIL-WELL MECHANISM. WILLIAM E. HANCOCK, Tulsa, Okla. Filed Nov. 30, 1920. Serial No. 427,331. 4 Claims. (Cl. 103—64.)

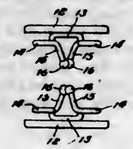
1. In an equipment for oil wells, a sectional tubing, couplings between the sections of the tubing, an oil intake pipe extending through the lowermost coupling, means for protecting the end of said intake pipe and the direct flow of oil thereto, a valve seat on the upper end of the intake pipe, a valve coacting therewith, means for holding the valve in operative relation to its seat, a deflector extending downwardly from a point above the valve seat supported in spaced relation to the tubing whereby an annular chamber is formed between the deflector and the tubing, a working barrel above the said deflector having ports in its side, and a means secured to the upper end of the working barrel and having lugs engaging the interior wall of the tubing for holding the discharge pipe in spaced relation to the tubing.

1,384,526. SAFETY DEVICE FOR FASTENERS. MONROE KEETON, Meridian, Miss. Filed Feb. 24, 1921. Serial No. 447,580. 1 Claim. (Cl. 24—90.5.)



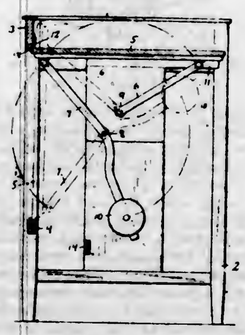
In combination, a cuff button having a shank and enlarged ends, an ornamental guard chain attached to one of said ends, said chain being adapted to pass around the two adjacent edges of the material of a cuff, said chain carrying means to lock itself to one of the enlarged ends of the cuff button by inserting same through said locking means.

1,384,527. MOTION-PICTURE PROJECTOR. CHARLES KESSES, New York, N. Y. Original application filed Sept. 25, 1917, Serial No. 193,180. Divided and this application filed Apr. 11, 1918. Serial No. 227,867. 2 Claims. (Cl. 88—17.)



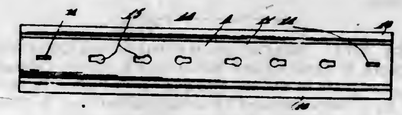
1. In a motion picture machine, a film gate, a rail horizontally disposed on said gate and film guides slidably mounted on said rail, as and for the purpose set forth.

1,384,528. PHOTOGRAPHIC EXPOSING-CLOCK. CHARLES KESSES, New York, N. Y. Filed Oct. 21, 1920. Serial No. 418,553. 4 Claims. (Cl. 161—26.)



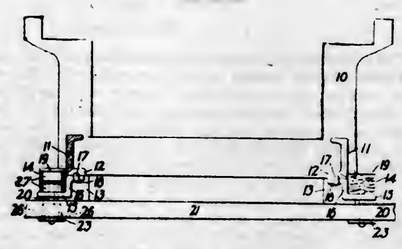
1. In combination with a time clock, having a dial with a switch operating device, a frame having two hinged parts, one part containing the clock operating mechanism and the other part carrying the dial the two parts so arranged that the switch operating device and clock operating means are connected by a clutch on the closing of the frame, substantially as set forth.

1,384,529. SEPARABLE CUFF-BUTTON. ANDREW J. KENEDY, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,331. 3 Claims. (Cl. 24—102.)



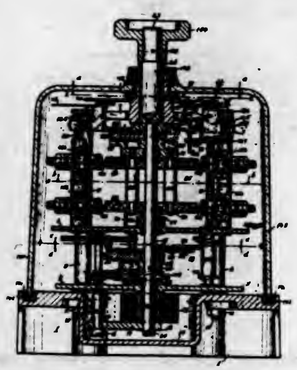
3. A separable cuff button, comprising a pair of mating links, each of said links composed of a head adapted to engage with the outer side of a cuff, and a spring wire member bent and swaged to form a central shank secured to said head and adapted to lie in the button hole, a pair of loop-shaped guards continuous with said shank and adapted to lie crosswise of the button hole on the inner side of the cuff, and a pair of inwardly extending arms continuous with said guards respectively and inclined toward each other, said arms terminating in ball-shaped ends which lie substantially in contact with each other, the ball-shaped ends of the arms of the two links adapted to spring past each other into interlocked relation.

1,384,530. DESK FOR BOOKKEEPING-MACHINES, &c. JOHN H. KNAUFT, Milwaukee, Wis. Filed Mar. 15, 1920. Serial No. 365,751. 4 Claims. (Cl. 45—6.)



1. The combination in a desk of ends, a back, a movable top adapted to be moved from a substantially horizontal position to a substantially vertical position, or vice versa, a plurality of links pivoted non-concentrically on each end of the desk pivoted to the top of the desk, stops for limiting the movements of the top of the desk, and counterbalance mechanism connected with the top in such a manner as to leave the space between the ends substantially unobstructed.

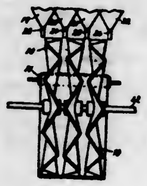
1,384,531. TIE. HENRY THEODORE KAUAE, Gull Lake, Saskatchewan, Canada. Original application filed Feb. 3, 1920, Serial No. 356,010. Divided and this application filed June 14, 1920. Serial No. 388,862. 3 Claims. (Cl. 238—75.)



1. The combination with a tie having a slot adjacent each end thereof, of a pair of anchoring members each having an end inserted through one of said slots and turned over to engage the end of the tie adjacent the slot.

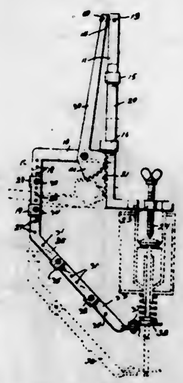
1,384,532. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1919. Serial No. 343,666. 7 Claims. (Cl. 248—30.)

1. The combination with a typewriting machine having a frame, of resilient feet upon said frame, a base upon which said feet rest, lugs on said frame, springs resting upon said lugs, and means on said springs and connected to said base for compressing the springs to press the feet to said base.



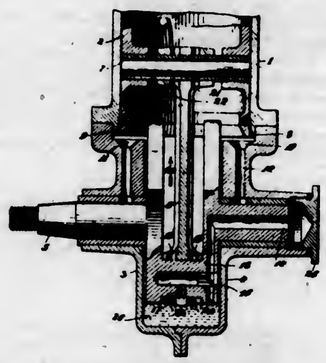
1,384,533. TIME-RELEASE MECHANISM. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gat s, N. Y., a Corporation of New Jersey. Filed Aug. 31, 1917. Serial No. 189,088. 47 Claims. (Cl. 200—38.)

1. In a clockwork time release, in combination; circuit controlling means comprising a movable element and a plurality of contacts adapted to be changed so as to be either opened or closed in either of two extreme positions of the movable element, means for automatically



operating said circuit controlling means; a timing mechanism for limiting the speed of said automatic operation; and means for rendering said timing mechanism ineffective after said movable element has made a predetermined portion of its entire movement from one extreme position to the other.

1,384,534. SURFACING-MACHINE FOR ROOFING. LOWELL F. LINDLEY and ALEXANDER S. SPEER, Chicago, Ill., assignors to The Roofing Patents Company, Buffalo, N. Y., a Corporation of Delaware. Filed Apr. 7, 1920. Serial No. 371,981. 9 Claims. (Cl. 91—20.)

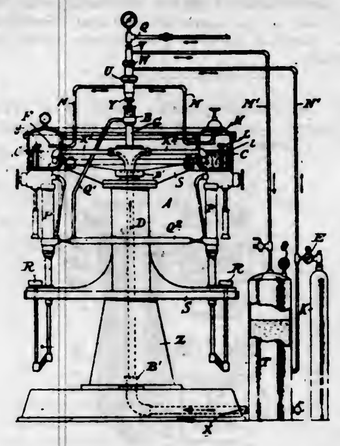


1. In a surfacing machine, a disk mounted to rotate, and means for passing roofing material provided with an adhesive coating about said disk in contact with an arc of the edge thereof, the disk serving as a marker for impressing a continuous pattern defining line on the material extending longitudinally the full length thereof, and means for feeding granular material at each side of the disk, the disk serving as a partition to separate the material at one side thereof from the material at the other throughout the length of the material, whereby the material will be provided with a pattern consisting of continuous areas extending longitudinally and the full length thereof and separated from each other by the defining line.

1,384,535. VALVE-LIFTING DEVICE. WILLIAM WALLACE MCNAUGHTON, Billings, Mont. Filed Feb. 16, 1920. Serial No. 358,823. 5 Claims. (Cl. 29—86.3.)

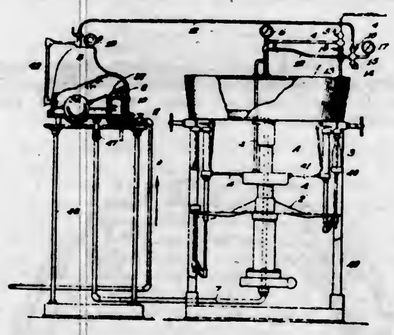
5. An adjustable valve lifter and spring compressor comprising a supporting member adapted to be disposed over the upper end of an engine cylinder and having a horizontal portion and a vertical portion, the horisontal portion being provided with a plurality of screw-threaded apertures, a screw adjustable in any one of said apertures, the vertical portion of the supporting member being toothed and having a horisontally disposed loop, a second member formed in sections, one of said sections having a vertical portion carrying a horisontally disposed loop, the vertical portion being adapted to be engaged with the loop of the vertical portion of the supporting member, and the loop of the said section of the second named member being open and adaped to be engaged with the vertical portion of the first named member, a second section vertically adjustable upon the first named section and having its lower end extending downward and toward the axis of said screw, and a third section slidably mounted upon this downwardly and laterally extended portion of the second named section for adjustment longitudinally thereof along, said third named section at its lower end having a horizontally disposed claw adapted to be disposed beneath and in alinement with the screw and to embrace a valve stem and to be disposed beneath the spring thereof, and a lever mounted upon the first named section of the second member and having a sector gear engageable with the teeth on the vertical portion of the first named member.

1,384,536. LUBRICATING DEVICE. BERT L. MADDEN, Rochester, N. Y., assignor to Cyclemotor Corporation, Rochester, N. Y., a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,412. 3 Claims. (Cl. 184—11.)



1. In an engine, in combination: a cylinder, a piston within said cylinder; means for depositing a lubricant on the walls of the cylinder, said lubricant when the engine is in operation working down to the bottom edges of the cylinder and the piston; a crank case beneath the cylinder formed with a cavity under the said bottom edges for receiving said lubricant; a crank shaft; a bearing for the crank shaft formed with a cavity, said crank case formed with a duct leading from said first mentioned cavity to said crank shaft whereby the lubricant is conducted to said crank shaft; a connecting rod embracing the crank and connected with the piston; said crank shaft formed with a duct from its end to the bearing surfaces between the crank shaft and the connecting rod, said second mentioned cavity allowing the lubricant to pass from the crank shaft bearing to the duct in the crank shaft and so to the bearing surfaces at the connection of the crank shaft and connecting rod.

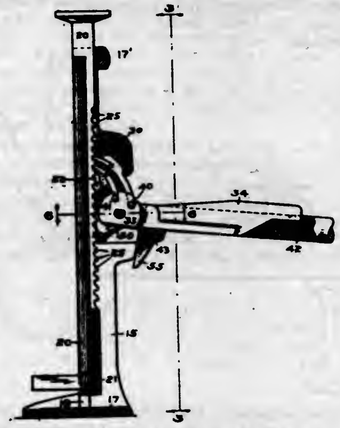
1,384,537. BOTTLE-FILLING APPARATUS. FRED. W. MÜLLER, Hoboken, N. J. Filed Oct. 21, 1919. Serial No. 332,246. 4 Claims. (Cl. 226—93.)



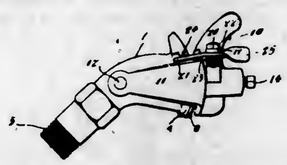
1. In an apparatus for filling bottles with a gas-charged liquid, the combination, with a tank partly filled with such liquid and means for connecting a bottle mouth with the

liquid containing zone of said tank, of a second tank of relatively considerable capacity, a pipe of relatively

small cross-section leading therefrom to a point in the partly filled tank near the top thereof, and a blow-off valve connected to said second tank.



1,384,538. BOTTLE-FILLING APPARATUS. FRED. W. MÜLLER, Hoboken, N. J. Filed Oct. 28, 1919. Serial No. 333,922. 8 Claims. (Cl. 226—93.)

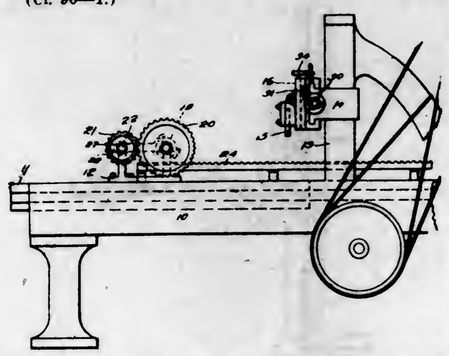


1. In a bottle filling apparatus designed to handle gas charged liquids the combination, with the main tank to which the bottles are connected for filling, of a conduit for delivering the liquid thereto of relatively large and substantially unobstructed cross section and delivery port, a quick acting valve in said conduit of approximately the same area of opening, and pressure operated means controlled by the rise and fall of the level of the liquid supplied to the tank to quickly open and quickly close said valve.

1,384,539. LIFTING-JACK. ALBERT NEAL, Kokomo, Ind. Filed Jan. 28, 1921. Serial No. 440,777. 4 Claims. (Cl. 254—110.)

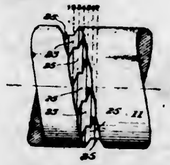
1. A lifting jack comprising a frame, a movable tooth lifting bar guided in said frame, an actuator lever oscillatively supported in said frame, a pair of pawls pivotally supported in the end of the actuator lever and adapted to alternately engage the lifting bar when the lever is oscillated, said lever capable of being depressed a sufficient distance to disengage both pawls for releasing and freeing the lifting bars, and means carried by the actuator lever for imparting a frictional contact for controlling the downward movement of said bar.

1,384,540. NOZZLE. JOHN F. REEVES, Oxnard, Calif. Filed Nov. 13, 1920. Serial No. 423,832. 3 Claims. (Cl. 251—19.)



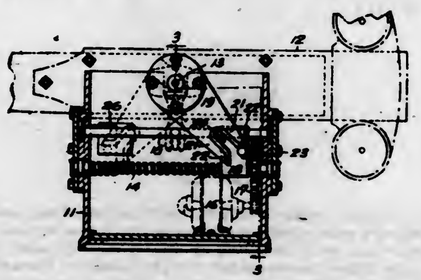
1. In a nozzle, a hollow body having a curved plate at one end provided with an orifice, a curved valve plate slidably fitting the orifice plate, a handle having a spring chamber, a plate in the spring chamber, a spring inserted in the spring chamber between the last named plate and the valve plate, a nut mounted in the handle, a screw engaging the nut and having its inner end seated against the plate in the spring chamber, and arms provided on the handle and pivoted to the body.

1,384,541. GEARING. HENRY J. SCHMICK, Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 16, 1920. Serial No. 374,468. 9 Claims. (Cl. 74—41.)



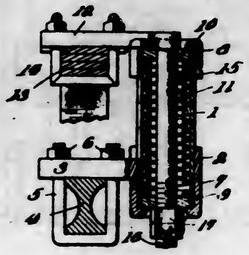
1. A gear having teeth with their working faces composed of a series of adjoining elementary surfaces of curvilinear form each consisting of coaxial arcs disposed in parallel planes substantially at right angles to the axis of rotation of the gear, respective centers of curvature of said elementary surfaces being non-concentrically dispored about said axis.

1,384,542. ART OF AND APPARATUS FOR FORMING GEAR-TEETH AND THE LIKE. HENRY J. SCHMICK, Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 29, 1920. Serial No. 377,688. 11 Claims. (Cl. 90—1.)



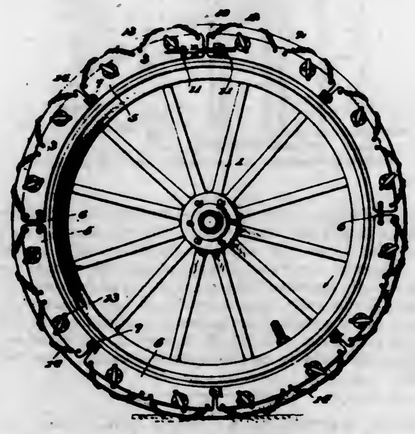
1. The art of forming gear teeth, cam grooves, and the like, by moving the blank to be formed transversely of its axis of rotation in a straight line path toward the cutter and rotating it on its axis at a fixed ratio of angular velocity with reference to the speed of movement toward the cutter.

1,384,543. GEARING. HENRY J. SCHMICK, Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del., a Corporation of Delaware. Filed June 2, 1920. Serial No. 386,060. 12 Claims. (Cl. 74—41.)



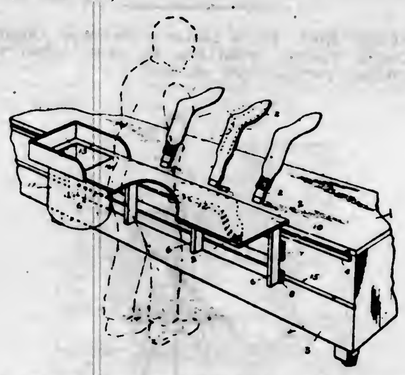
1. A member having an axis of rotation and a peripheral groove with side walls which comprise a series of angularly spaced elementary plane surfaces extending transversely of the axles of rotation and successively spaced in the direction lengthwise of the axis.

1,384,544. CROSSING-GATE. CHARLES H. TILLETT and THOMAS A. ALLAN, Montreal, Quebec, Canada. Filed Mar. 5, 1920. Serial No. 363,465. 11 Claims. (Cl. 39—7.)



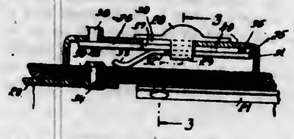
1. In a device of the character described, the combination with a member to be operated and a motor driven worm of an operative connection between the worm and the member adapted to be continuously actuated by the worm during the operation of the motor and including engaging parts capable of relative movement in the line of nut travel only at the commencement and completion of the motor operation, so as to give free run to the motor at such times.

1,384,545. SHOCK-ABSORBER. STANLEY J. VESELY, Cedar Rapids, Iowa. Filed Oct. 3, 1919. Serial No. 328,256. 2 Claims. (Cl. 267—19.)



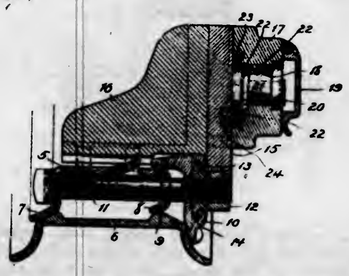
1. A shock absorber for motor vehicles comprising a supporting arm adapted to be attached to the axle of the vehicle, a slotted cylinder carried by said arm, a coiled spring mounted within said cylinder, a washer mounted within said cylinder at each end of said spring and an arm carried by the spring of the vehicle extending into the slot of said cylinder having a rod extending through said washers and spring and provided with means at one end for adjusting the tension of said spring within said cylinder.

1,384,546. WHEEL-TRACTION DEVICE. JOHN WESLEY WHITE, Lewistown, Mont., assignor of one-half to William D. Rose, Lewistown, Mont. Filed Oct. 9, 1920. Serial No. 415,713. 5 Claims. (Cl. 152—14.)



3. A traction device comprising metallic members for the respective sides of the tire casing, each of said members being made up of connected plates, and lugs projecting from the plates, each lug including a wing-like projection set at an angle to the line of traction.

1,384,547. HOSIERY-CARRIAGE. EARL M. WITHERELL, Duluth, Minn., assignor of one-half to F. A. Patrick & Company, Duluth, Minn., a Corporation of Minnesota. Filed July 12, 1920. Serial No. 395,658. 2 Claims. (Cl. 211—12.)

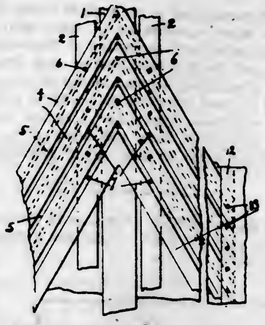


1. In combination; an elevated structure, a horizontally reciprocal carriage supported coöperatively adjacent the structure having a cutaway portion therein whereby the body of a person engaging said cutaway portion of the carriage will automatically cause the same to remain in close juxtaposition to the person when he moves parallel to said structure.

1,384,548. HAND-LAMP SWITCH. ERNEST ALSCHULER, St. Louis, Mo., assignor, by mesne assignments, to National Carbon Company Inc., Cleveland, Ohio, a Corporation of New York. Filed June 9, 1917. Serial No. 173,690. 8 Claims. (Cl. 200—60.)

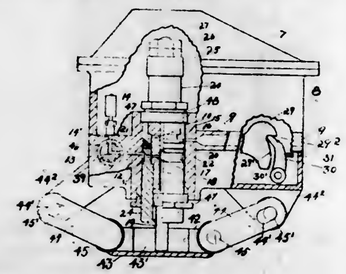
3. Contact mechanism for battery hand lamps, comprising in combination, a conductor, a resilient contact strip mounted to swing into engagement with said conductor, a push-button on said contact strip, a contact element mounted to slide beneath said contact strip into and out of engagement with said conductor, and a thumbpiece for actuating said contact element and securing said strip and element in position; substantially as described.

1,384,549. AUTOMOBILE-TIRE LOCK. PETER F. AUGENBRAUN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Mar. 13, 1920. Serial No. 365,519. 8 Claims. (Cl. 70—90.)



1. In an automobile tire lock, the combination of a bolt casing adapted to be secured to a tire carrier, a bolt carried by said casing and adapted to overlap the rim locking clamp and engage and house a clamp locking nut and a key lock carried by said casing for actuating the bolt.

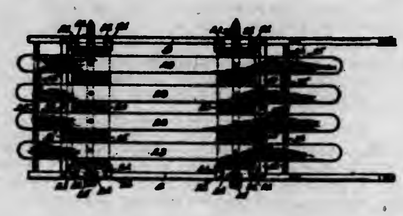
1,384,550. CHEMICAL PROCESS FOR RECLAIMING FILES, RASPS, AND THE LIKE. JOHN HENRY ALFRED D'ORSINI BOWMAN, Montreal, Quebec, Canada, assignor to Canadian File & Tool Works Limited, Montreal, Canada. Filed Feb. 2, 1920. Serial No. 355,678. 6 Claims. (Cl. 76—24.)



1, A process of sharpening or recutting tools and the like, which consists in immersing the tools in an acid solution capable of evolving a gas which adheres in minute bubbles to the projections of the tool, thus protecting said projections from the full chemical action of the acid solution while allowing said action to take place in the grooves, depressions or other surfaces of the tool.

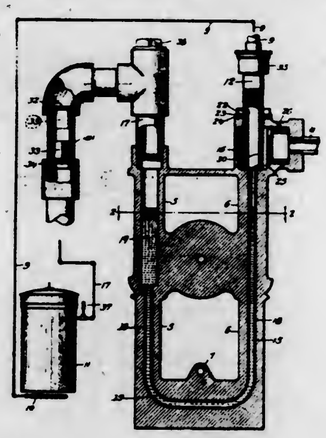
1,384,551. VEHICLE-TIRE. AMEL B. BROLUSKA and HARRY A. BROLUSKA, Detroit, Mich., assignors of one-third to Cyril Caillian, Detroit, Mich. Filed Apr. 2, 1920. Serial No. 370,760. 11 Claims. (Cl. 152—18.)

2. In a vehicle tire, the combination with circumferential bands and two series of V-shaped plates secured thereto, the plates of one series overlapping the joints of the other series, and rubber within and without the band and plates.



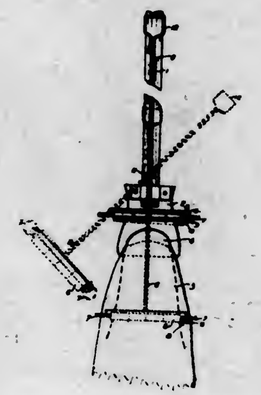
1,384,552. AUTOMATIC TRAIN-CONTROL APPARATUS. ANDREW J. BROOKINS, Chicago, Ill. Filed Apr. 24, 1920. Serial No. 376,355. 25 Claims. (Cl. 246—49.)

13. In a train control system, an apparatus operable on a member of a train adapted to travel on a trackway provided with track side members at intervals along said track way, said train member provided with air under pressure and said air being a controlling element of said system, in combination, a movable member arranged to normally obstruct said passage way, means to release said movable member from said normal position, and said



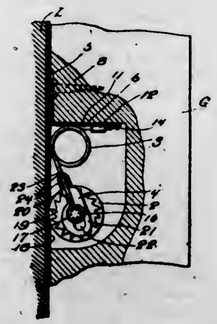
air arranged to yieldingly force said movable member from said normal position, an additional member, manually operable to obstruct said passage way, and a contact member arranged to co-act with said track side members and said movable member to move said additional member from said obstructing position.

1,384,553. COLLAPSIBLE SLED. MAX BROWN, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 337,092. 4 Claims. (Cl. 280—20.)



1. A sled comprising a collapsible frame consisting of longitudinal bars; a plurality of knee joint connections between said bars, each consisting of two links pivoted to each other and to said bars, one of said links being provided with a lug, there being a notch in the other link to receive said lug and interlock therewith to prevent further bending of said knee joint; and a spring held catch arranged on said other link and adapted to engage said lug to hold the same in said notch, substantially as described.

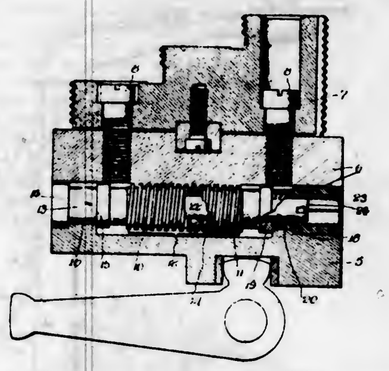
1,384,554. REGULATOR. VINCENT D. CARROLL, Chicago, Ill. Filed Aug. 18, 1919. Serial No. 318,355. 1 Claim. (Cl. 236—50.)



In combination with a pressure reducing liquid receptacle heated by a gas burner, of a gas controller therefor comprising a structure having a U-shaped conduit partially filled with mercury, the conduit extending part way down one leg on the pressure receiving side being much larger than the remainder of the conduit; a gas inlet pipe on the gas controlling side; an enlarged gas chamber between the gas inlet pipe and the gas controlling leg open at its top providing a dam, to prevent mercury from entering the gas inlet pipe; another chamber between the gas chamber and said leg; a vertically adjustable open tube extending into the latter chamber; a pipe extending therefrom to said burner; means to lock the vertically adjustable tube in adjusted position and a float valve to prevent overflow of water from said receptacle into the gas controlling device.

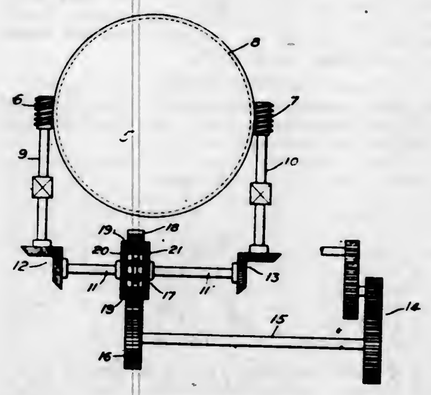
1,384,555. MOP. FRANK LESLIE CUNNINGHAM, Calgary, Alberta, Canada. Filed Feb. 12, 1919. Serial No. 276,496. 1 Claim. (Cl. 15—48.)

In a mop, the combination of a wringing device consisting of a box spring frame substantially rectangular in shape, the sides of the said frame being provided with rollers between which the mop cloth is passed and is compressed, coil spring members joining and formed upon the ends of the sides before mentioned, one of the said coil springs being adapted to be engaged and disengaged from the extended end of the free side so as to form an entrance through which the mop cloth is passed prior to wringing, and eyes formed upon the ends of the wringer frame to which an operating handle is secured, all substantially as described.



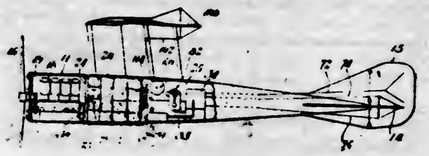
1,384,556. RETAINING DEVICE FOR WINDOW-SASH. WILLIAM M. DUCKER, New York, N. Y., assignor to Ducker Sectional Building Corp., New York, N. Y., a Corporation of New York. Filed Aug. 7, 1916. Serial No. 113,622. 12 Claims. (Cl. 292—77.)

1. A retaining device for window sash, comprising a spring adapted to be fixed to a window sash, a roller carried directly by said spring, the spring being adapted to urge the roller outwardly from the window sash into frictional engagement with a portion of a window frame,



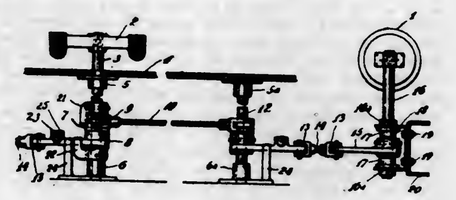
and a separately formed part carried partly by the spring and partly by the roller and interengaging between the roller and a portion of said spring for retaining the roller against rotary movement in one direction.

1,384,557. ADJUSTING AND LOCKING DEVICE FOR CHUCK-JAWS. HANS C. ELVERS, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1921. Serial No. 444,334. 4 Claims. (Cl. 279—112.)



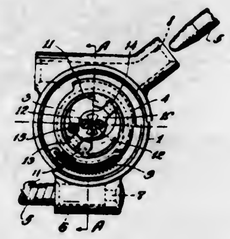
1. The combination with a jaw carrier, and a jaw base mounted for endwise movement on said carrier, of an adjusting screw rotatably mounted in said carrier and drivingly engaged with said base, said screw being formed in two independently rotatable sections disposed end to end, and means whereby said sections may be simultaneously and equally turned in the same direction and whereby also one of said sections may be turned independently relatively to the other.

1,384,558. GEAR-CUTTING MACHINE. LEWIS J. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Nov. 22, 1917. Serial No. 203,446. 6 Claims. (Cl. 90—1.)



1. In a gear cutting machine, a rotatable work holding table, at least two worms for driving said table, driving means for both of said worms, and differential means operatively connecting said worms for allowing equal and opposite variations in speed between the two worms, whereby the inaccuracies of one drive are compensated for by the other drive.

1,384,559. AERIAL TORPEDO. LLOYD GILES and SIDNEY H. WOODRUFF, Los Angeles, Calif. Filed July 23, 1917. Serial No. 182,175. 8 Claims. (Cl. 244—1.)



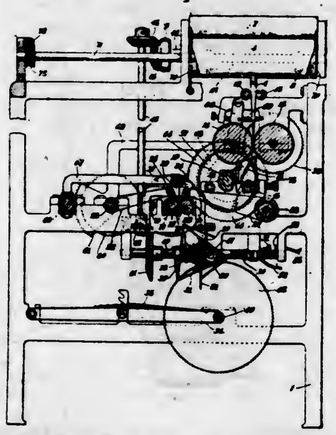
1. An aerial torpedo comprising a fuselage; planes on the fuselage; a rudder on the fuselage; means for automatically controlling the rudder to keep the torpedo in a straight course; elevating mechanism on said fuselage; means for automatically moving said elevator into predetermined positions, said last named means consisting of a rotatable plate, contact segments on said plate, a pendulum arranged to contact with said segments, detent mechanism arranged to engage said plate, timing mechanism for said detent mechanism, a cylinder, a piston in said cylinder, a piston rod, means for connecting said rod to said elevator, a solenoid, electric connections between said solenoid and said pendulum and said segments, a valve on said cylinder, means for controlling the action of said valve by said solenoid, compressed air supply for said cylinder; a charge of explosives in said fuselage; and means for firing said charge after a lapse of a predetermined time.

1,384,560. DIRIGIBLE HEADLIGHT. HARRY M. HALE, Duquesne, Pa. Filed Apr. 6, 1920. Serial No. 371,732. 2 Claims. (Cl. 240—61.)

1. In combination with dirigible headlights of the character described, a rotatably mounted vertical spindle; a plurality of levers loosely positioned upon said spindle and individually acted upon by dogs secured upon said spindle; an operating lever mounted securely on the upper end of said spindle and provided with diametrically disposed pedals, and means for transmitting the motions of said loosely positioned levers to said dirigible headlights.

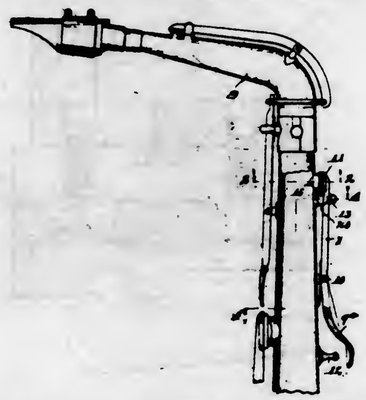
1,384,561. LOCK. LEON N. HAMPTON, New York, N. Y. Filed Sept. 27, 1920. Serial No. 413,008. 9 Claims. (Cl. 70—17.)

6. In a lock, a casing, a cam mounted within and inclosed by said casing, a shackle, said casing being provided with an opening for the shackle between the cam



and casing, means for automatically moving said cam into engagement with the shackle to cause the cam to grip the shackle, a lock barrel, means for securing the barrel to the casing and means operatively connected to the lock barrel for moving the cam to inoperative position to release the shackle, the means for securing the lock barrel to the casing preventing abnormal movement of the cam.

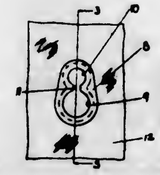
1,384,562. SPOOL AND THE LIKE. OSCAR H. HEINIG, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,889. 4 Claims. (Cl. 242—123.)



1. As a new article of manufacture, a spool comprising a cylindrical wooden hollow spindle having grain extending in an axial direction, and an end piece for each end thereof, each end piece including a circular wooden hub having a tapered neck of size suitable to enter the spindle with a driving fit and having an outside flange, a circular relatively thin wooden disk having an inner opening of size to receive said flange, the grain of the hub extending in an axial direction with respect to the spindle, and the grain of the disk extending at right angles to the grain of the hub, and a sheet metal facing for the inner face of each of said end pieces comprising a circular sheet metal disk of size appropriate to face the inner face of the end piece and having a peripheral outwardly extending flange adapted to overlie the edge of the disk, the edge of said flange being inturned against the extreme edge portion of the outer face of the disk, and the inner portion of each of said sheet metal faces having a series of inwardly projecting prongs adapted to engage the grain of the end portion of the spindle, substantially as described.

1,384,563. FOLDING-MACHINE. FRANK P. HILDEBRANDT, Saugerties, N. Y. Filed Sept. 14, 1916. Serial No. 120,036. 10 Claims. (Cl. 270—66.)

6. The method of cutting and folding uniform lengths from a web of crape paper which consists in cutting the web into desired lengths while it is without tension, receiving and conveying such cut portions without tension, and folding them without tension while controlled by the conveying operation.

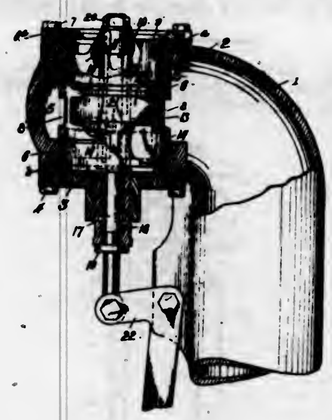


1,384,564. ATTACHMENT FOR REED MUSICAL INSTRUMENTS. GUY B. HUMES, Chicago, Ill. Filed June 30, 1919. Serial No. 307,634. 8 Claims. (Cl. 84—380.)

1. A tone modifying attachment for a key opening of a musical instrument; a support in said opening and communicating therewith; a membrane on said support; and means for retaining said membrane in position, substantially as described.

8. A tone modifying attachment inserted between the key and key opening of a reed musical instrument; a tubular member in said opening; a flanged disk at the outer end of said tubular member and integral therewith; an opening in said flanged disk; a membrane over said opening; a cork ring engaging the inner walls of said flanged disk and holding said membrane in position, said attachment being operated by moving the key into and out of engagement with the flanged disk; a stop on said instrument rotatably mounted adjacent said disk; a projection on said stop; and a handle for moving said projection into and out of engagement with the under side of said key to hold said key disengaged from said flanged disk, substantially as described.

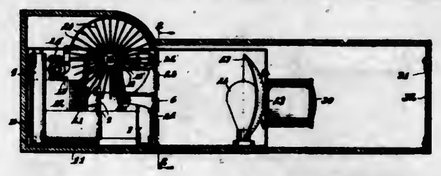
1,384,565. GROMET. FREDERICK D. MARTIN, Kansas City, Mo. Filed May 5, 1920. Serial No. 379,049. 4 Claims. (Cl. 24—141.)



4. A gromet comprising a pair of coöperating members each having an opening formed therein, said opening being restricted intermediate its ends, the opening at one side of said restricted portion being larger than at the opposite side; and a neck integral with and projecting from one of said members and adapted for projection in the opening in the coöperating member, and to be clenched over said coöperating member, said neck corresponding in cross section to the contour of said openings, substantially as described.

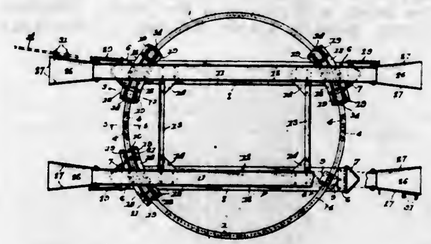
1,384,566. PROCESS OF MAKING CONTACT SULFURIC ACID. HENRY F. MERRIAM, Maplewood, N. J., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,599. 3 Claims. (Cl. 23—1.)

1. The improvement in the method of making sulfuric anhydrid by the contact process, which comprises employing as the raw material for the production of sulfur dioxid, sulfur in the form of brimstone of the Louisiana brimstone type, burning the same to produce gas containing sulfur dioxid and oxygen and conducting said gas over catalytic material until approximately 97–98% conversion has taken place and then absorbing the anhydrid formed, the entire operation from the burning of the gas to the end of the conversion stage being conducted without permitting the temperature of the gas to fall materially below the temperature required for the production of sulfuric anhydrid in the converter.



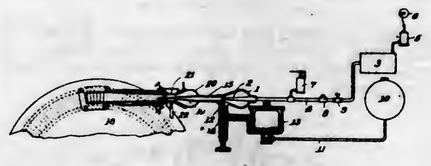
1,384,567. THROTTLE-VALVE. CHARLES J. PILLIOD, Toledo, Ohio, assignor to Daniel Searles, trustee, Toledo, Ohio. Filed Apr. 12, 1920. Serial No. 373,298. 1 Claim. (Cl. 251—78.)

In combination, a fluid pressure line, a cylindrical valve cage removably set into the line and having a set of ports arranged therearound in communication with the interior of the line, a hollow trunk-valve fitted in the cage for axial movements therein, said valve having a hollow hub portion with circumferentially spaced webs radiating therefrom to the rim portion of the valve, a junk-ring carried circumferentially by the valve in position to close the cage ports when the valve is in one position, the valve compressing longitudinally separable sections shouldering against the junk-ring to retain it in position thereon, and with one section provided with ports adapted to uncover the cage ports to the interior of the valve when the valve is moved from closed position, and a valve stem projecting through the valve and from one end thereof without the line and serving to retain the parts of the valve in assembled relation.



1,384,568. ADVERTISING DEVICE. OTTO PAUL RENZ, Chicago, Ill. Filed Sept. 12, 1919. Serial No. 323,310. 6 Claims. (Cl. 88—24.)

1. In an advertising device, the combination of a movable apron; a rotatable drum having a plurality of leaves secured thereto; means of illuminating said apron and said leaves; and means for directing the light reflected from said apron and said leaves onto a screen; and means

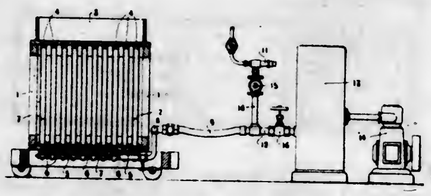


whereby the rotatable drum and the leaves are actuated to produce a moving object upon said screen, substantially as described.

1,384,569. TURNTABLE. MARTIN H. RICE, Moline, Ill. Filed Mar. 5, 1921. Serial No. 449,660. 8 Claims. (Cl. 104—44.)

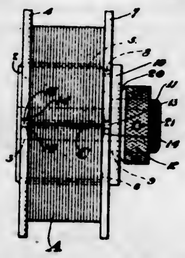
1. In a turn-table the combination of runners, a circular track mounted on the runners, parallel runways, and truck wheels connected with the runways alongside thereof and extending above their lower sides in position to run on the track and suspend the runways close to the track.

1,384,570. SYSTEM OF SUPPLYING AN EXPLOSIVE MIXTURE TO ENGINES AND TURBINES. ALFRED SCHWARZ, Joplin, Mo., assignor to William Scully, trustee, Brooklyn, N. Y. Filed July 10, 1918. Serial No. 244,183. 8 Claims. (Cl. 60—42.)



1. In combination, a heat engine, a Venturi tube, means for supplying air under pressure to said tube, means for supplying fuel to the vacuum portion of said tube, said fuel being drawn into the tube solely by the vacuum induced at the throat by the flow of air therethrough, a second Venturi tube into which said first tube discharges and which discharges into said engine and means for igniting the mixture in said second tube adjacent the throat portion thereof.

1,384,571. MACHINE FOR MOLDING SOAP AND THE LIKE SUBSTANCES. JOSIAH SMITH, Leeds, England. Filed Nov. 16, 1920. Serial No. 424,363. 4 Claims. (Cl. 25—7.)

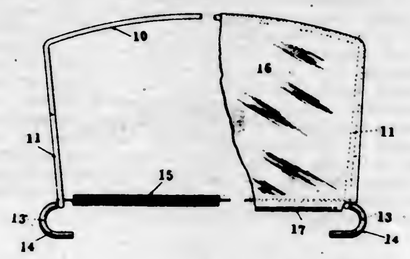


1. A soap-molding machine of the kind specified; comprising in combination, a framing, tubular molds carried by the framing, a tank situated on the framing for supplying hot liquid soap to the upper open ends of the tubular molds, slidable pistons within the tubular molds,

and means for setting up a vacuum within the tubular molds to lower the slidable pistons and draw the hot liquid soap from the supply tank into said tubular molds,

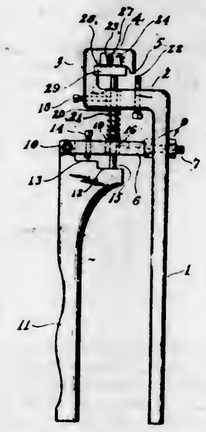
together with means for supplying compressed air to the tubular molds to raise the slidable pistons and eject the solidified bars or slabs of soap from said tubular molds.

1,384,572. REEL. WILLIAM J. SMITH, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Dec. 4, 1920. Serial No. 428,358. 5 Claims. (Cl. 242—116.)



4. A reel for wire or the like comprising a hub and a pair of flanges, one of said flanges being removable and having an aperture therein to fit said flange on a reduced portion of said hub, a U-shaped collar of greater diameter than the aperture in said removable flange fitted over another reduced portion of said hub, and a nut threaded on said hub to force said collar against said removable flange, the aperture in said flange being of a size that permits the flange to pass freely over said nut when said collar is removed.

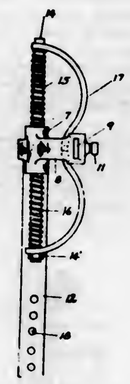
1,384,573. CLOSURE FOR BOTTLES AND OTHER CONTAINERS. THOMAS C. SPELLING, New York, N. Y. Filed Apr. 11, 1917. Serial No. 161,112. 13 Claims. (Cl. 120—57.)



1. A closure for a bottle formed with a vent in the rim surrounding the mouth, the rim being horizontally undercut, comprising a cap formed of resilient substance, attached to, and fitted on, and creased along its outer edge inside of the rim, overlying a gasket of yieldable substance, both co-extensively covering less than the entire area within the rim, a stopper, and means for shifting the stopper into and out of said space, and binding and locking it when in place.

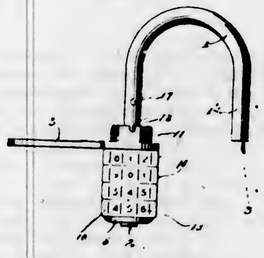
1,384,574. RAIN AND SUN SHIELD FOR AUTOMOBILES. EDWARD L. STANTON, HARRY T. STANTON, and STODDARD J. STANTON, St. Louis, Mo. Filed Apr. 21, 1920. Serial No. 375,437. 7 Claims. (Cl. 246—95.)

1. In a device of the class described, the combination with a supporting spring frame, of a flexible cover surrounding said frame, and a pair of clamping loops carried by said frame and adapted by reason of the resiliency of said frame to be engaged with the uprights of a vehicle to removably secure the device in position.



1,384,575. SAW-SET. WILLIAM M. STOVALL, Clallam Bay, Wash. Filed Mar. 5, 1920. Serial No. 363,615. 7 Claims. (Cl. 76—69.)

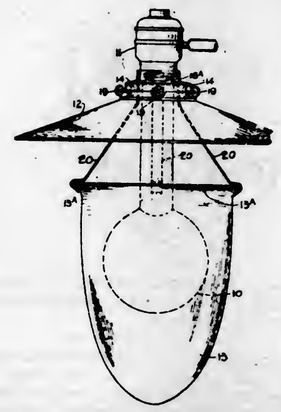
1. In a saw set, the combination of a handle provided with a saw-receiving end, a bar provided with an inwardly-threaded end extending through the handle, locking nuts at opposite sides of the handle and mounted upon the threaded end of the bar for holding the bar securely upon the handle, tooth-bending means on the saw-receiving end and on said bar, and an auxiliary handle movably mounted on the bar and coöperating with the tooth-bending means for actuating the same at the will of the operator.



1,384,576. VEHICLE ATTACHMENT. CHARLES SUHR, Chicago, Ill. Filed Mar. 13, 1920. Serial No. 365,631. 4 Claims. (Cl. 240—57.)

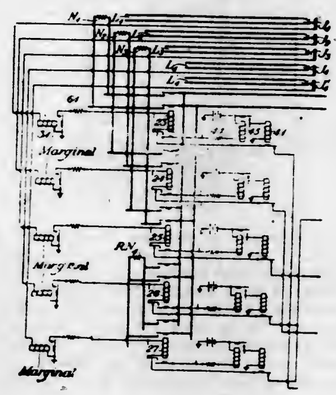
1. A device of the class described, comprising a supporting bracket; a hub on said bracket; a stem projecting vertically from opposite sides of said hub and slidable therein; a member firmly mounted on the ends of said stem for attaching a lamp thereto; and means for

retaining said lamp and member in constant relation to said hub, substantially as described.



1,384,577. PERMUTATION-LOCK. SAMUEL S. SWAN, Eau Claire, Wis. Filed Mar. 6, 1920. Serial No. 363,789. 2 Claims. (Cl. 70—10.)

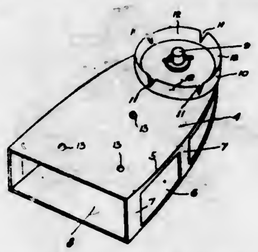
1. A lock of the class described including a locking member having an arm, a tumbler disk carrying member slidable on the arm, a plurality of tumbler locking disks rotatable on the carrying member, said carrying member being slidable on said arm when said disks are in unlocked position and held against sliding movement when said disks are in locking position, removable means for retaining the carrying member against sliding from the arm when the disks are in unlocked position, and means for holding the last mentioned means against removal when said disks are in locking position.



1,384,578. ELECTRIC-LIGHT FIXTURE. HERBERT O. TOMLINSON, Wheaton, Ill. Filed Mar. 27, 1920. Serial No. 369,387. 7 Claims. (Cl. 240—111.)

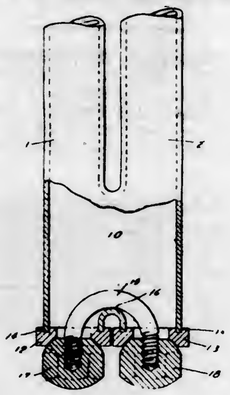
1. In an electric light, the combination of a lamp socket, a resilient clamping ring encircling said socket and removable downwardly therefrom, spring arms permanently united with said ring, a reflector having a central opening which is larger than said ring, said arms extending downward through said opening and being movable toward each other to permit downward removal of said reflector while said ring remains in place on the socket, a bowl detachably engaging the lower ends of said arms to spread them apart, so that the bowl is removably supported, and means for contracting the ring solidly upon said lamp socket to render the upper ends of said resilient arms rigid with the sides of the socket, to

form a spring bowl holder, and for expanding the ring to disconnect said arms from the sides of the socket.



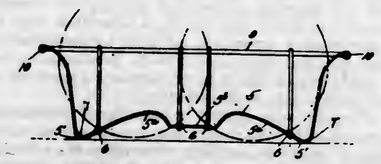
1,384,579. AUTOMATIC TRANSMISSION-CONTROLLING MEANS. JOHN F. TOOMEY, New York, and CHARLES S. DEMAREST, Brooklyn, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 16, 1917. Serial No. 196,899. 20 Claims. (Cl. 179—170.)

1. A transmission circuit for transmitting signaling currents, terminal apparatus with which said circuit may be associated, and means operating automatically to so vary the transmission efficiency of said circuit, in accordance with the transmission requirements with respect to the signaling currents of any type of terminal apparatus with which said circuit is associated, that the total transmission equivalent of said transmission circuit and terminal apparatus will be substantially constant regardless of the type of terminal apparatus associated with the transmission circuit.



18. A transmission circuit, a plurality of terminating lines with which said circuit may be associated, and a plurality of relays for variably controlling the transmission efficiency of said circuit, said relays being selectively operated in accordance with the terminating line with which the circuit is associated.

1,384,580. SPRING-BOARD. JOHN TOSS, Campbell River, British Columbia, Canada. Filed June 10, 1920. Serial No. 387,983. 5 Claims. (Cl. 304—28.)

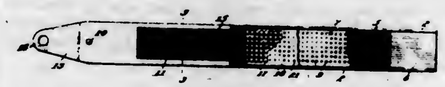


1. In a device of the class described, a shoe adapted to receive the end of a board, and a cup-shaped member pivotally mounted on said shoe.

1,384,581. RETURN-BEND. CHARLES HENDERSON TRUE, Hammond, Ind., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 14, 1920. Serial No. 373,905. 2 Claims. (Cl. 122—462.)

1. In a structure of the class described, the combination of two parallel pipes; a channel connecting them at a comparatively small distance from their ends, the walls of the channel being integral with the pipes; a U-shaped bolt with threaded ends whose parallel legs extend through the open ends of the pipes and which bears against the channel wall nearest the pipe ends; closures for the pipe ends; and means engaging the threaded ends of the bolt and the closures to force the latter against the pipe ends.

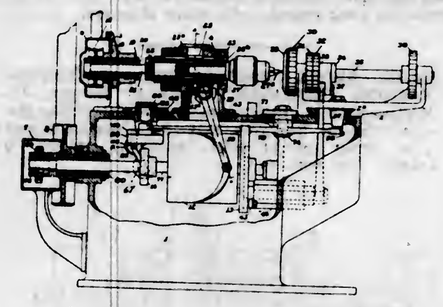
1,384,582. DISH-DRAINER. WALTER B. WILLS, Baltimore, Md. Filed Jan. 26, 1921. Serial No. 439,969. 1 Claim. (Cl. 141—11.)



A dish-draining, wire basket having an upper rim of heavy wire, a bottom comprising transversely-extending, spaced, parallel wires, each having two arched portions, each two arched portions being connected by a straight portion; said bottom comprising, also, four longitudinally-extending, parallel, spaced wires, two thereof intersecting said straight portions near the ends thereof and the remaining two longitudinal wires intersecting said arched portion near the outer ends thereof, at points below the plane of the straight portion, the outer ends of said transversely and longitudinally extending wires being bent upwardly and secured to said rim as and for the purpose described.

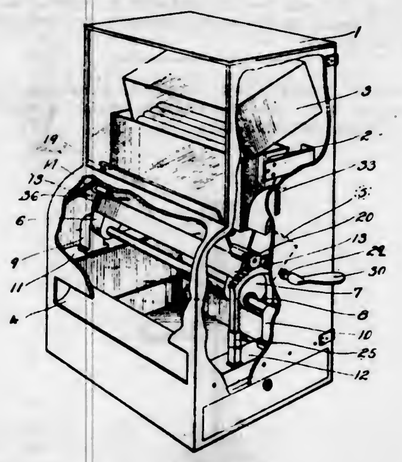
1,384,583. CABLE-SUPPORT. MERRITT D. WOOD, Clark, S. D. Filed Oct. 21, 1920. Serial No. 418,563. 6 Claims. (Cl. 248—31.)

1. In a cable-supporting device, a supporting plate attachable to a battery-box or the like and including a channel provided with a series of apertures between its opposite sides, and a combined cable-clamping and support-attaching unit including a headed fastener which is interchangeably seatable in said apertures by movement of its head inward through the respective apertures, said fastener being operable to turn its head into locking engagement with said channel and being provided with means to engage said opposite sides and prevent it from turning beyond the locking position, said fastener including means to coact with said head for rigidly securing the said unit to said plate.



1,384,584. CHECK-PROTECTOR. CHARLES A. APPEL, Jr., Washington, D. C. Filed May 17, 1921. Serial No. 470,435. 4 Claims. (Cl. 101—19.)

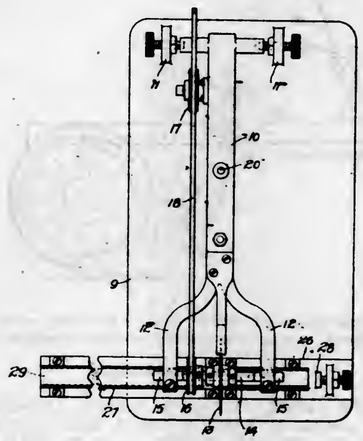
1. A check protector comprising a support for the check to be drawn, and a multiplicity of puncturing devices adapted to be individually actuated and over which a stylus may travel as in the act of writing.



1,384,585. AUTOMATIC DRILLING-MACHINE. EDMUND R. BARANY, New York, N. Y., assignor to Twinomatic Machine and Tool Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 8, 1918. Serial No. 257,333. 13 Claims. (Cl. 77—5.)

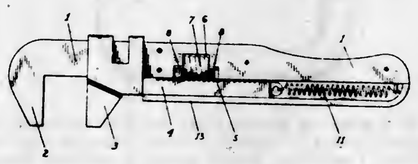
1. In a drilling machine, the combination with a drill spindle, and means to advance and retract the same axially, of a pair of slides at opposite sides of the axial line of the drill, and movable toward and from each other,

a rotary blank clamping member carried by each of the slides, and means to reciprocate said slides, to center and clamp a blank in line with the drill.



1,384,586. VENDING-MACHINE. FRANK C. BATES, Kansas City, Mo., assignor to John B. Stader, Kansas City, Mo. Filed Aug. 4, 1920. Serial No. 401,188. 7 Claims. (Cl. 211—8.)

1. In a vending machine, an article-containing hopper, a swinging valve closing and opening the discharge end of the hopper, a swinging gate slidably mounted on the valve, and means for rotating the gate.

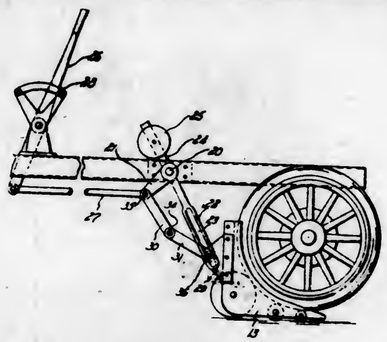


1,384,587. MANUFACTURE OF COMPOSITION CORES. HARRY TRISTRAM BELLAMY, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,103. 2 Claims. (Cl. 25—3.)

2. The process of manufacturing composition cores, which consists in forming the compound into tubular form of approximately the dimensions desired and while in a semi-plastic state turning to final diameter, rolling

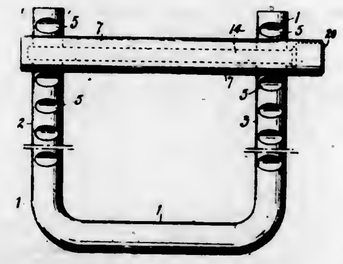
a thread upon its peripheral surface, cutting to final length and subsequently firing.

1,384,588. WRENCH. JOHN V. BELLUOMINI, Jackson, Calif. Filed Feb. 12, 1921. Serial No. 444,436. 1 Claim. (Cl. 81—157.)



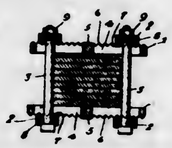
A wrench comprising a fixed jaw, a shank thereon, side plates fixed on the shank and projecting therebeyond in the plane of the jaw to form a longitudinal inclosure with said shank, a movable jaw slidable on the shank between the fixed jaw and the side plates, a spring-pulled shank on the movable jaw slidable in the said inclosure and provided with teeth on the face thereof adjacent the fixed-jaw shank, and a spring pressed worm mounted in the latter shank for movement to and from the movable-jaw shank, the fixed-jaw shank being recessed to receive said worm and the side plates being orificed to allow the worm to project therethrough whereby the latter may be manipulated by the fingers on opposite sides thereof but the diameter of said worm being less than the overall width of the side plates and shank, whereby the worm will be protected.

1,384,589. EMERGENCY-BRAKE. JAMES CHARLES BLANEY, Cleveland, Ohio. Filed Aug. 4, 1920. Serial No. 401,186. 10 Claims. (Cl. 188—4.)



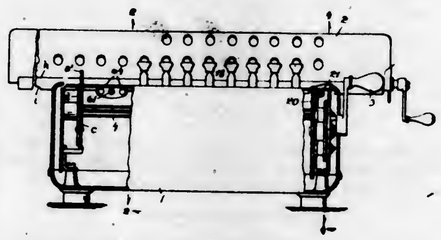
1. In combination with a vehicle, having a frame and wheels therefor, a brake shoe having side members, a front end member and a bottom member, said end member extending above the horizontal line through the axle of the wheel, said shoe being provided with a groove, into

which the wheels of the vehicle may run when the brake shoe is placed on the ground, and means associated with



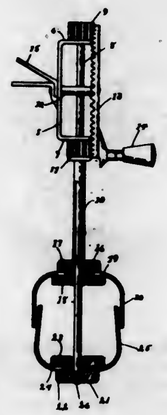
said brake shoe and vehicle whereby the brake shoe may be lowered to and raised from operative position as a brake.

1,384,590. LOCK. VICTOR R. BOTTONE, Philadelphia, Pa., assignor of one-half to John S. McAleer, Philadelphia, Pa. Filed Mar. 30, 1921. Serial No. 456,844. 4 Claims. (Cl. 70—108.)



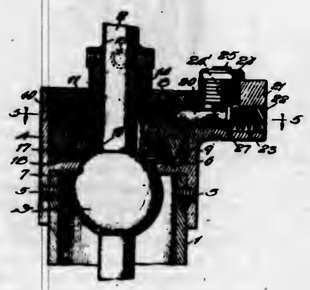
2. A device of the character described comprising, a member having a transverse recess formed in the side thereof, a receiving member having an aperture formed therein adapted to receive the first mentioned member, a locking rod rotatably mounted in the said receiving member, said locking-rod having a transverse recess formed in the side thereof adapted to aline with the said aperture formed in the said receiving member and means for rotating the locking-rod so that it will engage the first mentioned member by occupying the transverse recess formed in the first mentioned member.

1,384,591. CLAMP FOR BROKEN SPRINGS. SAMUEL HOWARD BRADY, Reno, Nev. Filed Nov. 1, 1919. Serial No. 334,915. 2 Claims. (Cl. 267—51.)



2. A clamping device of the class described comprising two pairs of clamping plates, each having a pair of longitudinally extending slots therein having their inner ends separated, bolts connecting each pair of plates together and passing through the slots in said plates, elongated washer plates for said bolts, said plates and washer plates being corrugated to interlock with each other, a top plate upon which the upper slotted plates rest, said top plate having projections at its ends and one projection being formed in the shape of an eye.

1,384,592. SHOCK-ABSORBER FOR CALCULATING-MACHINE CARRIAGES. EDWIN F. BAITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1920. Serial No. 373,835. 9 Claims. (Cl. 235—79.)



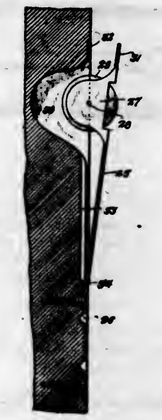
1. In a calculating machine having a series of gears, an endwise-shiftable pivoted carriage having register wheels, a series of gears connected therewith and engaging the first-named gears, and means engaging the carriage to raise the same pivotally and shift it endwise, means for cushioning the fall of the carriage active throughout the fall thereof.

1,384,593. EGG-BEATER. JAMES L. BRUMFORD, Canajoharie, N. Y. Filed Dec. 27, 1920. Serial No. 433,274. 3 Claims. (Cl. 259—132.)

1. An egg beater of the character described comprising a support, a power shaft rotatably mounted in said support, a second tubular power shaft rotatably mounted on the first named shaft, complementary agitating elements inverted with respect to each other carried by the ends of the respective shafts, each of said elements comprising a core, a sectional shell embracing said core, curved agitating fingers integrally formed in pairs mounted in the core and projecting through the shell, the free ends of the agitator fingers of one element being inwardly disposed of the path of movement of the free ends of the agitator fingers of the other element and means for simultaneously rotating said shafts in opposite directions.

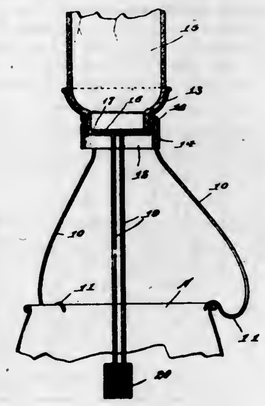
1,384,594. AUTOMOBILE-LOCK. RUDOLPH BRUNER, Chicago, Ill., assignor to John P. Dales and M. Jay Meyers, Chicago, Ill. Filed Apr. 22, 1920. Serial No. 375,750. 9 Claims. (Cl. 70—128.)

1. In a lock of the kind described for controlling levers and in combination, a casing having a cylindrical bore and arranged about the lever, means for securing the same in place, a coöperating cylindrical member arranged to seat in said casing and provided with a continuous groove about the periphery thereof, and means for locking said member in the casing including a lock bolt carried by said casing and constructed to engage said member in said groove.



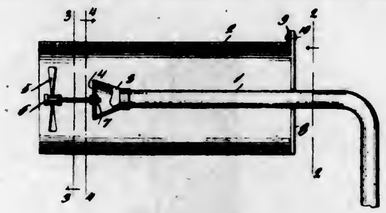
1,384,595. EAR DEVICE. CHARLES T. BUCK, Waukegan, Ill. Filed May 4, 1920. Serial No. 378,896. 3 Claims. (Cl. 181—25.)

2. In an ear device, a sound receiver having one end closed and rounded to form a substantially spherical sound chamber, a tube having one end opening into said receiver and the other end adapted to be inserted into the ear, a sound amplifier on said tube within said receiver and opening out toward said round closed end, and means for adjusting the position of said amplifier relative to said round closed end to regulate sound waves passing through the tube.



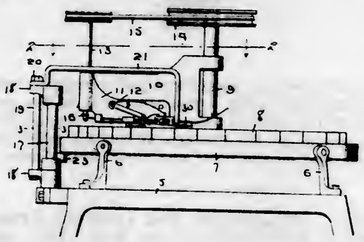
1,384,596. SPRING-ROLLER ATTACHMENT FOR WINDOWS AND DOORS. AARON A. BURGNER, Jacksonville, Fla., assignor of one-half to Harry R. Ford, Jacksonville, Fla. Filed Aug. 10, 1917. Serial No. 185,592. 1 Claim. (Cl. 292—77.)

In a device of the class described, a window sash having a recessed edge portion, a bracket and a resilient device connected therewith for mounting the bracket, said bracket conforming to the shape of the recess and including an offset portion opposite the resilient device and engaging the edge of the sash for limiting the movement of the bracket and closing the adjacent portion of the recess,



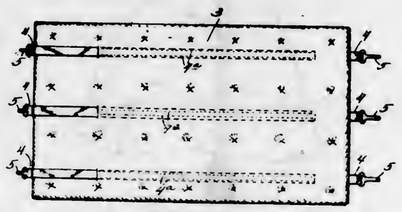
and a roller mounted in the bracket for engaging a window frame, the sash having a restricted channel for the reception of the resilient element and the channel having outlet portions for the discharge of dust laterally through the sash, and on the inner and outer sides thereof.

1,384,597. ATTACHMENT FOR COOKING VESSELS. ELMER E. BUTTS, Arkansas City, Kans. Filed Mar. 9, 1920. Serial No. 364,491. 4 Claims. (Cl. 53—1.)



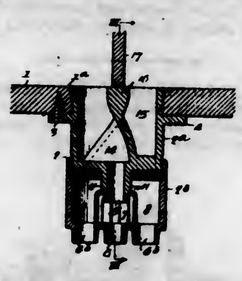
1. A device of the character described comprising a tripod structure including legs detachably engageable upon the edge of a kettle and a ring member carried by the upper ends of the legs, a water reservoir formed as a jar arranged in inverted position with its outlet end fitting within said ring member, a closure for the end of said reservoir, and a pair of tubes leading through said closure and adapted to extend into water within the kettle, said tubes being of unequal length.

1,384,598. GAS-BURNER. JOSEPH P. BUTTS, Baxter Springs, Kans. Filed Oct. 14, 1919. Serial No. 330,600. 3 Claims. (Cl. 158—118.)



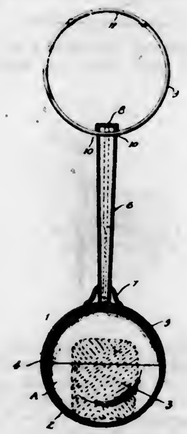
1. In a gas burner comprising a burner tube provided with a tip, a mixing chamber surrounding the burner tube, a stem supported by the burner tip and a fan mounted on said stem and disposed forwardly of the tip and within the front portion of the mixing chamber.

1,384,599. CANNING-MACHINE. PERRY CHAMBERLAIN, Troy, Pa. Filed Apr. 2, 1919. Serial No. 286,932. 5 Claims. (Cl. 113—91.)



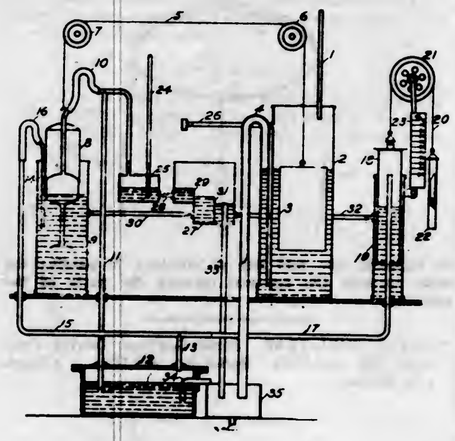
1. In a canning machine, a can carrier, and a soldering mechanism, said mechanism including a heated soldering iron, means for intermittently feeding a soldering strip against the iron, an actuating member carried by the feeding means, a pivoted arm operable by contact with the cans traveling with the carrier, and an adjustable abutment carried by the arm and engageable with the actuating member for variably actuating the feeding means.

1,384,600. MATTRESS-HOLDER FOR INVALID-BEDS. LUCY SPOHRER COIL, Nevada, Mo. Filed Jan. 3, 1921. Serial No. 434,434. 1 Claim. (Cl. 5—22.)



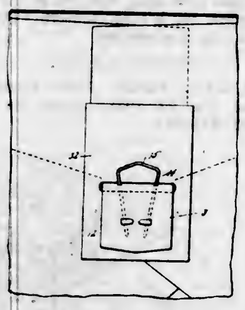
The combination with a holder and a mattress for support thereon, of a plurality of straps extending longitudinally of and underlying the mattress; the foot ends of the straps being secured to the mattress some distance from the head end thereof to permit a sheet, when spread over the mattress, to be fully tucked down over the head end thereof and back between such end and the said straps, and means attached to the opposite ends of the straps for detachable engagement with the head end of the holder.

1,384,601. NOZZLE FOR CAKE-COATING MACHINES. WILLIAM COSTELLO, Jr., Philadelphia, Pa. Filed Sept. 27, 1919. Serial No. 326,779. 4 Claims. (Cl. 107—1.)



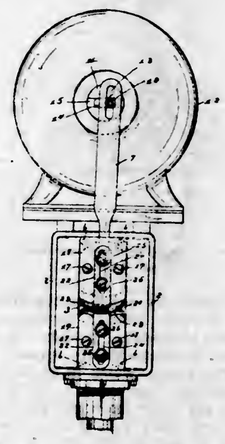
1. In a nozzle, the combination with a relatively fixed portion having a plurality of channels or compartments of a distributing head detachably secured to said fixed portion and having a concentrically disposed substantially bell shaped inner partitioning wall forming an independent chamber in said head and having an opening centrally disposed in the top thereof, a duct leading from one of the compartments of the fixed portion to said central opening, another of the compartments of the fixed portion communicating with the other chamber of the distributing head, and discharge apertures in the distributing head leading from each of the chambers therein.

1,384,602. CROCHET COTTON OR WOOL HOLDING DEVICE. WINDOM HARRISON CROWELL, Detroit, Mich. Filed Apr. 20, 1920. Serial No. 377,669. 1 Claim. (Cl. 223—14.)



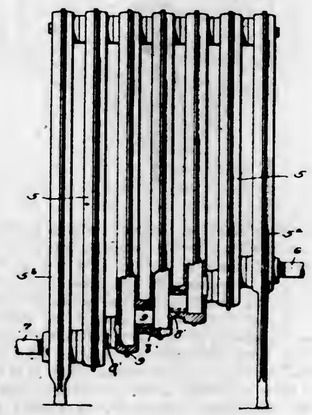
A device of the character stated, comprising a pair of hollow hemispherical sections adapted to be fitted together to form a spherical thread receiving inclosure, said inclosure having a thread outlet therein, a hollow needle receiving handle including an open end, a removable cap closing the other end of the handle, said handle being located with its open end abutting against the exterior surface of the thread receiving inclosure, and a collar around the end of the handle maintaining the open end of the handle in engagement with the exterior surface of the thread receiving inclosure.

1,384,603. GAS-ANALYSIS APPARATUS. WILLIAM L. DE BAUFRE, Highland Park, Mich. Filed Oct. 10, 1919. Serial No. 329,691. 5 Claims. (Cl. 23—3.)



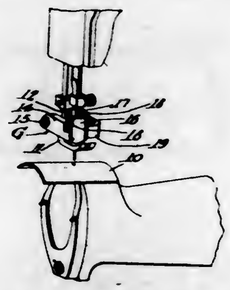
1. In a gas analysis apparatus, a liquid seal, an extractor bell fitted to rise and fall in said liquid seal and connected with the source of the gas mixture to be analyzed, a second liquid seal, a measuring bell fitted to rise and fall in the second liquid seal and connected to the said extractor bell and to a venting device constituted by an open tube attached to the said extractor bell also dipping into a liquid seal, means for subjecting the gas mixture to the action of an absorbent reagent during its passage from the extractor bell to the measuring bell, and means of bringing the said liquid seals to their normal levels during each cycle of operations.

1,384,604. LOCK FOR ENVELOPS AND OTHER CONTAINERS. GEORGE DOUTNEY, Brooklyn, N. Y. Filed July 6, 1920. Serial No. 394,182. 1 Claim. (Cl. 229—78.)



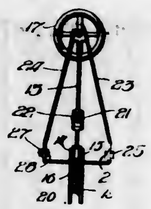
As a new article of manufacture, an envelop of the conventional shape, the body having a horizontal slot and provided on its inner face with a pocket open at the bottom, the closing flap being provided on each side of its center with substantially V-shaped notches, whereby a comparatively long integral and tapering tongue is formed, the tongue being provided with a hook projecting from its end, said hook engaging the pocket over the edges of the bottom thereof when the envelop is sealed by inserting the tongue through the slit and the pocket.

1,384,605. IRONING NECKBANDS. GEORGE B. EHRMANN, Troy, N. Y. Filed May 8, 1919. Serial No. 295,542. 5 Claims. (Cl. 68—9.)



1. In a machine of the class described and in combination, guiding mechanism forming a groove and provided with an opening in the groove-wall; an iron adjacent to said opening; and means for rapidly reciprocating said iron.

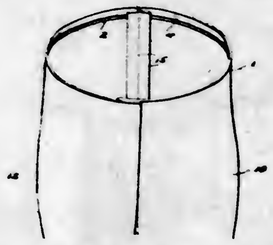
1,384,606. RADIATOR. WILLIAM J. FARRELL, New York, N. Y. Filed Nov. 15, 1919. Serial No. 338,276. 1 Claim. (Cl. 257—151.)



A radiator comprising a plurality of vertically disposed sections, with the upper ends of said sections substantially parallel, each of the sections being provided with an opening formed at the lower end and in each of its sides, the opening in one side of each section being at a higher level than the opening in the other side thereof, the higher opening of one section being positioned to register with the lower opening of an adjacent section, thereby providing in the bottom of the radiator a stepped drain way, allowing the water to reach its lowest level and be carried off, substantially as and for the purpose set forth.

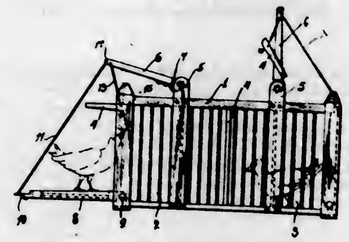
1,384,607. SAFETY-GUARD FOR SEWING-MACHINES. DANIEL WEBSTER FEITEL, New Orleans, La. Filed Sept. 27, 1919. Serial No. 326,893. 2 Claims. (Cl. 112—261.)

1. A safety guard for a sewing machine presser foot, including an integral member having a substantially cylindrical needle surrounding cylinder, the upper edge of which is slotted at diametrically opposite sides for the threading of the needle, which is adapted to project at all times to completely surround the needle to prevent the introduction of the finger below the needle and above the presser foot, there being formed from one side adjacent the lower end of one of the slots a substantially U-shaped projection for permitting the passage of the needle clamp therethrough, the lower edge of the cylindrical portion at right angles to the U-shaped member being split to render the edge flexible, and two clamping lugs, one upon each side of the split portion for surrounding the presser foot and clamping the guard thereon.



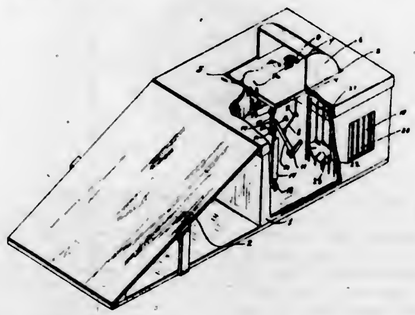
1,384,608. FLYING-MACHINE. LEVI S. GARDNER, Detroit, Mich. Filed Feb. 2, 1918. Serial No. 215,024. 4 Claims. (Cl. 244—29.)

2. In a flying machine, vertical rudders and horizontal rudders, a controlling device comprising a lever arranged to be rotatable about a vertical axis and also about a horizontal axis, a member on the upper end of the lever rotatable about a longitudinal axis, cables extending from opposite sides of each of the rudders to said member, and guides on said lever for said cables for causing said rudders to be turned into screw formation when said member is turned, for causing the vertical rudders to be shifted when the lever is turned about its vertical axis, and for causing the horizontal rudders to be shifted when the lever is turned about its horizontal axis.



1,384,609. GARMENT-SEAM. BARNETT H. GOLDSTEIN, New York, N. Y., assignor of one-sixth to Max Pugatsky, one-sixth to Robert D. Von Rentsch, and one-sixth to Jacob Goldstein, New York, N. Y. Original application filed Feb. 6, 1920, Serial No. 356,581. Divided and this application filed Apr. 9, 1920. Serial No. 372,492. 3 Claims. (Cl. 2—142.)

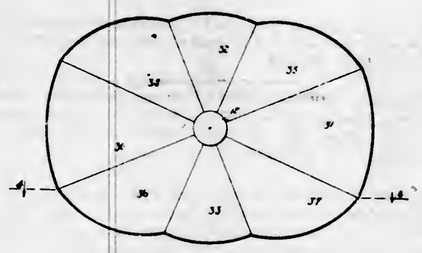
1. In a garment, lining members secured along their upper edges to the upper edges of the main body fabric, and a line of stitching passing only through the main body fabric of the garment and underlying the said lining members so as not to interfere with the same in making



or adjusting the said line of stitching in passing the same through the material forming the parts of the garment.

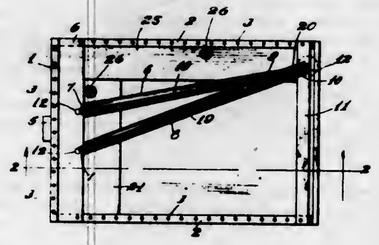
1,384,610. BIRD-TRAP. JOSEF GORNIAK, Denver, Colo. Filed Jan. 22, 1921. Serial No. 439,180. 2 Claims. (Cl. 43—61.)

1. A device of the class described comprising a cage, a platform pivotally attached at the entrance to said cage, uprights on the sides of said cage, a rod supported between said uprights, a spring rigid with said rod and extending outward therefrom, a rigid member attached to the free end of said spring, a second member having a hole therethrough near one end thereof, a cord passing through said hole and having means at the end thereof for attaching bait thereto, said cord being attached at the other end to said first member, and a cord connecting the end of said platform with said first-member.



1,384,611. ANIMAL-TRAP. JOSEF GORNIAK, Denver, Colo. Filed Jan. 22, 1921. Serial No. 439,182. 2 Claims. (Cl. 43—70.)

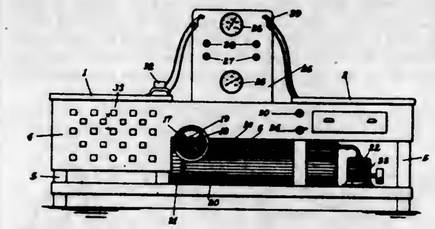
1. A device of the class described comprising a box, a recess in the upper surface thereof, a platform pivotally



mounted in said recess, a link pivotally attached to the underside of said platform, a recess in said link, a resilient member urging said link downward, a member pivotally mounted on the floor of said box, a hook on the end of said member normally engaging said second-named recess, and a cord attached to said last-named member and extending to said platform.

1,384,612. APPARATUS FOR RECORDING MOTION AND SOUND. ROBERT D. GRAY, New York, N. Y. Filed Aug. 4, 1920. Serial No. 401,178. 10 Claims. (Cl. 181—30.)

4. A sound reflector having its interior surface formed of elliptic and parabolic segments having a common axis, the elliptic segments having a common acoustic focus located in the said common axis.

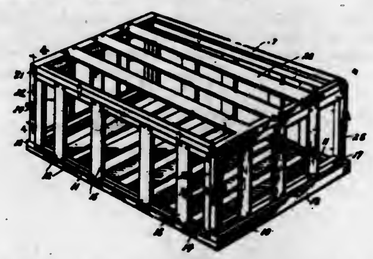


1,384,613. BANK-BURGLAR PROTECTIVE DEVICE. CHARLES A. GUHR, Chicago, Ill. Filed Dec. 19, 1919. Serial No. 346,114. 1 Claim. (Cl. 268—2.)

A bank cage protective device comprising a metal screen disposed at the front of the cage and arranged to slide vertically into position behind the bars of the cage front, an electromagnet disposed beneath the floor of the cage for normally holding the screen in position, cables secured to the screen and arranged to extend upwardly, runways for said cables extending rearwardly and converging to form a stop member at their junction, a counterweight disposed beneath the floor of the cage, a cable connected at one end with the counterweight and at its other end with said last named cable, and a tube for concealing the cable connected to the counterweight.

1,384,614. RADIATOR-TESTING APPARATUS. GEORGE S. HALL, Chico, Calif. Original application filed May 22, 1919, Serial No. 298,980. Divided and this application filed Dec. 13, 1919. Serial No. 344,505. 1 Claim. (Cl. 73—51.)

An apparatus for testing leaky radiators including in combination with a work bench provided with a tank containing air under pressure, an open-topped water tank positioned on the bench, a platform in the tank for holding a radiator thereon, the radiator being connected with the air tank, a well in the bottom of the tank, a plunger

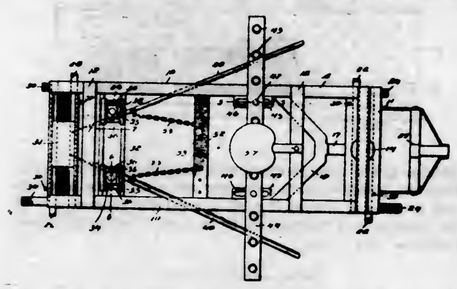


slidable in the well, means for holding the plunger against rotation, a sleeve on the plunger sustaining the platform and a turnably mounted cable operatively connected with the plunger and adapted to be wound to raise and lower the same in the well.

1,384,615. ART OF MANUFACTURING PERYLEN. FAITZ HANSGIRG, Grätz, Styria, Austria. Filed July 30, 1919. Serial No. 314,388. 6 Claims. (Cl. 23—24.)

1. A method of manufacturing perylen, consisting in adding a β-substituted derivative of a naphthalene nucleus to a halogenizing agent, and heating the product of the reaction.

1,384,616. COLLAPSIBLE CRATE. LUDWIG E. LARSON, Willow Grove, Pa. Filed April 18, 1919. Serial No. 291,102. 1 Claim. (Cl. 217—47.)



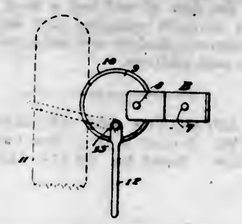
A collapsible crate all of the sections of which are permanently connected together in a unit and are susceptible of being detachably fixed in open and closed state, the said crate including a bottom section with raised end portions, inwardly-foldable side sections hinged to the bottom section and having dowel pins projecting upwardly from their upper edges, inwardly foldable end sections hinged to said raised end portions and having dowel pins projecting upwardly from their upper edges, a top section with sockets in its underside to receive said dowel pins, links pivoted at one end to the side edges of the top section near the corners thereof and having longitudinal slots adjacent to their opposite ends, threaded pins extending from points midway the length of the ends of the end sections and also extending through said slots, and nuts on the threaded portions of said pins and at the outer side of said links.

1,384,617. DITCH-FILLING MACHINE. OSCAR LEE, Fairfield, Mont. Filed Mar. 3, 1920. Serial No. 362,898. 3 Claims. (Cl. 37—7.)

1. A machine of the character described comprising a frame, a front hanger carried at the forward end of the frame, a front turning bolster pivotally connected with the hanger, a rear stationary bolster on the rear end of the frame, axle beams mounted in the bolsters and later-

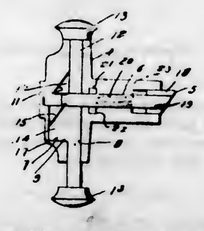
ally adjustable, depending uprights on said axle beams, inwardly extending axle spindles on said uprights, traction wheels journaled upon the spindles, scraper blades disposed beneath the frame on opposite sides of its center line of draft, front and rear posts on said blades, a front cross beam upon the frame and adjustably connected therewith and having a series of tubular sockets for adjustably receiving the front posts of said scraper blades, bearings mounted in the rear portion of the frame and supported

for lateral adjustment, and adjustably receiving the rear posts of said scraper blades, means carried by the posts for adjustably securing the same in the sockets and bearings respectively, draw chains adjustably carried by the frame and connected with the scraper blades, flanged bars arranged on opposite sides of the bearings and fixed in spaced parallel relation to each other between the sides of the frame transversely thereof, and slidable boxings mounted between the flanged bars and supporting said bearings.



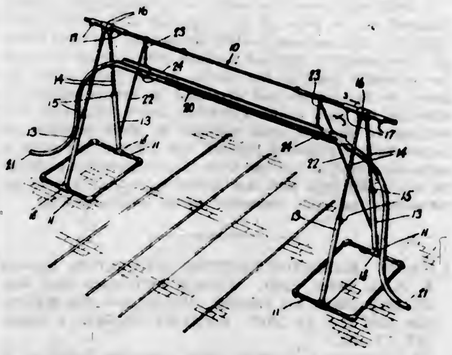
1,384,618. WRENCH. CYRIL HILL LEWIS, Shangani, Southern Rhodesia, British South Africa. Filed Oct. 11, 1920. Serial No. 416,255. 2 Claims. (Cl. 81—129.)

1. A wrench including a handle, a jaw having a body portion which is pivotally secured to the handle, an eccentrically mounted wheel on the handle to the rear of the body of the jaw, and a rod pivotally connected thereto whereby to bring the periphery of the wheel into frictional engagement with the periphery of the jaw.



1,384,619. BROOM OR MOP HOLDER. CHRISTOPHER MCRAE, San Francisco, Calif. Filed June 19, 1920. Serial No. 390,141. 2 Claims. (Cl. 24—249.)

1. A device of the character described comprising a bracket member, a roller having a concave roughened surface and being pivoted to said bracket at a point adjacent the edge thereof, said roller having edges formed by the concave surface to prevent lateral displacemnt of an arti-

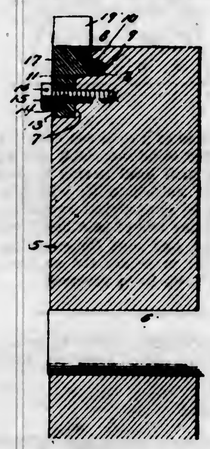


cle resting thereon, and a clamping element attached to said roller and adapted to embrace the article inserted in the clamping element.

1,384,620. DOOR-LATCH. HENRY MCVITTIE, Bend, Oreg., assignor of one-half to Joseph R. Tripoll, Bend, Oreg. Filed Dec. 6, 1919. Serial No. 342,985. 1 Claim. (Cl. 292—170.)

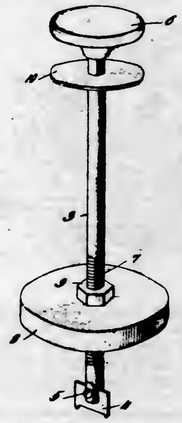
A door latch comprising a T-shaped casing having communicating grooves in its leg and arm portions, straight and inclined shoulders located in the groove of the arm portion and arranged on opposite sides of the groove in the leg portion, an actuating rod slidable in the groove of the arm portion, a spring pressed bolt in the groove of the leg portion, a strap secured to the bolt and surrounding the rod and a cam on said rod and having straight and inclined faces and the latter face adapted to be engaged by the strap and the inclined shoulder and the straight face adapted to normally engage the straight shoulder.

1,384,621. HOSE-SUPPORTING BRIDGE. WALTER CECIL MAJOR, Niagara-on-the-Lake, Ontario, Canada. Filed July 23, 1920. Serial No. 398,409. 3 Claims. (Cl. 104—276.)



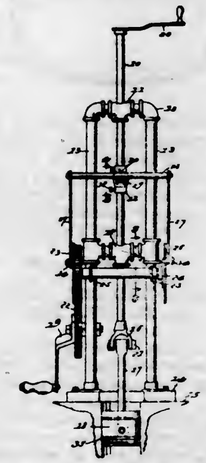
1. A device of the character described comprising a cross beam, hose supporting means carried by the cross beam, end supporting frames, each frame including a base, and divergently disposed legs, the latter being composed of telescopic sections, and means carried by the legs for supporting the base.

1,384,622. KEYHOLE-FINDER. CYRIL H. MAY, Ironwood, Mich. Filed May 13, 1920. Serial No. 381,120. 2 Claims. (Cl. 70—16.)



1. A combination of an escutcheon plate provided with an opening, a finder plate provided with an opening, an inclined depressed portion surrounding said opening and lugs extending inwardly from the opening adapted to be received in the opening of the escutcheon plate whereby the two are fastened together.

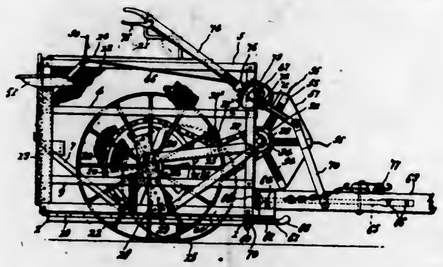
1,384,623. DETACHABLE GEAR FOR AUTOMOBILES. JAQUELIN M. MEREDITH, Jr., Norfolk, Va. Filed Dec. 1, 1919. Serial No. 341,598. 1 Claim. (Cl. 74—28.)



In a device of the class specified, the combination of a rotating member having a stepped groove in the outer portion of one side thereof continuing around the same and opening through the periphery of the member, the inner portion of the groove being reduced in depth to provide a straight shoulder transversely of the member where the said reduced portion of the groove intersects the outer deeper part of the groove, the deeper part of the groove being formed with an inner counter recess which continues the length of the shoulder to provide an increased bearing surface, the outer wall of the recess being beveled outwardly, and separable sections fitted flushly in the grooved portion of the member and having outer parts extending beyond the periphery of the member and portions of equal thickness engaging and snugly fitting the deeper part of the groove, the inner portions of the sections being reduced in thickness to fit in the inner reduced part of the groove, the sections having an inwardly projecting flange of the same contour as and snugly fitting in the counter recess and also bearing upon the said shoulder, and fastening means inserted through the inner reduced portion of each section and groove at a distance inwardly from the flange of the section.

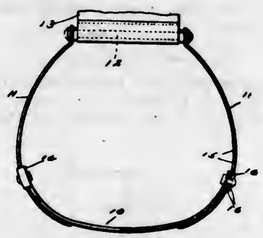
1,384,624. VALVE-GRINDER. JOE MILLER, Buffalo, N. Y. Filed Dec. 30, 1920. Serial No. 434,007. 3 Claims. (Cl. 51—29.)

1. A valve grinder including a rod equipped with a valve engaging member on one end and a handle on the opposite end, primary rod oscillating means mounted upon the rod adjacent said valve engaging member, and secondary rod oscillating means mounted upon the rod adjacent the handle.



1,384,625. APPARATUS FOR DRESSING ENGINE-CYLINDERS. WARREN K. MOORE, New Castle, Pa. Filed Mar. 28, 1921. Serial No. 456,142. 5 Claims. (Cl. 74—14.)

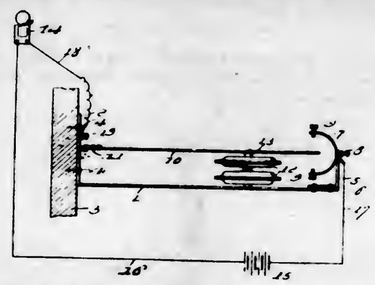
3. An apparatus for the purpose described having in combination with a supporting frame and means for attaching the same to an engine cylinder, an operating



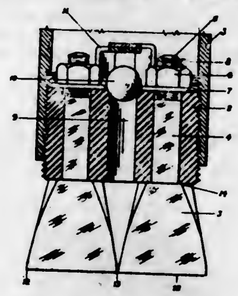
rod reciprocably and rotatably mounted in bearings in said frame and provided with means for engaging a piston rod, and means for imparting reciprocatory and rotary movement to said rod, the means for reciprocating the operating rod including crank disks, a cross head connected by pitmen with the crank disks, and a bearing block for the cross head fitted upon the operating rod.

1,384,626. PEA-PICKER. THEODORE S. MOUCHET, Bowersville, Ga., assignor to Perfect Pea Picker Company, Hartwell, Ga., a Corporation of Georgia. Filed May 13, 1920. Serial No. 381,117. 10 Claims. (Cl. 56—130.)

1. In a pea picking machine, a vehicle having a container space for the peas, picking means carried by said vehicle, and a rod pivoted on said vehicle beneath the picking means and having forwardly extending divergent arms bent from the ends thereof for gathering in the vines.



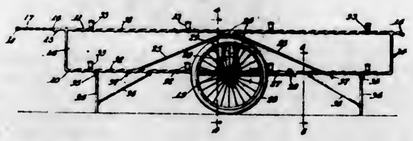
1,384,627. STIRRUP. WALTER R. OLMSTEAD, Cimarron, N. Mex. Filed Aug. 24, 1920. Serial No. 405,664. 2 Claims. (Cl. 54—47.)



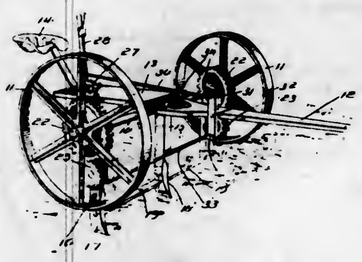
1. A stirrup including a foot piece and side members, a bar connecting said members at the top, said side members being adjustable with respect to the foot piece, said side members being designed to conform to the shape of the foot piece so that the free terminals thereof underlie the foot piece for the purpose specified, and means for holding said parts fixed relatively in a given position.

1,384,628. INCUBATOR-ALARM. ARTHUR OLSON, Oslo, Minn. Filed Nov. 27, 1918. Serial No. 264,397. 1 Claim. (Cl. 200—140.)

A heat operated circuit closer comprising a bracket composed of a horizontal arm and an upright arm of which the latter is adapted for attachment to the side wall of an incubator, a thermostat disposed on the horizontal arm of the bracket, a swinging arm composed of a metal strip one end of which extends back on itself to provide an eye which engages a loop carried by the upright portion of the bracket, an L-shaped bracket one leg of which is secured to the outer extremity of the horizontal arm but insulated therefrom, and an arcuate member disposed to the free extremity of the swinging arm with its ends above and below the plane of the latter and provided with terminal adjusting screws for contact with the extremity of the swinging arm, for the purpose specified.

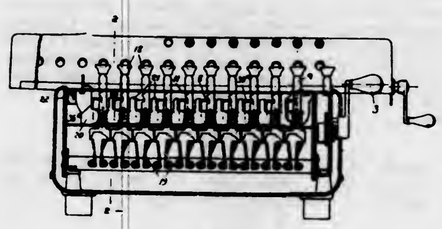


1,384,629. WELL-DRILLING APPARATUS. WALTER OVERKAMP, Evergreen, Colo. Filed Mar. 29, 1918. Serial No. 225,502. 4 Claims. (Cl. 255—64.)



1. The combination of a drill rod having a tubular end, a drill head adapted to be removably secured within said tubular end, said drill head having a plurality of symmetrical non-round holes parallel with the axis of said head, a plurality of symmetrical reversible cutters each having a shank fitting one of said holes, each shank having a threaded end, and nuts for engaging the threaded ends of the shanks to secure the cutters removably in place and permit them to be reversed.

1,384,630. STRETCHER. JOHN T. OWENS, New York, N. Y. Filed Dec. 6, 1918. Serial No. 265,551. 1 Claim. (Cl. 296—20.)



A stretcher comprising upper and lower frames, corner posts connecting the frames, truss braces between the sides of the respective frames, an angular member secured to the inner truss braces and dividing the lower frame into two compartments and the upper frame into two berths, fabric facings removably and adjustably secured to the frames, wheels centrally journaled on the lower frame, and foldable supports on the lower frame adjacent to the ends thereof.

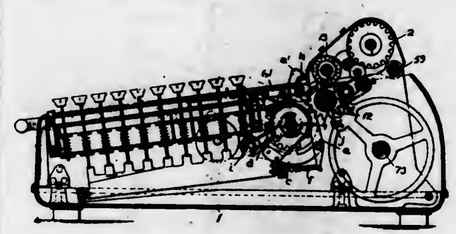
1,384,631. WEEDER. CARL GUSTAV PARSCHAUER, Beehive, Mont. Filed Dec. 30, 1919. Serial No. 348,318. 4 Claims. (Cl. 97—25.)

1. In a rotary rod weeder of the class described comprising a main axle, ground wheels journaled on the ends of said axle, draft means connected with the axle, intermediate and outer hangers depending from the axle and having ground cutting means at their lower ends, a sectional weeding bar journaled in the lower portion of said hangers, and mechanism housed within each outer hanger and operated from the ground wheels for transmitting power to each section of the weeding bar independent of the adjacent section.

1,384,632. KEY-LOCK FOR CALCULATING-MACHINES. EDGAR E. PHINNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Feb. 25, 1920. Serial No. 361,178. 6 Claims. (Cl. 235—130.)

1. In a key-set calculating machine, setting-up means including a series of keys, numeral wheels, drive mechanism for said wheels movable in either of two directions, and means operable by said drive mechanism in either direction of movement thereof for locking said keys in position.

2. In a key-set calculating machine, setting-up means including a plurality of series of keys, rock bars engaging the keys of each series, numeral wheels, drive mechanism for said wheels including a shaft rotatable in either of two directions, and means operated by said shaft in either direction of movement thereof for locking said keys in position, including a lock member common to all of said rock bars, a member fast on said shaft, and a lever intermediate of said members.

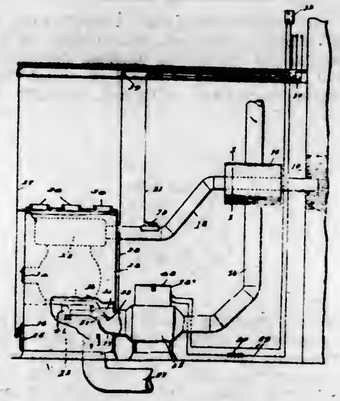


5. In a key-set calculating machine, setting-up means including a plurality of series of keys having stems provided with upper and lower notches, a rock bar for each series engaging normally the lower notches and adapted to engage the upper notches to retain the keys in position, numeral wheels, drive mechanism for said wheels including a shaft rotatable in either of two directions, and means operable by said shaft in either direction of movement thereof to engage said rock bars and lock said keys in position.

1,384,633. REVERSE-OPERATION CHECK FOR REGISTERS. EDGAR E. PHINNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Feb. 28, 1920. Serial No. 362,019. 6 Claims. (Cl. 235—129.)

1. Means for preventing reverse movement of a rotary member, comprising a rotary element, a pivotal locking device, frictionally operating means for moving said device into engagement with said element upon reverse movement of said member, and a stop limiting the pivotal movement of said device in one direction, said device being adapted for wedging engagement with said stop in assuming the engagement stated with said element.

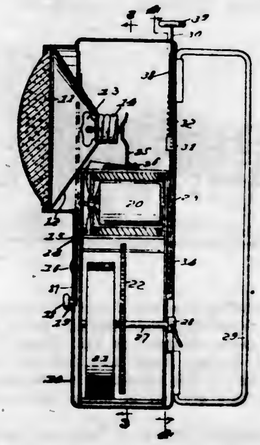
1,384,634. CARRIAGE-LOCK FOR CALCULATING-MACHINES. EDGAR E. PHINNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Feb. 7, 1920, Serial No. 356,882. Renewed May 12, 1921. Serial No. 468,978. 11 Claims. (Cl. 235—63.)



1. In a calculating machine, a frame, an endwise-shiftable carriage, registering dials thereon, gears upon said dials, driving gears mounted on said frame, means for operating said driving gears, and locking means preventing movement of the operating means whenever the gears of said dials are out of mesh with said driving gears.

2. In a calculating machine, a frame, an endwise-shiftable carriage, registering dials thereon, gears upon said dials, driving gears mounted on said frame, means for operating said driving gears, and means actuated by the operating means for shifting said carriage endwise to bring the gears of said dials into mesh with said driving gears.

1,384,635. HOT-AIR FURNACE. JONATHAN I. QUARMBY, EARL J. EWING, and SAMUEL R. EWING, Lansing, Mich. Filed Apr. 18, 1919. Serial No. 291,084. 2 Claims. (Cl. 126—99.)

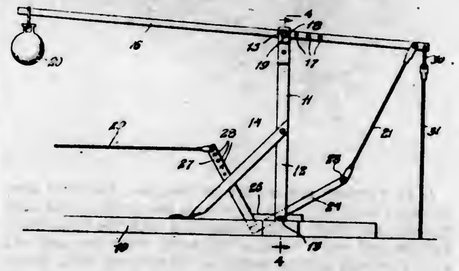


1. A hot air furnace of the class described comprising a smoke pipe leading therefrom, a heating drum mounted upon said smoke pipe, a cold air intake pipe passing through said drum, a drum connected with said intake pipe, a firebox contained within said furnace, a motor mounted within a casing to provide for drawing heated

air therefrom, and forcing same into the furnace, a shaft located within said chamber, a belt provided on said

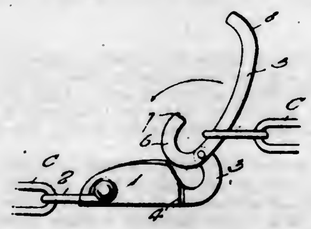
motor for driving said shaft, a fan mounted upon said shaft located within said drum, and a short pipe section mounted upon said shaft located within said drum.

1,384,636. FLASHLIGHT. ARTHUR C. SACHSE, Detroit, Mich. Filed Sept. 2, 1920. Serial No. 407,730. 4 Claims. (Cl. 240—8.5.)



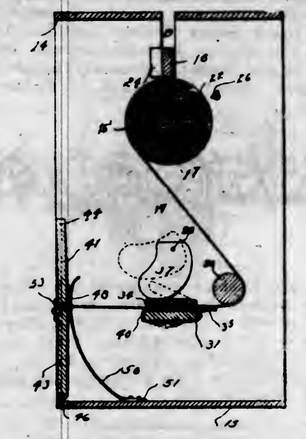
1. A flash light having a lamp and magneto generator, actuating spring for the generator, a train of gearing operatively connecting the spring with the generator, and a controlling device having a stem provided with a rack for engaging the gear element of said train to impart initial movement to the same in the direction of operative rotation, the rack being subsequently disengaged from said gear element.

1,384,637. UNSATURATED ETHER OF ETHENYL-PARADIOXYDIPHENYLAMIDIN. JOSEF SCHULER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Mar. 9, 1921. Serial No. 450,928. 1 Claim. (Cl. 23—24.)



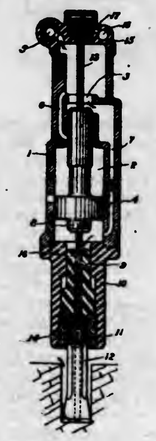
As a new product, the herein described ethenyl-p-dialloxydiphenylamidin, being a local anesthetic particularly adapted for ophthalmological practice and constituting colorless crystals melting at 85 to 86° C., very readily soluble in alcohol and ether and insoluble in water and forming a hydrochlorid melting at 152 to 153° C., which dissolves easily in alcohol, is less soluble in water and is insoluble in ether.

1,384,638. PUMPING-JACK. HENRY T. SCOTT, Wichita Falls, Tex. Filed Aug. 18, 1919. Serial No. 318,377. 1 Claim. (Cl. 74—5.)



In a pumping jack, a base, a frame secured thereto and arising therefrom, said frame including spaced legs, brace members between the legs and base, spaced ears on the outer end of the frame, a walking beam having spaced openings therethrough disposed nearer one end thereof than the other, a pivot member passing through the ears and through one of the said openings, a counter-balancing weight on the walking beam at the end thereof farthest from the pivot, a link pivotally secured to the walking beam adjacent to the opposite end thereof, a saddle casting having a lateral axle connected to the link, bearings on the base for said axle contacting with the arms of the frame, an angle arm secured to the free end of the saddle casting, said arm having spaced transverse openings therethrough designed to receive in any one thereof a shackle rod or cable which is connected to the operating engine for the jack, a link on the end of the walking beam outward of the first mentioned link, a rod connected therewith, said rod being connected with the sucker rod of a pump.

1,384,639. TIRE-CHAIN RETAINER. GEORGE E. SELLERS, Palouse, Wash. Filed Nov. 11, 1920. Serial No. 423,375. 2 Claims. (Cl. 24—69.)

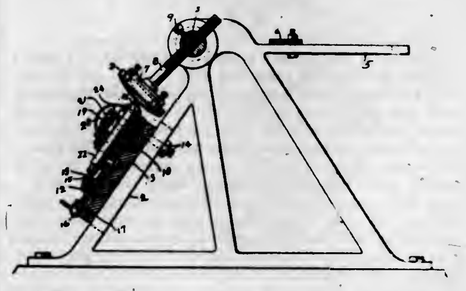


2. The structure set forth in claim 1, said plate being relatively wide at one end and comparatively narrow at its opposite end, the lower edge thereof being straight and the upper edge being curved longitudinally from the wide end to the narrow end, and said latch arm being curved longitudinally to conform and fit snugly against the correspondingly curved upper edge of the plate, the free end of said arm being more abruptly curved and extending around the first named end of the plate to the lower edge of the latter, thereby being guarded against accidental opening when struck by obstacles.

1,384,640. PAPER-DISPENSING DEVICE. ALBERT SIMPSON, Falun, Alberta, Canada. Filed Oct. 1, 1920. Serial No. 414,079. 8 Claims. (Cl. 211—32.)

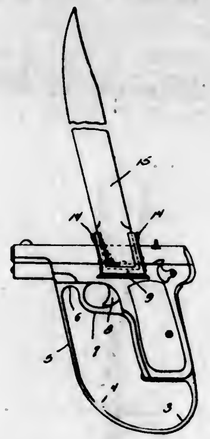
1. A paper dispensing device comprising a casing, a paper support arranged within the casing, a fixed tension strip in the casing, a second tension strip above said fixed strip, connections between said strips whereby the second strip will be supported above and normally parallel with the fixed strip and may be moved toward and from the fixed strip, arms pivoted in the casing above the second-mentioned tension strip to bear upon the same and hold it upon paper passing over the fixed tension strip, and means in advance of the tension strips to permit withdrawal of a portion of the paper and sever the withdrawn portion.

1,384,641. BLOWING DEVICE FOR PERCUSSIVE TOOLS. WILLIAM A. SMITH, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 5, 1918. Serial No. 265,401. 4 Claims. (Cl. 121—10.)



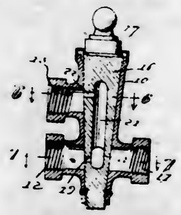
1. In a blowing device for percussive drills, a cylinder, a front head, an anvil block provided with a longitudinal hole within said front head, a rod extending through said cylinder and anvil block and reduced in cross section near its forward end so that when the drill cylinder is moved back, permitting said anvil block to move forward relatively thereto, communication is opened directly from the forward end of the drill cylinder through the anvil block to the hole in the drill steel.

1,384,642. CAN-OPENER. JONATHAN R. SPENCER, Long Beach, Calif., assignor of one-half to Frank W. Smith, Los Angeles, Calif. Filed Apr. 11, 1917. Serial No. 161,203. 1 Claim. (Cl. 30—3.)



A can opener comprising a handle constructed from a single length of material bent upon itself to form converging side members terminating in parallel portions, said parallel portions having their ends bent at right angles in opposite directions to form ears, each ear having a corresponding straight edge and an arcuate shaped edge, a shank secured between the parallel portions and having one end thereof projecting slightly beyond the ears, a curved blade formed on a side portion of said end of the shank and leaving one corner of the end of the shank exposed to form a biting edge, said blade having substantially plano-convex side faces to form curved cutting edges extending in corresponding directions and one being of an increased curve over the other.

1,384,643. MACHINE FOR TRUING LENS-GRINDING DISKS. GEORGE A. SQUIER, Cleveland, Ohio. Filed Oct. 1, 1917. Serial No. 194,141. 9 Claims. (Cl. 82—12.)

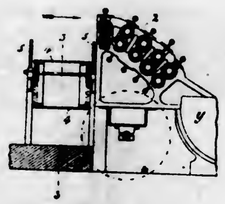


1. In a machine as described, a cutting tool and a holder for stock to be cut, and a constantly rotating shaft having a transverse opening and one of said parts being provided with a stem extending through said opening and adjustably fixed therein, and the other of said parts being also mounted for adjustment toward or away from said shaft and movable in an arc having the axis of the shaft as a chord thereof.

1,384,644. SWORD-HILT PISTOL. FRANK STULLER, Rivesville, W. Va. Filed Oct. 11, 1920. Serial No. 415,966. 2 Claims. (Cl. 42—53.)

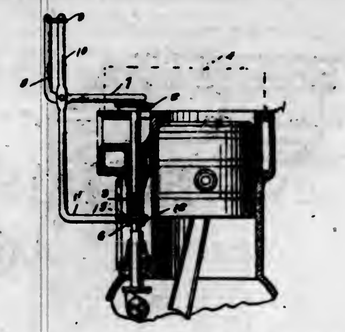
2. A pistol having a guard formed between the outer and lower corner of its grip and its barrel, an outwardly projecting upwardly disposed angularly arranged socket upon the barrel of the pistol, spring influenced lugs entering the sides of the socket, and the springs for said lugs having their outer ends rounded to provide finger grips, and said socket designed to receive therein the end of a sword blade which is formed with notches to be engaged by the spring pressed lugs.

1,384,645. HOUSE-SERVICE VALVE. TIMOTHY J. SULLIVAN, Warmsprings, Mont. Filed June 9, 1920. Serial No. 387,661. 1 Claim. (Cl. 251—94.)



A valve for the purpose indicated consisting of a casing provided adjacent its lower end with an inlet and diametrically opposite said inlet with an outlet for connection to a cold water service pipe, the casing being provided above the outlet with an opening identical to the same and designed for connection to a hot water service pipe, a valve plug mounted in the casing and having a transversely cored passage, the casing being provided with a vent with which said passage may be brought into registration, the plug being formed with a drain port communicating with said passage and being further formed with a longitudinal channel and with a drain port opening into said channel adjacent the upper end, and means for imparting angular or turning movement to the plug whereby when the cored passage is in registration with the vent in the casing, the two aforesaid drain ports are respectively in registration with the hot and cold water service outlets, the turning of the plug shifting the cored passage out of registration with said vent and into registration with the inlet opening of the casing and with the cold water service outlet when the drain ports are moved out of registration with said casing outlets.

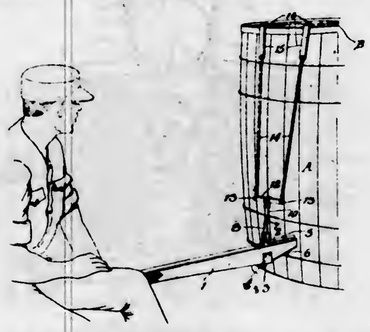
1,384,646. PLATE-FEEDING APPARATUS. HUBERT SPENCE THOMAS, Llandaff, and WILLIAM ROBERT DAVIES, Whitchurch, near Cardiff, Wales, and RICHARD BEAUMONT THOMAS, deceased, Englefield Green, England, by Nora Constance Beaumont Thomas, Englefield Green, England, Henry Robert William Anderson, London, England, and Charles Bathurst, Lydney, England, executors of said Richard Beaumont Thomas. Filed Aug. 6, 1917. Serial No. 184,768. 2 Claims. (Cl. 271—28.)



1. In a tinning machine or apparatus, a series of yieldable cup-like suckers carried by arms on a rocking shaft, in combination with a series of pivoted yieldingly supported tables to contain piles of plates, said suckers being capable of accommodating themselves to the varying heights and inclinations of the surfaces of the uppermost plates in the respective piles.

1,384,647. APPARATUS FOR CLEANING AND POLISHING METAL-COATED PLATES. HUBERT SPENCE THOMAS, Llandaff, and WILLIAM ROBERT DAVIES, Whitchurch, near Cardiff, Wales, and RICHARD BEAUMONT THOMAS, deceased, Englefield Green, England, by Nora Constance Beaumont Thomas, Englefield Green, England, Henry Robert William Anderson, London, England, and Charles Bathurst, Lydney, England, executors of said Richard Beaumont Thomas. Original application filed Aug. 6, 1917, Serial No. 184,768. Divided and this application filed May 13, 1918. Serial No. 234,303. 1 Claim. (Cl. 51—23.)

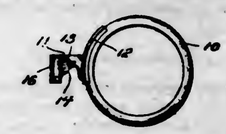
In a tinning machine or apparatus, a dusting and cleaning appliance adapted to be placed at the rear end of the machine, said appliance being of a width proper to receive and treat a series of plates or sheets abreast or side-by-side, an endless traveling conveyer at the rear of the said dusting and cleaning appliance, said conveyer being of a length proper to receive the series of plates or sheets as they emerge from and fall clear of the rolls of the wide dusting and cleaning appliance, means for moving the traveling conveyer at such a rate of speed that the series of plates or sheets simultaneously received by the conveyer is removed from the path of the plates or sheets which will next be delivered thereon and is carried to a second or additional dusting and cleaning appliance in a single series, the rolls of the second or additional dusting and cleaning appliance being arranged at such an angle to the wide rolls of the first mentioned dusting and cleaning appliance that the plates or sheets are acted upon by the rolls of the second or supplementary dusting and cleaning appliance in a direction different from that effected by the rolls of the first mentioned dusting and cleaning appliance, the plate or sheets as they leave the second or supplementary dusting and cleaning appliance being collected into a single pile



1,384,648. VALVE-SPRING LIFTER. EARL E. TIBBETS, Hebron, Nebr. Filed July 22, 1919. Serial No. 312,491. 1 Claim. (Cl. 29—86.8.)

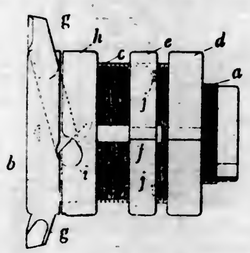
A valve spring lifter comprising a horizontally disposed arm adapted to rest on the head of a valve, an outwardly and upwardly inclined handle formed on said arm, a second handle of a greater length than the first handle pivoted to the arm adjacent its formation onto the first handle, said second handle terminating in a plane substantially with the free end of the first handle, a second horizontal arm formed on the lower end of the second handle and extending at right angles to the second handle and in a plane below the first arm, an enlarged portion formed on the end of the second arm and having a slot opening outwardly through one edge thereof and having a concaved recess in its upper face, and a ring pivoted to the first handle and adapted to engage over the second handle when said handles are moved in parallelism.

1,384,649. [WITHDRAWN.]



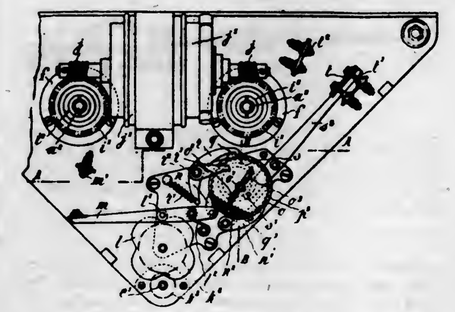
1,384,650. TOOL FOR HEADING HOGSHEADS. ROMMIE PUREFOY WATSON, Wilson, N. C. Filed Aug. 10, 1920. Serial No. 402,539. 2 Claims. (Cl. 147—7.)

1. A barrel-header comprising a lever, having a pointed prong at one end, a link pivoted to the lever and spaced from the point carrying end, an equalizing bar pivoted to the link, and hook members for engaging a barrel head pivotally connected to the equalizing bar by flexible members.



1,384,651. STRING-CUTTER. OTTO WEDMAN, Tacoma, Wash. Filed Jan. 3, 1920. Serial No. 349,233. 1 Claim. (Cl. 30—14.)

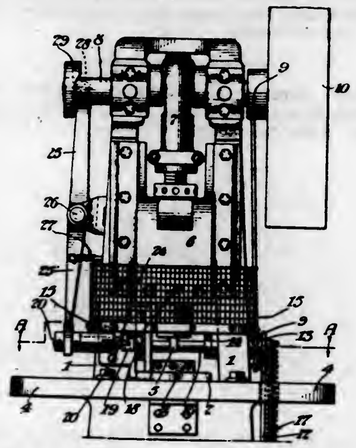
A cord cutter embodying a ring, a cutting member made from a single piece of material and comprising a base shaped to conform to the periphery of the ring and secured to said ring, an arm extending from one side edge of the base and disposed radially of the ring, said arm having its flat face substantially flush with one edge of



the ring and its outer end bent over and extending inward to form a curved guide and a cutting edge formed on one side edge of the arm between the ring and guide, said edge being defined by a plane parallel to the plane defined by the edge of the ring.

1,384,652. BORING AND OTHER CUTTING TOOL. GEORGE WILLIAMSON, Oldham, England. Filed Feb. 21, 1921. Serial No. 446,857. 6 Claims. (Cl. 77—58.)

1. In a tool of the type described, a body member, a member mounted for movement thereon, said body and movable members having normally alined cutter receiving portions, means mounted on the movable member for effecting adjustment of the cutter, and means for moving the movable member with respect to the body member to clamp the cutter in adjusted position, and also acting to prevent displacement of the cutter adjusting means.



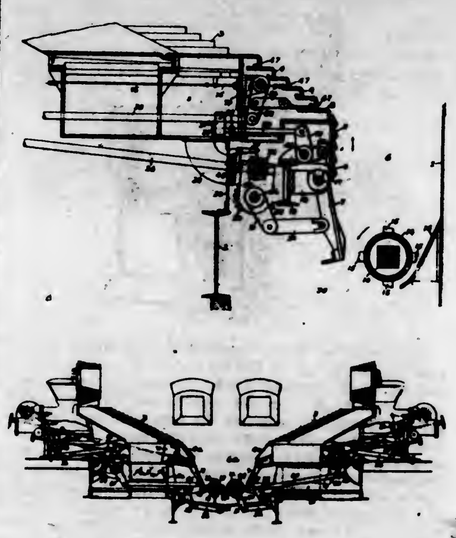
1,384,653. AUTOMATIC INDICATING APPARATUS. JOSEPH ANDRÉ ZAHAR and ERNÉ ALFRED LAURENT VOLET, Paris, France. Filed Dec. 24, 1917. Serial No. 208,618. 7 Claims. (Cl. 40—53.)

1. An automatic indicating apparatus comprising, in combination, a flexible band, a pair of rollers coöperating with said band, an electric motor, transmission mechanism between said motor and each of said rollers and adapted to actuate said rollers to cause travel of said band in

opposite directions respectively, each of said transmission mechanisms including a normally engaged clutch, and electromagnetic means for alternatively disengaging said clutches, said electromagnetic means causing the transmission mechanism of the disengaged clutch to act as a brake upon the corresponding roller to maintain a tension upon said band.

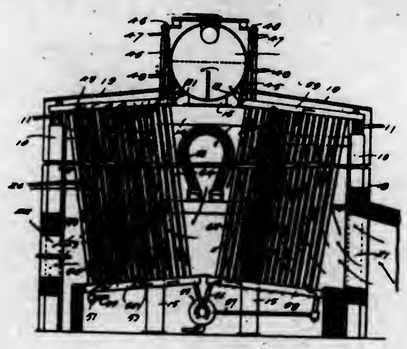
1,384,654. SAFETY DEVICE FOR STAMPING-PRESSES AND THE LIKE. FRANK ALLEY, West Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 4, 1921. Serial No. 434,978. 6 Claims. (Cl. 74—105.)

1. A safety device for stamping presses and the like, comprising a movable safety shield in combination with a movable latch to lock the shield in safety position and independent means adapted to be continuously controlled by a power-operated part of the press mechanism for operating said latch.



1,384,655. WRENCH. JOSEPH G. ALLMON, West Medford, Mass. Filed Aug. 10, 1920. Serial No. 402,561. 8 Claims. (Cl. 81—119.)

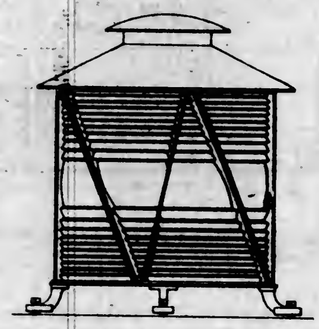
8. An inclosed, rigid jaw wrench, having nut engaging surfaces parallel with the axis of the wrench, an under face oblique to said axis, a perforated stop web opposite said under face, and a handle extending substantially at right angles to the axis.



1,384,656. STOKER. MAXWELL ALPERN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1915. Serial No. 62,206. 16 Claims. (Cl. 110—44.)

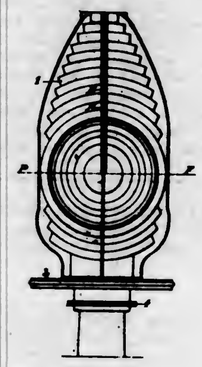
10. The combination in a stoker having a transversely extending ash pocket; of means for discharging ashes from said pocket; plates movable toward and from said means to vary the size of the ash discharge opening; means for operating said plates; a substantially air tight casing surrounding certain of said parts adjacent

the air pocket and communicating with the stoker furnace; and means for discharging air under pressure to said casing.



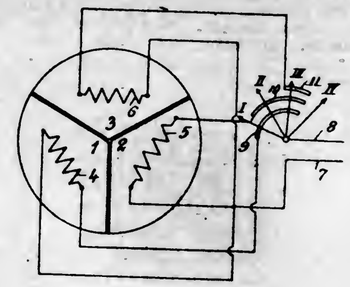
1,384,657. BOILER CONSTRUCTION. GEORGE C. BAKER, Bayonne, N. J. Filed Oct. 1, 1919. Serial No. 327,684. 3 Claims. (Cl. 122—332.)

1. A boiler including a frame structure, a drum carried by the frame structure, vertically extending water tubes positioned in the frame upon opposite sides of the drum and arranged in front and rear sets, lower water heads communicating with the tubes and arranged in front and rear sets, conduit means communicating with the lower water heads for delivering water from the rear sets of water heads to the forward sets of water heads and provided with outlet means for withdrawal of water from the boiler, upper water heads communicating with the tubes and arranged in front and rear sets, and conduits communicating with the upper water heads and with the



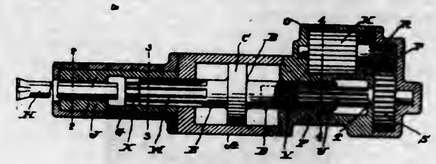
drum whereby water may pass from the upper front set of water heads to the drum and from the drum to the upper rear set of water heads of the rear tubes.

1,384,658. OCCULTING LIGHT. HENRI-LUGLIEN MARIE JOSEPH BÉNARD, Paris, France. Filed Apr. 3, 1919. Serial No. 287,836. 3 Claims. (Cl. 177—346.)



1. A light for signaling and other purposes, comprising a source of light, shutters adapted to obstruct or give passage to the beam, electro-magnetic means for moving said shutters in either direction, means for distributing current to said electro-magnetic device, and controlling means for said distributing device, said controlling means being changeable according to the signal to be transmitted.

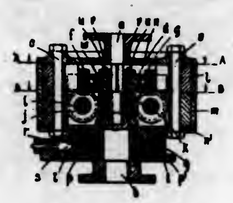
1,384,659. AERIAL SIGNAL-LIGHT. HENRI LUGLIEN MARIE JOSEPH BÉNARD, Paris, France. Filed May 23, 1919. Serial No. 299,104. 4 Claims. (Cl. 240—49.)



1. A signal light for use in aerial navigation, comprising in combination a source of light, an optical system for projecting the beam from said source, said optical system having a narrow central aperture extending from a horizontal plane passing through the light source to the zenith.

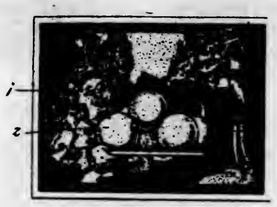
1,384,660. ELECTRIC HEATING-PLATE. MICHAEL GORRITZEN, Stavanger, Norway. Filed Nov. 10, 1920. Serial No. 423,067. 2 Claims. (Cl. 219—37.)

1. An electric heating plate comprising a plurality of sector shaped sections, an independent heating element in each section, and a switch for connecting one of more of said heating elements with a supply current.



1,384,661. ROTATION MEANS FOR PERCUSSIVE TOOLS. HENRI AUGUSTUS GUILEY, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,943. 1 Claim. (Cl. 121—7.)

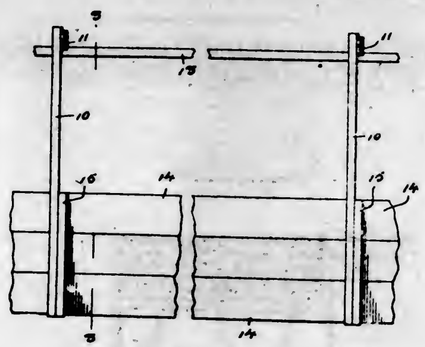
A fluid actuated rock drill of the hammer type having independent rotation for the drill bit and comprising a cylinder casing, a reciprocating hammer piston therein having a main head and a forwardly extending reduced shank, said shank being provided with straight longitudinally extending flutes, a front head for the cylinder casing, a rotation sleeve therein adapted to receive and hold a drill steel in sliding but non-rotatable engagement, the rotation sleeve having internal straight flutes cooperating with the flutes on the piston shank thereby affording slidable but relatively non-rotatable engagement between the rotation sleeve and the forwardly extending piston shank, a removable back cylinder extension for the cylinder casing, a driven spur gear carried by the back cylinder extension in axial alinement with the piston, a spindle for said spur gear having straight longitudinal flutes, a rearward portion of the piston also being provided with straight flutes coöperating with the flutes on the said spindle, thereby affording slidable but relatively non-rotatable engagement between the spindle and piston, a motor casing located at the side of the back cylinder extension, an independent rotary fluid actuated gear motor in said motor casing, one of the gears of said motor being geared to the driven gear for imparting continuous rotation thereto, whereby continuous rotation is imparted to the reciprocating piston both on the forward and on the rearward stroke and also continuously imparted to



the rotation sleeve and drill steel, the back cylinder extension having a back head inclosing the driven gear and also forming a back head for the motor casing.

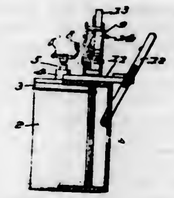
1,384,662. REDUCTION-GEAR. ERNEST CHARLES HATCHER, Finchley, London, and THOMAS ROOKE, Hampstead, London, England. Filed Jan. 20, 1921. Serial No. 438,699. 11 Claims. (Cl. 74—36.)

1. In a gear for transmitting motion from a driving shaft to a driven shaft, spindles mounted transversely to the shafts, each of said spindles carrying a worm wheel, gearing connecting the said spindles, a worm on the driving shaft in gear with the worm wheel on one of the said spindles, and a worm wheel on the driven shaft in gear with the worm on the other spindle.



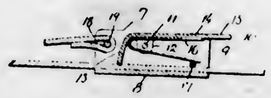
1,384,663. METHOD OF PRODUCING COLOR-PRINTS. JOSEPH A. IMHOF, New York, N. Y., assignor to Invisible Color Print Corporation, New York, N. Y., a Corporation of New York. Filed May 23, 1921. Serial No. 471,635. 5 Claims. (Cl. 41—20.)

1. The process of producing a design of apparently uniform color but carrying soluble coloring matter in substantially invisible form, which consists in applying a definite amount of coloring matter to the entire surface that is to be colored, by printing, from half-tone plates or the like supplied with a mixture of insoluble ink and soluble coloring matter, a plurality of partial images, in superimposed and partially overlapping relation, said partial images having incomplete components of light and shade and of latent color, the aggregate and overlapping of the partial images creating a complete image of apparently uniform color having requisite light and shade and proper latent coloring.



1,384,664. STEEL CLAMP. JONAS C. JACOBY, South Bethlehem, Pa. Filed Feb. 20, 1920. Serial No. 360,204. 2 Claims. (Cl. 25—131.)

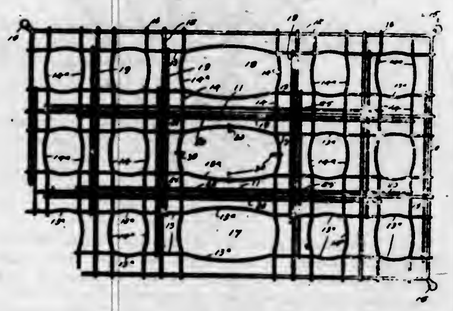
1. A concrete form comprising suspending U-shaped arms arranged in pairs, sectional side walls detachably secured thereto, links pivotally connected to the opposing sides of the said arms, a nut pivotally connecting the links



and a threaded rod engageable with the nuts to provide relative adjustment of the arms.

1,384,665. CHURN. FRED H. JONES, Zanesville, Ohio. Filed Nov. 27, 1918. Serial No. 264,386. 1 Claim. (Cl. 185—37.)

A device for the purpose indicated comprising a supporting member, a driving element, a gear carried by the driving element, a spring motor carrying a gear for meshing with the last said gear, a base on which the motor is carried, slides mounted on top of the supporting member and engaging the base to permit sliding movement of the latter, and a hand lever secured to the supporting member by a pivotal connection at one end of the lever, the lever having an operative connection with the base whereby swinging movement of the lever may impart sliding movement of the base to shift the gear on the motor into and out of mesh with the gear on the driving element.

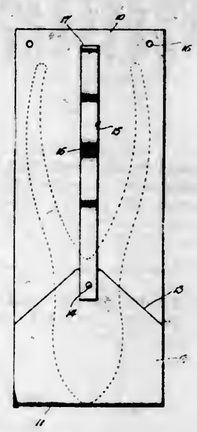


1,384,666. CATCH DEVICE FOR ADJUSTING STRAPS FOR LENGTH. JAMES H. LAMONT, Coatesville, Pa. Filed Dec. 21, 1920. Serial No. 432,199. 1 Claim. (Cl. 24—191.)

An open-ended box-form device for adjusting a strap for length, consisting of a sheet-metal body having a bottom and lateral flanges extending the full length thereof, a lever fulcrumed between said flanges and having an inturned arm extending toward said bottom and adapted in coöperation therewith for frictional engagement with a strap, a transverse strap-confining pin connecting said

flanges at one end portion of said body and spaced apart from said bottom, and a transverse strap-engaging pin connecting said flanges near the other end portion of said body adjacent to said inturned arm, said lever forming one side of said device and being protected throughout the major portion of its length by said flanges, and a spring located between said flanges and bearing at one end against said lever and at the other end against said first named pin.

1,384,667. SELF-DISCHARGING TRAY. HARRY LEE, Livingston, Mont. Filed Apr. 9, 1920. Serial No. 372,520. 7 Claims. (Cl. 294—87.)

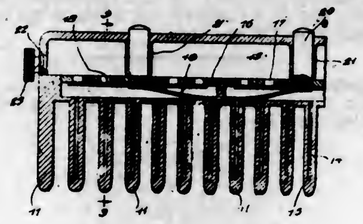


1. A serving tray having a main or supporting frame, pairs of clamping rods arranged in intersecting relation, the members of each pair being movable toward and from each other in a direction at right angles to that of the intersecting pair, and means for actuating said clamping rods.

1,384,668. VALVE. THOMAS D. LEWIS, Scranton, Pa. Filed Jan. 9, 1920. Serial No. 350,321. 6 Claims. (Cl. 162—1.)

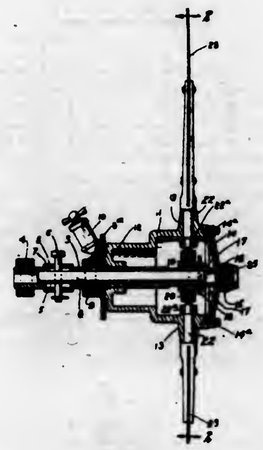
1. The combination of a main valve body having a chamber in its outer end and a ribbed portion at its inner end and also having a longitudinal central bore or socket in the ribbed portion and pairs of opposite apertures in walls of the ribbed portion, one pair of apertures being nearer than the other pair of apertures to the inner end of the ribbed portion; a priming valve body having a stem dispersed in said bore or socket and also having a longitudinal diametrically disposed slot in said stem; a pin removably secured in one pair of apertures in the ribbed portion of the main body and extending through the slot in the stem of the priming valve body; a gland closing the chamber in the outer end of the main valve body; a stem movable through said gland and having a circumferentially grooved inner end portion in the chamber; and collar sections embracing the stem and disposed in said chamber and having interior ribs seated in the circumferential groove of the stem.

1,384,669. TOOL-HOLDER. LUDWIG D. LUTTMER, Wylie, Minn. Filed May 24, 1920. Serial No. 383,860. 1 Claim. (Cl. 2—151.)



A tool holder comprising an elongated rectangular metallic plate formed at one end with an upwardly extending retaining portion disposed in spaced parallel relation to the plate, said plate being adapted for disposition within the user's pocket and being provided with holes for the passage of securing means, and an upwardly extending leaf spring disposed longitudinally of the plate and having its lower end secured to the upper end of said retaining portion and being bent intermediate its ends whereby to engage against the plate with its upper extremity bent away from the plate to define a flaring entrance opening between the plate and the spring.

1,384,670. FAUCET. ARTURO MÚNDEZ Y BARRIÉ, Habana, Cuba. Filed July 13, 1920. Serial No. 395,956. 1 Claim. (Cl. 251—46.)

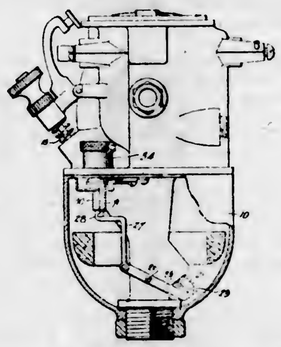


A faucet, comprising a body portion; a partition therein having a valve seat; a hollow valve coöperating with said seat and having a hemispherical socket formed in the upper face of its bottom wall; the upper wall of the valve being provided with a threaded opening; and an operating element for said valve having a reduced lower portion, one part of which is threaded, the diameter of such threaded part being equal to that of the threaded opening to permit said threaded portion to be screwed through said opening into the interior of the valve; the terminal of said reduced portion being rounded for coaction with said socket to permit a universal rocking movement of the valve relative to its operating element.

1,384,671. COMB. CHARLES MURRAY, Tuguegarao, Philippine Islands. Filed Aug. 17, 1920. Serial No. 404,135. 1 Claim. (Cl. 132—13.)

A comb having a hollow back to provide a reservoir, hollow teeth communicating with said reservoir and defining distributing tubes, a perforated partition located within the reservoir and a plunger operating within the reservoir to cover the perforations and to force the contents of the reservoir through the tubes.

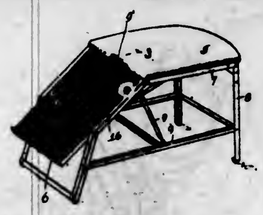
1,384,672. REVERSIBLE FAN. RAY M. MURRAY, Billings, Mont. Filed Mar. 15, 1919. Serial No. 282,830. 2 Claims. (Cl. 170—163.)



1. A device of the character described, comprising a bracket, a stationary tubular shaft carried thereby and provided with pairs of opposed slots near opposite ends thereof, a pin extending through one pair of said slots, a stationary shaft located within said tubular shaft and movable bodily in the direction of the length thereof, another pin carried by said last mentioned shaft and extending through the other pair of slots, a grooved wheel mounted on the first named shaft over the last named slots and receiving the second named pin therethrough, a revoluble casing on said tubular shaft and inclosing a portion of the same and said grooved wheel and second named pin, a blade carried by said revoluble casing, and adjustable angularly in relation thereto, and mechanism connected with said blade and with said grooved wheel for enabling axial adjustment of said wheels to adjust the pitch of the blade.

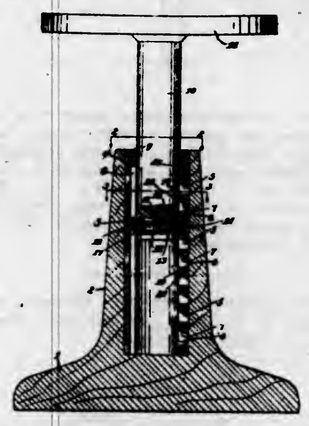
1,384,673. SWIMMING-GLOVE. SKJOLD J. NIELSEN, St. Paul, Minn. Filed Dec. 11, 1920. Serial No. 429,971. 4 Claims. (Cl. 9—21.)

1. In a swimming glove, a body having a wrist portion, finger stalls thereon, webs between the finger stalls, said finger stalls having overlapping edges, the edges of said webs being inserted between and attached to the overlapping edges of the finger stalls, and a substantially crescent shaped pocket forming member attached to the palm of said glove with its concave portion opened out toward the wrist portion of the glove.



1,384,674. CARBURETER-LOCK. CHARLES EDGAR NORTHROP, Dayton, Ohio. Filed Sept. 19, 1919. Serial No. 324,968. 7 Claims. (Cl. 251—6.)

1. A carbureter lock, comprising a closing member that is adapted to be mounted on the valve seat tube of the needle valve of a carbureter to close the said valve seat tube, an actuating element that is adapted to actuate the said closing element, and a key controlled means for operating the said actuating member and locking it in position.

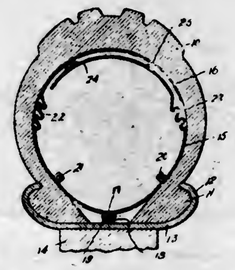


1,384,675. STOOL. FRANCIS PAUL RILEY, New York, N. Y., assignor of one-half to Edward J. Zitsman, New York, N. Y. Filed Oct. 9, 1920. Serial No. 415,749. 2 Claims. (Cl. 155—35.)

1. A device of the character described comprising a framework, a seat supported thereby, a foot board pivotally mounted in the framework and provided on one of its sides with a foot rest and on its other side with a mirror, means carried by the framework for securing the foot

board in one position, and means for operating said foot-board-securing means to release the foot board to permit of its automatically swinging to the other position.

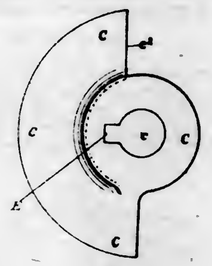
1,384,676. ADJUSTABLE STAND. ALBERT V. RUFLE, Canton, Ohio. Filed Dec. 2, 1920. Serial No. 427,898. 3 Claims. (Cl. 248—41.)



1. A stand comprising a base, a hollow column mounted thereon, a vertical row of notches within the interior of said column, the diametrically opposite side of the column being provided with a vertical groove, a stem slidably mounted within said hollow column and provided with a top, a block upon said stem extending into said groove and a spring pressed pawl carried by said stem and arranged to selectively engage said notches.

1,384,677. PROCESS FOR THE TREATMENT OF VEGETABLE FIBERS. CHARLES SCHWARTZ, Villeurbanne, France, assignor to Societe Gillet & Fils, Lyon, Rhône, France, a Corporation of France. Filed Dec. 9, 1919. Serial No. 343,578. 2 Claims. (Cl. 8—20.)

1. A process for the treatment of vegetable fibers with a view to impart to them the character of wool, both physically, as to feel, appearance and caloric quality, and chemically, as regards their affinity and absorbent capacity for dyestuffs, said process comprising treating the vegetable fiber at the ordinary temperature with concentrated nitric acid and removing the acid by washing.



1,384,678. RESILIENT TIRE. WILLIAM B. SHAW, New York, N. Y. Filed Aug. 18, 1920. Serial No. 404,422. 5 Claims. (Cl. 152—8.)

4. A filler tube adapted to be placed within a resilient tire casing, comprising a plurality of sections, each of which includes a pair of members connected at one edge and having the remaining edges overlapped, anti-friction means between said overlapped edges, folds formed in

each member for increasing the resiliency thereof, and means for connecting said sections together to provide a unitary structure.

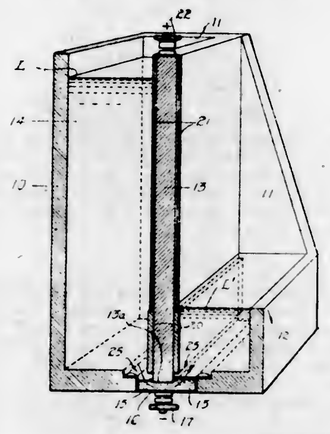
1,384,679. WORM-SCREW OF EXTRUSION AND LIKE PRESSES. ALBERT WILLIAM SIZER, Hessle, near Kingston-upon-Hull, England. Filed Nov. 6, 1920. Serial No. 422,332. 3 Claims. (Cl. 25—14.)

1. The combination, with a press screw, and its driving shaft; of a protecting cap for the front end of the screw, said cap comprising a hub plate which encircles the said shaft, and a spiral blade portion arranged at an angle to the said hub plate and fitting against the end of the thread of the screw.

1,384,680. MANUFACTURING FLAVORING EXTRACTS WITH HIGHER ALCOHOLS. BERNARD H. SMITH, Brooklyn, and JOHN R. EOFF, Jr., New York, N. Y., assignors to Garrett & Company, Inc., a Corporation of New York. Filed July 26, 1920. Serial No. 399,089. 11 Claims. (Cl. 99—11.)

1. A flavoring extract consisting of flavoring material dissolved in one of the higher alcohols, above ethyl, of the paraffin series.

1,384,681. MANUFACTURING FLAVORING EXTRACTS WITH GLYCOLS. BERNARD H. SMITH, Brooklyn, and JOHN R. EOFF, Jr., New York, N. Y., assignors to Garrett & Company, Inc., a Corporation of New York. Filed July 26, 1920. Serial No. 399,090. 10 Claims. (Cl. 99—11.)

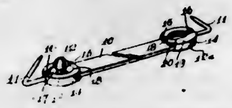


1. A flavoring extract consisting of a flavoring material dissolved in a glycol.

1,384,682. PADLOCK. FRANK SOLEY, Philadelphia, Pa., assignor to Miller Lock Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1921. Serial No. 457,189. 7 Claims. (Cl. 70—108.)

5. The combination in a padlock, of a casing having an opening extending therethrough; internal projections in the casing; a shackle having a long leg extending into an opening in the casing; two carrying plates, one on each side of the opening in the casing; a locking dog mounted on one pin and having a locking member engaging the shackle; a tumbler; a dog operating lever pivotally mounted on the other pin, both the tumbler and the lever having a notch to receive the locking member of the dog, the dog also having a projection extending over the operating lever so that when a key is inserted in the lock the operating lever will be forced against the projections and will withdraw the locking dog, said casing being recessed around the opening; a cover plate mounted in each recess and inclosing the carrying plates; and rivets retaining the cover plates in position.

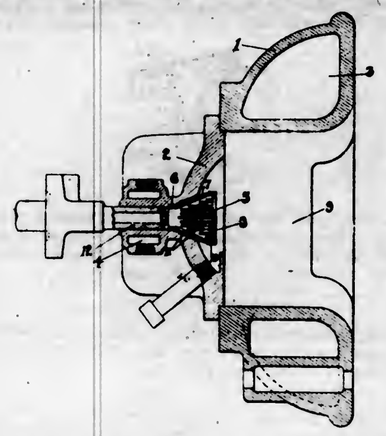
1,384,683. PROCESS FOR AMALGAMATING METALS. RANSOM H. STEVENS, Los Angeles, Calif., assignor of one-third to W. R. Crowell and one-third to L. C. Comer, Los Angeles, Calif. Filed Aug. 29, 1918. Serial No. 251,909. 3 Claims. (Cl. 83—65.)



1. The process of amalgamating metals which embodies passing a liquid-containing the metal to be amalgamated beneath a partition that extends below the level of a body of an amalgamating substance, the upper surface of the amalgamating substance being depressed beneath the partition by the weight of the body of liquid to form a passage through which the liquid flows in contact with the amalgamating material, and causing an electric current to flow through the liquid prior to and while it is in condition with the amalgamating substance.

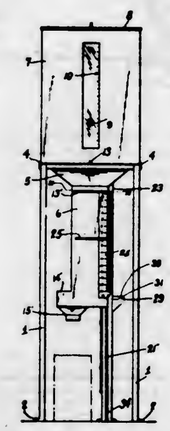
1,384,684. SPANNER-WRENCH. GUSTAVE HAROLD WATKINS, Jacksonville, Fla. Filed Jan. 8, 1921. Serial No. 435,843. 1 Claim. (Cl. 81—99.)

A spanner wrench comprising a handle with a slotted end, a curved jaw pivoted in said slot and having a hooked end, a pawl fitted to the handle provided with a hooked end engaging notches, or serrations, in the convex edge of said jaw, a spring fastened at one end of the handle allowing the free end of said spring to bear against the pawl, and means for limiting the throw of the pawl in one direction.



1,384,685. GARMENT-FASTENER. ERNEST J. F. WEIG, New York, N. Y. Filed Oct. 30, 1920. Serial No. 420,691. 3 Claims. (Cl. 24—73.)

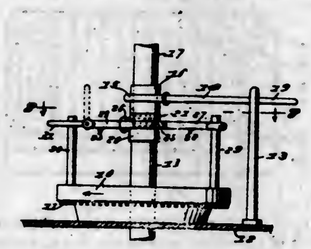
3. A device of the class described, including a strip of elastic fabric, hooks disposed toward each other, the shanks of said hooks having eyes positioned at the ends of the strip, ball and socket fastener elements disposed on said eyes, and base plates on which the ends of the strip are positioned, said base plates having flanges turned over and serving to clamp the ball and socket fastener elements and said eyes to said strip.



1,384,686. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. ADOLPH F. CHRISTMAS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 27, 1918. Serial No. 225,074. 3 Claims. (Cl. 123—30.)

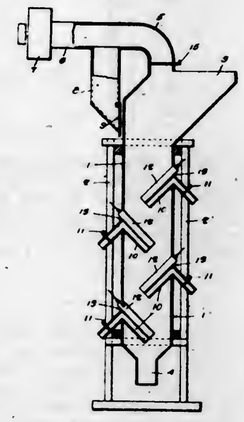
1. In a liquid fuel internal combustion engine, the combination with a cylinder having a combustion chamber, a vaporizer head for said cylinder, a vaporizer located within said head and adapted to absorb the heat of the explosion and impart said heat to the injected liquid fuel to convert the liquid into a vapor or gas, said vaporizer comprising a conical hollow body having a plurality of substantially parallel extensive internal surfaces with relatively small open spaces in order that the injected fuel may absorb sufficient heat in the vaporizer to become vaporized or gasified before entering the combustion chamber, said body portion increasing in diameter and volume of metal from inlet to outlet, lateral outlet

apertures from said vaporizer to the combustion chamber and a fuel nozzle opening into an end of the hollow body portion of said vaporizer.



1,384,687. DISPENSING-MACHINE. MARION E. CONKLING and ERNEST E. BUSHELL, Lawton, Okla. Filed June 11, 1920. Serial No. 388,255. 7 Claims. (Cl. 221—95.)

1. In a product dispensing apparatus, a bin having a slidable valve controlling the outlet thereof, a hopper below and removably associated with the bin and having a valve controlled inlet, a slidable product receiving member in the hopper, means for retaining the member at varying determined positions relative to the valve in the hopper, means for releasing said retaining means to permit the gravitating of the member through the hopper, means for limiting the movement of the member in such direction, and means for discharging the products from the member when the latter is in its lowered position.

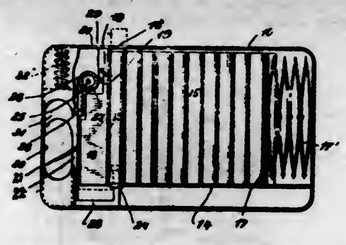


1,384,688. BACK-UP OR GO-AROUND TONG. HUGH CORRIGAN, Duncan, Okla. Filed Mar. 2, 1920. Serial No. 362,663. 3 Claims. (Cl. 255—23.)

1. An apparatus of the class described having in combination with means for holding one member of a coupling or union, a rotary head and a clamp carried by said head for engagement with the other coupling or union member and consisting of complemental lever members respectively of the first and third order with the inner

extremity of the former pivotally connected with an intermediate point of the latter and provided with opposed clamping jaws, said clamping members having terminals bearing upon the rotary head.

1,384,689. GRAIN DRIER AND COOLER. MONROE DAVIS, Enid, Okla., assignor of one-half to Armond R. Arceneaux, Welsh, La. Filed Mar. 25, 1920. Serial No. 368,575. 3 Claims. (Cl. 34—37.)



2. A device of the class described comprising a casing provided with a grain inlet at its top and a grain discharge at its bottom, a plurality of superimposed declining baffles arranged alternatively at opposite sides of said casing and consisting of right angular shaped air ducts secured at the junctions of their right angularly arranged portions to the walls of said casing and leading from the exterior thereof to the interior of the same, and electrically heated plates supported upon the innermost portions of said air ducts, and an air discharge at the top of said casing.

1,384,690. CIGARETTE-CASE. CHARLES DOMINICK, Bath, Me. Filed Apr. 8, 1920. Serial No. 372,252. 4 Claims. (Cl. 131—59.)

4. In a device of the class described, a container for the articles to be dispensed and having a discharge opening, a receptacle for fuel having a lighting orifice, an ejector coacting with the opening, a shaft carrying a fire producing medium and a pinion, a rack carried by

said ejector and engaging said pinion, means for moving the ejector in one direction, and a spring arranged to

return the ejector to initial position and to reverse the movement of the shaft carrying the fire producing medium and effect the ignition of the fuel at the orifice.

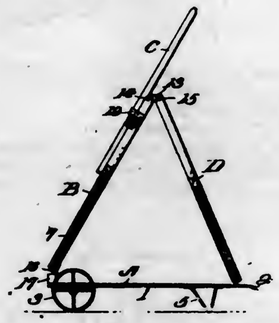
1,384,691. SAFETY-RAZOR. JOHN C. DUNHAM, Greenville, Ohio. Filed May 26, 1920. Serial No. 384,300. 2 Claims. (Cl. 30—12.)

1. In a safety razor, a blade holding head, a stem extending loosely through the head, a handle attached to the latter, a locking disk fixed to the stem having a plurality of notches, a pair of upstanding ears carried by the head, a latch pivoted between the ears and adapted for engagement in any one of the notches to hold the head in any desired position about its axis.

1,384,692. ADDITION COMPOUND FOR COFFEE. NATHANIEL C. EMTAGE, New Orleans, La., assignor to Cornelius J. Everett, New Orleans, La. Filed Aug. 18, 1919. Serial No. 318,370. 4 Claims. (Cl. 99—11.)

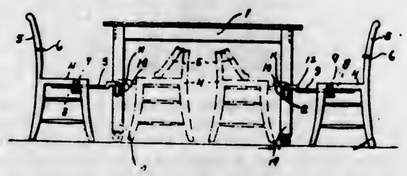
1. A method of producing a coffee addition or substitute for chicory for mixing with genuine coffee, consisting of boiling molasses to a massecuite consistency of a bitter sweet taste and reducing the same to a syrup by the addition of water and then reboiling the syrup, mixing a ground cereal and pure ground roasted coffee and adding the molasses syrup as preliminarily prepared thereto at the boiling point, placing the mass in covered means and permitting it to cook slowly by its own heat, then baking the mass in an oven and permitting it to cool off in the same oven, and finally grinding and packing the cooled mass.

4. The herein described coffee addition compounded to serve as a substitute for chicory and for mixture with pure roasted coffee, consisting of molasses massecuite having a bitter sweet taste 50%, corn meal 30%, and pure roasted coffee 20%.



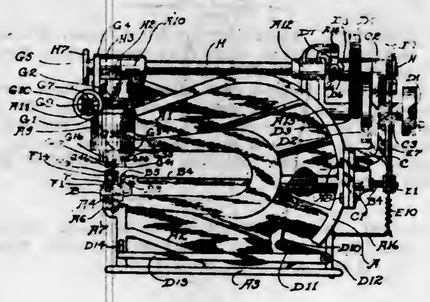
1,384,693. VEST-SUPPORTER. CLAYTON M. FLORKEY, Kokomo, Ind. Filed Jan. 10, 1921. Serial No. 436,185. 2 Claims. (Cl. 24—53.)

2. As a new article of manufacture a vest supporter formed of a single piece of sheet metal and comprising a main body, an attaching portion provided with thread receiving openings to permit attachment of the supporter to a vest, a collar button engaging portion, and a spacing portion connecting said collar button engaging portion



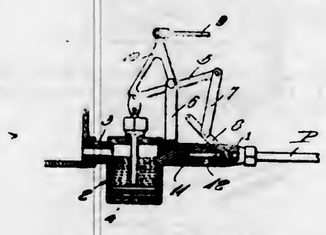
to the main body, said main body, spacing portion, collar button engaging portion provided with an opening to permit the mounting of the collar button engaging portion over the collar button.

1,384,694. WHEELED LADDER. EPHRIAM A. FOSTER Sandusky, Ohio. Filed Feb. 19, 1919. Serial No. 277,916. 1 Claim. (Cl. 228—16.)



A wheeled ladder including a base mounted on wheels at one end, a block upstanding at the wheel end of the base, a main ladder section hinged at one of the upper corners of the block, a prop hinged to the ladder section, the prop being of a thickness substantially corresponding to the height of the block whereby when the parts are folded together they will lie substantially parallel and in compact relation to one another.

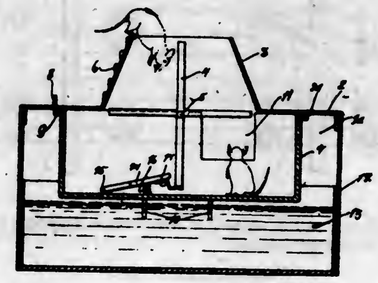
1,384,695. COMBINATION-TABLE. FRANK GILARSKI, South Chicago, Ill. Filed Sept. 22, 1920. Serial No. 411,975. 2 Claims. (Cl. 45—31.)



2. A device of the class described comprising a frame, legs supporting said frame, brackets on said legs, pins pivotally mounted in said brackets, rods extending integrally from said pins at right angles thereto, a longitudinal slot in each of said rods, a chair clamping means carried thereby operatively engaging with the mentioned slot, said rod being adapted to be swung about its bracket, means on said bracket for raising said rod when it approaches a position under said frame, said means comprising a lug extending upward from said bracket, and means permitting the back of the chair to be folded and pass under said frame.

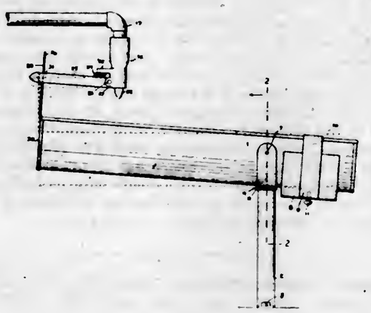
1,384,696. MACHINE FOR CUTTING SHEET-FORM MATERIAL. CHARLES BAXTER GRAY, Philadelphia, Pa. Filed Oct. 9, 1918, Serial No. 257,501. Renewed June 7, 1921. Serial No. 475,829. 48 Claims. (Cl. 164—87.)

1. In a machine for punching sheet-form material, a die located at one side of the sheet plane, a reciprocatory punch located at the other side of the sheet plane in alinement with the die, sheet feeding means located adjacent the die and at the same side of the sheet plane and adapted to bear against a sheet in the sheet plane in any part of a circle surrounding the die axis, automatic means for giving said part of the sheet feeding means a step-by-step movement for feeding said sheet, presser feed means at the opposite side of the sheet plane, and operator-controlled means for moving said presser feed means around the die axis independently of the part of the feeding means which is at the opposite side of the sheet plane, whereby the relation between the two parts of the feeding means is varied for changing the direction of movement of the sheet, substantially as described.



1,384,697. AUTOMOBILE-LOCKING DEVICE. JOSEPH H. HISSONG, Bartlesville, Okla. Filed Oct. 18, 1920. Serial No. 417,831. 9 Claims. (Cl. 251—6.)

1. In a device of the class described, the combination with a carbureter, of lock-controlled means for simultaneously cutting off the supply of fuel to the carbureter and also rendering the latter inoperative by withdrawing fuel therefrom.

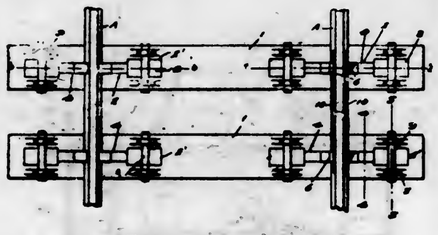


1,384,698. ANIMAL-TRAP. TOMASZ KALEMBA, Uniontown, Pa. Filed Jan. 17, 1921. Serial No. 437,766. 2 Claims. (Cl. 43—74.)

1. A device of the class described comprising an outer casing, a cover secured thereto, a substantially inverted-funnel-shaped entrance in said cover, a wheel rotatably mounted under said entrance, said wheel being composed of two intersecting planes providing four quadrantal sectors, a chamber releasably supported beneath said cover, said wheel being adapted to be rotated by the weight of

an animal thereon, and means for stopping said wheel after the same has been rotated one-fourth of a revolution.

1,384,699. POULTRY-WATERER. JOHN KRULL, Hayward, Calif. Filed Feb. 23, 1921. Serial No. 447,262. 6 Claims. (Cl. 119—81.)

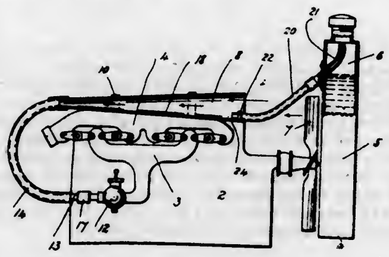


1. A poultry waterer embodying in its construction a standard, a bracket swiveled in said standard, a trough pivotally mounted on said bracket, a weight member adjustably supported upon the trough adjacent to one end thereof, a water supply pipe, a valve disposed adjacent the other end of the trough and connected with said water supply pipe and means of connection between said trough and valve operating to open said valve when the weight of the water in the trough is below a predetermined point and to close said valve when the weight of the water in the trough reaches said predetermined point.

1,384,700. COMBINED TIE AND BOLTLESS RAIL-JOINT. HERBERT O. MCGREGOR, Morgantown, W. Va. Filed Aug. 21, 1920. Serial No. 404,997. 3 Claims. (Cl. 238—181.)

3. A rail joint comprising a pair of fish plates having notches in their outer faces and holes in their inner faces, pins engaging said holes and holes in the webs of the rails, grooved plates under the rails, locking members consisting

of base portions and upwardly extending heads, said heads engaging the notches and the base portions engaging

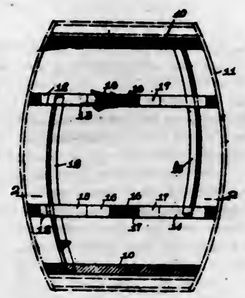


the grooves in the plate and means for locking the members in locking position.

1,384,701. SHOVEL-TOOTH. WILLIAM F. MCMONEGAL, Hazleton, Pa. Filed Nov. 4, 1918. Serial No. 261,142. 1 Claim. (Cl. 37—56.)

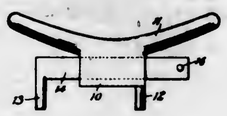
In a device of the class described, a shank portion provided with an enlarged head constituting a solid body to be interposed between the edge of the shovel and a tooth, the shank including a wedge-shaped projecting element, said head also having projecting elements extending transversely thereof at the base of the wedge and spaced from the tapered walls of the wedge, and a detachable and reversible tooth having a recessed portion therein and having projecting elements diverging with reference to each other and located on opposite sides of the recess, the ends of the projecting elements being chamfered, and the chamfered portions coöperating with the projecting elements at the base of the wedge and shank portions, the wedge shaped element of the shank and the projecting elements of the tooth constituting an interlocking joint beyond the aforesaid solid body of the head.

1,384,702. AIR-MOISTENER. JOSEPH FRANCIS MALONEY, Cleveland, Ohio. Filed Sept. 11, 1919. Serial No. 323,059. 1 Claim. (Cl. 123—25.)



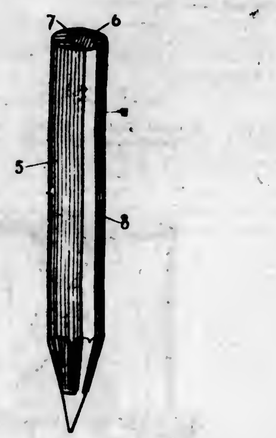
The combination, with an internal combustion engine provided with a fan, and a radiator arranged in front of the fan; of a tubular funnel adapted to receive a blast of air from the fan, said funnel having its lower side inclined downwardly and forwardly and provided with an inlet for hot air arising from the engine, a pipe for vapor communicating with the vapor space of the radiator, a fastening device securing the open rear end of the vapor pipe to the lower inclined side of the funnel at its front end so that condensed vapor may drip from the front end of the funnel, and a delivery pipe for moistened and heated air secured to the rear end of the funnel in line with its axis and operatively connected with the fuel intake of the engine.

1,384,703. LUBRICATING-OIL. JOSEPH FRANCIS MALONEY, Cleveland, Ohio. Filed Apr. 26, 1920. Serial No. 376,617. 1 Claim. (Cl. 87—9.)



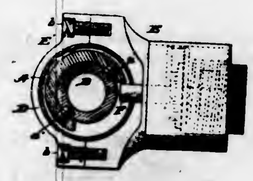
A lubricant, comprising the following ingredients mixed together in substantially the following proportions: 50 gallons of paraffin lubricating oil, 15 pounds of lubricating graphite, 1½ gallons of ether, 30 gallons of acetone, 5 gallons of turpentine, 15 gallons of kerosene, and 50 gallons of creosote.

1,384,704. BARREL-PROTECTOR. WILLIAM FRANCIS MEEK, Tampico, Mexico. Filed Oct. 19, 1920. Serial No. 417,949. 8 Claims. (Cl. 217—77.)



1. A protector for receptacles, adapted to be arranged within and extending throughout the entire length of the same, including in combination a pair of body bracing portions adapted to contact with the inner face of the receptacle, each of said bracing portions including a plurality of body portions, each comprising substantially one fourth of a complete circle, and means for connecting said bracing members one to the other.

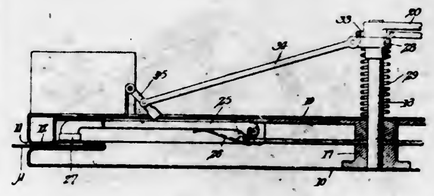
1,384,705. DECK-PLATE KEY. WILLIAM MEYER, Jamestown, R. I. Filed Aug. 9, 1920. Serial No. 402,141. 1 Claim. (Cl. 81—90.)



As a new article of manufacture, a key of the class described including a body having an opening extending therethrough horizontally from end to end, said body having at the top thereof opposite arms projecting from the ends thereof to constitute handle means for the bodily turning of the key, the body at the under side having a depending pin adjacent to one end, and a slide bar movable in said opening of the body and projecting beyond both ends of the latter, that end of the slide bar opposite to that end of the body having the pin presenting a depending pin, and means at the opposite end of said slide bar to prevent complete withdrawal of said bar from said body.

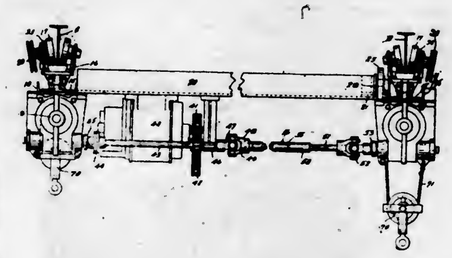
1,384,706. PENCIL. WALTER MEYNER, New York, N. Y. Filed June 5, 1920. Serial No. 386,858. 3 Claims. (Cl. 120—88.)

1. A self-luminous writing implement comprising a supporting body having a bore open at one side thereof and a core of self-luminous writing medium in said bore and exposed at the opening in the side of the supporting body.



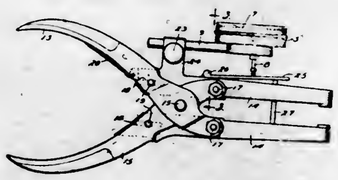
1,384,707. STEERING-POST-LOCKING MEANS. ARTHUR E. MILLER, Sacramento, Calif. Filed Sept. 4, 1919, Serial No. 321,710. Renewed Dec. 21, 1920. Serial No. 432,305. 5 Claims. (Cl. 70—90.)

2. In combination with the steering post of an automobile an apertured housing therefor and a lock having a bolt, a locking sleeve in the form of an incomplete circle adapted to be inserted through the aperture of said housing and having sufficient space between its ends to permit the sleeve to be laterally forced over and onto said post without removal of the post, said space being provided for the reception of the bolt of said lock.



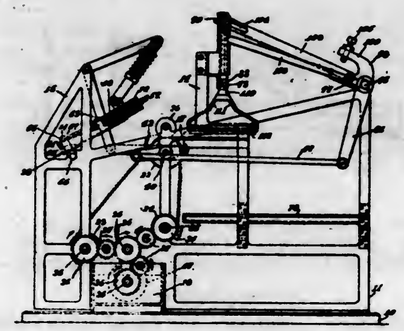
1,384,708. CHECK-PRINTING MACHINE. FRANK MONTROSS, Cleveland, Ohio. Filed Mar. 15, 1921. Serial No. 452,469. 2 Claims. (Cl. 101—94.)

1. A device of the character described comprising a supporting casing formed with slots, the check to be printed being insertible through said slots, a printing medium passing through said slots above the check, a disk rotatable with respect to the support and having an operating handle, a plurality of radially extending pivoted type bars carried by the disk and adapted to be brought



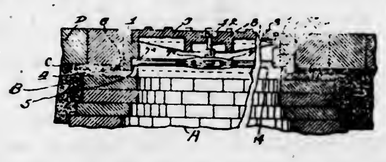
selectively over the proper location upon a check, and a lever operated means for forcing a selected type bar downwardly into engagement with the printing medium.

1,384,709. TROLLEY HOISTING MECHANISM. EDWARD Y. MOORE, Cleveland, Ohio. Filed Jan. 29, 1919. Serial No. 273,753. 41 Claims. (Cl. 212—133.)



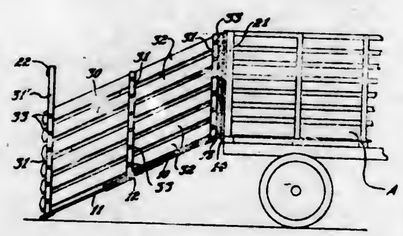
1. The combination of two trolley hoisting mechanisms having individual means for independently shifting them, and power mechanism common to both hoisting mechanisms and coupled therewith.

1,384,710. SHEET-COUNTER. ELGIN MORELL, New York, N. Y. Filed Dec. 11, 1919. Serial No. 343,990. 6 Claims. (Cl. 33—148.)



1. A sheet counter comprising a pair of relatively movable jaws, one of said jaws having an opening therethrough, a thrust pin fixed on the other jaw and operable through said opening upon movement of the jaws, an actuator plate pivoted on the first mentioned jaw and adapted to co-act with the thrust pin, a dial counter mounted on the first-mentioned jaw, and means carried by the dial counter adapted to co-act with the actuator plate for registering the relative separation of said jaws.

1,384,711. LABELING-MACHINE. ADOLF POLLATSEK, Brooklyn, N. Y. Filed Mar. 4, 1920. Serial No. 363,315. 26 Claims. (Cl. 216—54.)

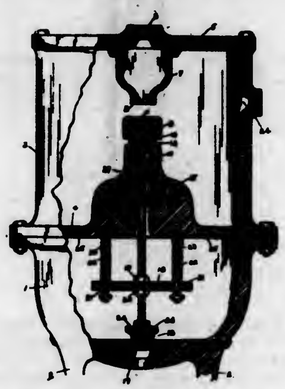


15. In combination, in a labeling machine of the character described, a paste applying belt having sprocket chains attached thereto; and sprocket means for engaging said chains for moving the belt.

1,384,712. MANHOLE. FRANCIS SHANLEY, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,327. 20 Claims. (Cl. 94—35.)

17. In a device of the class described, a support, a cover, and a curb resting on said support and supporting said cover, said curb having a symmetrical T-shaped cross section with a vertically disposed outer periphery.

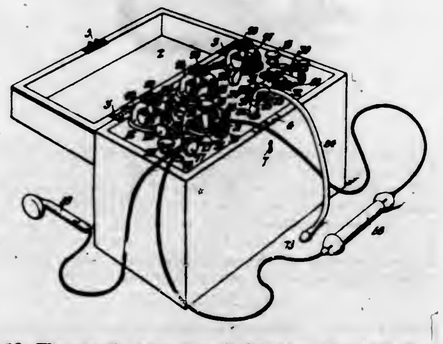
1,384,713. END-GATE AND CHUTE. JAMES CLAY STEPHENS, Bruceville, Ind. Filed Jan. 8, 1921. Serial No. 435,959. 6 Claims. (Cl. 296—61.)



1. The combination with a vehicle body, of an end gate including two sections pivotally connected together and normally disposed parallel, one of said sections being hingedly mounted upon the wagon body, the other of said sections projecting below the hinge and having a slot, and a resilient latch projecting from the wagon and passed through said slot to hold said sections parallel.

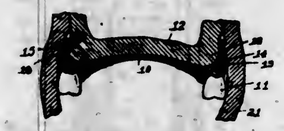
1,384,714. VALVE-PACKING GREASE. EDWIN C. WEISSMANN, U. S. Army. Filed Jan. 10, 1919. Serial No. 270,569. 1 Claim. (Cl. 87—9.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A valve packing grease comprising in approximately the proportions following:



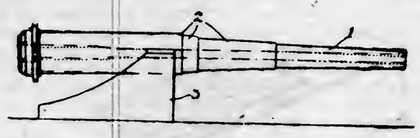
Tallow	25 lbs.
Soap	1 lb.
Beeswax	1 lb.
Neutral oil	1 gal.

1,384,715. STEAM-TRAP. HENRY WILLEMSTYN, Rochester, N. Y. Filed Sept. 23, 1920. Serial No. 412,329. 3 Claims. (Cl. 137—103.)



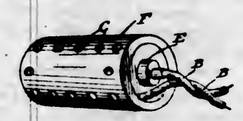
1. In a steam trap, the combinaton of a hollow base, a cylinder mounted on top of said base, an inlet and an outlet provided in said cylinder, a float valve mounted in said cylinder below said inlet, a valve stem operated by said float valve, a valve head carried on the end of said valve stem, a partition between said cylinder and said hollow base, said valve stem passing through said partition to operate said valve head in said hollow base.

1,384,716. ELECTRIC THERAPEUTIC APPARATUS. LOUIS FRANCIS BOGIA, Philadelphia, Pa. Filed July 15, 1920. Serial No. 396,519. 17 Claims. (Cl. 174—177.)



13. Therapeutic apparatus including a frame; a plurality of glass inclosures removably mounted on said frame; means arranged to produce an electric spark in one of said inclosures; means arranged to hold volatile material in another of said inclosures; an inhaler; and means arranged to direct air from said inclosures to said inhaler, including a mixing conduit common to a plurality of said inclosures.

1,384,717. FALSE-TEETH ATTACHMENT. BENJAMIN BLIEBERG, New York, and WILLIAM SHERFF, Brooklyn, N. Y. Filed Aug. 24, 1920. Serial No. 405,569. 2 Claims. (Cl. 32—4.)

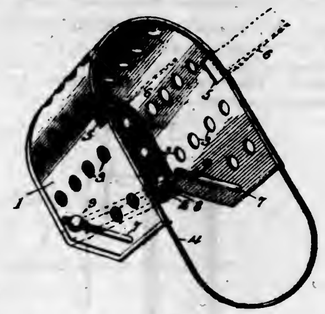


1. In a device of the character described, the combination with a dental plate, of means carried thereby for maintaining the plate in position in the mouth of the wearer, comprising elements hinged to the opposite sides of said plate and means for normally effecting the movement of said elements toward each other to cause the same to engage and grip the gums.

1,384,718. GUN-TUBE AND METHOD OF MANUFACTURING SAME. ALBERT E. GUY, U. S. Army. Filed Sept. 2, 1919. Serial No. 321,225. 4 Claims. (Cl. 29—1.11.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

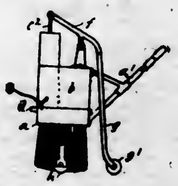
1. The method of manufacturing a gun tube, consisting of forming a tube on a true line, springing a tube out of a true line and boring and rifling.

1,384,719. ELECTRIC WATER-HEATER. CLARENCE C. HERBERT, Lincoln, Nebr. Filed Aug. 8, 1919. Serial No. 316,277. 1 Claim. (Cl. 219—40.)



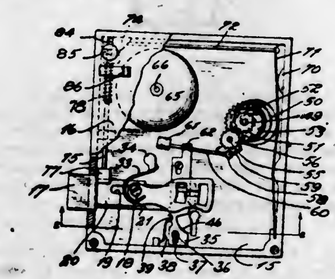
An electric heater comprising a shell of carbon and a rod of carbon of smaller diameter and inserted therein, and means for spacing the same apart from the shell, said spacing means including disks on the ends of the rod entirely inclosing the ends of the shell, and electrical wires connected to said rod and shell.

1,384,720. WAGON. WILLIAM L. JENNINGS, Girard, Tex. Filed Feb. 19, 1920. Serial No. 359,771. 1 Claim. (Cl. 56—100.)



A wagon body having a bottom oppositely inclined from a longitudinal median line, diverging blades having their adjacent rearward ends substantially flush with the higher median portion of the bottom, and their forward ends depressed substantially flush with the lower extreme edges of the bottom, said bottom being provided with a slot registering with the interval between the blades.

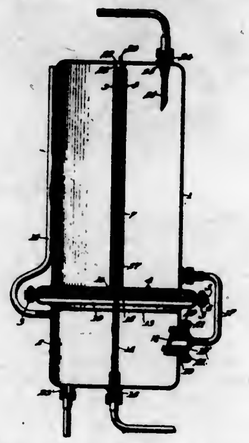
1,384,721. WEANER. FRANK B. JOHNSON, Trinidad, Colo. Filed July 17, 1920. Serial No. 396,040. 4 Claims. (Cl. 119—131.)



1. In a weaner, the combination of a muzzle encircling portion open at its extreme lower end, a bail encircling the upper end, a set of slots provided at an angle in the side walls of the portion, and a roller adapted to be retained in the slot by head portions and automatically move forward and backward in the slots.

1,384,722. AUTOMATIC SPRINKLER-BROOM. LEONARD KING, Luton, England. Filed Dec. 29, 1919. Serial No. 348,178. 1 Claim. (Cl. 15—51.)

A manually operated broom means provided on the broom for carrying water, a force pump carried by the broom, a pivoted cranked operating lever for said pump with the lower end near the surface being cleaned, a contact roller carried by said lever near the lower part, a spray head at the front of the broom and means establishing communication between said head and the pump, and yielding supporting wheels at the ends of the broom, as herein described.



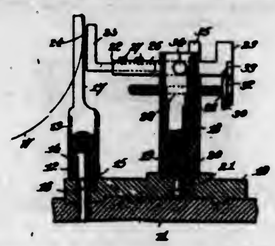
1,384,723. SAFETY-LOCK. WILLIAM KOZIOL, Easthampton, Mass. Filed Mar. 26, 1921. Serial No. 455,965. 2 Claims. (Cl. 116—8.)

1. A lock comprising a casing, a key actuated bolt slidable therein, a bell and spring actuated hammer therefor a detent for said hammer releasable by the lock key, and

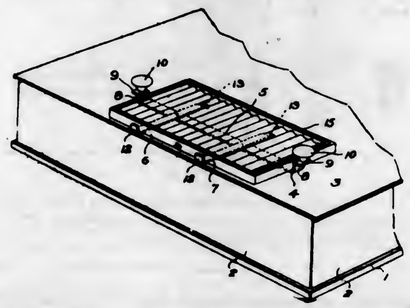
means preventing the retraction of said bolt, said means becoming operative upon the slackening of the hammer actuating means.

1,384,724. VACUUM-REGULATOR MACHINE. LOUIS LE BRAS, New York, N. Y., assignor to Vaco Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1920. Serial No. 360,335. 10 Claims. (Cl. 158—36.)

1. In a vacuum regulator machine, a vessel forming a vacuum chamber provided with a flexible diaphragm at or near one end of said chamber, means to connect said vacuum chamber with a source of liquid supply, means to connect said vacuum chamber with a source of suction, means to connect said vacuum chamber with the atmosphere, and means whereby the means providing the said source of suction and the said connection with the atmosphere are controlled by the action of said diaphragm under changing conditions in the vacuum chamber.



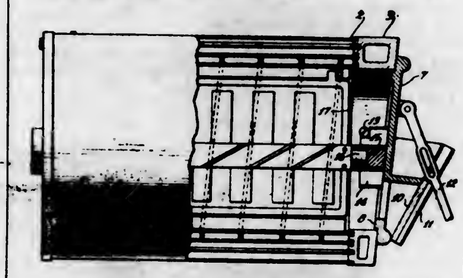
1,384,725. CONTAINER. JOSEPH LEVY, Brooklyn, N. Y. Filed Aug. 9, 1919. Serial No. 316,285. 2 Claims. (Cl. 65—13.)



2. In a container, a blank for forming the sides thereof, said blank having parallel upper and lower edges and formed with similar bending sections at each end, a neck projecting from one of said sections, and an enlargement projecting from said neck, the edge of the enlargement adjacent said neck being parallel with the edge of the last mentioned bending section.

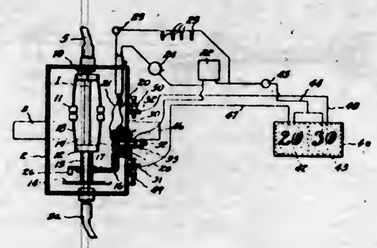
1,384,726. GRINDING-FIXTURE. JOSEPH DUPLESSIE, Providence, R. I., assignor of one-half to George F. Rooke, Providence, R. I. Filed Nov. 15, 1919. Serial No. 338,161. 4 Claims. (Cl. 125—11.)

1. A grinding fixture embodying a diamond-tool, a pivot having one face thereof in alinement with the axial center of said pivot, means for effecting movement of said tool with relation to said face, and means permitting the accurate determination of the distance of movement of said tool for the accurate setting of said tool, the last mentioned means including relatively separable measuring lugs.



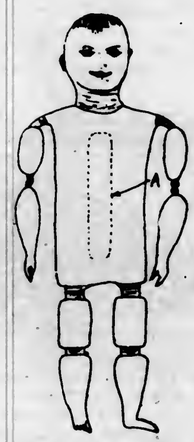
1,384,727. DISPLAY DEVICE. THOMAS C. HUTCHESON, Newton, Mass., assignor to United Drug Company, Boston, Mass., a Corporation. Filed Oct. 28, 1920. Serial No. 420,109. 6 Claims. (Cl. 248—39.)

1. In a display device of the nature described, in combination, a frame having vacuum cups at opposite ends whereby it may be attached to a plane surface and having provision for forming with said plane surface a drawerway to slidably receive a display tray.



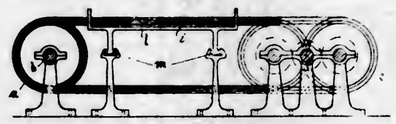
1,384,728. HORIZONTAL ICE-CREAM FREEZER. EMERY THOMPSON, New Rochelle, N. Y. Filed Mar. 1, 1921. Serial No. 448,807. 6 Claims. (Cl. 259—100.)

1. In an ice cream freezer, a cylinder containing a spaddle with a front journal, a bracket supporting said front journal, a cover reinforcing the bracket and means for fixing the cover in place so that it will engage and reinforce the bracket and hold it steady when the journal is revolving.



1,384,729. [WITHDRAWN.]

1,384,730. SPEED CONTROL FOR MOTOR-VEHICLES. EDGAR J. CRAWFORD, Seattle, Wash., assignor to J. Eugene Jordan, Seattle, Wash. Filed Feb. 16, 1920. Serial No. 358,914. 2 Claims. (Cl. 175—355.)



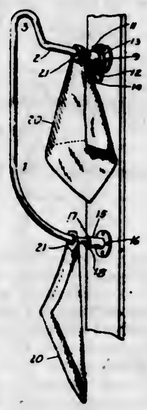
1. A speed controlling device for motor vehicles, comprising in combination, an electric circuit adapted to produce an electric spark in the engine cylinders, a governor housing, a governor shaft mounted within the housing and operatively connected with a wheel of the vehicle, a governor on said shaft, a disk slidable on the shaft to be raised and lowered in accordance with the speed of the governor, a block mounted on the housing and adjustable in the longitudinal direction of the shaft, a pair of contact plates mounted on the block through which the electric circuit to the engine is maintained and which normally engage each other at their outer ends, one of said plates being yieldable and having a contact block thereon engageable by said disk to break connection between the plates at certain predetermined speeds of the governor according to the adjustment of the block, a series of electric lights mounted on the vehicle, a series of individual speed indicating numerals for said lights, a series of contact points on the housing having electric connection with corresponding lights, a binding post in the block having electric connection through a source of electricity with all of said lights and a contact member electrically connected with the binding post engageable individually with said contact points to close an electric circuit through the lights to indicate the speed at which the governor will open the circuit through the engine.

1,384,731. DOLL. LAURA W. RICHARDS, Pawtucket, R. I. Filed July 17, 1918. Serial No. 245,433. 3 Claims. (Cl. 35—16.)

1. In a manikin for training nurses in the handling of a living child, a body portion formed of flexibly connected sections and a weight permanently positioned in said body portion at a point approximately the center of gravity of a human infant, whereby the manikin when placed in a bath will have portions thereof affected by gravity similar to a living human infant.

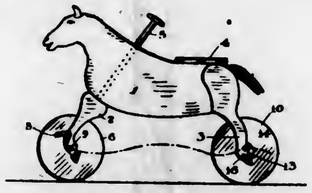
1,384,732. MACHINE FOR CUTTING BACON AND THE LIKE INTO THIN SLICES. FRIEDRICH SCHERMER, Mainz, Germany. Filed July 8, 1920. Serial No. 395,939. 1 Claim. (Cl. 17—24.)

A machine for cutting bacon and the like into thin slices, comprising in combination, a shaft on one side of the machine, a plurality of step-pulleys loosely mounted on said shaft, two shafts on the other side of the machine, a plurality of step-pulleys corresponding to the former and mounted alternately on said two shafts, a toothed wheel on each of said two shafts, a common driving-spur-wheel in gear with said toothed wheels, steel-ribbons forming cutting-blades guided over said step-pulleys and thus alternately movable in opposite directions, a table having lateral recesses with which it is mounted over said steel-ribbons and movable in transverse direction to the latter, and dovetail guides for the reception of said table, substantially as and for the purpose set forth.



1,384,733. TWIST-DRILL. NORMAN E. WOODS, Paterson, N. J. Filed Sept. 30, 1919. Serial No. 327,541. 7 Claims. (Cl. 77—70.)

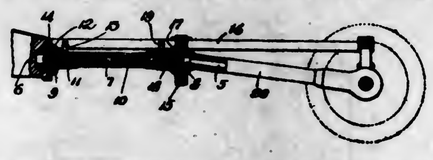
2. A twist drill having cutting blades provided with cutting lips, each divided by a groove into a plurality of longitudinally alined cutting edges of varying length one with respect to the other, each groove being of semi-elliptical form and deepest at its side farthest from the longitudinal center of the drill and shallowest at its side nearest the center of the drill, the outer edge wall of the groove overhanging and forming at its point of juncture with the outer cutting edge a cutting point.



REISSUES.

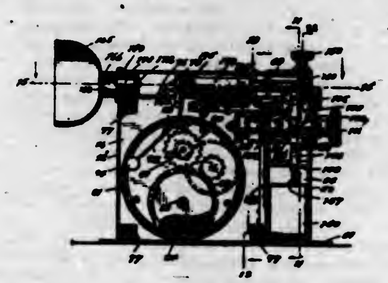
15,147. TOWEL-RACK. EDWIN T. BRIGHAM, Kansas City, Mo., assignor to Jacques Rousso, Los Angeles, Calif. Filed Mar. 17, 1921. Serial No. 453,150. Original No. 1,371,295, dated Mar. 15, 1921, Serial No. 669,502, filed Jan. 4, 1912. 14 Claims. (Cl. 45—32.)

7. A towel rack comprising a support; a towel guide member extending outwardly from said support; and towel retaining means mounted on said outwardly extending guide member and arranged to releasably retain towels thereon, said retaining means being arranged and adapted to permit the passage of perforated towel guiding means over and around it, substantially as described.



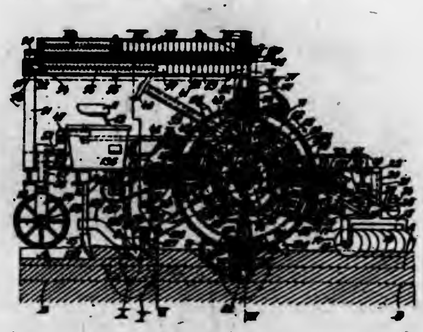
15,148. TOY. NORBERT CHAPDELAINE, Montreal, Quebec, Canada, assignor, by mesne assignments, to Allan Angus Magee, Montreal, Quebec, Canada. Filed Mar. 28, 1921. Serial No. 456,204. Original No. 1,335,425, dated Mar. 30, 1920, Serial No. 303,233, filed June 10, 1919. 4 Claims. (Cl. 208—42.)

1. In a toy, a body having legs extending frontwardly and rearwardly therefrom, a wheel journaled centrally in relation to its tread between the front legs and forming a pivot for said body and also a steering member, foot rests projecting from and rigid with said front legs, a rear wheel journaled eccentrically in relation to its tread between said rear legs and forming the propulsion member and a seat situated in a forward position in relation to said rear wheel.



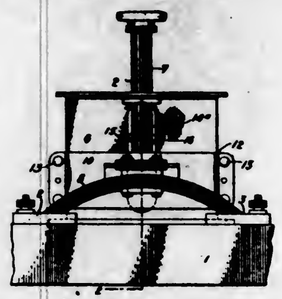
15,149. MOTOR-VEHICLE EXTENSION DRIVE-SHAFT. GUY S. DAVISON, Holderness, N. H., assignor, by mesne assignments, to The Longford Company of America, Cambridge, Mass., a Corporation of Maine. Filed May 4, 1916. Serial No. 95,477. Original No. 1,163,643, dated Dec. 14, 1915, Serial No. 21,299, filed Apr. 14, 1915. 6 Claims. (Cl. 180—1.)

1. The combination, with the transmission and drive shafts of a motor vehicle, of mechanism adapted to lengthen the wheel base of said vehicle, comprising means to extend the rear wheels, supporting axle, and transmission shaft operatively connected therewith, from the motor drive shaft rearwardly, means carried by the side frames



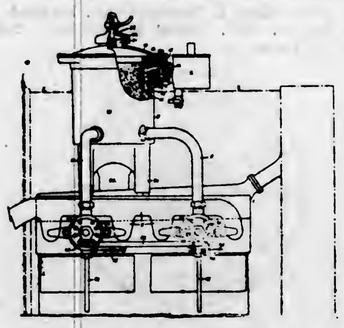
to support and maintain the transmission shaft at substantially the same angle with the rear axle, in said moved position, as in its former position, and means to connect the motor drive shaft with said transmission shaft in its new position.

15,150. ALARM-SIGNAL. VLADIMIR P. FEDOROFF, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,832. Original No. 1,256,542, dated Feb. 19, 1918, Serial No. 193,807, filed Sept. 20, 1917. 64 Claims. (Cl. 116—90.)



1. In a device of the class described, alarm mechanism, and means dependent upon change of its angular position relative to a vertical line for setting said mechanism into operation and adjustable to operative and inoperative condition at different angular positions of the mechanism relative to a vertical line.

15,151. PROCESS OF AND APPARATUS FOR SOIL TREATMENT. HERBERT KNIGHT, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,286. Original No. 1,359,177, dated Nov. 16, 1920, Serial No. 305,173, filed June 18, 1919. 15 Claims. (Cl. 111—91.)



1. The process of soil treatment consisting in progressively inserting successive definite and regularly spaced gas expanding bodies beneath the soil surface during an uninterrupted traversing movement.

15,152. SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 30, 1919. Serial No. 293,857. Original No. 1,256,332, dated Feb. 12, 1918, Serial No. 836,423, filed May 5, 1914. 5 Claims. (Cl. 200—76.)

1. In a switch mechanism, comprising a quick-break means for moving the switch blade away from a contact member, said quick-break means including a spring exerting a tendency to urge the switch blade against the contact, and said spring being movable through a dead-center position for reversing its effectiveness upon the switch blade to thereby break the switch blade away from the contact, the combination therewith of a flexible switch blade which is connected between the spring and the contact to receive pressure from the spring, and an operating member operable upon the spring to increase the pressure of the spring against the switch blade and thereby to flex the switch blade between the spring and the contact, said operating member being also adapted to move the spring through its dead-center position to relieve the pressure of the spring upon the switch blade and thereby to enable the stored energy in the switch blade to cause the switch blade to move in a direction away from the contact and thus to act as an auxiliary to the breaking action of the spring.

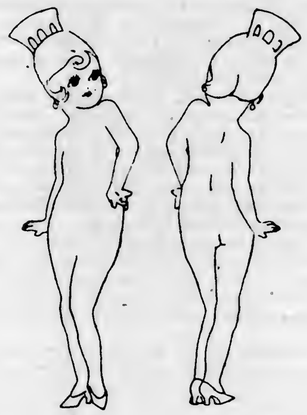
15,153. APPARATUS FOR VAPORIZING HYDROCARBONS. PERCY OCTAVIUS ROWLANDS, Liverpool, England. Filed May 28, 1919. Serial No. 300,447. Original No. 1,252,955, dated Jan. 8, 1918, Serial No. 158,947, filed Mar. 31, 1917. 15 Claims. (Cl. 48—102.)

1. In combination, a power driven body, an internal combustion engine mounted on said body, a container adapted to hold and burn solid fuel; a conduit or chamber heated by and surrounding said container, said conduit or chamber adapted to have introduced into it hydro-carbon liquid fuel and to vaporize said liquid fuel by heat of combustion of said solid fuel; and a conduit connecting said vaporizing conduit or chamber with the cylinder of the engine; substantially as set forth.

13. A liquid fuel boiling or evaporating apparatus for internal combustion engines comprising a metal vessel adapted to receive internally solid fuel to burn same therein, an inclined conduit on the outside of said vessel and heated by the heat of the combustion of the solid fuel in the vessel, a duct on the outside of the vessel adapted to deliver liquid fuel on to the upper surface of the upper part of the inclined conduit, and means for supplying a fluid to the vaporized fluid conduit at a point removed from the point of introduction of the fuel to the surface of the conduit, whereby the liquid fuel delivery on to the actual upper surface of the conduit is not interfered with by the previously delivered fuel.

14. A liquid fuel boiling or evaporating apparatus for internal combustion engines comprising a metal cylinder or wall adapted to receive internally solid fuel and to burn same therein, an inclined conduit on the outside of said vessel, heated by the heat of the combustion of the solid fuel in the vessel, a duct on the outside of the vessel adapted to deliver liquid fuel on to the upper surface of the upper part of the inclined conduit, and means for supplying liquid fuel to the vaporized fluid conduit at a point removed from the point of introduction of the fuel to the surface of the conduit and a discharge conduit for mixed fluid and fuel vapor at the lower part of the inclined conduit downward toward which both the fluid and the vapor flow.

15. In combination, an internal combustion engine, a liquid fuel feeding device, an oil vaporizing apparatus below said device having a vaporizing conduit adapted to be heated, said conduit being adapted to receive hydro-carbon liquid fuel from the feeding device and to permit the flow of said fuel in said conduit by gravity, a conduit extending between the vaporizing conduit and the engine cylinder, a controlling device in said conduit, whereby the degree of vacuum within the vaporizing conduit as produced by the suction of the engine is controlled, the vacuum thus produced acting upon the liquid fuel in the feeding device, whereby the quantity of fuel passing from the feed device into the vaporizing conduit is directly proportional to the degree of vacuum produced by the engine between the controlling device and the vaporizing conduit.



DESIGNS.

58,297. DRESSED DOLL. ESTELLE VALRIE ALLISON, New York, N. Y. Filed Jan. 26, 1920. Serial No. 354,257. Term of patent 7 years.

The ornamental design for a dressed doll as shown.

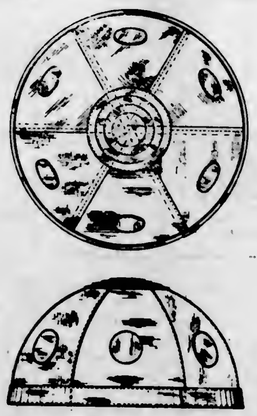
58,298. DOLL. ESTELLE VALRIE ALLISON, New York, N. Y. Filed Jan. 26, 1920. Serial No. 354,258. Term of patent 7 years.

The ornamental design for a doll as shown.

58,299. DOLL. ESTELLE VALRIE ALLISON, New York, N. Y. Filed Jan. 26, 1920. Serial No. 354,259. Term of patent 7 years.

The ornamental design for a doll as shown.

58,300. DOLL. ESTELLE VALRIE ALLISON, New York, N. Y. Filed Jan. 26, 1920. Serial No. 354,260. Term of patent 7 years.



The ornamental design for a doll as shown.

58,301. SUPPLEMENTARY WAIST FOR MEN'S OVERCOATS. LORISTON F. AMSDEN, Baltimore, Md., assignor of one-half to Harold C. Mitchell, New York, N. Y. Filed Jan. 15, 1920. Serial No. 351,623. Term of patent 14 years.

The ornamental design for a supplementary waist for men's overcoats, as shown.

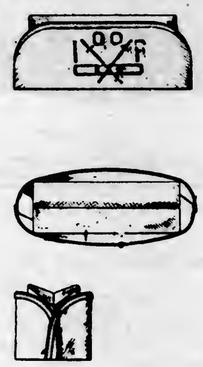
58,302. CAP. KATE L. BARTHOLOMEW, Portland, Oreg. Filed Sept. 4, 1919. Serial No. 321,723. Term of patent 3½ years.

The ornamental design for a cap, as shown.

58,303. CAP. KATE L. BARTHOLOMEW, Portland, Oreg. Filed Apr. 29, 1920. Serial No. 377,717. Term of patent 3½ years.

The ornamental design for a cap as shown.

58,304. MASONIC PENDANT. BEATRICE ELIZABETH MARIA BARTON, Birmingham, England. Filed Jan. 13, 1921. Serial No. 437,102. Term of patent 3½ years.

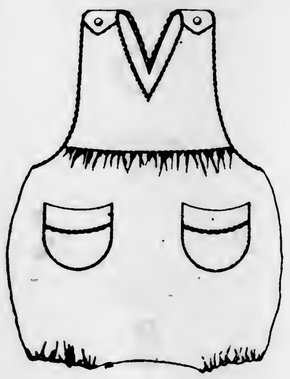


The ornamental design for a Masonic pendant, as shown.

58,305. SETTING FOR PRECIOUS STONES. HYMAN BRESLAVSKY, New York, N. Y. Filed July 1, 1920. Serial No. 393,442. Term of patent 3½ years.

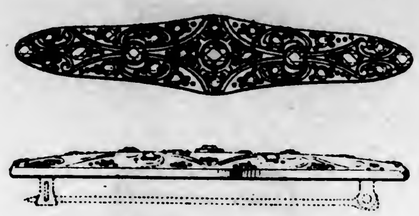
The ornamental design for a setting for precious stones substantially as shown.

58,306. CAP. WILLIAM I. CRUM, Wichita, Kans. Filed Dec. 30, 1920. Serial No. 434,161. Term of patent 14 years.



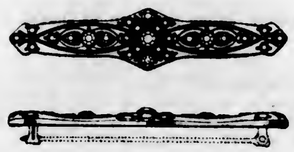
The ornamental design for a cap, as shown.

58,307. DIAMOND-SETTING. JOSEPH DAVIDSON, Rockaway Beach, N. Y., assignor to Fanny Davidson, Rockaway Beach, Long Island, N. Y. Filed Nov. 20, 1920. Serial No. 425,576. Term of patent 7 years.



The ornamental design for a diamond setting as shown.

58,308. CHILD'S GARMENT. LOTTIE E. FREEMAN, Boston, Mass. Filed Aug. 23, 1920. Serial No. 405,521. Term of patent 3½ years.



The ornamental design for a child's garment, as shown.

58,309. ARTICLE OF JEWELRY. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,181. Term of patent 7 years.

The ornamental design for an article of jewelry as shown.

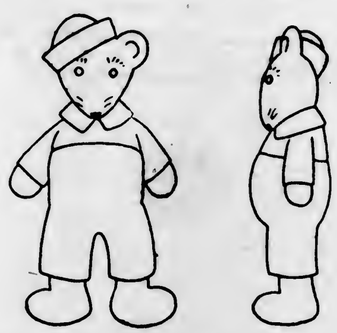
58,310. ARTICLE OF JEWELRY. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,183. Term of patent 7 years.

The ornamental design for an article of jewelry as shown.

58,311. MILITARY-SERVICE BUTTON. JOHN H. GEARY, Chicago, Ill. Filed Nov. 27, 1918. Serial No. 264,456. Term of patent 7 years.

The ornamental design for a military service button, as shown.

58,312. FINGER-RING OR SIMILAR ARTICLE. MARTIN E. GOLLESCH, Plankington, S. D. Filed July 24, 1920. Serial No. 398,790. Term of patent 14 years.

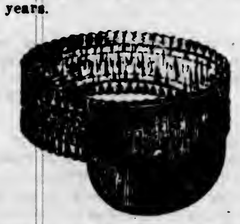


The ornamental design for a finger ring or similar article as shown.

58,313. GLOVE. BRAYTON C. GRINNELL, Seattle, Wash. Filed June 1, 1920. Serial No. 385,842. Term of patent 14 years.

The ornamental design for a glove as shown.

58,314. TOY ANIMAL. JOHN B. GRUELLE, Norwalk, Conn. Filed Mar. 16, 1920. Serial No. 366,427. Term of patent 14 years.



The ornamental design for a toy animal as shown.

58,315. DOLL. FRAN C. HAMILL, Los Angeles, Calif. Filed Dec. 22, 1920. Serial No. 432,628. Term of patent 7 years.

The ornamental design for a doll, as shown.

58,316. COMBINED GARTER AND POWDER-PUFF RECEPTACLE. ADELAIDE HEALD, Washington, D. C. Filed Feb. 21, 1917. Serial No. 150,285. Term of patent 7 years.

The ornamental design for a combined garter and powder-puff receptacle as shown and described.

58,317. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,868. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,318. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,869. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,319. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,870. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,320. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,871. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,321. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,872. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,322. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,873. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,323. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,874. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,324. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,875. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,325. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1920. Serial No. 432,876. Term of patent 14 years.

The ornamental design for a precious, or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,326. PRECIOUS, OR SEMIPRECIOUS, OR SYNTHETIC STONE, OR AN IMITATION THEREOF, OR AN ARTICLE OF SIMILAR NATURE. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 27, 1920. Serial No. 433,515. Term of patent 14 years.

The ornamental design for a precious or semiprecious, or synthetic stone, or an imitation thereof, or an article of similar nature, as shown.

58,327. WATCH-FOB. CHARLES W. HERRIN, Burkburnett, Tex. Filed Dec. 22, 1920. Serial No. 432,629. Term of patent 7 years.

The ornamental design for a watch fob, as shown.

58,328. SURFACE ORNAMENTATION FOR AN ARTICLE OF MANUFACTURE. BERNARD HOLS, Cleveland, Ohio, assignor to The Frankelite Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1921. Serial No. 468,165. Term of patent 7 years.

The ornamental design for surface ornamentation for an article of manufacture as shown and described.

58,329. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,742. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,330. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,743. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,331. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,744. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,332. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,745. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,333. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,746. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,334. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,747. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,335. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,749. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,336. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,752. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,337. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,446. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,338. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,448. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,339. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,450. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,340. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,451. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,341. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,453. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,342. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,455. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,343. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,456. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,344. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,458. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,345. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,461. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,346. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,465. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,347. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,471. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,348. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,472. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,349. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,473. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,350. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,475. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,351. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,476. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,352. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,477. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,353. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,479. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,354. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,480. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,355. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,481. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,356. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,482. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,357. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,483. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,358. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,484. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,359. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,485. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,360. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,488. Term of patent 14 years.

The ornamental design for a talcum powder box as shown.

58,361. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,490. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,362. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,491. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,363. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,492. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,364. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,494. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,365. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,496. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,366. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,498. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,367. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,501. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,368. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,506. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,369. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,509. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,370. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,512. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,371. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,514. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,372. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,516. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,373. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,525. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,374. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,526. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,375. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,529. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,376. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,530. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,377. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920 Serial No. 430,531. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,378. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,532. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,379. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,534. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,380. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,539. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,381. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,540. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,382. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,541. Term of patent 7 years.

The ornamental design for a talcum powder box, as shown.

58,383. TALCUM-POWDER BOX. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,542. Term of patent 14 years.

The ornamental design for a talcum powder box, as shown.

58,384. CAP. ANNA SHERIDAN JEFFRIES, Clearmont, Wyo. Filed Dec. 2, 1920. Serial No. 427,922. Term of patent 3½ years.

The ornamental design for a cap as shown.

Ser. No. 142,480. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

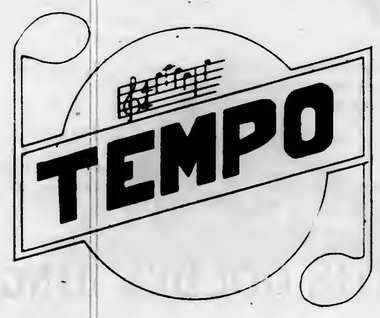
Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,481. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.



Ser. No. 142,482. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,483. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,484. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING CO., Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,485. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,486. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.

Claims use since June 5, 1920.

Ser. No. 142,487. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.
Claims use since June 5, 1920.

Ser. No. 142,488. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING CO., Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.
Claims use since June 5, 1920.

Ser. No. 142,489. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GALLATIN VALLEY MILLING COMPANY, Seattle, Wash., and Belgrade, Mont. Filed Jan. 20, 1921.

Particular description of goods.—Wheat-Flour.
Claims use since June 5, 1920.

Ser. No. 142,514. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OTIS R. LYONS, Kansas City, Mo. Filed Jan. 20, 1921.

Particular description of goods.—A Preparation of Goose-Grease, Turpentine, and other Ingredients for Use in the Treatment of Colds and Lung Troubles.
Claims use since Nov. 15, 1920.

Ser. No. 142,531. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARTHUR Z. PEDERSEN, Orange, N. J. Filed Jan. 20, 1921.

CHROMINE

Particular description of goods.—Antifreeze Solutions, Particularly of an Anticorrosion Nature, for Cooling Fluids in Automobile and other Radiators and Refrigerating Solutions.
Claims use since on or about Nov. 6, 1920.

Ser. No. 142,586. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CEDAR HILL FORMULAR COMPANY, New Britain, Conn. Filed Jan. 22, 1921.

POLLO

Particular description of goods.—A Preparation for Cleaning and Polishing Varnished Surfaces.
Claims use since Oct. 1, 1920.

Ser. No. 142,621. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) HAAS & KIRKLAND, Winter Haven, Fla. Filed Jan. 22, 1921.

THE GOLDEN RING

Particular description of goods.—Trees.
Claims use since June 1, 1920.

Ser. No. 142,708. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) IRONWARP SILK MILLS, INC., Allentown, Pa. Filed Jan. 24, 1921.

Ironwarp

Particular description of goods.—Silks, Cotton and Crape Textiles in the Piece.
Claims use since Dec. 6, 1915.

Ser. No. 142,712. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES S. LIVESAY, Palo Alto, Calif. Filed Jan. 24, 1921.

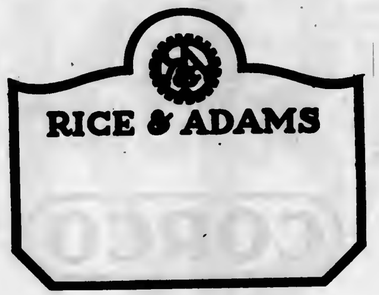
The lining of the drawing indicating shading merely.
Particular description of goods.—A Hair-Tonic.
Claims use since Nov. 1, 1920.

Ser. No. 142,715. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NUX-I-KOLA COMPANY, Detroit, Mich. Filed Jan. 24, 1921.

NUX-I-KOLA

The word "Nux-I-Kola."
Particular description of goods.—General Tonic.
Claims use since Nov. 10, 1920.

Ser. No. 142,815. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STANDARD TAR PRODUCTS CO., Milwaukee, Wis. Filed Jan. 26, 1921.



Particular description of goods.—Wood-Preservatives and Fly-Sprays.
Claims use since Feb. 1, 1920.

Ser. No. 142,851. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) OAK CHROME & STONE CHROME LEATHER CO., Masury, Ohio. Filed Jan. 27, 1921.

No claim being made to the representation of a leather half-sole or to the words "Oak Chrome & Stone Chrome Leather Company," "Stone," "Trade Mark," and "Chrome" apart from the mark shown.
Particular description of goods.—Sole-Leather.
Claims use since June 28, 1920.

Ser. No. 142,855. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) RICE & ADAMS CORPORATION, Buffalo, N. Y. Filed Jan. 27, 1921.

Particular description of goods.—Bottle-Washers, Can-Washers, Biscuit-Tin Washers, Metal-Parts Washers, Dish-Washers, Battery-Jar Washers, Milk-Bottle Fillers, Milk-Bottle Cappers, Milk-Bottle Pasteurizers.
Claims use since Dec. 14, 1916.

Ser. No. 142,857. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AMBROSE S. SWEET, Elmira, N. Y. Filed Jan. 27, 1921.

ICE-MINT

Particular description of goods.—A Cooling, Soothing, Antiseptic Preparation for External Use.
Claims use since January, 1917.

Ser. No. 142,886. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN HENRY KESSLER, Cleveland, Ohio. Filed Jan. 28, 1921.

VIX-UM

Particular description of goods.—Liquid Preparation for Treatment of Asthma, Bronchitis, Croup, Whooping-Cough, Catarrhal Sore Throat, Colds, Lung Affections.
Claims use since Dec. 24, 1920.

Ser. No. 143,016. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE STEELDUCT COMPANY, Youngstown, Ohio. Filed Jan. 31, 1921.

STEELDUCT SD

No claim is made to the term "Steelduct" apart from the mark shown.
Particular description of goods.—Pipes or Electric Conduits to Carry Electric Wires—Namely, Rigid Steel Conduits.
Claims use since July 19, 1920.

Ser. No. 143,026. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WHEELING CORRUGATING COMPANY, Wheeling, W. Va. Filed Jan. 31, 1921.

CORCO

Particular description of goods.—Sheet-Metal Culverts, Well-Casings of Slip-Joint and Screw-Joint Types, Flood-Gates, and Lead Gas Connections.
Claims use since about June 15, 1914, on culverts; since about Nov. 15, 1914, on flood-gates and well-casings, and since Jan. 1, 1921, on lead gas connections.

Ser. No. 143,049. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE IZZARD COMPANY, Seattle, Wash. Filed Feb. 1, 1921.

SEA-FED
BRAND

No claim is made to the exclusive use of the word "Brand" apart from the mark shown in the drawing.
Particular description of goods.—Canned Salmon.
Claims use since Dec. 16, 1920.

Ser. No. 143,084. (CLASS 39. CLOTHING.) ESTHER L. BORNSTEIN, Cambridge, Mass. Filed Feb. 2, 1921.

DUROPLAY SUIT

No claim being made to the exclusive use of the words "Play Suit" apart from the mark shown.
Particular description of goods.—Three-Piece Play-Suits, Blouses, Bloomers, and Skirts.
Claims use since Dec. 27, 1920.

Ser. No. 143,088. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BUFFALO FORGE COMPANY, Buffalo, N. Y. Filed Feb. 2, 1921. Under ten-year proviso.

BUFFALO

Particular description of goods.—Machines and Apparatus and Parts Thereof for Bending, Cutting, Punching, Shearing, Drilling, Upsetting, and Riveting Metal and the Like, Air-Blast Conveyers, Steam-Engines, Steam-Turbines, Air and Gas Exhausters, Fans and Blowers, Emery-Wheel Hoods, Tire and Axle Setters, Blacksmiths' and Combination Shears, Metal-Tire Shrinkers, Tire and Bolt Upsetters, Vapor-Condensers, Pumps and Pumping Machinery and Parts Thereof, Water-Eliminators, Air-Washers, Dust-Separators, Blowpipe Systems, Twyers, Irons, Cooling-Ponds; Sugar-Plant Machinery, Including Cane-Crushers, Cane and Bagasse Carriers, Clarifiers, Crystallizers, Centrifugals, Endless-Chain Elevators, Bagasse-Feeders, Cane-Mills; Rice and Grain Treating Machinery, Including Classifiers, Driers, Endless-Chain Elevators, Fans, Hullers, and Polishers; Coffee Machinery, Including Conveyers, Hullers, Pulpers, Polishers, Fanning-Mills, and Grading-Reels.
Claims use since 1878.

Ser. No. 143,090. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BURHANS-EBERMAN CO., Cleveland, Ohio. Filed Feb. 2, 1921.

Particular description of goods.—Ready-Mixed and Paste Paints.
Claims use since Oct. 15, 1920.

Ser. No. 143,110. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) G. H. VOTER, INC., Boston, Mass. Filed Feb. 2, 1921.

CRESERVATIVE

Particular description of goods.—Wood-Preservative.
Claims use since Aug. 7, 1919.

Ser. No. 143,130. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RALPH C. KING, Columbus, Ga. Filed Feb. 3, 1921.

PYRODINE

Particular description of goods.—A Preparation for the Treatment of Diseases of the Mouth and Teeth, Such as Pyorrhea Alveolaris, (Rigg's Disease.)
Claims use since June 28, 1919.

Ser. No. 143,144. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK SARAPAS, Kincaid, Ill. Filed Feb. 3, 1921.

Frank Sarapas

The picture shown is a facsimile of the applicant's portrait.
Particular description of goods.—Medicine for Relieving Influenza, Pneumonia, and Inflammation of Lungs.
Claims use since Sept. 1, 1920.

Ser. No. 143,197. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AMERICAN LEVANT SYNDICATE INC., New York, N. Y. Filed Feb. 5, 1921.

ALSIN PRODUCTS

Particular description of goods.—Wheat-Flour.
Claims use since July 1, 1920.

Ser. No. 143,215. (CLASS 15. OILS AND GREASES.) KATZENBACH & BULLOCK CO., New York, N. Y. Filed Feb. 5, 1921.

K & B

Particular description of goods.—Castor-Oil Used in Lubricants, Cotton-Seed Oil When Used in Lubricants, Match-Wax When Used for Illuminating Purposes, Paraffin-Wax When Used for Illuminating Purposes, Petrolatum When Used in Lubricants, Petroleum Jelly When Used in Lubricants, Soy-Bean Oil When Used in Lubricants.
Claims use since June, 1910.

Ser. No. 143,240. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OSWALD B. STRUB, St. Louis, Mo. Filed Feb. 5, 1921.

ANTI ANTI AKE AKE

Particular description of goods.—A Medicinal Preparation for Headache, Neuralgia, Colds, Grippe, and Rheumatic Pains.
Claims use since the early part of January, 1914.

Ser. No. 143,301. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAVEALL DENTIFRICE COMPANY, Chicago, Ill. Filed Feb. 7, 1921.

Particular description of goods.—Dentifrice.
Claims use since Nov. 1, 1920.

Ser. No. 143,324. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE KLINKER MANUFACTURING CO., Cleveland, Ohio. Filed Feb. 8, 1921.

GLOIRE DE PARIS

Particular description of goods.—Cold-Cream, Rose Cold-Cream, Vanishing Cream, Peroxid Vanishing Cream, Massage-Cream, Cocoa-Butter, Tissue-Cream, Honey and Almond Cream, Almond-Meal, Cocoanut-Oil Shampoo, Tar Shampoo, Antiseptic Shaving-Lotion, Toilet Water, Liquid Face-Powder, and Perfume.
Claims use since February, 1920.

Ser. No. 143,383. (CLASS 12. CONSTRUCTION MATERIALS.) THE CHATFIELD MANUFACTURING COMPANY, Cincinnati, Ohio. Filed Feb. 10, 1921.

PARASLATE

Particular description of goods.—Prepared Roofing in Roll, Sheet, or Shingle Form.
Claims use since the 1st of March, 1916.

Ser. No. 143,472. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Feb. 12, 1921.

CASTOLAY

Particular description of goods.—Toilet Powder.
Claims use since Jan. 27, 1921.

Ser. No. 143,486. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE C. C. COMPANY, Des Moines, Iowa. Filed Feb. 12, 1921.

No claim is made to the word "Pills" appearing in the trade-mark.
Particular description of goods.—Laxative Pills.
Claims use since Jan. 18, 1920.

Ser. No. 143,508. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. B. MALLINSON & CO., INC., New York, N. Y. Filed Feb. 12, 1921.

Tré-Jolie

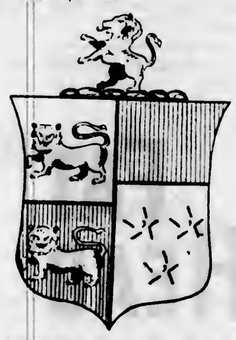
Particular description of goods.—Silk Piece Goods.
Claims use since December, 1920.

Ser. No. 143,522. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) UNKEFER VARNISH COMPANY, Chicago, Ill. Filed Feb. 12, 1921.

UVARGO

Particular description of goods.—Paint Enamels, Paste and Ready-Mixed Paints, Fillers, and other Paint-Coatings.
Claims use since July 1, 1919.

Ser. No. 143,569. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) STATE OF NEW YORK, Saratoga Springs, N. Y. Filed Feb. 14, 1921.



Particular description of goods.—Natural Mineral Water.
Claims use since about 1912.

Ser. No. 143,580. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TOWERS, WILLIAMSON & TOLLETT, Guthrie, Okla. Filed Feb. 14, 1921.

Particular description of goods.—A Preparation for the Treatment of Dandruff and Eczema.
Claims use since Jan. 1, 1921.

Ser. No. 143,592. (CLASS 38. PRINTS AND PUBLICATIONS.) DORRANCE & COMPANY, INC., Philadelphia, Pa. Filed Feb. 15, 1921.

Particular description of goods.—Printed Books.
Claims use since Aug. 6, 1920.

Ser. No. 143,658. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAURICE ROUSSEL, Paris, France. Filed Feb. 16, 1921.

SILKA

Particular description of goods.—Perfumes, Toilet Waters, Face-Lotions, Beauty-Cream, Face-Powder, Brilliantine.
Claims use since Mar. 16, 1910.

Ser. No. 143,675. (CLASS 42. (KNITTED, NETTED, AND TEXTILE FABRICS.) THE UNITED TURKEY RED COMPANY, LIMITED, Glasgow, Scotland. Filed Feb. 16, 1921.

Particular description of goods.—Cotton Piece Goods.
Claims use since Apr. 1, 1920.

Ser. No. 143,702. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PRAEMAFIX CORPORATION OF AMERICA, New York, N. Y. Filed Feb. 17, 1921.

Praemafix

Particular description of goods.—Embossing-Machines and Cutting and Punching Dies.
Claims use since Dec. 23, 1920.

Ser. No. 143,727. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) WESTERN CARTRIDGE COMPANY, East Alton and Springfield, Ill. Filed Feb. 17, 1921.

Western WESTEX

The diamond, upon which appears the word "Western," is colored red and the oval and word "Westex" are colored black.

Particular description of goods.—Impregnated or Coated Woven Fabrics—Namely, Imitation Leather, and Waterproof Cloth.

Claims use since about Jan. 1, 1920.

Ser. No. 143,756. (CLASS 39. CLOTHING.) WILLIAM GREILICH & SONS, INC., Brooklyn, N. Y. Filed Feb. 18, 1921.

KICK-EES WGS

Particular description of goods.—Leather, Canvas, and Cloth Shoes and Slippers.

Claims use since Dec. 15, 1920.

Ser. 143,760. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) L. HELLER & SON, INC., New York, N. Y. Filed Feb. 18, 1921.

HOPE

Consisting of the word "Hope."

Particular description of goods.—Precious Stones—viz., Rubies, Emeralds, and Pearls.

Claims use since Dec. 1, 1920.

Ser. No. 143,819. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEALTH LABORATORIES, Scranton, Pa. Filed Feb. 19, 1921.

63

Particular description of goods.—A Specific for Rheumatism.

Claims use since Jan. 10, 1914.

Ser. No. 143,864. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) HALL-NEAL FURNACE COMPANY, Indianapolis, Ind. Filed Feb. 21, 1921.

VICTOR

Particular description of goods.—Coal, Wood, Gas, and Oil Heating-Furnaces, Grate-Frames, Grate-Bars, Grate-Bar Levers.

Claims use since Apr. 4, 1901.

Ser. No. 143,877. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE MONARCH ENGINEERING COMPANY, Dayton, Ohio. Filed Feb. 21, 1921.

TRADE MARK MONARCH AUTOMATIC ELECTRIC WATER SYSTEMS

No claim is made to the words "Trade Mark" and "Automatic Electric Water Systems" apart from the mark shown.

Particular description of goods.—Electric Motors, Electric Switches, Electrical Cut-Outs, Circuit-Breakers, Circuit-Closers, Automatic Pressure and Float Operating Electrical Control and Indicating Devices.

Claims use since about Jan. 1, 1919.

Ser. No. 143,878. (CLASS 39. CLOTHING.) L. B. MERWIN CO., Bloomington, Ill. Filed Feb. 21, 1921.

TOMMY TUCKER

Particular description of goods.—Boys' Wash-Suits.

Claims use since Jan. 1, 1921.

Ser. No. 143,940. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE MAX GLICK CO., Cleveland, Ohio. Filed Feb. 23, 1921.

FAT HEAD

Particular description of goods.—Candy.

Claims use since Jan. 27, 1921.

Ser. No. 143,984. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM A. DEDRICK, Indianapolis, Ind. Filed Feb. 24, 1921.

IM-PRO-HA-TO

Particular description of goods.—Hair-Tonic and Medicinal Scalp Treatment.

Claims use since on or about May 1, 1920.

Ser. No. 144,065. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK S. CARROLL, Asheville, N. C. Filed Feb. 26, 1921.

ORASEPS

Particular description of goods.—Antiseptic Mouth-Washes.

Claims use since Jan. 1, 1920.

Ser. No. 144,110. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL M. SOLOMON, Chicago, Ill. Filed Feb. 26, 1921.

Citrox

Particular description of goods.—Tooth-Paste.

Claims use since Dec. 1, 1918.

Ser. No. 144,149. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PORTER BAKING CO., Seattle, Wash., assignor to Creme-O-Toast Company, Seattle, Wash., a Corporation of Washington. Filed Feb. 28, 1921.

CREME-O-TOAST

No claim being made to the word "Toast" apart from that shown in the accompanying drawing.

Particular description of goods.—Sliced Prepared Toast in packages.

Claims use since Jan. 1, 1920.

Ser. No. 144,196. (CLASS 39. CLOTHING. TOBIAS KAPLAN, New York, N. Y. Filed Mar. 1, 1921.

Dexter

Particular description of goods.—Men's Dress-Shirts.

Claims use since Dec. 1, 1920.

Ser. No. 144,231. (CLASS 39. CLOTHING.) CAL HIRSCH & SONS MERCANTILE CO., St. Louis, Mo., and Los Angeles, Calif. Filed Mar. 2, 1921.

WARRIOR

Particular description of goods.—Puttees.

Claims use since July 1, 1920.

Ser. No. 144,257. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) B. L. SCHMIDT COMPANY, Davenport, Iowa. Filed Mar. 2, 1921.

INTERNAL GRINDER Micro

No claim is made to the words "Internal Grinder" apart from the mark shown by the drawing.

Particular description of goods.—Metal-Grinding Machines.

Claims use since March, 1920.

Ser. No. 143,984. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM A. DEDRICK, Indianapolis, Ind. Filed Feb. 24, 1921.

IM-PRO-HA-TO

Particular description of goods.—Hair-Tonic and Medicinal Scalp Treatment.
Claims use since on or about May 1, 1920.

Ser. No. 144,065. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANK S. CARROLL, Asheville, N. C. Filed Feb. 26, 1921.

ORASEPS

Particular description of goods.— Antiseptic Mouth-Washes.
Claims use since Jan. 1, 1920.

Ser. No. 144,110. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL M. SOLOMON, Chicago, Ill. Filed Feb. 26, 1921.

Citrox

Particular description of goods.—Tooth-Paste.
Claims use since Dec. 1, 1918.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

HAY *v.* MALONE, DOING BUSINESS UNDER THE STYLE AND NAME OF PORO COLLEGE.

Decided May 2, 1921.

TRADE-MARKS — IDENTITY — PORTRAITS WITH THE WORD "HAY-PO"—SIMILAR PORTRAITS WITH "PORO."

Opposition to registration of a mark for hair-dressing, comprising portraits representing "before" and "after" use, with the word "Hay-Po" above, all inclosed within a circle, sustained in view of the prior use by opposer of substantially the same portraits with the word "Poro" above, all inclosed within a circle.

Mr. Peyton Gordon and *Mr. H. M. Sterling* for Hay.

Mr. J. D. Rippey and *Mr. L. C. Kingsland* for Malone.

VAN ORSDEL, *J.*:

This is a trade-mark opposition proceeding brought under section 6 of the Trade-Mark Act of February 20, 1905, and involves the right of appellant Hay to register the words "Hay-Po" as a trade-mark for hair-dressing. The following is an illustration of the mark as actually used in trade:

The mark of the opposer Malone consists of substantially the same portraits "before" and "after," with the word "Poro" printed above, all inclosed within a circle. Opposer has established prior use of her mark.

It is unnecessary to pass upon appellant's right to register the word "Hay-Po" alone, since it does not appear that he has ever used it in trade independent of the other features of the mark as above shown. There must be actual trade-mark use to entitle the owner to registration. Hence, appellant must stand or fall upon the actual use of the mark.

In a former proceeding, appellant attempted to register the mark above illustrated with the "before" and "after" features, and was successfully opposed by appellee. On this point, the Commissioner, in his opinion, said:

An applicant should not be allowed to register one feature of his mark when it discloses other prominent and material features. Such practice would enable an applicant using a compound mark when rejected on a previous compound mark to select the feature not shown in the prior mark and register it and thus evade the rejection, although actually using a mark that infringed the prior mark. This would evidently lead to intolerable results.

We think appellee has clearly established that she would be injured by the registration of appellant's mark, and where that fact is shown, the opposition should be sustained.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE BRASELTON.

Decided June 6, 1921.

PATENTS—DOUBLE OR ANALOGOUS USE—COATING PROCESS.

It involves no invention to apply an old process for coating metal, paper, glass, fabric or the like, consisting in depositing the coating material in the form of a spray by means of a blast of air, to the coating of shoes with a thin film of metal. (*Brown v. Piper*, 91 U. S., 37.)

Mr. E. B. Whitcomb for Braselton.

Mr. T. A. Hostetler for the Commissioner of Patents.

SMYTH, *C. J.*:

Braselton applied for a patent on an improvement in shoes and a process for making shoes. There were twenty-eight claims in his application. All were allowed except 1, 2, 4 to 11, inclusive, 25 and 26, the last two being numbered in the record 16 and 17. Claims 1, 4 and 11 are typical. They are:

1. The process of making shoes which consists in coating certain parts of the shoe with metal by heating the metal to a liquid and blowing the same in the form of a spray by a blast of gas against the said parts.

4. The process of making shoes which consists in coating the bottom of a shoe above the sole before the sole is attached, with a film of metal by heating the metal into a liquid and blowing the same by a blast of gas into the form of a spray and against the then exposed lower surface of the shoe.

11. The process of making shoes which consists in applying a continuous flexible film of metal over the sole and welt and impregnating said sole and welt with said metal.

The appealed claims were rejected on a patent to Schoop dated February 9, 1915, and on one to Morf on the same date.

Under the process covered by the claims a film of metal is applied to a portion of the article dealt with. Some of the claims say that the film is flexible and impregnates the material of the article; that it is continuous and is applied by a blast of gas in the form of a spray. From the references it is clear that the method of the claims is old. Appellant utilizes the processes of Schoop and Morf, the only difference being that he applies it to shoes while Schoop used it to coat metal, paper, fabric and the like, and Morf to coat glass and other substances. When the matter was before the Examiners-in-Chief it was said of the present claims that they—

> are drawn to a process of making shoes but involve nothing more than coating the shoe by the old method after the shoe is complete. This is not a method of making shoes and the method is not patentable as novel merely because the coating is applied to a different object unless the result of the operation is different and unobvious. In this case the result of the process is the production of a coating and nothing more.

This we approve. There is no warrant for holding that an old process applied to a new use is patentable when it performs substantially the same functions. The Supreme Court of the United States, in *Brown et al.* v. *Piper*, (91 U. S., 37,) refused to hold that a process for preserving fish and other articles in a close chamber by freezing was patentable, in view of methods for freezing ice-cream and for preserving a corpse. It was contended that the process had never been used before for preserving fish, but the court disposed of the contention by saying:

> The answer is, that this was simply the application by the patentee of an old process to a new subject, without any exercise of the inventive faculty, and without the development of any idea which can be deemed new or original in the sense of the patent law.

Other decisions bearing directly on the point are *Lovell Manufacturing Co.* v. *Cary* (147 U. S., 623) and *Arlington Manufacturing Co.* v. *Celluloid Co.*, (97 Fed., 91.) In concluding his opinion in this case the Assistant Commissioner said:

> To my mind nothing could be more evident to one knowing the prior art and having a conception of a metal coated shoe than that an ordinary shoe could be coated by the prior art process to produce appellant's patented article.

Indisputably this must be correct.

There is nothing in the cases cited by appellant which conflicts with the views here expressed. *Thayer & Chandler* v. *Wold* (142 Fed., 776) at first reading seems to give his contention some support. A closer examination, however, shows that it does not. It was there argued that an air brush consisting of a combination device whereby liquid colors may be atomized by a blast of compressed air and blown upon a suitable surface so as to form any desired representation, such as a picture, according to the will and skill of the manipulator, was anticipated by two patents showing concentric color and steam nozzles, a needle valve in the color tube as well as a coincident delivery of oil and steam, for the purpose of atomizing the oil supply. Both of them pertained to furnaces in the industrial art. The court in holding that there was no anticipation said:

> It is indeed possible to reason from a Corliss engine to a watch spring, but the journey will lead the mind over an uncharted highway and across unbridged waters. So, here, the adaptation of the idea of the oil distributing device to the pencil sized air brush seems to me to involve several inventive steps.

The court then points out the steps. The distance between the methods of the references and the method of the applicant is not great and no inventive steps would be necessary to make the journey. We think the Commissioner of Patents was right and his decision is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

THE COCA-COLA CO. *v.* CHERO-COLA CO.

Decided June 6, 1921.

1. TRADE-MARKS—IDENTITY—"CHERO-COLA" AND "COCA-COLA."

   The words "Chero-Cola" held not entitled to registration in view of the prior adoption and use of the words "Coca-Cola," for goods of the same descriptive properties.

2. SAME—SAME—MERE ARGUABLE DIFFERENCES.

   Mere arguable differences between marks are not sufficient to warrant registration of the last to adopt and use.

3. SAME—SAME—TEST OF IDENTITY.

   That there would be no difficulty in apprehending the difference between two marks when they are placed together, or when attention is in some other way directed to them, is not a proper test of identity, as ordinarily a prospective purchaser does not carry more than a faint impression of the mark he is looking for, is governed by a general glance, and acts quickly.

Mr. F. M. Phelps, *Mr. E. S. Rogers*, and *Mr. Nelson J. Jewett* for The Coca-Cola Co.

Mr. C. L. Parker and *Mr. Melville Church* for Chero-Cola Co.

SMYTH, *C. J.*:

Appellee made application to have registered in the Patent Office the words "Chero-Cola" as a trade-mark for "Cola," a soft drink. The application was opposed by the appellant on the ground that it, the appellant, was the owner of the registered mark "Coca-Cola," which is applied by it to the same kind of a drink. The Examiner of Interferences sustained the opposition, but was reversed by the Commissioner of Patents.

Opposer has been using its mark since 1886, while applicant did not adopt its mark until 1911. It is conceded that the goods of the parties have the same descriptive properties, and therefore there is but one matter for our decision, namely, whether or not the marks are so similar as to be likely to cause confusion in the public mind or to deceive purchasers. (33 Stat. L., 725.)

Nearly three thousand pages of testimony were taken and elaborate briefs have been filed. Many decisions by courts in this country and in England are cited, and, besides, we are invited to listen to the teaching of psychology on the subject. None the less the question in dispute is a simple one and the principles by which its solution may be reached have been often declared and applied by this court.

It is true that if we analyze the two marks differences will be found: They do not sound quite

alike, and the number of letters in each is not the same, but these are only arguable differences, which are not enough to defeat the opposition. (*William Waltke & Co.* v. *Geo. H. Schafer & Co.*, 49 App. D. C., 254, 256, and cases cited; *Thos. Manufacturing Co.* v. *Aeolian Co.*, 47 App. D. C., 376, 379.)

Each of the marks embraces two hyphenated words. "C" is the first letter in each mark, and "Cola" the last word in each. The image which one mark paints upon the mind is not clearly different from that made by the other mark. To require that the line which separates marks should be well defined is not to ask too much, since the field from which a person may select a mark is almost limitless. (*Florence Manufacturing Co.* v. *Dowd & Co.*, 178 Fed., 73, 75; *Waltke & Co.*, v. *Schafer & Co., supra; Thos. Manufacturing Co.* v. *Aeolian Co., supra*, 378.) If he is not content with a word to be found in a dictionary, he may coin one.

Of course, if the two marks were placed together, or if a person's attention was in some other way directed to them, there would be no difficulty in apprehending the difference between them. This, however, is not the way to make the test. Ordinarily the prospective purchaser does not carry more than a faint impression of the mark he is looking for. If the article offered to him bears a mark having any resemblance to the one he is thinking of he is likely to accept it. He acts quickly. He is governed by a general glance. The law does not require more of him. (*Patton Paint Co.* v. *Orr's Zinc White*, 48 App. D. C., 221.)

Many witnesses testified to numerous instances of actual confusion produced by applicant's mark. Even counsel for applicant in the cross-examination of witnesses several times confused "Coca-Cola" with "Chero-Cola." The statute does not require proof of actual confusion, but when there is such proof it is not easy to escape the conclusion that the assailed mark if registered would be likely to do that which it has done.

Opposer, as we have seen, adopted its mark in 1886 and has been using it ever since, so that—

> the mark for years has acquired a secondary significance and has indicated the plaintiff's (opposer's) product alone. (*The Coca-Cola Company* v. *The Koke Company of America*, decided by the Supreme Court of the United States December 6, 1920.)

Millions have been spent by it for advertising its goods under the mark. During the time that it has used the mark it has been doing business in Atlanta, Ga. Applicant's place of business is in a nearby town,—Columbus, Ga. It, as we have said, did not commence to use its mark until 1911, twenty-five years after opposer had put into use its mark. Why was this mark selected by it, since it had so many others from which to choose? Is not its action open to the inference that the purpose was to appropriate some of opposer's business by producing confusion in the minds of the purchasing public? Whatever the purpose may have been, it is quite undeniable that mistakes have resulted from the use of applicant's mark.

Even if we doubted with respect to the proper solution of the question before us, it would be our duty to resolve the doubt against the applicant. (*Lambert Pharmacal Co.* v. *Mentho-Listine Co.*, 47 App. D. C., 197; *William Waltke & Co.* v. *Geo. H. Schafer & Co., supra.*)

Considering the matter in the light of the statute, the record, and our previous decisions, we are constrained to hold that the opposition should be sustained, and hence the decision of the Commissioner of Patents must be, and it is, reversed.

Reversed.

Court of Appeals of the District of Columbia.

IN RE TAYLOR-LOGAN CO., PAPERMAKERS.

Decided June 6, 1921.

TRADE-MARK—IDENTITY—"MAIL ORDER"—"MAIL" AND REPRESENTATION OF A MAIL-BOX WITH THE WORD "MAIL."

The words "Mail Order," for paper, held deceptively similar to the word "Mail" printed in a special manner and to a mark consisting of the representation of a mail-box with the word "Mail" thereon, the word "Mail" being the principal element of each mark.

Mr. Geo. H. Kennedy for Taylor-Logan Co.

Mr. T. A. Hostetler for the Commissioner of Patents.

SMYTH, *C. J.*:

Appellant asked the Commissioner of Patents to register the words "Mail Order" as a trade-mark for various kinds and grades of paper manufactured by it. The request was denied on the ground that there were registered for J. C. Blair Company two similar marks which were applied to the same class of goods, namely, paper of different kinds, and that if appellant's mark were granted registration it would "be likely," in the language of the statute,

> to cause confusion or mistake in the mind of the public, or to deceive purchasers * * *. (33 Stat. L., 725.)

The Blair Company's marks consist, in one case, of a representation of a mail-box with the word "Mail" on it and, in the other, of the word "Mail" printed in a special manner. The word "Mail," then, is common to all the marks and is prominent in each. Appellant takes a part of the Blair Company's mark in one case and the entire mark in the other and adds to it the word "Order." The word "Mail" is the principal element in each case, and the appellant by appropriating it has formed a mark which, in our judgment, is deceptively similar to each of the Blair Company's marks.

> It is not necessary to constitute an infringement that every word of a trademark shall be appropriated. It is sufficient that enough be taken to deceive the public in the purchase of a protected article. (*Saxlehner v. Eisner & Mendelson*, 179 U. S., 19, 33.)

Marks which have been held to be deceptively similar are "Autonoisettes" and "Auto," (*Walter Baker & Co.* v. *Delapenha et al.*, 160 Fed., 746;) "Pride" and "Pride of Syracuse," (*Hier* v. *Abrahams*, 82 N. Y., 519;) "Queen" and "Queen of the West," (*Ammon & Person* v. *Narragansett Dairy Co.*, 252 Fed., 276;) "Chancellor Club" and "Club Cocktails," (*in re S. C. Herbst Importing Co.*, 30

App. D. C., 297;) "Orchestrola" and "Orchestrelle," (*Thomas Manufacturing Co.* v. *Aeolian Co.*, 47 App. D. C., 376;) "Mentholistine" and "Listerine," (*Lambert Pharmacal Company* v. *Mentholistine Chemical Company*, 47 App. D. C., 197,) and "U-Lavo" and "Lava," (*William Waltke & Co.* v. *Geo. H. Schafer & Co.*, 49 App. D. C., 254.)

The principles governing the solution of the question as to whether or not trade-marks applied to the same class of goods are likely to produce confusion have been so often discussed and applied by this court that we do not think it necessary to do more than to direct attention to the decisions just referred to and to those cited by the Commissioner of Patents in his opinion, which we affirm.

Affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mass.) The Arkell patents, No. 790,021, for a process for making stretchable crinkled paper, and No. 790,022, for a machine for carrying out such process, *Held* void for anticipation and lack of invention in view of the prior art. *Arkell Safety Bag Co.* v. *Safepack Mills*, 272 F. R., 1.

(U. S. C. C. A. Mass.) The Arkell patent, No. 790,023, for process and machine for making stretchable crinkled paper, *Held* void for lack of invention. *Arkell Safety Bag Co.* v. *Safepack Mills*, 272 F. R., 1.

(U. S. C. C. A. Ohio.) Claim 6 of the Wertz patent. No. 926,308, for a toy pistol, *Held* valid, also *Held* infringed, though a rigid pawl held in place by a spring engaging with the trigger was used to operate the feeding element instead of a spring alone, engaging on the hammer. *Edwards Mfg. Co.* v. *National Fireworks Distributing Co.*, 272 F. R., 23.

(U. S. C. C. A. Ohio.) The Clark patent, No. 991,956, for a toy pistol, *Held* not infringed, if valid, in view of the prior art. *Edwards Mfg. Co.* v. *National Fireworks Distributing Co.*, 272 F. R., 23.

(U. S. D. C. N. Y.) The Hewitt patents, No. 781,001, claim 1, and No. 781,002, claim 3, for an apparatus and method of amplifying variable electrical currents by a gas or vapor conductor in the circuit, *Held* not infringed by audion-repeaters, which generated a new and stronger electrical current having the same variations as the primary current, though the repeater used a bulb, in which an infinitesimal quantity of air remained. *Hewitt* v. *American Telephone & Telegraph Co.*, 272 F. R., 194.

(U. S. D. C. N. Y.) The Hewitt patents, No. 1,120,949, claims 1, 7, 11, 13, 18, 19, and No. 1,121,359, claims 2 to 4, for an apparatus and method for increasing resistance to starting a current at an electrode by inducing in the vapor around the electrode a higher charge than is induced solely by the application of current through the terminals, is not infringed by an audion-repeater consisting of a bulb, in which the current passed from the filament to a plate, though between the two was a charged grid acting merely to vary the amount of the current and not to prevent the starting or flow of an undesired current. *Hewitt* v. *American Telephone & Telegraph Co.*, 272 F. R., 194.

(U. S. D. C. Ga.) The Ashmore and Morgan patent, No. 1,273,022, claims 5 and 6, for a device and process for finishing concrete pavements by rolling them with a roller of small dimensions and relatively great length and light weight, adapted to float on semifluid concrete, *Held* not anticipated by the use of heavy rollers, which sought to attain the result by pressure instead of by agitation, as in the patented process, and to be valid. *Macon Concrete Roller Co.* v. *Brooks-Callaway Co.*, 272 Fed. Rep., 341.

(U. S. D. C. Ga.) The Ashmore and Morgan patent, No. 1,302,275, claims 1-3, for a roller to finish pavement between the rails of a railroad-track and grooving the same next the rails, *Held* anticipated by previous roller construction and invalid. *Id.*

Patents Nos. 1,384,734 to 1,385,350.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 288—No. 3. TUESDAY, JULY 19, 1921. Price—$5 per year.
[PUBLISHED JULY 30, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 6, 1921.

Amédée Castaing, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Spiros C. Markatos, 456 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered January 29, 1907, No. 60,225, to Amédée Castaing, 518 West Thirtieth street, New York, N. Y., and a notice of such declaration sent by registered mail to said Amédée Castaing at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Amédée Castaing, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 21, 1921.

Ella Virginia Cameron, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ralph H. Estabrook, of 10 Lincoln street, Fitchburg, Mass., for registration of a trade-mark and trade-mark registered May 9, 1893, No. 22,996, to Ella Virginia Cameron, of 753 Third avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Ella Virginia Cameron at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ella Virginia Cameron, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,249,583.

On June 21, 1921, a decision was rendered that Joseph L. Wright was not the first inventor of the subject-matter covered by claims 38, 40, and 41 of his Patent No. 1,249,583, subject, "Telephone-exchange system," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,337,903.

On June 10, 1921, a decision was rendered that Harold Cecil Greenwood was not the first inventor of the subject-matter covered by claims 1, 2, 5, and 6 of his Patent No. 1,337,903, subject, "Synthetic production of ammonia," and no appeal having been taken within the time allowed such decision has become final.

Patent Office Publications.

The stock of the following publications is held for sale by the Patent Office, and orders for same should be addressed to the Commissioner of Patents:

Weekly Index—Annual subscription	$1.00
Commissioner's Decisions:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Trade-Mark Supplements:	
Weekly edition—Annual subscription	2.00
Single numbers	.05
Manual of Classification of the German Patent Office, (translated,) paper cover	1.00
Index to German Classification	1.00
Definitions of Revised Classes and Subclasses, edition of 1912, (Bulletins 1 to 27, inclusive)	.50
Bulletins, excepting Nos. 28 and 29, (now out of print,) published since 1912, each	.10

Other publications than those above named, exclusive of printed copies of patents, trade-mark registrations, etc., formerly held for sale by the Patent Office, have been transferred to the Superintendent of Documents, Government Printing Office. Orders for such publications should NOT be sent to the Patent Office, but to the Superintendent of Documents, to whom all remittances for such publications should be made payable.

Printed copies of specifications and drawings of patents, trade-mark registrations, etc., will be furnished by the Patent Office, as heretofore.

Photostat Copies.

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the number will vary according to the year.

APPLICATIONS UNDER EXAMINATION.

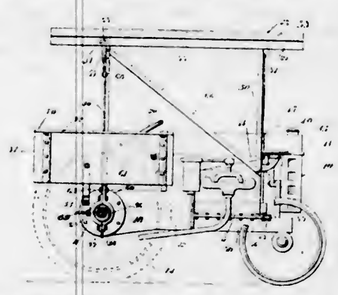
PATENTS

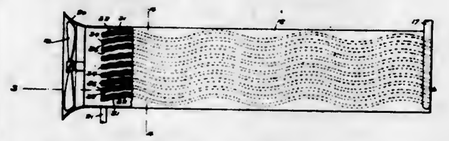


GRANTED JULY 19, 1921.

1,384,734. ELECTRICAL TESTING SYSTEM AND APPARATUS. CLARENCE A. ANDERSON, Abilene, Kans. Filed Sept. 24, 1919. Serial No. 326,005. 9 Claims. (Cl. 179—175.)

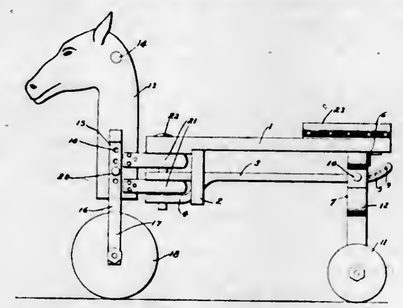
6. In an electrical testing system, a talking set including an induction coil, receiver, transmitter and battery, an exploring coil and switching means for alternately connecting and disconnecting said receiver with the remainder of said talking set and said exploring coil.

1,384,735. TOP AND FENDER FOR TRACTORS. NILS ANDERSON, Yutan, Nebr. Filed Jan. 22, 1920. Serial No. 353,150. 7 Claims. (Cl. 280—152.)



2. The combination with a tractor having an engine, of a top arranged above the tractor, a pair of standards connected to said top and having their lower ends secured to opposite sides of said engine, a transversely extending brace connected at its ends to the intermediate portions of said standards, means to connect the intermediate portion of said transversely extending brace to the upper side of said engine, and a supporting device for the rear end of said top.

1,384,736. SUNKEN-SHIP INDICATING AND SAFETY DEVICE. JOSEPH ARDO and OSCAR PHILLIPS, Newhall, W. Va. Filed Mar. 15, 1921. Serial No. 452,485. 6 Claims. (Cl. 9—9.)

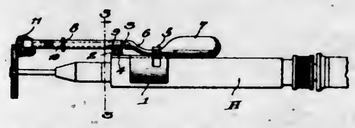


1. A device of the kind described comprising a hollow float, a drum in said float, and a rope wound on said drum and having its loose end adapted for attachment to a ship, a shaft forming part of said drum, an air compressor in the float adapted for operation by said shaft, and a whistle on the said float.

1,384,737. STEAM-CONDENSER. HARTLEY O. BAKER and WILLIAM P. COOK, Pueblo, Colo., assignors to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed May 13, 1918. Serial No. 234,167. 1 Claim. (Cl. 257—39.)

A steam condenser comprising a shell having parallel sheets therein extending longitudinally and arranged in pairs to provide alternate air and steam passages, said sheets having relatively long sinuous portions throughout their lengths, and the sinuous portions having smaller transverse corrugations throughout the length thereof.

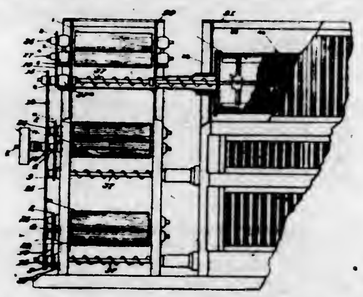
1,384,738. TOY VEHICLE. JOHN WILLIAM BELLAIRS, Mishawaka, Ind. Filed July 17, 1920. Serial No. 396,996. 3 Claims. (Cl. 208—165.)



1. A toy vehicle including a body, a cushion upon the rear portion thereof, a bolster hingedly connected to the body, a reach fixed to and extending under the body, an adjustable connection between the reach and bolster for holding said bolster at angular adjustment relative to the body, a steering head, tongues extending therefrom and pivotally connected to the body and reach, a block adjustably connected to the head, and a wheel connected to the block.

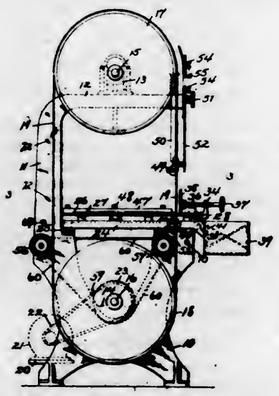
1,384,739. [WITHDRAWN.]

1,384,740. DENTAL INSTRUMENT. WILLIAM W. BOLLS, Washington, D. C. Filed Nov. 4, 1920. Serial No. 421,667. 8 Claims. (Cl. 32—10.)



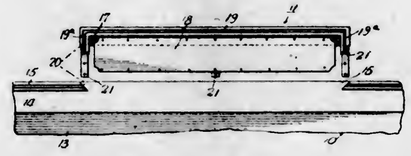
1. In a dental instrument having a handle and a grinding wheel, a support formed for attachment to the handle

of the instrument, a tubular member pivoted to the support and having a discharge positioned opposite to the



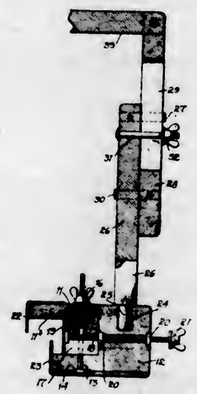
rear face of the wheel and radially movable from the center to the periphery of the grinding wheel, and a bulb connected to the tubular member to feed fluid thereto.

1,384,741. DRIVE MECHANISM FOR MILLS. THOMAS C. CAMPBELL, Owensboro, Ky., assignor to The Anglo-American Mill Company, Owensboro, Ky. Filed Jan. 22, 1920. Serial No. 353,155. 6 Claims. (Cl. 83—12.)



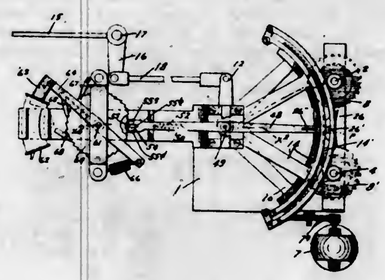
1. In a self contained mill having a roll section and a centrifugal section, pairs of rolls in said roll section, centrifugals in said centrifugal section, a conveyer adjacent each pair of rolls and means for actuating each member of said pairs of rolls in opposite directions and simultaneously actuating said conveyer, said means comprising sprockets associated with each roll and each conveyer and a chain engaging the sprockets of each pair of rollers and the sprocket of the adjacent conveyer.

1,384,742. MEAT-CUTTING MACHINE. JOHN W. CLARK, Alhambra, Calif., assignor of one-half to Henry Almond, Newark, N. J., and one-half to Clark Cutter, Inc., Newark, N. J., a Corporation of New Jersey. Filed July 13, 1920. Serial No. 395,947. 3 Claims. (Cl. 143—25.)



1. A meat cutting machine comprising a frame including a bed, said frame supporting a band saw and its associated mechanism, a sliding table on the frame and between the reaches of the saw and projecting laterally beyond one of said reaches, an open topped receptacle adapted to be secured to the bed adjacent to and below the projecting end of the table, and coacting means on the frame and on the table so disposed that the receptacle when reversed has its bottom substantially level with the table to form an extension thereof.

1,384,743. HEADPLATE FOR SIGNBOARDS. THOMAS CUSACK, Chicago, Ill., assignor to Thos. Cusack Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 22, 1921. Serial No. 463,726. 2 Claims. (Cl. 40—125.)



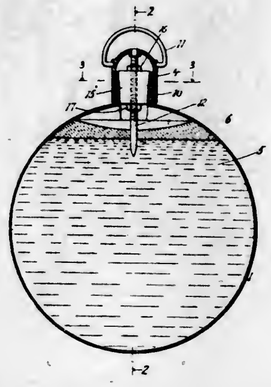
1. In combination with a signboard, which includes a panel and a bar defining said panel at the top, an auxiliary head-bar, a plate attached to the face of said head-bar and depending below the bottom edge of the same, and narrow, vertically extending bars secured to the rear face of said head-bar, said head plate and vertical bars being adapted to engage and to be secured to the opposite faces of the top bar of the sign.

1,384,744. BOOKREST FOR HOSPITAL-BEDS AND CHAIRS. MARTIN L. DODGE, Lake Kushaqua, N. Y., assignor of one-half to Albert E. Paye, Lake Kushaqua, N. Y. Filed Apr. 12, 1920. Serial No. 373,270. 1 Claim. (Cl. 45—82.)

A book rest including an adjustable rest plate and a supporting clamp from which the rest plate is adjustably mounted, said clamp including a pair of L-shaped blocks in adjustable connection with one another, having spaced parallel extensions one of which projects beyond the other, a clamping plate, plates secured to the ends of said block extensions and projecting inwardly therefrom and each opposing a portion of the said clamping plate, and an adjusting member working through a bore in one block and a slot in the other block as and for the purpose set forth.

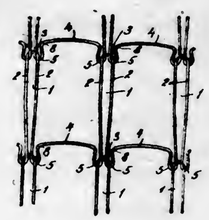
1,384,745. STEERING MECHANISM FOR DIRIGIBLE BODIES. KENNEDY DOUGAN, Minneapolis, Minn. Original application filed Apr. 21, 1910, Serial No. 556,855. Divided and this application filed Aug. 2, 1915, Serial No. 43,196. Renewed Nov. 22, 1919. Serial No. 339,933. 6 Claims. (Cl. 172—8.)

3. In a torpedo or other dirigible object, the combination with a rudder, of a driving mechanism adapted to turn the rudder, a starting element adapted to start said mechanism, a revoluble cam actuating and controlling said starting element, and means for rotating said cam, said cam having alternate neutral and operative phases to shift said starting element from neutral to operative position, and reversely.



1,384,746. HEATER. MILBOURNE KEITH DUNHAM, New York, N. Y., assignor of one-third to Charles Berg and two-thirds to Willgot Klingberg, New York, N. Y. Filed Jan. 22, 1918. Serial No. 213,128. 6 Claims. (Cl. 257—246.)

2. In a heater for explosive engine driven vehicles, a pipe adapted to be placed in communication with the exhaust pipe of the engine, and extending through the car body, and a casing completely surrounding said pipe and the portions thereof extending through said car body, to form a space between said pipe and casing, and means for admitting water into said casing and means comprising a siphon connection for draining the water from said casing.

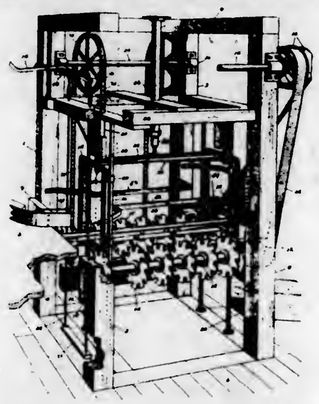


1,384,747. CHEMICAL HEATER. LUIS E. ECKELMANN and GEORGE E. FERGUSON, New York, N. Y., assignors to Pyrene Manufacturing Company, a Corporation of Delaware. Filed Aug. 24, 1917. Serial No. 187,939. 4 Claims. (Cl. 126—263.)

1. A chemical heater comprising a container, a crystallisable salt solution and a sealing material adapted to be melted when heated in said container, the sealing material being of less specific gravity than that of the salt solution and adapted to solidify upon cooling and to form a seal preventing crystallization while said seal remains intact, and a device normally extending through said seal and

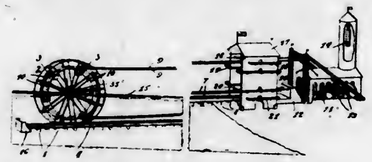
into said salt solution and adapted upon withdrawal to rupture said seal and cause the salt solution to crystallise.

1,384,748. WIRE FABRIC. CHARLES EHRLICH, Brooklyn, N. Y.; Max Ehrlich administrator of said Charles Ehrlich, deceased. Filed Sept. 18, 1919. Serial No. 324,456. 1 Claims. (Cl. 245—5.)



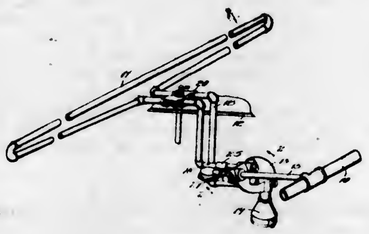
A wire fabric for a bedspring formed of a plurality of long loops, the side elements of the long loops being reversely bent at their lower ends in the plane of the long loops to form a neck, and being again bent outwardly in the plane of the long loops and forming a series of arcuate resilient loops intermediate the respective long loops, in the same plane with the long loops, the said side elements of the long loops being connected at their upper ends by an integral bight portion which is bent downwardly out of the plane of the long loops, said bight being a simple bend which engages against the underside of the neck portion of a long loop of another series.

1,384,749. ICE-SCORING MACHINE. JAMES FAIRHEAD, Toronto, Ontario, Canada, assignor to The Lake Simcoe Ice Supply & Cold Storage Co., Limited, Toronto, Canada. Filed Jan. 26, 1920. Serial No. 353,978. 5 Claims. (Cl. 125—13.)



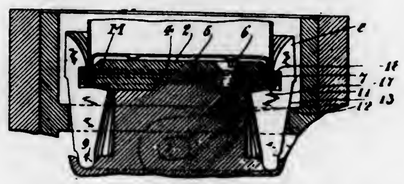
1. In an ice scoring machine, a main frame, parallel horizontal shafts rotatably mounted in bearings in said frame and carrying saws rigid therewith, means for rotating said shafts, an elevator reciprocating on a vertical plane between said shafts and adapted through the weight of ice placed thereon to lower said ice between opposing saws for scoring, said elevator being provided with a tilt-

ing floor, means for tilting said floor for delivering said ice from said elevator, a weight member adapted upon the



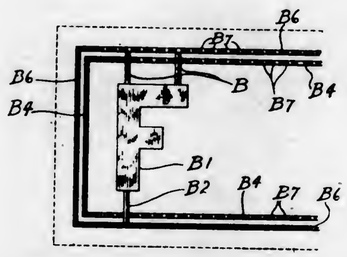
removal of said ice from said elevator to return said elevator to its position above said saws, and a lock for said elevator.

1,384,750. SUBMERSIBLE AMUSEMENT DEVICE. HUGO GERNSBACK, New York, N. Y. Filed Nov. 22, 1920. Serial No. 425,719. 11 Claims. (Cl. 104—78.)



1. In an amusement device, the combination with an inclined track, of a wheel adapted to move along said track, cables for controlling the speed of movement of the wheel down said track, and means for moving the wheel up the track.

1,384,751. STEAM-HEATING APPARATUS FOR RAILWAY-CARS. EGBERT H. GOLD, Chicago, Ill. Filed Mar. 29, 1919. Serial No. 286,026. 2 Claims. (Cl. 237—12.4.)

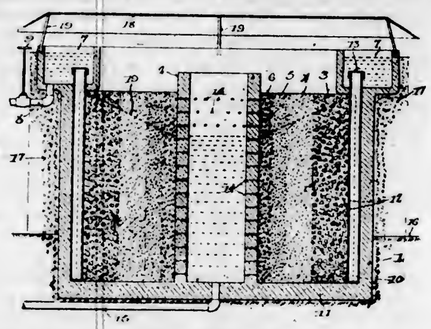


1. In combination with a railway car, a steam train pipe, a radiator in the car having a constantly open outlet, a supply pipe leading from the train pipe to the radiator comprising two sections, a vapor regulator comprising an inlet valve interposed between said sections of the supply pipe, a device to control said valve arranged to be actuated by the medium outflowing from the radiator to maintain steam in the radiator at substantially atmospheric pressure, the supply pipe section between the radiator and the vapor regulator being provided with a drain outlet, and a valve for said outlet controlled by high pressure steam taken directly from the train pipe, which valve is closed when the train pipe is under steam and stands open in the absence of steam pressure in the train pipe.

1,384,752. APPARATUS FOR CONTRACTING RINGS. EDWIN T. GREENFIELD, Kiamesha, and JOHAN GUSTAF V. LANG, New York, N. Y., assignors to Greenfield Paper Bottle Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 28, 1915. Serial No. 53,086. 15 Claims. (Cl. 113—18.)

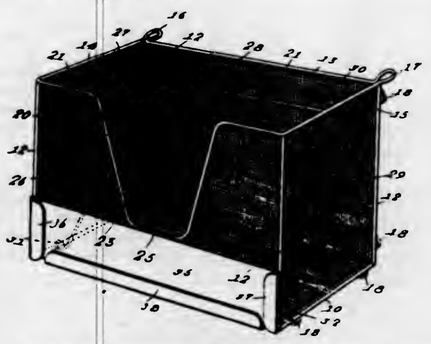
1. A press comprising an anvil, a contractible spiral pressing ring surrounding the anvil, a series of pressing members arranged about said ring, and means for forcing said pressing members toward said anvil into engagement with the ring so as to contract the same, said pressing members having a portion that projects under said anvil.

1,384,753. ILLUMINATED DISPLAY APPARATUS. ALBERT GREENWOOD, Knoxville, Tenn. Filed May 13, 1918. Serial No. 234,298. 8 Claims. (Cl. 40—140.)



1. In an apparatus of the nature described, the combination of substantially opaque display objects, supporting means extending upward and downward from said display objects, and two superposed parallel members having along their length equally spaced recesses all adapted to receive any of said supporting means, substantially as described.

1,384,754. FILTER AND PROCESS OF FILTERING. JOHN H. HANSEN, Milwaukee, Wis. Filed Jan. 10, 1920. Serial No. 350,571. 8 Claims. (Cl. 210—126.)

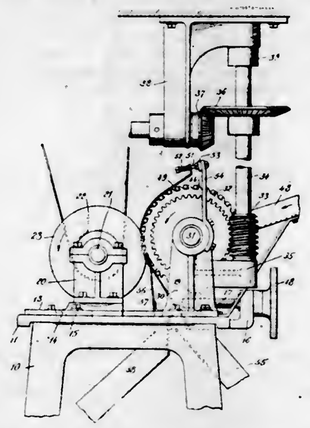


1. A filter comprising a plurality of vertical filtering walls, means for passing the water substantially horizontally therethrough, said filtering walls being exposed to the air at one end.

6. The process of filtering water, which process consists of passing the water in a substantially horizontal direction through filtering and oxygen absorbing material, and allowing oxygen to pass into said material, the line of flow of

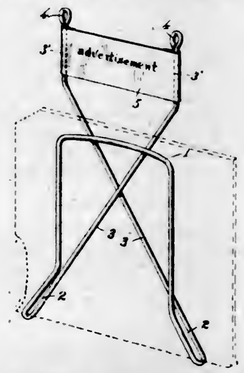
the oxygen being substantially at right angles to that of the water.

1,384,755. FILE-BASKET. JOSEPH PAYNE HALL, Sanford, Fla. Filed Aug. 19, 1919. Serial No. 318,455. 1 Claim. (Cl. 129—32.)



A receptacle comprising a rigid metallic frame, one element of which is of U formation, said frame including an approximately rectangular structure forming the upper portion of the frame, certain of the corners of the rectangular structure being formed into loops permitting of the connection of several receptacles in series, wire mesh connecting the various elements of the frame and providing front, rear, side and bottom walls, the front wall being cut away to conform to the U shaped frame element, a follower within the receptacle, springs connected with the follower and connected with structural elements of the frame, said springs retaining the follower in intimate contact with the contents of the receptacle, for holding records and the like in an approximately vertical position and a label holder extending across the front wall below the U portion, said U portion, label holder and front and rear walls permitting exposure of papers filed in vertical position, from both sides of the follower.

1,384,756. CARBON-CUTTING MACHINE. CARL HAMBUECHEN, Belleville, Ill., assignor, by mesne assignments, to National Carbon Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Oct. 18, 1917. Serial No. 197,197. 7 Claims. (Cl. 125—13.)

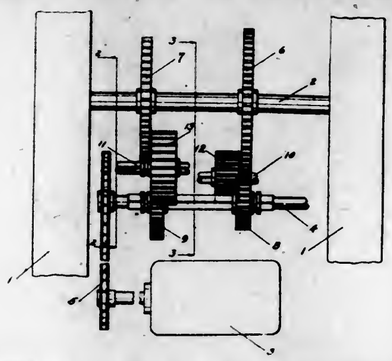


1. In apparatus for cutting rods, the combination of a plurality of cutting disks, a spindle, a drum mounted upon the spindle, a plurality of rings surrounding the drum and provided with alined notches for receiving rods, means for preventing rotary displacement of said

rings with respect to the drum and each other while permitting longitudinal adjustment thereof upon the drum relatively to each other, means for fastening the rings in

any desired position of longitudinal adjustment upon the drum, and means for rotating the spindle to cause such rod-receiving rings to convey rods into position to be cut by said disks.

1,384,757. PLACARD-SUSTAINING MEANS. WILLIAM E. HARRISON, Union City, Ind. Filed Apr. 21, 1921. Serial No. 463,133. 2 Claims. (Cl. 40—151.)

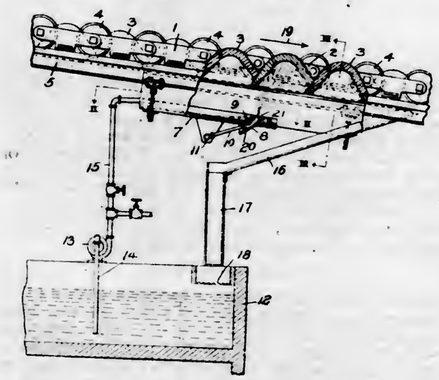


1. Placard sustaining means comprising an upstanding, bail-like frame terminating at its lower portions in laterally inclined return loops, the material of which the said frame is made being extended in each instance beyond the loops to form crossing arms lying in the rear of the bail-like frame, and the upper portions of the arms being formed into support engaging means, the arms being arranged sufficiently contiguous to the bail-like frame both at the lower portion of the frame and at the upper portion thereof for gripping a card introduced between the bail-like frame and the arms at both of said points.

1,384,758. VARIABLE-SPEED GEARING. WALTER H. HIMES, Grove City, Pa., assignor to Himes Cohen Tractor Co., Grove City, Pa. Filed Mar. 1, 1919. Serial No. 280,122. 3 Claims. (Cl. 74—58.)

3. In a gearing, the combination of driving shaft, a driven shaft, a driven gear fixed to said driven shaft, a driving gear so disposed on said driving shaft as to permit longitudinal movement into and out of mesh with their

coacting driven gear, said driving gear having an excess width over that of the driven gear, a reverse gear so

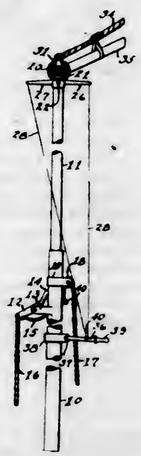


mounted and so disposed as to maintain continuous mesh with the coacting driving gear regardless of whether driving gear or reverse gear is in mesh with driven gear.

1,384,759. VEHICLE-TIRE. EDISON G. HULSE, Cumberland, Md., assignor to Kelly-Springfield Tire Company, Cumberland, Md., a Corporation of New Jersey. Filed Dec. 29, 1920. Serial No. 433,910. 4 Claims. (Cl. 152—14.)

1. A tire tread of resilient material, comprising a substantially flat surface in cross section, a continuous annular mid-rib, and resilient counterpart raised and spaced-apart traction pads on each side of said rib, said pads, in plan view, forming cruciform patterns adapted to remain continuously in contact with the road surface throughout their period of traction and to yieldingly clutch the road bed momentarily under the tangentially imparted traction stresses.

1,384,760. APPARATUS FOR COATING PIG-METAL-CASTING MACHINES. WILLIS T. HURST, Pittsburgh, Pa., assignor to Slag Rock Machine Company, a Corporation of Pennsylvania. Filed Feb. 16, 1920. Serial No. 358,892. 5 Claims. (Cl. 22—88.)



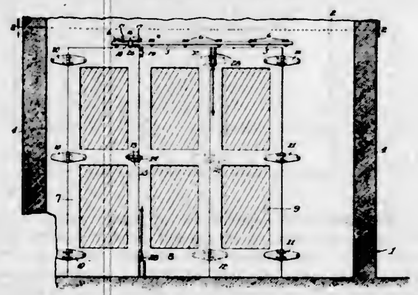
1. The combination with a pig metal casting machine, of an apparatus for coating the molds thereof with a liquid composition, said apparatus comprising means for maintaining a flowing stream of said composition adjacent to said mold, and means for projecting a jet of fluid upon said stream of composition to impel it upon the molds.

1,384,761. CABLE-TIE HANGER. JAMES H. JESSUP, Salem, Ohio. Filed Apr. 14, 1920. Serial No. 373,837. 13 Claims. (Cl. 294—22.)

1. In a cable tie hanger, an extensible member comprising telescopic tubes, one of said tubes carrying work holding means, means for moving said work carrying tube from one end of the other tube, and means operable from said end for holding said work carrying tube in position.

1,384,762. CABLE-TIE-CLAMPING DEVICE. JAMES H. JESSUP, Salem, Ohio. Original application filed Apr. 14, 1920, Serial No. 373,837. Divided and this application filed Nov. 29, 1920. Serial No. 426,953. 9 Claims. (Cl. 294—19.)

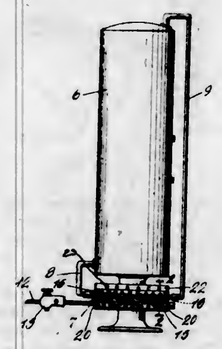
1. In a device of the class described, the combination with an extensible support, of movable clamping members carried by the support, and means associated with the support for operating said members and means for extending said support.



2. In a cable tie hanger, the combination with a telescopic extension device, of jaws pivotally secured to one of said telescopic members, and means for actuating said jaws.

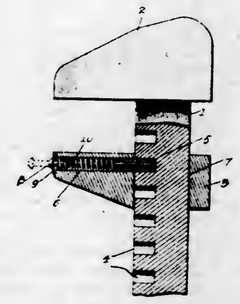
3. In a cable tie hanger, the combination with an extensible supporting means, of jaws pivotally secured thereto, a lever pivotally secured to the lower portion of said extensible means, connecting means between said jaws and said lever.

4. In a cable tie hanger, the combination with an extensible supporting device, of movable jaws carried thereby, and pivoted means connected with said device for operating said jaws.



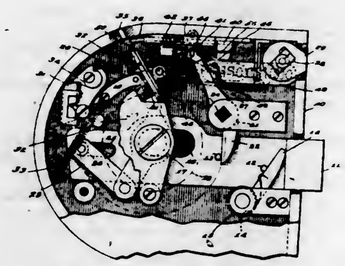
5. In a cable tie hanger, the combination with extensible supporting means, of clamping jaws pivotally secured thereto, a lever carried by the supporting means, and means connecting the lever with the clamping jaws.

1,384,763. DOOR-HANGER. BURTON S. JORDAN, Ottawa, Ill., assignor to J. E. Porter Company, Ottawa, Ill., a Corporation of Illinois. Filed July 28, 1919. Serial No. 313,784. 4 Claims. (Cl. 20—20.)



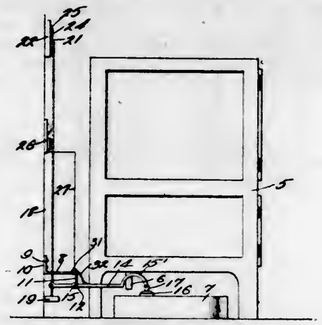
1. In a door structure, the combination of a straight track rigidly mounted parallel to and above the door opening, a plurality of doors hinged together, there being an inner door and an outer door and the latter hinged to a stationary support at one side of the door opening, a roller carriage mounted to travel on said track, a carrier secured to said roller carriage and extending downward therefrom, a bracket secured to said inner door, and a horizontal arm arranged at right-angles to said bracket and extending between the same and said carrier, said arm having pivotal connection with said carrier and rigid, non-rotative connection with said bracket.

1,384,764. COMBINED AIR AND WATER HEATER. WALTER M. KEIGHLER, Philadelphia, Pa. Filed Dec. 22, 1920. Serial No. 432,534. 1 Claim. (Cl. 126—133.)



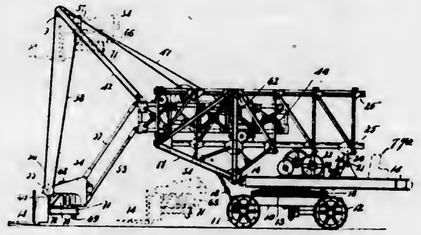
A combined water and air heater comprising an outer horizontal semicircular shell consisting of two plates and an interposed sheet of heat-insulating material, said shell having air inlets near its lower edge, an inner semicircular drum extending horizontally within the shell and spaced therefrom, the lower edge of the drum being secured to the lower edge of the shell and the upper edge of the drum being spaced from the upper edge of the shell, whereby the space between the drum and shell increases in width toward said upper edges, a gas burner pipe extending across the lower part of the drum, and a water pipe extending across the drum, above said burner pipe.

1,384,765. WRENCH. ELMER THEODORE KNITTER, Cleveland, Ohio. Filed July 7, 1920. Serial No. 394,513. 2 Claims. (Cl. 81—145.)



1. A wrench comprising a shank having spaced sockets, a jaw slidable on said shank and having an opening extending out through one end, a pin slidable in said opening and adapted to extend into said sockets whereby to hold the jaw against sliding movement in either direction, a rod connected to said pin and having a head arranged exteriorly of the jaw, a nut threaded on said jaw, a spring confined between said nut and said pin and urging the head of said rod in the direction of said jaw and urging said pin into one of said sockets, and a fixed jaw connected to said shank.

1,384,766. COIN-CONTROLLED LOCK. NICHOLAS KRETZER, Louisville, Ky. Filed July 30, 1919. Serial No. 314,272. 4 Claims. (Cl. 194—74.)

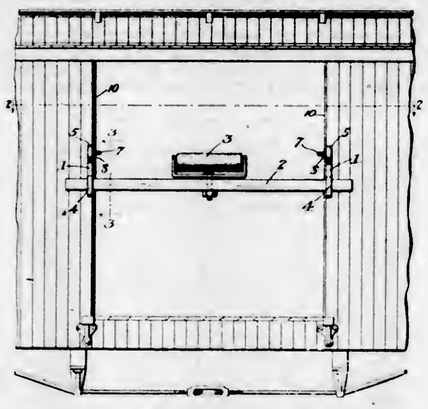


1. In a coin-controlled lock, a coin slot guard comprising a longitudinally movable guard plate, a guide therefor, a lever engaging said guard to produce longitudinal movement thereof, interengaging members, one of which is carried by the guard for holding the guard in projected position, and means for yieldingly urging the lever in one direction and for urging one of said interengaging members to active position.

1,384,767. INDICATOR AND ALARM FOR REFRIGERATOR DRIP-PANS. WILLIAM M. KURZ, Newark, N. J. Filed Nov. 26, 1919. Serial No. 340,864. 1 Claim. (Cl. 116—118.)

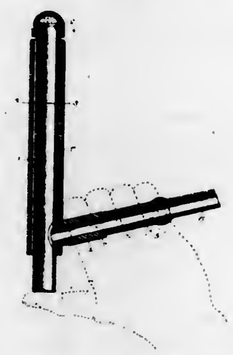
A signaling device for refrigerator drip pans comprising a bracket having its ends bent at right angles in opposite directions to each other, one of said ends being secured to an object adjacent the pan, a lever pivotally connected, adjacent one end, to the other end of the bracket, a float at the extreme end of the lever, a vertical movable rod passing through the bracket and opposite end of the lever, a weight at the lower end of the rod to balance the float, and indicating means connected with the upper end of the rod, operable by movement of the float.

1,384,768. REVOLVING CRANE FOR BRICK-HANDLING. GRAFTON E. LUCE, Chicago, Ill. Filed Aug. 16, 1919. Serial No. 317,872. 5 Claims. (Cl. 214—6.)



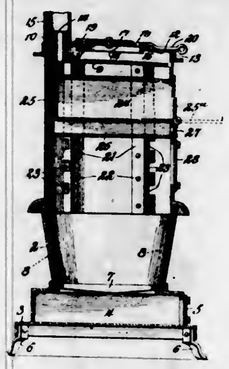
1. Apparatus of the kind described comprising, a rotatably mounted table, a carriage mounted for forward and backward movement thereon, a boom carried by said carriage, a frame suspended from said boom, and links connecting said frame and said carriage to maintain the same parallel to each other.

1,384,769. ELECTRIC GUN. FREDERICK B. MACLAREN, Jersey City, N. J., assignor to Electric Gun Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 16, 1916. Serial No. 84,674. 13 Claims. (Cl. 172—285.)



3. The method of shooting projectiles which consists in establishing a field traveling in the direction of flight by means of polyphase currents, and applying the accelerating motor effect of that field to the projectile to shoot it through the air.

1,384,770. TIMBER-ROLLER-SUPPORTING DEVICE FOR CARS. JACOB MANSON MATTIX, Louise, Miss. Filed June 3, 1920. Serial No. 386,158. 4 Claims. (Cl. 193—36.)

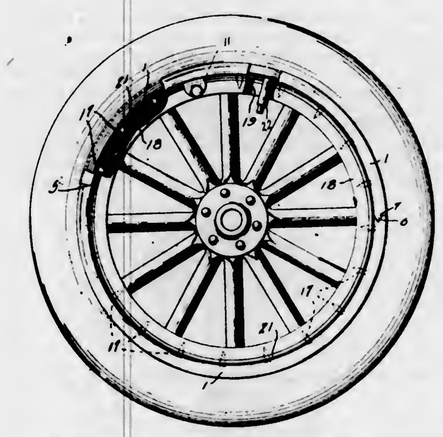


1. An adjustable support for a timber roller beam, adapted to be secured to the upright member of a car door frame or the like, comprising a bracket, means for supporting said beam on said bracket, a hooked member coöperating with said bracket, one end of which is adapted to engage the bracket and the other end the upright member of the car door frame, for securing said bracket in its adjustable position.

1,384,771. DOUBLE-CURRENT SYRINGE. JOSEPH KINNEY MITCHELL, Los Angeles, Calif. Filed Apr. 9, 1920. Serial No. 372,482. 3 Claims. (Cl. 128—240.)

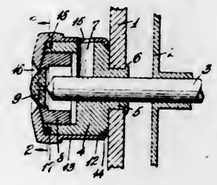
1. A device of the character specified comprising a tubular casing having one end open and having the other provided with a detachable spray head, said casing having a lateral branch near the open end for connection with the source of liquid supply, the open end of the casing being adapted to be closed by the thumb to provide either irrigation or drainage, and a jacket supported by the lateral branch and inclosing the tubular casing in spaced relation to provide a discharge passage about the tubular caring, said jacket being spaced apart from the spray cap at its inner end.

1,384,772. STOVE. CARL JOSEF MITISKA, Howell, Ind. Original application filed May 21, 1920, Serial No. 383,278. Divided and this application filed Jan. 13, 1921. Serial No. 437,026. 4 Claims. (Cl. 126—4.)



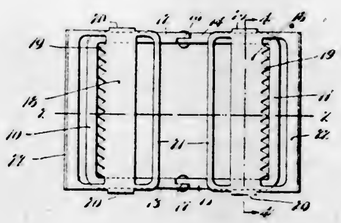
1. In a stove, the combination with a fire pot, and a drum supported upon the same, a bake oven carried within the drum above the fire pot and wholly inclosed thereby and in spaced relation with the walls of the drum, said bake oven being provided with a damper-controlled cold air passage open at its inner end and arranged beneath the oven with means to allow cold air to pass between the oven and the fire in order to regulate the effects of the latter upon the oven.

1,384,773. UTILIZING VULCANIZED WASTE RUBBER. STUART B. MOLONY, Wellesley Hills, Mass. Filed Mar. 30, 1918. Serial No. 225,803. 12 Claims. (Cl. 18—52.)



12. As a new article of manufacture semi-hard rubber containing fabric produced from soft vulcanized rubber containing fabric, by impregnating with sulfur the contained fabric in the soft vulcanized rubber, and subjecting to a vulcanizing temperature for a sufficient time to vulcanize the soft rubber semi-hard.

1,384,774. DEMOUNTABLE RIM. CLYDE V. NACHAND and EDWIN M. RAHM, Jeffersonville, Ind. Filed Oct. 14, 1920. Serial No. 416,873. 2 Claims. (Cl. 301—17.)

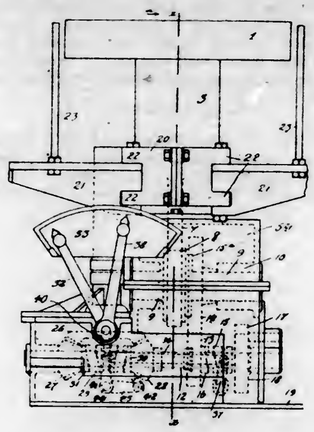


1. In a device of the class described, the combination of a rim having spaced arcuate locking recesses extending part way into the inner surface of the rim from one side thereof, a felly having similarly spaced locking lugs positioned to releasably engage in the aforesaid locking recesses, the felly having a longitudinal slot to permit of shifting the rim and tire valve longitudinally relative to the felly, the rim having diagonally slotted portion, and a wedge plate member slidable into the said diagonally slotted portion in the rim, whereby to permit of readily securing the rim in place and readily detaching same.

1,384,775. LUBRICATING DEVICE. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 2, 1919. Serial No. 328,021. 2 Claims. (Cl. 64—24.)

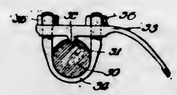
1. A fishing reel provided with a frame including an end head, a spool having a shaft extending through said head, a journal bearing member secured to said end head and in which said shaft rotates, an end bearing member for said shaft adjustable endwise thereof in said journal bearing member, and a cap inclosing and rotatable on said journal bearing member and permanently attached thereto and arranged when attached to prevent adjustment of said end bearing member.

1,384,776. CLAMP-BUCKLE. JOSEPH POSTERNOCK, Walpole, Mass. Filed Feb. 19, 1921. Serial No. 446,432. 1 Claim. (Cl. 24—194.



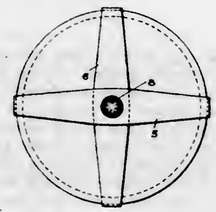
A clamp buckle comprising a pair of substantially U-shaped members hinged together to form a substantially rectangular articulated frame, a toothed plate slidably mounted on said members, and having the teeth adapted to engage with the cross bars of said U-shaped members, an angular guiding plate for each toothed plate lying parallel to said teeth and on the opposite side of the said cross bars, and a bar parallel to each of said guiding plates and on the opposite side of said teeth.

1,384,777. FOUNDRY MOLDING-MACHINE. PERCY PRITCHARD, Birmingham, England. Filed Jan. 28, 1920. Serial No. 354,600. 8 Claims. (Cl. 22—45.)



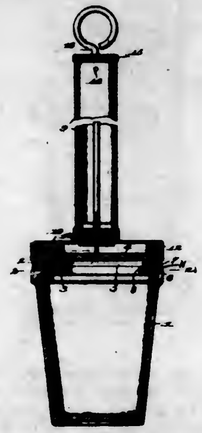
3. A foundry molding machine comprising a molding table or pattern plate, a driving shaft, means for impart-

ing a jarring action to the molding table driven from said shaft, and means for withdrawing the mold which



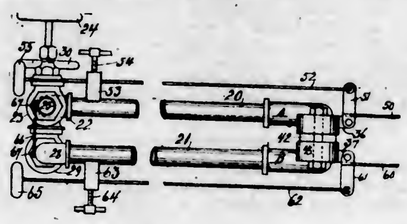
means are driven from said driving shaft, substantially as set forth.

1,384,778. GRIPPER MECHANISM. FRANK E. RICH, Chicago, Ill., assignor to Miehle Printing Press and Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1919. Serial No. 292,904. 8 Claims. (Cl. 101—412.)



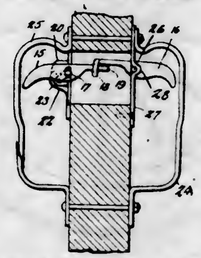
1. In gripper mechanism, the combination of a support having a groove, and a gripper having a projection cooperating with said groove in a manner whereby the gripper is rockably adjustably mounted on said support.

1,384,779. PISTON-RING TOOL. JULIUS O. ROBERTS, Abilene, Kans. Filed June 4, 1920. Serial No. 386,560. 4 Claims. (Cl. 29—86.4.)



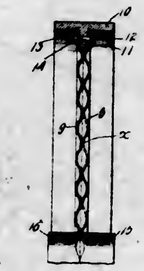
1. In a tool for applying piston rings, a pair of pivotally connected arms, each of the arms having a right angled extremity adapted to overlie a portion of the periphery of a piston, and means for adjusting the right angled ends with relation to the arms.

1,384,780. PUMP FOR FRUIT-JARS AND THE LIKE. SIDMOR S. SAGER, Buffalo, N. Y. Original application filed June 25, 1919, Serial No. 306,718. Divided and this application filed June 22, 1920. Serial No. 390,738. 2 Claims. (Cl. 230—27.)



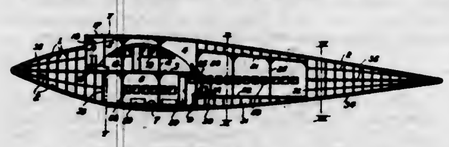
1. A pump comprising a cylinder, a piston working in said cylinder, a cupped element secured to said cylinder, a resilient washer removably seated in said element, and a spring for securing said resilient washer in place.

1,384,781. LIQUID-FUEL BURNER. RAPPEL SCHAWROW, Bayonne, N. J. Filed July 30, 1919. Serial No. 314,316. 6 Claims. (Cl. 158—75.)



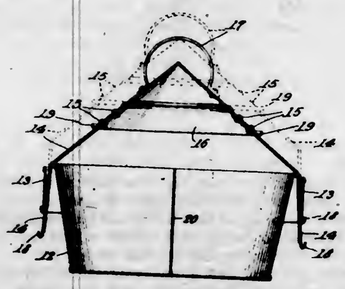
1. In a liquid fuel burner the combination of a pipe for a vaporizing agent and a liquid fuel pipe, an outlet port coacting with each pipe and an adjustable wing spaced from each port to control the direction and mixture of the discharged liquid fuel and vaporizing agent after being discharged from their outlet ports.

1,384,782. LATCH. EDWARD SCHRUTH, ALBERT SCHRUTH, and JOHN F. SCHRUTH, Pepin, Wis. Filed July 12, 1920. Serial No. 395,804. 5 Claims. (Cl. 292—241.)



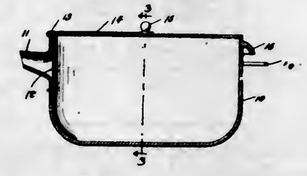
1. In a locking bolt for doors, a plate having a bolt bearing and an extension forming a shield, a bolt rotatable in the bearing and having a crank extension overlying the shield, a bolt engaging member, and means for partially rotating the said bolt.

1,384,783. VEHICLE-WHEEL, &c. BENJAMIN F. SEYMOUR, Washington, D. C. Filed July 20, 1918. Serial No. 245,857. 6 Claims. (Cl. 301—63.)



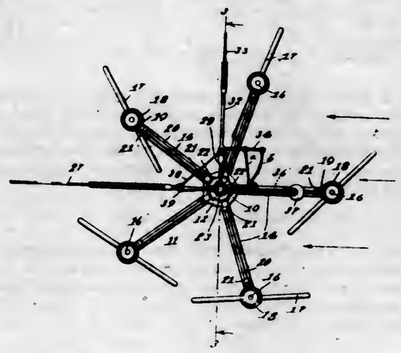
1. A wheel of the character described constructed of metal plates having parallel corrugations, and having the corrugations of the respective plates crossing, substantially as set forth.

1,384,784. AIRPLANE-BODY. JAMES L. SHANKLAND, Toronto, Ontario, Canada. Filed Aug. 23, 1919. Serial No. 319,375. 3 Claims. (Cl. 244—30.)



1. A flying machine body having superposed floors entirely within said body providing an engine room and a pilot room and an upper cabin above the engine room with the pilot room on the same plane as the upper cabin and overhanging the forward end of the engine room, said machine body having the walls thereof inset to provide decks at the upper cabin, and a floor and ceiling in the rear of said superposed floors providing a lower cabin of greater depth than said engine room and communicating with said upper cabin and said engine room.

1,384,785. RECEPTACLE FOR FEEDING AND WATERING POULTRY. CHARLES S. SHEPARD, Cattaraugus, N. Y.; Minerva A. Shepard executrix of said Charles S. Shepard, deceased. Filed Sept. 2, 1920. Serial No. 407,787. 2 Claims. (Cl. 119—61.)



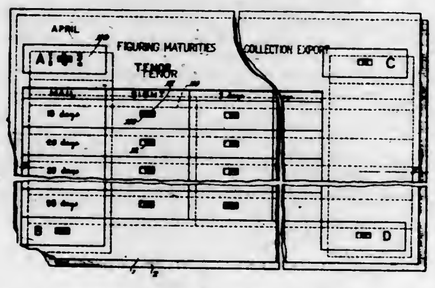
1. A receptacle, for the purpose indicated, consisting of an open topped pan provided at its outer sides with brackets open from top to bottom, a guard provided with spring arms passing downward through the said brackets and by means of which the said guard may be supported in different positions of adjustment by frictional contact of the said spring arms with the outer portions of said brackets.

1,384,786. COOKING VESSEL. MABEL L. THOMPSON, New York, N. Y., assignor of one-half to Rebecca Woods, New York, N. Y. Filed Dec. 9, 1920. Serial No. 429,439. 5 Claims. (Cl. 53—8.)

1. A cooking vessel having a transverse pivotally connected supporting bail and, in diametrically opposite positions, an outlet and a handle arranged in a plane perpendicular to the axis of the supporting bail, the upper edge or rim of the vessel above the outlet and extending rearwardly at the sides of said rim being provided with a seat for the reception of the peripheral edge of a vessel cover.

1,384,787. WINDMILL. WILLIAM R. TWIFORD, Manville, Wyo. Filed Oct. 13, 1919. Serial No. 330,217. 2 Claims. (Cl. 170—24.)

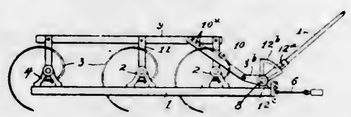
1. A wind mill embodying a fan having rotatably mounted fan blades, a main governing vane, a supplemental governing vane, said supplemental governing vane being geared to the fan blades and mounted for horizontal pivotal movement and including an L-shaped arm positioned upon one side of the pivot, a weighted cable connecting the vanes and means connecting the L-shaped arm and cable for controlling the position of the supplemental vane.



1,384,788. TYPEWRITING-MACHINE. RICHARD W. UHLIG, Arlington, N. J., assignor to Allen Typewriter Company, Allentown, Pa., a Company of Pennsylvania. Filed Oct. 13, 1917. Serial No. 196,374. 6 Claims. (Cl. 197—121.)

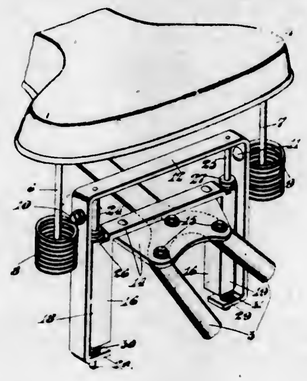
2. In a typewriting machine, the combination with a to and fro movable carriage and a platen rotatably carried thereby, of a paper table pivotally supported by the carriage having a part extending below and conforming to the curvature of the platen and carrying a roller at the forward end thereof; a spring to yieldingly urge the table to position with the roller in engagement with the platen;

a lever fixed to the table support operable to rock the support and move the table to position with the roller carried thereby out of engagement with the platen; and releasable latching means operable by the movement of the lever to lock the lever and thereby the table in position with the roller carried thereby out of engagement with the platen.



1,384,789. CALCULATOR FOR MATURITIES. CARLOS VILLEGAS, Brooklyn, N. Y. Filed May 1, 1919. Serial No. 294,106. 6 Claims. (Cl. 283—2.)

1. A means for obtaining dates of maturity, comprising a table for a given month having the maturity dates arranged in groups, said groups being arranged in intersecting columns and rows according to the tenor and time in the mail of the instrument, the order and arrangement of the dates being the same in all groups.

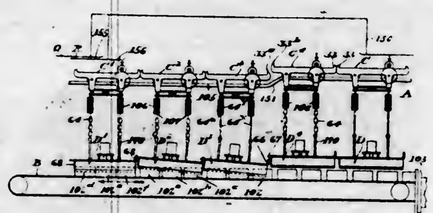


1,384,790. TRACTOR-DRAWN TILLAGE IMPLEMENT. FREDERICK C. WARNE, Mansfield, Ohio, assignor to Roderick Lean Manufacturing Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 4, 1918. Serial No. 265,303. 8 Claims. (Cl. 55—104.)

1. In a harrow, including flexibly connected transversely arranged master and auxiliary sections, tooth bar actuators on each section flexibly connected to each other, and actuator moving and adjusting means positioned on said master section, said tooth bar actuators on each section being independently adjustable for alining the teeth of said master and auxiliary sections.

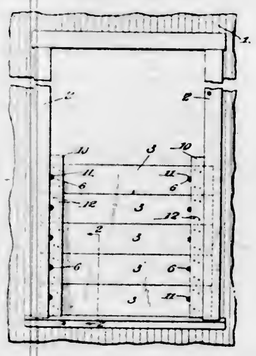
1,384,791. MOTORCYCLE-SADDLE. CHARLES A. WATERMAN, Boston, and HUBERT F. SMITH, Medford, Mass., assignors to General Motorcycle Sales Company, Boston, Mass., a Corporation of Massachusetts. Filed May 14, 1919. Serial No. 296,997. 2 Claims. (Cl. 208—15.)

1. A motor cycle saddle comprising a seat, posts at opposite sides of said saddle supporting the seat, two tension springs encircling, respectively, said posts and supporting the posts, a frame to which the upper ends of said springs are secured, a truss constructed to be secured to a motor cycle and having two vertical housings mounted respectively at opposite sides thereof, coiled springs mounted in



said housings, posts extending through said springs and supporting said frame for upward and downward movement relatively to the truss, and additional springs between said truss and frame for yieldingly resisting the upward movement of the frame relatively to the truss.

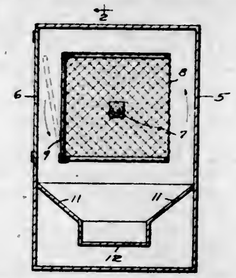
1,384,792. POWER-LIFT PLOW. LEWIS E. WATERMAN, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 16, 1915. Serial No. 67,201. 5 Claims. (Cl. 97—59.)



1. In a power lift plow, the combination of a plow, a ratchet wheel, a plow lifting rod, a pivoted arm connected to the forward end of said lifting rod and equipped with a pawl adapted to engage said ratchet wheel and thereby lift the plow by movement of said lifting rod beyond a dead-center position, and a revolving tappet arranged to move the pawl into engagement with the ratchet wheel and to subsequently actuate the lift rod for releasing the same from said position whereby the plow is free to lower.

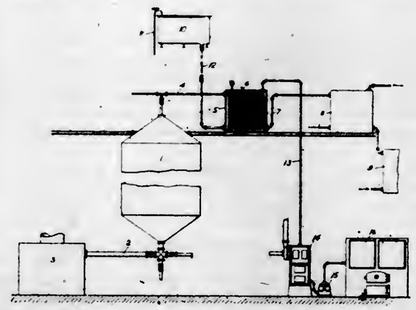
1,384,793. HOISTING AND CONVEYING GRAPPLE. BERNARD F. WEBER and FRANK E. WOODFORD, Chicago, Ill.; said Woodford assignor, by mesne assignments, of his right to Raymond C. Penfield, New York, N. Y. Original application filed Feb. 24, 1910, Serial No. 545,616. Divided and this application filed Aug. 8, 1910. Serial No. 576,171. 21 Claims. (Cl. 294—63.)

1. A conveyer comprising, in combination, a car, a grapple pivoted to the car for horizontal rotation, normally resting in a predetermined position and mounted to be turned at an angle thereto, means for yieldingly holding said grapple in said predetermined position, and automatic means for returning the grapple to its original relation to the car when it is turned therefrom.



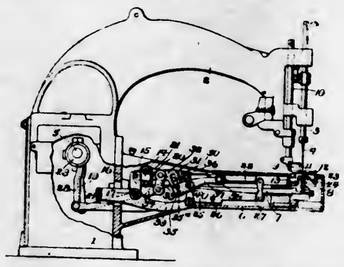
1,384,794. GRAIN-DOOR FASTENER. CHARLES WING, Aurora, Ill. Filed Sept. 13, 1920. Serial No. 409,839. 6 Claims. (Cl. 292—24.)

1. A grain door fastener for cars comprising a fitting attached to the jamb, a fitting secured to the closure, and a connecting member having ends adapted to be engaged with said fittings respectively, both ends being hook-shaped, but one of them having its terminal portion extending substantially parallel to the shank, while the tip of the other hook projects transversely of said shank; and means removably secured in position adjacent the latter hook for holding it in engagement with the fitting.



1,384,795. CEMENT-BAG CLEANER. JOSEPH WIRTH, Fond du Lac, Wis. Filed Mar. 11, 1921. Serial No. 451,625. 1 Claim. (Cl. 83—60.)

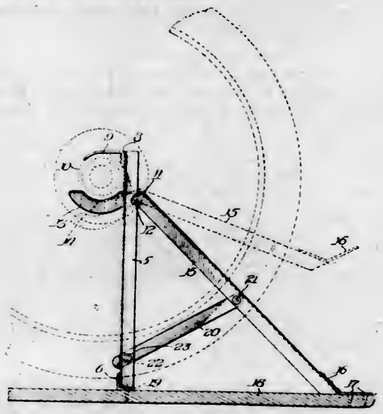
A cement bag cleaning apparatus comprising a box like casing having a door in the front side thereof, a receptacle square in cross section all of the sides of which are formed of screen material and one of said sides being hingedly connected to said receptacle to swing outwardly and downwardly through the front of the box like casing, when the door of said casing is open, to thereby permit of the charging of cement bags to be cleaned into said receptacle through the front wall of the casing and across said hinged side, means for rotating the recep-



tacle within the casing and a door in the casing near the bottom thereof to permit of the removal of the cement dislodged from bags placed in the receptacle.

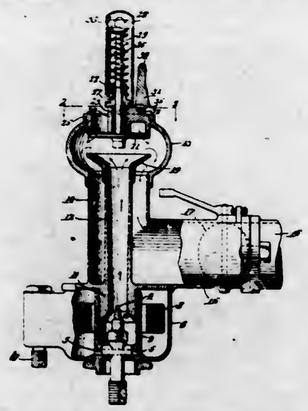
1,384,796. HEAT-RECLAIMING SYSTEM FOR PULP-MILLS. GEORGE S. WITHAM, Jr., Hudson Falls, N. Y. Filed July 15, 1916. Serial No. 109,456. 4 Claims. Cl. 92—11.)

1. A heat reclaiming system for pulp mills comprising one or more digesters provided with means for relieving gases therefrom during the digestion, means for bringing a regulable stream of liquid to be heated into heat interchanging relation with said gases while still at a high temperature, and automatic regulating means for regulating said stream of liquid in accordance with the temperature of the heated liquid; substantially as described.



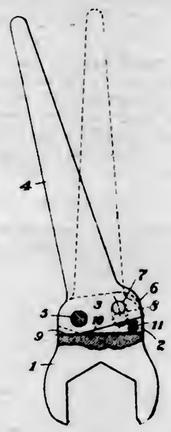
1,384,797. FEEDING MECHANISM FOR SEWING-MACHINES. AUGUST J. WOHLFART, New York, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1915. Serial No. 944. 8 Claims. (Cl. 112—209.)

1. In a sewing machine, the combination of a standard, a work-supporting arm projecting therefrom and a feed-



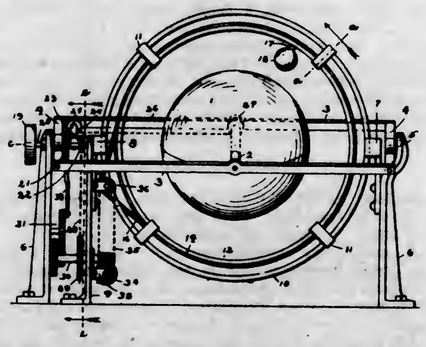
ing mechanism located within said work-supporting arm for feeding the material longitudinally thereof, said feeding mechanism including a main feed bar, a feed dog carried thereby, a sleeve embracing said main feed bar and capable of endwise movement thereon, an auxiliary feed dog carried by said sleeve, means for moving said sleeve endwise in unison with the main feed bar or for giving a differential movement to said sleeve, means under the control of the operator for giving to said sleeve said differential movement or for causing the same to move in unison with the main feed bar, said last named means including a lever located in said work-supporting arm, a rock lever pivoted to said standard and connected to said lever, and a manually-operated member connected to said rock lever.

1,384,798. AUTOMOBILE-SUPPORT. PHILIP DEBROW, Chicago, Ill. Filed Feb. 5, 1921. Serial No. 442,663. 6 Claims. (Cl. 254—120.)



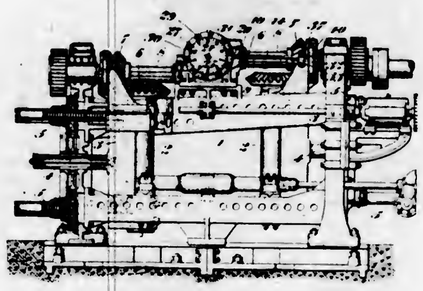
1. An automobile support of the character described, comprising a vertical standard, a lever pivoted on said standard, said lever having a short arm adapted to liftingly engage beneath an axle and a long arm serving as a brace and means for attaching the lower end of said long arm to the floor.

1,384,799. CARBURETER. WILL E. DEWEY, Rockford, Ill. Filed Jan. 17, 1917. Serial No. 142,820. 3 Claims. (Cl. 261—63.)



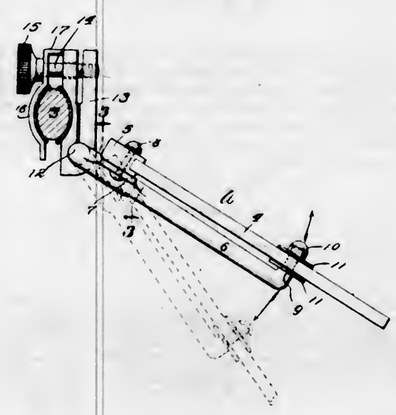
1. In a carbureter, the combination of a primary mixture tube, a secondary mixing chamber having an air inlet port and a mixture outlet, an inwardly opening disk valve for said port, said tube extending into said mixing chamber through the mixture outlet end thereof, a fuel nozzle in said tube, and a distributing disk within the mixing chamber at the discharge end of the primary mixture tube, co-axial with the disk valve and positioned between the valve and mixture outlet, whereby the primary mixture will be radially distributed by said plate and will be drawn into a peripheral body of secondary air in the mixing chamber and thence through the mixture outlet in the opposite direction from that in the primary mixture tube.

1,384,800. WRENCH. OSWALD DUDA, Houston, Tex., assignor to Reed Roller Bit Company, a Corporation of Texas. Filed Dec. 23, 1920. Serial No. 432,641. 5 Claims. (Cl. 81—98.)



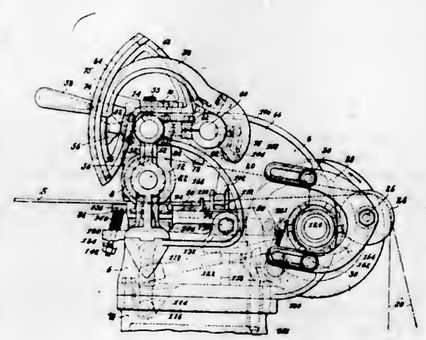
1. A wrench comprising a head having a pair of rigid jaws to engage the object, a handle pivoted to the head to one side of the center line between the jaws and having a lateral extension from said pivot reaching across the center line and adapted, when the handle is turned on its pivot, to rock to and from the head, said extension contacting with the head after the handle has moved freely through a certain arc in the direction to turn the object.

1,384,801. EDUCATIONAL APPARATUS. LORENZO FERRARI, Oakland, Calif. Filed June 9, 1919. Serial No. 302,715. 8 Claims. (Cl. 35—3.)



1. An orrery comprising a globe mounted in a frame and adapted to rotate therein, a ring rotatably mounted around said globe, a sphere mounted on said ring and adapted to be revolved thereby about said globe, and means for giving said motions to said members.

1,384,802. DIAL-INDICATOR. HARRY R. GEER, Johnstown, Pa. Filed Jan. 16, 1920. Serial No. 351,832. 10 Claims. (Cl. 80—56.)



10. The combination with a pair of adjustable rolls each mounted in a movable housing, of a continuous visual indicator comprising a fixed pointer, rotatable dials, a threaded sleeve provided with gears meshing with gears on the rotatable dials, and an operating screw mounted within the threaded sleeve and attached to one of the movable roll housings whereby it is adpated to rotate the dials to indicate at all times the distance apart of the adjustable rolls.

1,384,803. WINDSHIELD ATTACHMENT OR DEFLECTOR FOR AUTOMOBILES AND THE LIKE. WILLIAM L. HOWE, Overland, Mo. Filed Mar. 24, 1920. Serial No. 369,257. 3 Claims. (Cl. 296—95.)

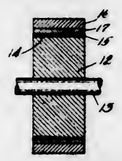
1. An attachment of the class described including, in combination, a shield, resilient hinge-members, supporting-brackets secured to the shield and having engagement for swingable adjustment with the hinge-members, and means comprising bolts having engagement with the hinge-members only for conjointly clamping the hinge-members upon an automobile and the brackets and their supported shield in adjustably swung position.

1,384,804. MACHINE FOR PREPARING INSOLES. ALBERT E. JOHNSON, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 30, 1914. Serial No. 874,718. 26 Claims. (Cl. 12—17.)

1. A machine for preparing soles, having, in combination, a sole support, gouging knives mounted adjacent the support to simultaneously operate on opposite margins of the sole, and means for moving the support to present a sole to the knives and draw the support past the knives to gouge out the margin of the sole adjacent the breast line.

2. An insole preparing machine having, in combination a support for a welt insole blank, means for positioning an insole upon the support, cutters relatively immovable toward and from the work supporting face of the support mounted opposite the support in position to gouge out a portion of the surface of the insole adjacent the breast line on each side of the shank of the between the edge and the material of the between substance, and means to move the support toward the cutters to gouge the insole.

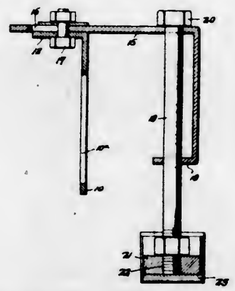
3. A sole preparing machine, having, in combination, a support for locating the heel portion of a sole, and rotary knives mounted on an axis substantially parallel with the face of the support and relatively immovable toward and from the work supporting face of the support, for gouging the margin of the sole adjacent the shank, and means for moving the support and knives relatively to one another to gouge the sole.



4. A machine for preparing insoles, having, in combination, a movable support for positioning an insole, a pair of rotary knives for gouging the insole adjacent the breast line on both sides of the shank to remove a portion of the insole corresponding in width to the feather, and means to move the support to present the insole to the knives.

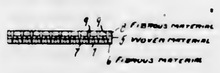
5. A machine for preparing soles, having, in combination, a movable support for positioning a sole, adjustable rotary knives for gouging the sole, means for adjusting the knives to vary the position of the gouges in treating different sizes of soles, and means for moving the knives and support relatively to gouge the sole adjacent the breast line.

1,384,805. PROCESS FOR EMULSIFYING OIL OR ASPHALT. DANIEL J. MCSWINEY, Chelsea, Mass., assignor to Francis R. Mullin, Winchester, Mass. Filed Mar. 5, 1920. Serial No. 363,458. 16 Claims. (Cl. 134—1.)



1. The process of emulsification consisting in passing emulsifying material through a container and gradually adding to it the material to be emulsified, said addition being such that at no place during said passage shall the volume of material to be emulsified amount to more than four times the volume of the emulsifying material.

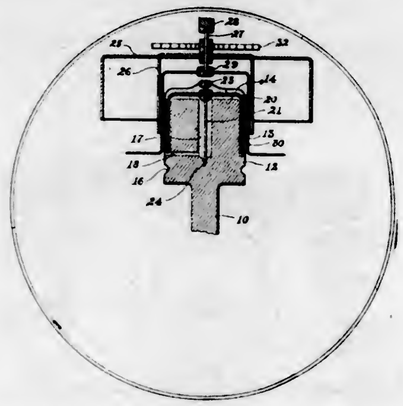
1,384,806. ROLL. EDWIN REED, Andover, Mass. Filed Mar. 31, 1921. Serial No. 457,292. 3 Claims. (Cl. 19—35.)



3. An annular facing for a corrugated roll body or center, comprising an outer ring of relatively soft rubber constituting a resiliently yielding tread, an inner ring of hard rubber vulcanized to the outer ring, and an annular layer of soft rubber vulcanized to the inner surface of the inner ring, and adapted to conform to corrugations on said body.

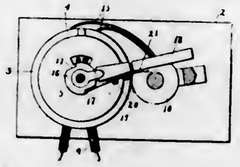
1,384,807. SHUTTLE-GUARD. PHILIP O. ROBERTSON, Allentown, Pa. Filed Mar. 26, 1921. Serial No. 455,740. 7 Claims. (Cl. 139—28.)

7. A shuttle guard comprising a casting and a supporting element laterally adjustable with respect to the reed frame of a loom and adapted to be secured to a sword arm of said loom, and a guide carried by said supporting element for preventing a shuttle from being deflected out of its true horizontal flight.



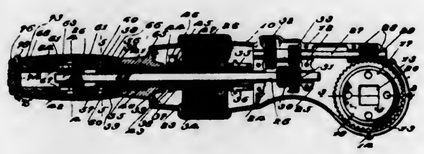
1,384,808. EMBOSSED FABRIC. ROSE E. SHINER, Franklin, Mass. Filed Apr. 1, 1920. Serial No. 370,444. 1 Claim. (Cl. 91—67.9.)

A fabric for rugs, carpets and the like, consisting of a layer of woven material, and a layer of fibrous material on each of the opposite faces of said woven material, the fibers of one of said layers of fibrous material passing into said woven material transversely thereof, the fibers of the other layer of fibrous material passing through said layer of woven material and into the other of said layers of fibrous material, said fabric being impregnated with coagulated adhesive material, the outer surfaces of said layers of fibrous material being embossed.



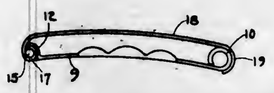
1,384,809. SPEEDOMETER. CHARLES G. SMITH, Cambridge, Mass., assignor to Charles F. MacGill, Cambridge, Mass. Filed Aug. 22, 1919. Serial No. 319,289. 6 Claims. (Cl. 264—13.)

1. A speedometer comprising a drive shaft, a rotary fluid containing member connected thereto, an inner member of magnetic material journaled coaxially within the fluid containing member, an indicating cup journaled for rotary movement coaxially with the inner member, and a magnet



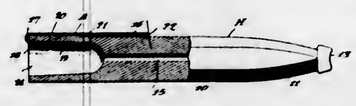
associated with the indicating member to clutch the indicating member to the inner member.

1,384,810. ELECTRIC SWITCH. CLARENCE C. STIBLING, Hartford, Conn., assignor to The Hart & Hegeman Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 14, 1920. Serial No. 373,791. 6 Claims. (Cl. 200—87.)



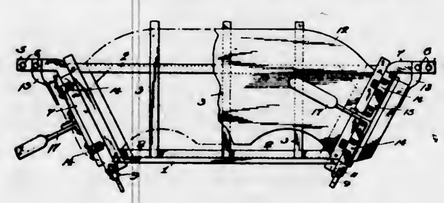
1. A snap switch provided with a turnable spindle having switching mechanism associated therewith and also having means by which the spindle may be partially operated to cause the switching mechanism to move from "on" toward "off" position, and means for automatically completing the "off" relation when the current reaches a predetermined amount.

1,384,811. MOTOR-DRIVEN ASSEMBLING-TOOL. CLARENCE STRAND, Gary, Minn. Filed May 9, 1919. Serial No. 296,042. 7 Claims. (Cl. 81—57.)



1. A motor driven assembling tool comprising a housing, a motor in the housing, an operating head rotatable in one end of the housing, gear connections between the motor and the operating head, a handle for the housing at the opposite end thereof, means operated by the handle for shifting the gear mechanism, and means operated by the handle to clutch the motor to the gear operated connections or to disengage the same.

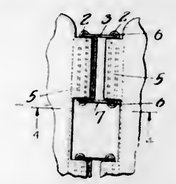
1,384,812. CLASP. FRED M. SWARTZ, Providence, R. I. Filed July 31, 1920. Serial No. 400,427. 1 Claim. (Cl. 24—259.)



In a clasp, a jaw, a pivot member supported on one end of the jaw, a second jaw, sleeves on the second jaw embracing the pivot, and curved fingers on the first jaw engaging said sleeves the outer ones of which are upwardly and outwardly curved and the central one of which has its extremity formed into a loop and embracing the pivot member.

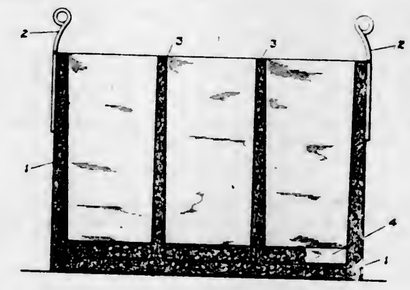
1,384,813. ATTACHMENT FOR CIGARETTE-HOLDERS. WILLIAM L. WALLACE, Davidson, N. C. Filed July 17, 1919. Serial No. 311,416. 2 Claims. (Cl. 131—10.)

1. In combination, a cigarette holder, having a shoulder formed thereon, an attachment comprising a band embracing the holder, a clip formed integrally with and arranged at right angles to the band and adapted to embrace the inner and outer walls of the socket of the holder, a lip on the inner end of the clip and disposed within the socket, a lug on the clip in advance of the lip and disposed within the socket, and a shoulder on the band and adapted to engage the shoulder on the holder.



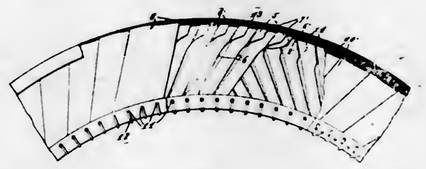
1,384,814. SHEET-METAL-BENDING MACHINE. CLAYTON B. WEAVER, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 13, 1918. Serial No. 216,945. 5 Claims. (Cl. 153—17.)

1. In a sheet metal bending machine, the combination with a frame, upon which the metal sheet is adapted to be received, with the end thereof extending beyond the end of the frame, and a bar fixed on and extending above and transversely across the frame adjacent the end thereof, and beneath and beyond which the end of the metal sheet extends, of a presser bar positioned above and parallel to and pivotally mounted on said first mentioned bar, and means for rocking said presser bar.



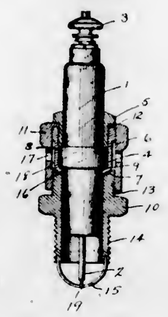
1,384,815. SHOE-FASTENING. WILLIAM ZAPIS, Hopewell, N. J. Filed Aug. 3, 1920. Serial No. 400,981. 1 Claim. (Cl. 24—225.)

A shoe fastening comprising hook receiving members having a longitudinal portion with loop portions at each end thereof, shoe uppers having along their adjacent edges spaced tongue portions doubled back and secured to the uppers forming loops to receive the longitudinal portions of said hook receiving members, the loop portions of said members projecting into the spaces between said tongue portions, and connecting members arranged to extend



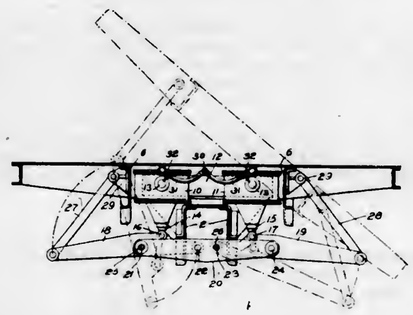
from the hook receiving members on one edge of the shoe to those on the other, said connecting members having hooks on at least one end.

1,384,816. STORAGE-BATTERY CONTAINER. JOHN M. AHLGREN, Indianapolis, Ind., assignor to Ahlbell Battery Container Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1918. Serial No. 220,103. 3 Claims. (Cl. 206—2.)



2. A battery container comprising a body composed of molded, pulpy, fibrous material the various walls and partitions of which are formed integral with said body, and an inner integral continuous lining of pliable acid and heat resistant material formed into an envelop to receive said container and having parts shaped to fit over the various walls and partitions of said container, said container being forced into said lining envelop while in a plastic state whereby said fibrous substance and lining will commingle and adhere to each other.

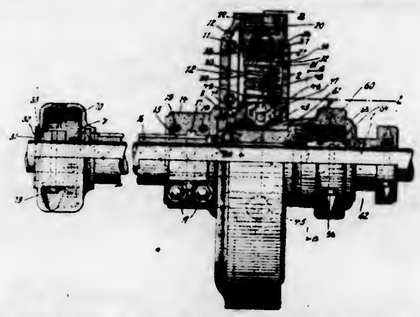
1,384,817. TIRE-ARMOR. JULIAN M. BAKER, Tarboro, N. C. Filed Oct. 10, 1919. Serial No. 329,720. 3 Claims. (Cl. 152—18.)



2. A protecting casing comprising a plurality of spirally arranged metallic sections, the adjacent edges of the sections being disposed in spaced relation with each other throughout a portion of the lengths of the sections, means for securing the sections together, at the tread portions thereof, and means for connecting the sections at the ends thereof.

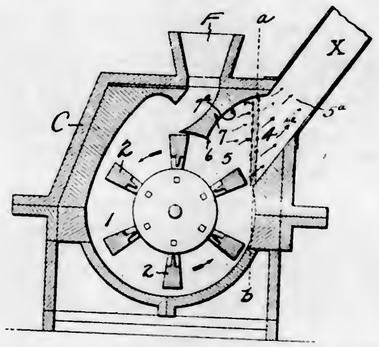
1,384,818. SPARK-PLUG. THOMAS T. BATHURST, Kansas City, Mo. Filed Dec. 13, 1919. Serial No. 344,717. 6 Claims. (Cl. 123—169.)

1. In a spark plug, the combination with a central insulating electrode holder, of a hollow socket member, a draw nut rotatably connected with said electrode holder and having threaded engagement with said socket member, coacting valve seats on said electrode holder and said socket member, respectively, a recess between said draw nut and said electrode holder, said recess being contiguous to said valve seats, and ports establishing communication between said recess and atmosphere.



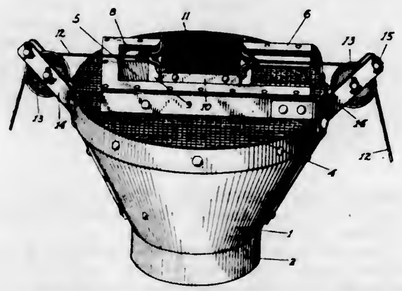
1,384,819. DUMP-CAR. HOWARD L. BEACH, Mount Lebanon, and WILLARD J. FENDNER, Pittsburgh, Pa. Filed July 14, 1920. Serial No. 396,194. 22 Claims. (Cl. 105—265.)

1. In a dump car, a tilting body, fluid actuated cylinders operatively connected to opposite sides of said body, each of said cylinders having a single fluid inlet and each adapted to coöperate with the other cylinder or cylinders to tilt said body to either side of the car.



1,384,820. CLUTCH. EDWARD GEORGE BENDL, Bogota, N. J. Filed Mar. 21, 1919. Serial No. 284,053. 6 Claims. (Cl. 192—76.)

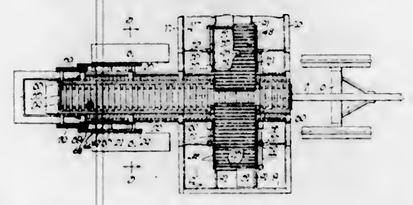
1. A clutch comprising an outer casing, an inner casing, said casings inclosing the main clutch compartment between them and having oppositely projecting parallel adjacent flanges, said inner casing having an integral hub and a second flange spaced a short distance apart from the hub and surrounding the latter, a series of contact shoes carried by said inner casing, devices located in the said compartment mounted to move radially in said flanges of



the inner casing to operate said shoes, and an element slidable on the said hub and adapted to engage and move said devices outwardly.

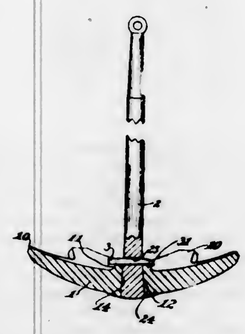
1,384,821. DISINTEGRATOR. JOSEPH K. BLUM, Greenburgh, N. Y. Filed May 10, 1920. Serial No. 380,352. 6 Claims. (Cl. 83—11.)

1. A pulverizer consisting of a casing with a disintegrating rotor therein and having an inlet opening and a discharge opening with an outlet conduit, said casing having within its upper part a partition separating the inlet from the outlet and forming a separating chamber of enlarged extent or width as compared to the outlet conduit.



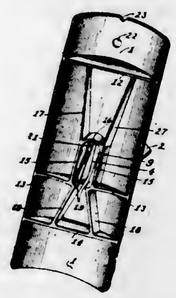
1,384,822. SPARK-ARRESTER FOR STEAM-ENGINES. CHARLES BRUCE, Tuolumne, Calif. Filed June 29, 1920. Serial No. 392,755. 2 Claims. (Cl. 183—62.)

1. A spark arrester comprising a screened base adapted to sit on a smoke stack, a certain area of such screen being



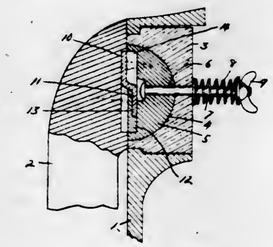
cut away to leave an unobstructed opening, a guide structure fixed to the base and surrounding the opening and extending therebeyond, and an auxiliary screened frame slidable in the guide structure, and adapted to be positioned over the opening to make a spark-tight connection with the guide structure and the screen of the base, and to be moved to uncover the same at will.

1,384,823. POTATO-PICKER. HILMER CARLSON, Chicago, Ill., assignor to Hilmer F. Carlson and Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 15, 1920. Serial No. 351,674. 24 Claims. (Cl. 56—327.)



24. In a potato picker, a chassis frame, a longitudinally extending shaft on said frame, a gear at one end of said shaft having operable driving connection with the rear wheels of the chassis, cranks disposed on said shaft, shoes having operative connection with the cranks, vertical shafts, pans at the lower end of the vertical shafts, cranks at the upper end of the vertical shafts, a driving connection between the horizontal shaft and the crank on the vertical shafts for oscillating the same, said pans adapted to move under said shoes when the shoes are in upper position, a hopper receiving said pans when the shoes are in lower position, means removing the material collected in the pans to said hopper, an elevator adjacent said hopper adapted to convey said material to sizing means on said chassis frame, said sizing means comprising a plurality of carrier screens adapted for sorting the material into separate bins.

1,384,824. MUSHROOM ANCHOR. WILLIAM R. CASE, Seattle, Wash. Filed Dec. 8, 1919. Serial No. 343,229. 3 Claims. (Cl. 114—206.)



1. As an article of manufacture, an anchor comprising a mushroom head having a central boss upon its concave side, and having an axial hole extending centrally therethrough, and tapered inward from the convex side of the head, a shank having a tapered end securable in said hole, and having a transverse slot therein, a notch in the upper side of said boss at opposite sides of the central hole registrable with said transverse slot, and a tapered key securable in said slot and notches.

1,384,825. ANCHOR. ALBERT B. CHANCE, Centralia, Mo. Filed July 26, 1917. Serial No. 182,947. 10 Claims. (Cl. 189—90.)

1. In an anchor of the character set forth, a concavo-convex anchor plate having longitudinal ribs on the convex side thereof connected at one end by an arched rib portion and diverging at the other end toward the corners of one end of the plate, the plate being provided with an aperture therethrough between the said longitudinal ribs and between portions of the said diverging ribs, the said aperture being bordered on the concave side of the plate with longitudinal ribs connected at one end by an arched rib portion and diverging at the other end, the inner walls of the said longitudinal ribs and the said arched rib portion on the concave side of the plate being partially cut away to provide inclined surfaces along the longitudinal ribs terminating in an arched surface within the said arched rib portion on the concave side of the plate, which arched surface lies in a plane substantially parallel with a plane including the longitudinal edges of the plate, the inner wall of the arched rib portion on the convex side of the plate inclining away from the said aperture in the plate, and an anchor rod having a rounded head on one end thereof coöperating with the said ribs and the said arched portions in the installation of the anchor, the said rod extending through the said aperture, the said head forming a ball-and-socket connection with the said arched surface within the said arched rib portion on the concave side of the plate, for purposes substantially as set forth.

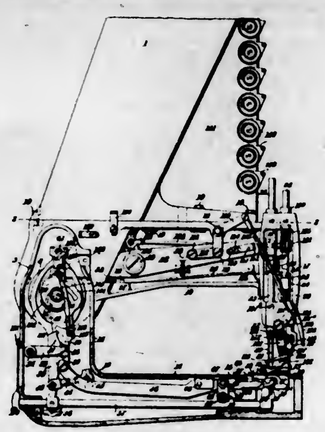
1,384,826. ARM-FITTING. THOMAS P. CHEEVERS, Detroit, Mich. Filed Aug. 2, 1919. Serial No. 314,948. 5 Claims. (Cl. 211—13.)

3. In an arm fitting for display figures, the combination with a plug mounted in a figure and having a half ball socket in its outer face, of a half ball rotatably engaging

in said socket, a spring for yieldably maintaining the spherical surfaces of said half ball and socket in contact with each other, an arm, and a hook connection between said arm and half ball for detachably securing said arm to said half ball.

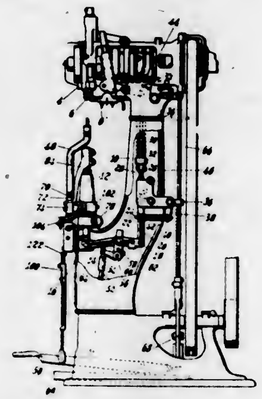
1,384,827. DAUBER, POLISHER, &c. ARTHUR J. COCHRAN, Columbus, Ind. Filed June 10, 1920. Serial No. 387,921. 1 Claim. (Cl. 15—16.)

As an article of manufacture, a main body provided with a downwardly extended support, flanking pockets and a retaining shoulder adjacent each pocket, and a flexible tongue secured to the support and extending into proximity with the shoulders whereby a flexible strip may be applied to the tongue and retained thereon between the tongue and shoulders, substantially as described.



1,384,828. HEELLESS SOCK. LAFAYETTE H. CONLEY, Sault Ste. Marie, Mich. Filed Jan. 12, 1920. Serial No. 350,970. 2 Claims. (Cl. 66—4.)

1. A knit sock or the like, comprising a knit leg portion, a knit and purled portion corresponding to that part designed to fit the heel and instep of the wearer and with the purling stitches sensibly advanced in a diagonal direction with respect to the stitches of the leg portion, and a plain foot and toe portion.

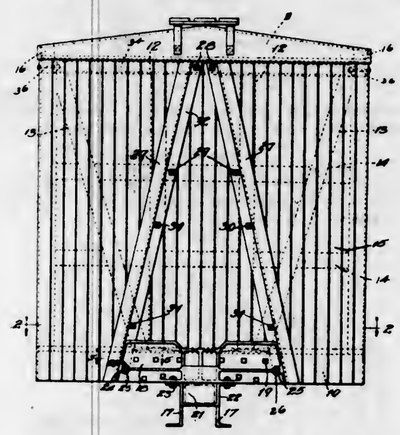


1,384,829. FEED-OFF-THE-ARM SEWING-MACHINE. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Jan. 27, 1917. Serial No. 144,847. 19 Claims. (Cl. 112—209.)

1. In a sewing machine, in combination, a reciprocating needle, a four-motion looper, a main-shaft, and operative connections between said main-shaft and said needle and looper including a pitman-lever and a connection therefrom for transmitting operative movement to said needle and means connected with the pitman-lever and

separate from said connection for transmitting all four movements to the looper.

1,384,830. WORK-SUPPORT. GEORGE GODDU, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1918. Serial No. 247,738. 50 Claims. (Cl. 1—41.)



1. In a machine of the class described, a work support movable between work-receiving and work-clamping positions, means for measuring the work comprising a spring normally operative to lift the work support to work clamping position, and manually operable means for applying final work-clamping pressure constructed and arranged to control said measuring means.

3. In a machine of the class described, a work support movable between work-receiving and work-clamping positions, means comprising a spring for measuring the work, means for locking the support against movement after measurement has been effected, manually operable means for applying final work-clamping pressure, and means separate from said manually operable means for controlling the locking means.

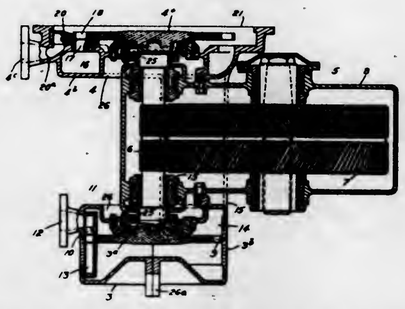
17. In a machine of the class described, a work support movable between work-receiving and work-clamping positions, said support comprising a jack spindle and a supporting member therefor, means for controlling the movements of the spindle relatively to its supporting member, means for starting the machine, and a cam controlled by said starting means for controlling said first mentioned means.

1,384,831. END REINFORCEMENT FOR BOX-CARS. GEORGE S. GOODWIN, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Continuation in part of application Serial No. 86,402, filed Mar. 24, 1916. This application filed Mar. 27, 1918. Serial No. 224,951. 5 Claims. (Cl. 105—411.)

1. A reinforcement for the end wall of a railway box car comprising, in combination with the end plate, side plates, striking block and truss rods of the car: a pair of end braces on the outside of the end wall of the car and an end plate bracing structure within the car secured to the end plate and side plates thereof, the truss rods of the car extending through and being anchored to the lower extremities of said end braces and the latter anchored to the striking block, the upper ends of said end braces being connected with said end plate bracing structure through the end plate of the car.

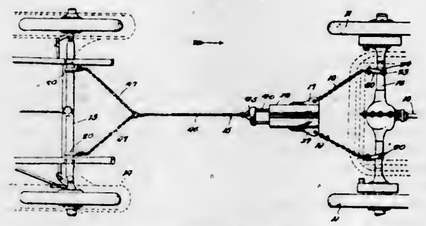
1,384,832. COLLAR-HOLDER. HENRY E. HALSETH, Virginia, Minn. Filed June 24, 1920. Serial No. 391,352. 3 Claims. (Cl. 24—81.)

1. A device of the class described comprising a front bar formed of non-resilient material, a sleeve situated intermediate its ends, a resilient wire passing through and supported by said sleeve and having its ends normally in engagement with the ends of said front bar for the purpose specified.



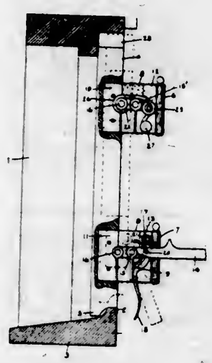
1,384,833. FOLDING-SEAT BED. PHILIP HERBOLD, Galion, Ohio. Filed Mar. 2, 1921. Serial No. 448,972. 2 Claims. (Cl. 5—49.)

1. A sofa bed comprising a box, a top seat frame hinged at its rear edge to the back of the box, the front wall of the box being of less height than its rear wall and the front bar of the seat frame being dropped to rest on said front wall when closed, and a folding bed-frame hinged



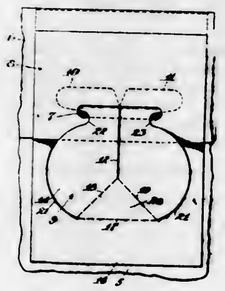
to the front of the box and adapted to swing into or out of the box when the seat frame is opened, the front and rear bars of the bed-frame being dropped, to support a soft edge spring thereon.

1,384,834. GEARED-POWER-DEVELOPING UNIT. HERBERT T. HERR, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 8, 1917. Serial No. 190,389. 5 Claims. (Cl. 60—70.)



1. In combination in a geared turbine unit, a driving gear, a driven gear meshing therewith, an inclosing casing for said gears in which said gears are mounted, a turbine housing mounted on each side of said casing, and a turbine rotor inclosed in each housing, each rotor being mounted on the shaft of the driving gear.

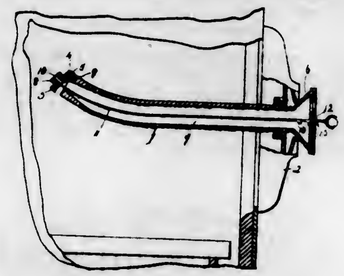
1,384,835. TOWING DEVICE. EDWIN G. HINES, Drums, and CHARLES S. MYERS, Hazleton, Pa.; said Myers assignor to said Hines. Filed June 29, 1920. Serial No. 392,732. 2 Claims. (Cl. 213—67.)



1. A tow line for vehicles comprising a barrel having laterally projecting connecting members at one end, a draw rod extended through said barrel, flexible elements connected to said draw rod, flexible elements connected to said laterally projecting connecting members, a coil spring surrounding said draw rod within said barrel, an adjusting device carried by said draw rod for tensioning said spring, and attaching means whereby to connect said flexible elements with the towing and the towed vehicle respectively.

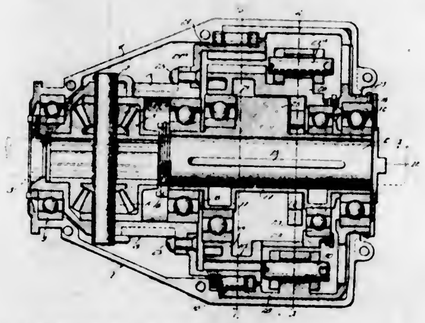
1,384,836. HINGE FOR WINDOWS. OSCAR B. JOHNSON, Indianapolis, Ind. Filed Aug. 4, 1919. Serial No. 315,335. 9 Claims. (Cl. 16—106.)

2. In a hinge construction a leg adapted to be fastened to a window frame and carrying a hinge pivot, a member adapted to be fastened to a sash, and lever means interposed between said pivot and member adapted to raise said member without separating the leaves of the hinge.



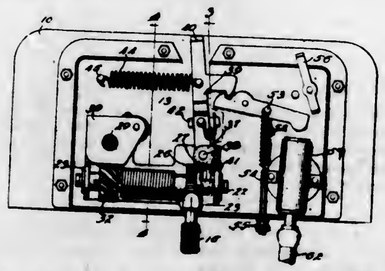
1,384,837. ENVELOP. LEMUEL R. JONES, Los Angeles, Calif. Filed Mar. 8, 1920. Serial No. 364,167. 3 Claims. (Cl. 229—84.)

1. In a fastener for envelops and the like, a blank, a tongue struck from said blank, a straight score extending along the juncture of the tongue and blank, diagonal scores extending from the ends of said straight score and intersecting on the longitudinal center of said tongue, said tongue formed with a slit extending from the intersection of the diagonal scores and opening at the end of the tongue and dividing the outer portion of the latter into two members adapted to overlap each other, a member having a slot adapted to receive the outer portions of said tongue members, and means on the ends of said tongue members adapted to be engaged by the ends of said slot to connect said member to said tongue.



1,384,838. AIR-FEEDING DEVICE. JOHN Y. KING, Lansdowne, Pa. Filed Dec. 5, 1919. Serial No. 342,754. 3 Claims. (Cl. 110—175.)

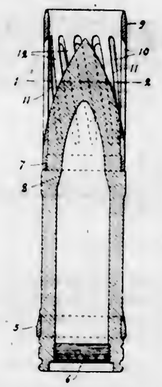
1. In an air feeding device, a body having a passageway therethrough, a valve hinged to the inner end of said body adapted to partially close the passageway, a hub formed upon said valve, said valve and hub having a



hole therethrough, said hub having a crosswise slot intersecting said hole, and means for operating the valve.

1,384,839. MECHANICAL MOVEMENT. JOHN KROHN, Newark, N. J. Filed Apr. 26, 1920. Serial No. 376,552. 7 Claims. (Cl. 74—35.)

1. A mechanical movement comprising a driving member, a driven member, rotative members carried by said driving and driven members, and having driving connection with each other, one of said rotative members having bodily eccentric movement about the axis of rotation of the member carrying the same, a link pivotally connected to said eccentric member, another link pivoted at a fixed point located adjacent the path of said eccentrically rotative member, and a member pivotally connecting the free ends of said links.

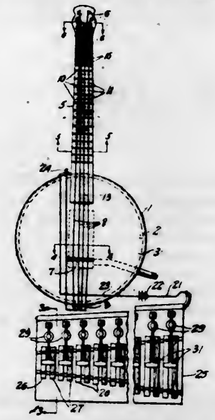


1,384,840. IGNITER. GEORGE ALBERT LEY, Chicago, Ill. Filed Apr. 17, 1920. Serial No. 374,705. 16 Claims. (Cl. 67—28.)

1. In an igniter of the character described, a frame, a pyrophoric element carried by said frame, a main shaft

journaled on said frame, an abrading wheel fixed to said main shaft, a sleeve loosely mounted on said main shaft, a winding mechanism including a winding shaft, pawl and ratchet mechanism constraining said winding shaft against unwinding motion, a driving pinion carried by said winding shaft and a driven pinion fixed to said sleeve, a coil spring mounted on said sleeve and having one end secured to said abrading wheel and the other end secured to said diven pinion, a setting lever, a locking detent controlled by said setting lever and engageable with said abrading wheel, a common pivot for said setting lever and said locking detent, a spring for engaging said setting lever to non-locking position, a trip for releasably maintaining said setting lever in locking position, and a pneumatic release for said trip.

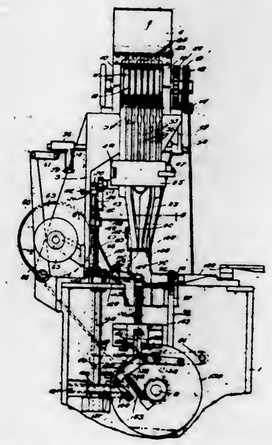
1,384,841. PROJECTILE. ROBERT LUNDELL, New York, N. Y. Filed June 17, 1918. Serial No. 240,423. 7 Claims. (Cl. 102—26.)



1. A projectile having a reduced head and a diving-device to prevent ricocheting consisting of a tubular member surrounding and extending forward of said reduced head and being connected with the body portion of the projectile by a plurality of spiral members between which open ports are formed for the escape of air or water which has entered the mouth of said tubular member during the flight of the projectile, said open ports having a combined cross-sectional area substantially equal to or greater than the area inclosed by the mouth of said tubular member.

1,384,842. PROCESS OF MANUFACTURING ACETALDEHYDE. HOWARD W. MATHESON, Shawinigan Falls, Quebec, Canada. Filed Nov. 26, 1917. Serial No. 204,008. 3 Claims. (Cl. 23—24.)

1. A process for the manufacture of acetaldehyde, which comprises passing acetylene through an acid solution of not greater than 6% concentration containing an oxid of mercury, and maintaining a temperature below 66° centigrade and a pressure below two pounds per square inch super-atmospheric.



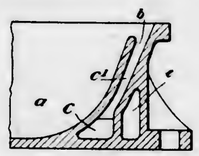
1,384,843. MUSICAL INSTRUMENT. WILLIAM J. MAXWELL, Jr., New York, N. Y. Filed Aug. 12, 1920. Serial No. 403,062. 6 Claims. (Cl. 84—171.)

1. In a musical instrument combination for the purpose set forth, a banjo having electrically conductive strings and electric contact points between the frets below each of the strings, a stationary panel board placed within the body of the banjo, said contact points being individually connected by means of insulated conductors with said stationary panel board, pivoting levers conductively connected with said strings at the head of the banjo and held in inoperative position of said strings, said levers adapted to be pressed down at their short end against contact points, a finger switch adapted to facilitate either of said strings being electrically charged, or to interrupt the electrical current charging them, a detachable panel board adapted to be placed upon and fitting said stationary panel board and having a plurality of electrical conductors adapted to energize electro-magnets of a secondary instrument when the strings of said banjo are caused to form contact with said contact points, said

secondary instrument comprising a plurality of tone producing pairs of metallic and wooden bars, each corresponding pair adapted to be sounded simultaneously, and chime-bars corresponding in tone with each respective pair of bars, buzzer-like electro-magnetic hammers adapted to repeatedly strike each corresponding metal and wood bar-pair when energized, another electro-magnetic hammer adapted to singly strike a corresponding chime bar simultaneously with said bar-pair, and means for supplying electric energy to said conductors.

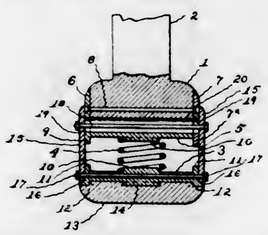
1,384,844. CARTON-FILLING MACHINE. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 15, 1917. Serial No. 154,966. 45 Claims. (Cl. 226—14.)

21. In mechanism for filling receptacles, means for selecting the quantity of material for properly filling a



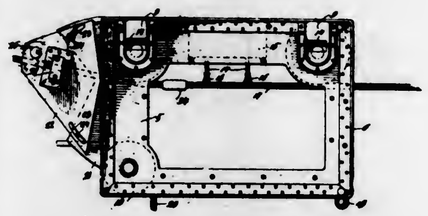
receptacle, means for testing the quantity of material selected to prevent short measure in said receptacle, and means for inserting the material selected and tested into a receptacle.

1,384,845. PROCESS OF JOINING FABRIC SECTIONS. GEORGE E. MOLYNEUX, Bayonne, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Mar. 24, 1913, Serial No. 756,317. Divided and this application filed May 18, 1917. Serial No. 169,422. 2 Claims. (Cl. 112—262.)



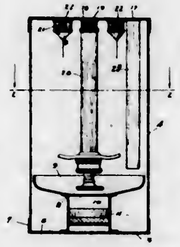
1. The process of joining fabric sections consisting in uniting the superposed edges of the fabric sections by stitching, opening the sections of fabric until the major portions lie in substantially the same plane, exerting a strain on the respective fabric sections in opposite directions away from and transversely of the line of stitching, and uniting said fabric sections while under said strain by connected parallel lines of stitches disposed respectively on opposite sides of the first line of stitching.

1,384,846. INTERNAL-COMBUSTION ENGINE. THOMAS MORTON, Ruthergien, Scotland. Filed Feb. 20, 1920. Serial No. 360,023. 5 Claims. (Cl. 184—6.)



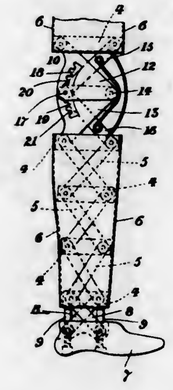
5. A combined crank chamber and lubricating oil receptacle for internal combustion engines having, in combination, an oil duct extending from one end of the crank chamber to the other end and through which the oil forced up at one end of the chamber is caused to flow, said duct communicating for this purpose with the interior of the crank chamber at each end, means whereby the oil, while passing along the oil duct, can be cooled by a contra-flow of cooling liquid, and cross ribs dividing the interior of the chamber into a series of oil collecting spaces.

1,384,847. SPRING-WHEEL. HARVEY MYERS, Poughkeepsie, N. Y. Filed Dec. 30, 1919. Serial No. 348,345. 1 Claim. (Cl. 152—38.)



A spring wheel including a felly provided with clearance openings in the periphery thereof, a band fitted tightly upon the felly and extending over the mouths of the clearance openings, bearing plates applied to the sides of the felly and having openings therein registering with the clearance openings of the felly, a floating ring surrounding the felly in spaced relation thereto, springs interposed between the floating ring and the felly, guide plates bridging the space between the floating ring and the felly, said guide plates being secured to the floating ring and slidably engaging the bearing plates of the felly, and tie bolts connecting the guide plates and extending through the clearance openings of the felly, movement of the bolts from the openings being prevented by the band.

1,384,848. LOGGING-CARRIAGE. JULIUS A. PIERSON, Winlock, Wash. Filed Dec. 31, 1920. Serial No. 434,281. 2 Claims. (Cl. 104—251.)

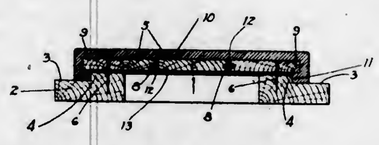


1. In combination, a logging carriage, a housing pivotally associated therewith, a sheave journaled within the housing, and an automatic holding device situated within the housing for the purpose specified.

1,384,849. STERILIZING OUTFIT. WILLIAM T. POWER, New York, N. Y. Filed Oct. 30, 1917. Serial No. 199,269. 6 Claims. (Cl. 167—3.)

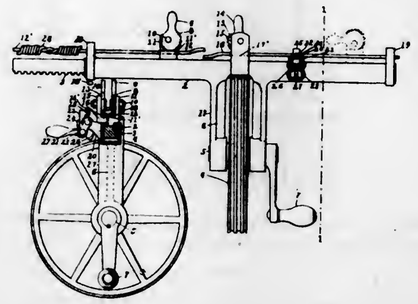
1. A pocket sterilizing outfit including an open end tubular container, a plurality of receptacles fixed to the inner side of said container, a pair of removable closure caps for the ends of said container, a complete sterilizing outfit including a water bowl and a heater for the same carried by one of the caps and adapted to be positioned within the container when the cap is in place and bodily removable from the container with the cap, the other cap provided with means for positioning instruments in pre-set spaced apart positions within the container when this other cap is in its closing position, said means arranged so as to space the intruments carried thereby in off-set position relative to the articles carried by the holder.

1,384,850. ARTIFICIAL LIMB. ALEXANDER PRINGLE and THOMAS SINCLAIR KIRK, Belfast, Ireland. Original application filed Aug. 6, 1920, Serial No. 401,606. Divided and this application filed Nov. 16, 1920. Serial No. 424,365. 8 Claims. (Cl. 3—2.)



1. In an artificial leg a plurality of transverse frames and oppositely disposed diagonal links rigidly connecting same.

1,384,851. COVER FOR COOKING UTENSILS. GEORGE J. RICHARDSON, Ceres, Calif. Filed Nov. 6, 1920. Serial No. 422,294. 3 Claims. (Cl. 53—8.)

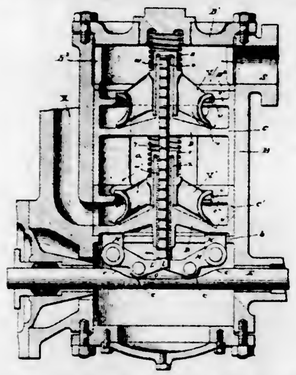


1. A cover for a cooking utensil having an outwardly projecting rim around its upper edge, comprising a cover member, a pair of handles pivotally mounted on the cover in parallel alinement and arranged to be moved to and from each other, extensions on the handle members beyond the pivotal connections thereof, and hooks on the outer ends of the extensions arranged to project under and engage the utensil-rim when the handles are spread apart.

1,384,852. REFRIGERATOR-DOOR. GEORGE H. RICE, Arlington, Vt., assignor to Arlington Refrigerator Company, Inc., Arlington, Vt., a Corporation of New York. Filed Aug. 2, 1920. Serial No. 400,704. 8 Claims. (Cl. 20—35.)

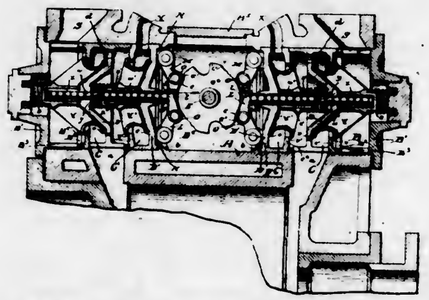
6. A door comprising a frame having a panel opening therein and a panel secured to said frame over said opening, a groove being formed around said panel opening and a sheet of insulating material applied in plastic form to said panel and locked thereto and to said frame by flowing into and becoming set in said groove.

1,384,853. WIRE STRETCHER AND SPLICER COMBINED. JAMES M. ROBERTS, Andrew county, near St. Joseph, Mo. Filed Mar. 16, 1920. Serial No. 366,208. 3 Claims. (Cl. 254—67.)



1. A rack guide having a slot formed through its top throughout the entire length thereof and an opening formed through the central portion of its bottom; a clamp standard the lower end portion of which is formed integrally with the central portion of one side of said rack guide; a clamp seat formed on one side of said standard; a clamp member oscillatably mounted on the same side of said standard for clamping a wire between said seat and said member by oscillation of the latter; a rack mounted for slidable movement in said rack guide; a movable clamp standard the lower end of which is secured on the upper surface of said rack and extends thereabove through said rack guide slot, said movable standard being provided with a clamp seat and clamp member similar to the first mentioned clamp standard; a pair of standards the upper ends of which are formed integrally with said rack guide; a shaft the ends of which are rotatably mounted in the lower ends of said standards; a worm wheel secured on the central portion of said shaft the worm threads of which project from said wheel through the bottom opening through the bottom of said rack guide into engagement with the teeth of said rack; a crank secured on one of the extremities of said shaft; and a suspending hook connected with each end of said rack guide whereby the hereinbefore claimed parts are suspended from a stretched wire.

1,384,854. VALVE-GEAR FOR STEAM-ENGINES. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed Nov. 30, 1920. Serial No. 427,290. 3 Claims. (Cl. 121—185.)

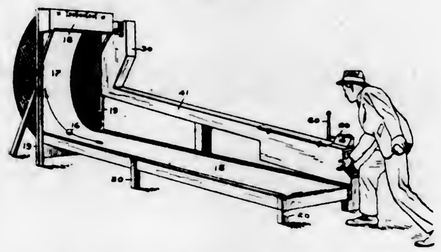


1. In a valve gear for steam engines, the combination of the following elements, namely—a valve chamber; spring-closed steam and exhaust valves mounted and arranged therein, one upon the axial prolongation of the other; a valve operating cam or tappet shaft extending crosswise through the valve chamber; a diaphragm separating the valve containing portion of the valve chamber from the cam shaft; valve spindles, one for each valve, the one spindle passing axially through and telescoping with the other, and the telescoped ends of the same projecting through and beyond the diaphragm toward the cam shaft; and lift members, one for each spindle, mounted and movable in bearings between the diaphragm and cam shaft, and on opposite sides of the intervening telescoped spindle ends, and formed and arranged to engage and be operated by the cam shaft and, at their free ends, to

engage the one the outer, and the other the inner one of the two telescoped ends of the valve spindles which project

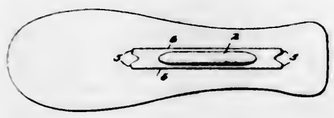
between them—the combination being and acting substantially as hereinbefore set forth.

1,384,855. VALVE-GEAR FOR STEAM-ENGINES. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed Dec. 8, 1920. Serial No. 429,114. 3 Claims. (Cl. 121—185.)



1. In a valve gear for steam engines the combination of the following elements, namely—an engine cylinder; two valve chambers mounted, at an interval from one another, on and lengthwise of said cylinder, one on the axial prolongation of the other; two sets of steam and exhaust valves, one for each valve chamber, mounted and arranged in their respective chambers—one set upon the axial prolongation of the other; valve spindles, one for each valve, the spindles of the two valves of each set passing the one axially through, and telescoping with the other, the telescoped ends of the two sets of spindles projecting in axial alinement with one another through the interior opposite closed ends of their respective chambers into the intervening space which separates said chambers; lift members, one for each spindle, mounted and movable in bearings on the interior opposite ends of their respective valve chambers on opposite sides of the telescoped ends of the sets of valve spindles with which they are respectively associated with their free ends engaging the one the outer and the other the inner one of said telescoped ends; and a cam or tappet valve-operating shaft extending through the interval which separates the two valve chambers crosswise of and between the opposed telescoped ends of the two sets of valve spindles, and lift members with which they are associated and provided with two sets of recesses and cam lifts located on diametrically opposite faces of said shaft to engage and actuate the lift members of two sets—the combination being and acting substantially as set forth.

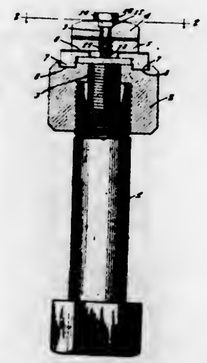
1,384,856. GUTTER OR EAVES-TROUGH HANGER OR SUPPORT. NEIL SALMONSEN, Philadelphia, Pa., assignor to Berger Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1920. Serial No. 404,344. 4 Claims. (Cl. 108—29.)



4. In a gutter hanger, a plate having integral spaced apart ears with perforations, a stem received between said ears, and means passed through said perforations and the stem, said plate having a curved extension for attachment to a support of curved form.

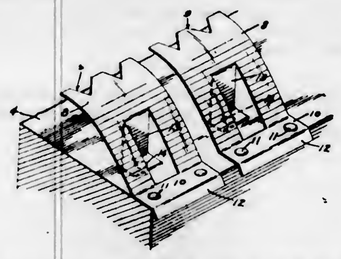
1,384,857. GAME APPARATUS. BRIANT SANDO, Indianapolis, Ind., assignor to Briant Specialty Company, Indianapolis, Ind., a Corporation. Filed Aug. 26, 1918. Serial No. 251,451. 2 Claims. (Cl. 46—61.)

1. A game apparatus of the character described comprising a runway upon which balls are rolled, a ball receiver and separator communicating with the discharge end of said runway, a floor for dividing said separator into an upper and lower compartment and having a plurality of ball inlet openings, a series of parallel walls for dividing said lower compartment into ball conveying passageways communicating with said ball inlet openings, and a hopper for receiving the balls discharged from the several passageways in the separator and discharging them through a single opening.



1,384,858. SHOE-SHANK. MORRIS M. SANDUSKY and JOSEPH SANDUSKY, New York, N. Y. Filed Feb. 9, 1921. Serial No. 443,628. 8 Claims. (Cl. 36—76.)

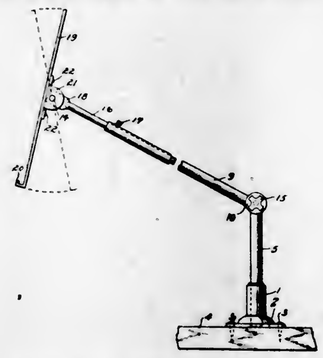
1. A shoe shank comprising a plate provided at its end with opposed teeth, each of the said teeth having its outer edge beveled and longer than its inner edge to cause them to bend toward each other on being driven into the leather.



1,384,859. LOCK-NUT. LOUIS MARTAIN SARTAIN, Pelham, Tenn. Filed Oct. 25, 1920. Serial No. 419,284. 1 Claim. (Cl. 151—28.)

In a device of the class described, a bolt; a nut threaded in one direction on the bolt and having oppositely disposed seats; a screw threaded in an opposite direction into the end of the bolt and having an enlarged head engaging the nut; a latch bar movable in the head of the screw longitudinally thereof and having transverse terminal projections coöperating with the seats; spring means housed in the head of the screw for advancing the latch to cause the projections to coöperate with the seats; an

operating member carrying the spring means and connected to the latch and slidable in the head of the screw, the operating member being accessible from the end of the head of the screw to effect a retraction of the latch, the operating member being rotatable, and comprising a part engaging the head of the screw to hold the operating member and the latch retracted, after the operating member has been retracted and rotated.



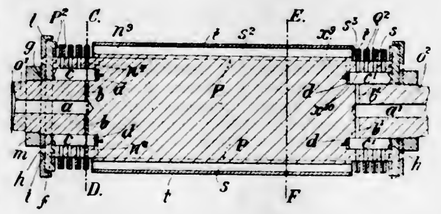
1,384,860. CATTLE-GUARD. MICHAEL SCHAFF, Rye-gate, Mont. Filed May 19, 1920. Serial No. 382,563. 2 Claims. (Cl. 256—18.)

1. A cattle guard consisting of rows of separately constructed plates carried by and secured to adjacent cross ties, each plate comprising an upwardly and forwardly extending portion having a terminal edge spaced from the cross tie, an intermediate member provided upon its base with a horizontal flange resting on the rear portion of the upper surface of the tie adapted to be secured thereto and a downwardly bent flange engaging the rear side of the tie.

1,384,861. STENOGRAPHER'S NOTE-HOLDER. LAWRENCE SCHINGEL, St. Louis, Mo. Filed Feb. 3, 1921. Serial No. 442,050. 2 Claims. (Cl. 120—28.)

1. An improved note-book holder, composed of a vertical tubular stand rising from a fixed base-plate, a vertical stand-arm mounted loosely to freely rotate in any direction in said vertical tubular stand, a horizontal arm pivoted at one end to the upper end of said vertical stand-arm and movable thereon in a vertical plane only, a note-book plate pivoted upon the outer end of said horizontal arm, a clamping-screw for fixing said horizontal arm upon said vertical tubular-stand after said arm has been adjusted thereon, and a clamping-screw for fixing said note-book plate in adjustment upon the outer end of said horizontal arm.

1,384,862. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 16, 1921. Serial No. 445,322. 2 Claims. (Cl. 88—43.)



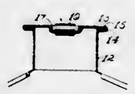
1. An ophthalmic mounting including a bridge bar having a seamless non-metallic tube centrally disposed thereon and having exposed terminal portions projecting beyond the ends of the non-metallic tube.

1,384,863. MERCURY OINTMENT. JOHN P. SHEPHERD, Chicago, Ill., assignor, by mesne assignments, to Shepherd Chemical Company, a Corporation of Illinois. Filed Jan. 24, 1920. Serial No. 353,817. 4 Claims. (Cl. 167—9.)

1. An ointment comprising mercury and a vehicle consisting chiefly of free cholesterin.

1,384,864. ELECTRICAL GENERATOR AND MOTOR. JOSEPH SHEPHERD, Leeds, England. Filed June 5, 1919. Serial No. 301,882. 8 Claims. (Cl. 171—252.)

1. A rotor of an electric generator or motor having longitudinal teeth with slots therebetween for the straight portions of the windings, cross teeth with slots therebetween for the end loops of the windings, and means for cooling by liquid circulation both the straight portions of the windings and the end loops.

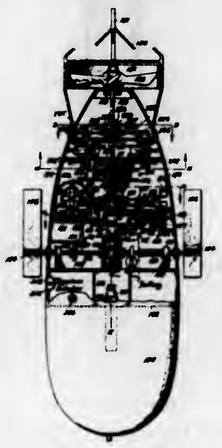


1,384,865. ELECTRIC GENERATOR AND MOTOR. JOSEPH SHEPHERD, Leeds, England. Filed June 13, 1919. Serial No. 304,010. 9 Claims. (Cl. 171—209.)

1. In a dynamo-electric machine, the combination of end supports on the stator frame having passages adapted for fluid circulation, projections on the supports forming between them recesses for the inner layers of the stator end windings, and clamps provided with passages for fluid circulation, said clamps having projections forming between them recesses for the outer layers of the stator end windings, said fluid cooled clamps serving to secure said end windings in place in the recesses.

2. In a dynamo-electric machine, the combination of end supports on the stator frame provided with passages adapted for fluid circulation, said supports having projections forming between them a series of spiral recesses for the inner layers of stator end windings, and clamps having passages adapted for fluid circulation, said clamps also having projections lying across the first mentioned projections and forming between them a second series of spiral recesses for the outer layers of the stator end windings.

1,384,866. DISINFECTING BROODER. SAMUEL SILVERS, Waterloo, Iowa. Filed May 6, 1920. Serial No. 379,402. 2 Claims. (Cl. 119—19.)



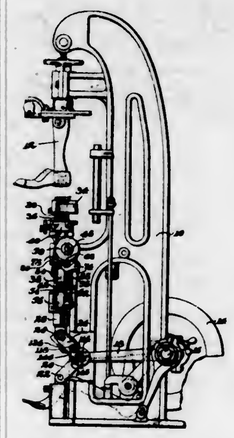
1. In combination, a structure of the character described having an open slideway in its upper portion, and a slide mounted slidably and removably in said slideway having an orificed depression for retaining and moistening by capillarity a porous disinfectant impregnated tape removably placed therein and extending within said structure.

1,384,867. AIR-CURRENT INDICATOR FOR AEROPLANES. LAWRENCE B. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 9, 1916. Serial No. 124,448. 3 Claims. (Cl. 177—351.)

2. The combination with an aircraft, of a plurality of devices carried thereby and adapted to be positioned by the direction of the wind in a plurality of planes, a common mounting for said devices, electrical signaling means controlled by said devices for producing a warning when the position of the craft relative to the direction of the wind to one or both planes attains a predetermined value, and an additional means controlled by such devices for producing danger signals when said relative position becomes critical.

1,384,868. DIRIGIBLE GRAVITY-BOMB. ELMER A. SPERRY and THOMAS H. PHILLIPS, Jr., of Brooklyn, N. Y.; said Phillips, Jr., assignor to said Sperry. Filed July 26, 1918. Serial No. 246,856. 49 Claims. (Cl. 244—1.)

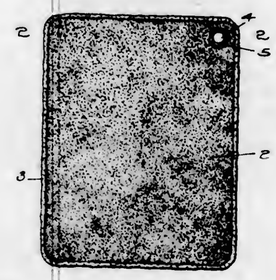
1. In combination, a gravity bomb, means carried by said bomb for controlling the descent thereof and controllable means remote from said bomb for controlling the first mentioned means.



1,384,869. BRIDGE-TOOTH. LAKE H. SPRINKLE, Brooklyn, N. Y. Filed Nov. 26, 1920. Serial No. 426,514. 3 Claims. (Cl. 32—9.)

1. In a bridge tooth a porcelain facing adapted to have a metal backing secured thereto, said facing having a concave rear, thereby permitting a heavier backing for the same size of tooth and thereby increasing the strength of the same.

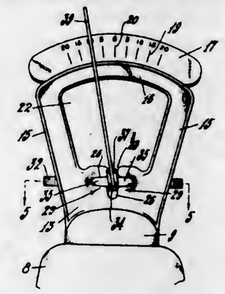
1,384,870. HEELING-MACHINE. JOHN F. STANDIAH, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 18, 1918. Serial No. 223,101. 30 Claims. (Cl. 1—32.)



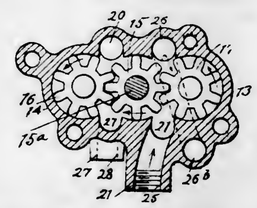
1. In a heeling machine, the combination of a work engaging member, power operated means for actuating the said member, yielding power transmitting connections between the actuating means and the member, and means for preliminarily adjusting the connections to transmit the pressure in a variable manner during the application thereof.

4. In a heeling machine, the combination of a work engaging member, power operated means for actuating said member, frictional power transmitting connections between the actuating means and the member, and means for insuring a progressive increase of the friction in said connections while the pressure is being applied to the work.

30. In a heeling machine, the combination of a nailing die, toggle mechanism for advancing the die to apply pressure to the work, a lost motion connection between the toggle and the nailing die, and means for eliminating the lost motion in alternate cycles of operation of the machine.



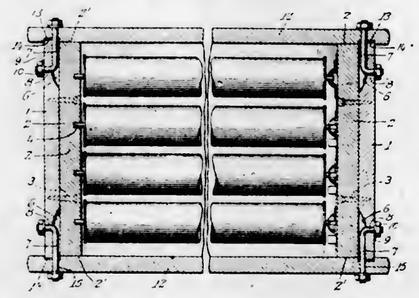
1,384,871. WASHCLOTH AND PROCESS OF MAKING IT. PAUL D. STEELE and ALBERT E. SIDNELL, Denver, Colo. Filed November 10, 1920. Serial No. 423,058. 6 Claims. (Cl. 18—53.)



1. The process of producing rubber wash-cloths consisting in subjecting a sheet of craped crude rubber to the dissolving and curing actions of a solution of benzene and sulfur chlorid.

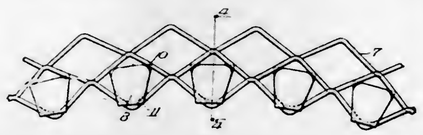
1,384,872. OPHTHALMIC-MOUNTING-ADJUSTING DEVICE. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Incorporated, a Corporation of Rhode Island. Filed Apr. 7, 1919. Serial No. 288,211. 7 Claims. (Cl. 33—200.)

1. In an optical adjusting device, the combination of a base, and a frame on the base provided with an opening and with an oblong slot adjacent to the opening, there being inwardly directed fingers with spaced ends intermediate the opening and the slot, the space between the finger ends intersecting said slot.



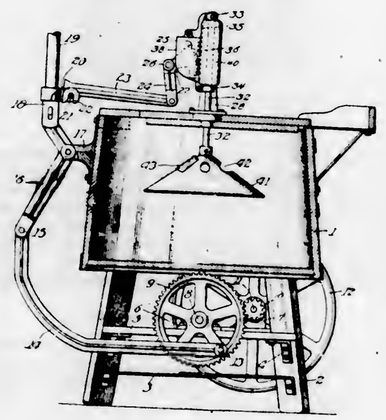
1,384,873. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM R. STRICKLAND, Cleveland, Ohio, assignor to The Peerless Motor Car Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1918. Serial No. 254,272. 8 Claims. (Cl. 184—27.)

6. The combination with an internal combustion engine having a lubricating system and an oil receptacle, of an engine driven pump comprising a chamber containing oil impelling means, said chamber having two inlets, one connected to the crank-case and one to the receptacle, and having an outlet connected to the lubricating system, said impelling means adapted to receive oil from both inlets and to deliver it to the outlet leading to the lubricating system.



1,384,874. MAP-CASE. FRANK H. SWANSON, Chicago, Ill., assignor to A. J. Nystrom and Company, a Corporation of Illinois. Filed Jan. 7, 1920. Serial No. 350,041. 8 Claims. (Cl. 217—12.)

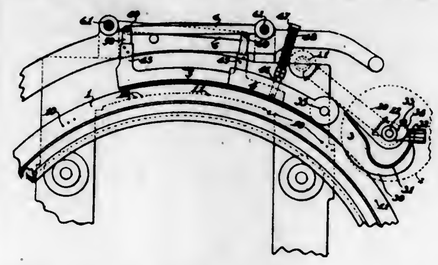
1. In a map case; the combination of upper and lower crown pieces having transverse gains adjacent to their



ends, end pieces having their ends adapted to enter said gains, bracing pieces securely attached to the end pieces, and means for drawing the ends of the bracing pieces into rigid contact with said crown pieces.

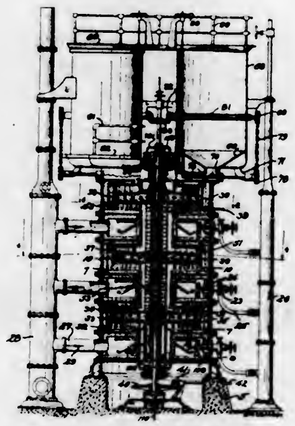
1,384,875. BRAKE-SHOE. JAMES S. THOMPSON, Pelham, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 17, 1919. Serial No. 345,535. 12 Claims. (Cl. 188—257.)

1. An assembly of parts for embedment in the body of a brake shoe comprising a plurality of strips of reticulated metal arranged side by side on edge with openings in registration, and inserts insertible endwise in registered openings of the strips and adapted to be turned into interlocking engagement with the walls thereof.



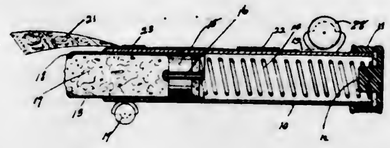
1,384,876. WASHING-MACHINE MECHANISM. WILLIAM H. VOSS, Davenport, Iowa. Filed July 21, 1917. Serial No. 181,935. 9 Claims. (Cl. 74—14.)

4. In combination, a straight rack, plates upstanding from said rack in alinement with the opposite edges thereof, whereby a space is formed between said plates of a width substantially equal to the width of said rack, a gear segment between said plates engaging said rack, and means on said segment engaging the inner faces of said plates, whereby when operated the movement of said rack will be confined to a straight line.



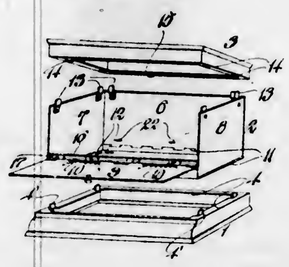
1,384,877. SCRAPER FOR FISH-DRESSING MACHINES. EDWARD H. WAUGH, Seattle, Wash., assignor to Smith Cannery Machines Company, Seattle, Wash., a Corporation of Washington. Filed Mar. 3, 1920. Serial No. 362,998. 15 Claims. (Cl. 17—10.)

1. In a fish dressing machine, in combination, a carrier for the fish, a scraper having its scraping edge placed diagonally of the path of the carrier and supports for said scraper comprising arms pivoted toward the ends of the scraper and extending back toward the opposite ends



of the scraper, and pivot supports for the other ends of said arms.

1,384,878. DISTILLATION-FURNACE. JOHN N. WINGETT, Denver, Colo., assignor to The American Shale Refining Company, Denver, Colo., a Corporation of Arizona. Filed July 19, 1917. Serial No. 181,528. 1 Claim. (Cl. 196—19.)



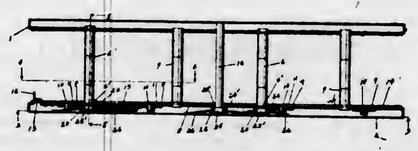
A furnace comprising superposed vaporizing and combustion chambers alternately arranged, linings for said chambers, outer shells for said chambers, horizontal plates lying between the top and bottom walls of adjacent chambers, extending between the outer shells of adjacent chambers and spacing the shells from the linings to provide insulating spaces therebetween.

1,384,879. ENVELOP MOISTENING, SEALING, AND STAMPING DEVICE. PHILIP M. ZENNER, Athens, Ohio, and HOWARD H. WILLIAMS, Huntington, W. Va. Filed Sept. 10, 1919. Serial No. 322,852. 2 Claims. (Cl. 216—3.)

1. An envelop moistening and sealing device comprising a water retaining tube and a sponge retaining tube secured for telescopic movement upon each other, the sponge retaining tube being provided with a cap at its base, and an orifice in said cap, and the water retaining tube being provided with a coil spring designed to butt against the cap of the sponge retaining tube and its other end being held in engagement against a head which closes the water retaining tube, substantially as shown and described.

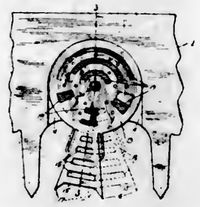
1,384,880. FILING-CABINET. ALLEN P. ASHER, Sandpoint, Idaho. Filed Aug. 10, 1920. Serial No. 402,611. 5 Claims. (Cl. 45—78.)

1. The combination in a filing cabinet, with a base and locking tongues thereon, of a filing section having a fixed, slotted bottom supported on the base, hinged ends and back plate on said section, a superposed member having means for retaining the ends and back plate in rigid normal position, and an openable front door to said section.



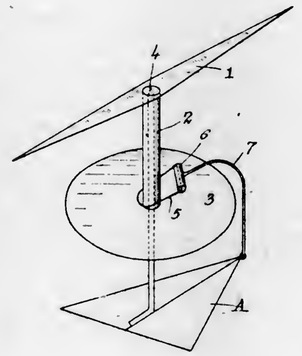
1,384,881. [WITHDRAWN.]

1,384,882. INDEX DEVICE. JAMES BARKER, Detroit, Mich. Filed Dec. 6, 1917. Serial No. 205,733. 3 Claims. (Cl. 40—63.)



3. A card holding strip formed of transparent material and of a substantial U-shape, the sides of said strip being inclined toward each other as they extend from the bend of the strip to frictionally engage a card received in said holder.

1,384,883. TEMPORARY BINDER. JAMES BARKER, Kalamazoo, Mich. Filed Oct. 29, 1920. Serial No. 420,368. 13 Claims. (Cl. 129—8.)

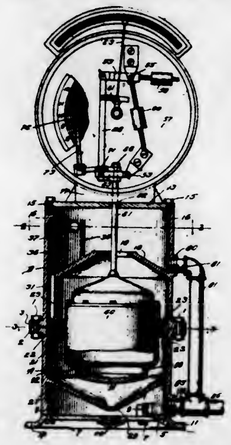


13. In a temporary binder, the combination of binder members, a locking means therefor, and a removable post constituting a control for said locking means whereby the locking means is operative to lock the binder only when the removable post is in position.

1,384,884. SAW. ERIC BECK, Aberdeen, Wash. Filed Oct. 6, 1920. Serial No. 414,990. 4 Claims. (Cl. 143—144.)

1. In a saw, a recessed blade, the recessed portions of said blade being slotted and perforated, oscillating teeth, operatively disposed in the recessed portions of said blade, and means connecting said oscillating teeth and the slotted portions of the saw blade for securing said members together and for determining the degree of movement of said teeth in each direction.

1,384,885. DAMPING DEVICE FOR COMPASSES. EDVARD GUSTAVSEN BERGMANN, Christiania, Norway. Filed June 11, 1920. Serial No. 388,115. 3 Claims. (Cl. 33—222.)



1. In a damping device for compasses such as ships or aeroplane compasses the combination with a compass needle, a damping disk fastened to the compass needle of a horizontal sleeve or bearing, a hoop or arm loosely mounted in said sleeve or bearing and resting with its free end on the damping disk in such a manner that it may follow small oscillations of the disk without sliding on the same.

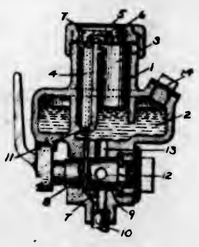
1,384,886. TESTING DEVICE. RICHARD G. BRINDLE, Chicago, Ill., assignor of one-half to Wade W. Reece, Chicago, Ill. Filed Oct. 27, 1919. Serial No. 333,597. 13 Claims. (Cl. 265—45.)

1. In a testing device, a liquid containing receptacle, a displacing body suspended in such receptacle, means for

indicating changes in the upward and downward pressure of such displacing body, and means for introducing liquid

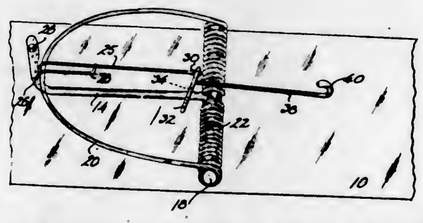
into the receptacle substantially in a horizontal plane passing through the center of the displacing body.

1,384,887. TOOL-HANDLE. JOHN E. BURNDAHL, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,007. 3 Claims. (Cl. 145—61.)



3. A tool and handle therefor arranged to have an angular adjustment with relation to the tool and from which the tool may be readily detached, comprising a tool, having a circular angle determining head, the handle having means for engagement with the head at the desired angle and means carried by the handle normally engaging the head on opposite sides thereof in a manner to permit the pivoting in the desired position but movable to disengage such pivotal engagement, and having extensions providing means for readily so moving them and thus detaching the tool head, said handle being slotted to receive the circular tool head and provided with another slot transverse to the first, the tool head having lateral trunnions engageable by and seated in the end of the transverse slot.

1,384,888. LEAK-DETECTOR. BERT CARLISLE, Santa Ana, Calif. Filed Mar. 19, 1920. Serial No. 367,116. 1 Claim. (Cl. 73—51.)

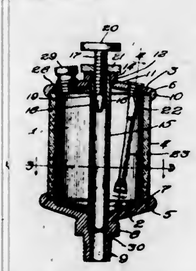


A valve leak detector including a stem of relatively thick and stiff rubber formed with an external bead at one end, and a bulb of thin and highly elastic rubber, the mouth of said bulb being stretched over said bead and vulcanized to the stem.

1,384,889. PUMP-LUBRICATOR. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 12, 1920. Serial No. 380,857. 3 Claims. (Cl. 184—55.)

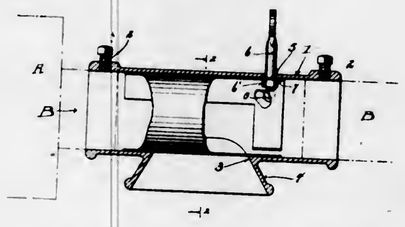
3. A lubricator for fluid compressors comprising a casing having an oil reservoir subject to the pressure of fluid compressed by the compressor, a plug adapted upon removal to provide an opening through which oil may be supplied to the reservoir, and valve means operated upon removal of the plug for closing communication through which fluid under pressure is supplied from the compressor to the lubricator and upon application of the plug in position for opening said communication.

1,384,890. ANIMAL-TRAP. WILLIS B. GILMORE, Idaho Springs, Colo. Filed June 1, 1920. Serial No. 385,599. 6 Claims. (Cl. 43—81.)



1. A trap comprising a main arm adapted to be affixed to a suitable base, a trigger mounted on said arm, a spring bail connected with said main arm, and a bait holder mounted on said arm, slidable in the direction of the length of the trigger and adapted to releasably engage one end of the trigger, said trigger being adapted to retain the bail in set position.

1,384,891. MAT. HERMAN E. GOTHBERG, Roselle Park, N. J. Filed Feb. 12, 1919. Serial No. 276,642. 8 Claims. (Cl. 280—169.)

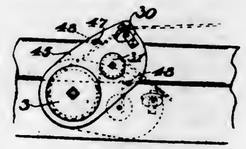


3. In a mat, a supporting frame, gripping means supported in said frame in spaced relation, and brush members disposed within the spaces between said gripping means and spaced from said gripping means, the upper surface of said brush members being above the upper surface of said gripping means.

1,384,892. AUTOMATIC FEEDING DEVICE FOR GRAPHITE OR THE LIKE. BURTON U. HILLS, Chicago, Ill. Filed Apr. 1, 1918. Serial No. 225,951. 7 Claims. (Cl. 184—59.)

7. In a device of the kind described and in combination, a substantially fluid-tight receptacle having an outlet passage extending through its base and connected to the receptacle on the interior thereof near the top, an inlet pipe having a nozzle at its lower end attached to the upper end of the receptacle near its periphery and projecting adjacent the bottom of the receptacle for admitting fluid to the receptacle below the top of the contained material, means for controlling the movement of the fluid passing through the receptacle and means in said pipe for preventing the re-admission of fluid to the receptacle through said outlet passage.

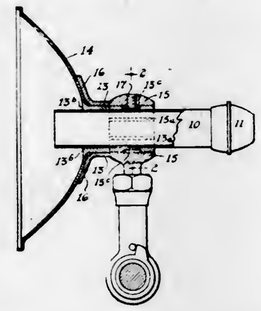
1,384,893. MUFFLER-CUT-OUT VALVE. JARRETT W. HORINE, Milwaukee, Wis. Filed Dec. 21, 1920. Serial No. 432,258. 2 Claims. (Cl. 251—96.)



1. A muffler attachment comprising a cylindrical valve casing, having an oval by-pass port and a radial slot offset therefrom, a resilient split sleeve valve shell revolubly mounted therein adapted to control the by-pass port, and an actuating arm extending from the sleeve through the valve casing slot.

1,384,894. BEVERAGE MATERIAL AND THE PROCESS OF MAKING SAME. ARNOLD A. HOALICK, Milwaukee, Wis. Filed Feb. 16, 1920. Serial No. 358,868. 5 Claims. (Cl. 99—11.)

3. The herein described method of manufacturing a beverage material which consists in mixing fifty pounds of malted oats with fifty pounds of oat flour and one hundred gallons of water, heating the mixture to dissolve portions of the grain, adding sodium chlorid, potassium bicarbonate and sodium bicarbonate to said heated mixture, again heating the mixture, filtering the same to remove the undissolved residue, adding twenty-five gallons of milk to the mixture while heated, and thereafter removing the moisture from the complete mixture.



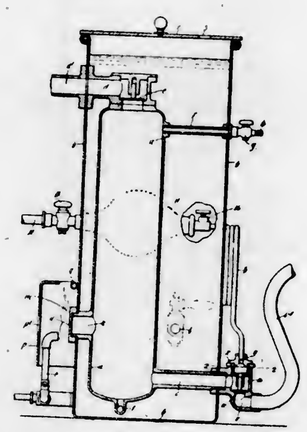
5. A food product of the character set forth containing milk, the soluble constituents of a mixture of malted and unmalted oats, sodium chlorid, potassium bicarbonate, and sodium bicarbonate.

1,384,895. POWER-GURDY. FRANK A. HOUCK, Ketchikan, Alaska. Filed Feb. 3, 1920. Serial No. 355,940. 2 Claims. (Cl. 254—137.)

1. In a power gurdy, a line-hauling wheel journaled at the rail, a frame pivotally mounted upon the rail and line guiding pulleys carried by the swinging end of said frame.

1,384,896. SPOTLIGHT. EARL H. HOWARD, Los Angeles, Calif., assignor to Gilfillan Bros. Smelting & Refining Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 3, 1919. Serial No. 335,331. 5 Claims. (Cl. 240—7.)

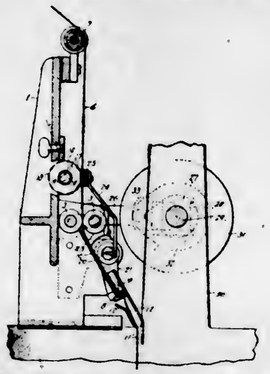
1. In a device of the class described, a standard having a bore therein, a lamp socket in said bore, a tube around said socket, said tube being flanged at one end and longitudinally slit at the other end, said tube being formed with a circumferential groove, a reflector held by said flange, a flange around said tube and against the outer face of the reflector, the tube being screw-threaded into said bore, and the flange around the tube being held between the reflector and the standard, and means passing through said standard and projecting into said groove in the tube serving to compress the slit part of the tube against the lamp socket and to hold the tube against unscrewing from the standard.



1,384,897. METHOD OF MAKING CURVED PRINTING-PLATES. HENRY E. HUBBARD, Oak Park, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 8, 1915, Serial No. 12,817. Divided and this application filed Aug. 19, 1918. Serial No. 250,601. 6 Claims. (Cl. 101—369.)

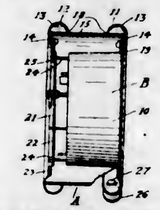
1. The method of making curved printing plates which consists of striking up printing characters on one face of a

plate and then subjecting the plate to pressure between concavo-convex surfaces, the surface contacting with said characters being of resilient material.



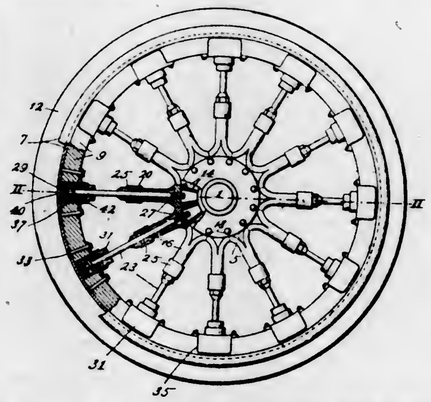
1,384,898. APPARATUS FOR PRODUCING A VACUUM FOR VACUUM-CLEANING AND DUST-REMOVING PURPOSES. BERTRAM CHARLES JOY, Hempstead, London, England. Filed Feb. 16, 1920. Serial No. 358,872. 4 Claims. (Cl. 160—1.)

1. For vacuum cleaning apparatus, automatically operating means for creating a partial vacuum, comprising a pistonless explosion chamber of considerable length as compared with its transverse dimensions, an inlet for air and gas near one end of said chamber, a mixing chamber communicating with said inlet, a screen of reticulated material adjacent said mixing chamber, a gas supply pipe in open communication with said explosion chamber through said screen and said mixing chamber and inlet, an air inlet suction pipe opening into said mixing chamber adjacent said gas supply pipe, a non-return valve in said air inlet pipe, an outlet valve connected with the other end of said chamber and adapted to be opened by superior pressure within said chamber, and means for igniting an explosive gaseous mixture in said chamber, the arrangement being such that when an explosion takes place in the explosion chamber, the gas supply is driven back in the gas supply pipe and replaced by products of combustion, so that the latter must be withdrawn from the gas supply pipe at the same time that air is drawn in through the air inlet suction pipe, before gas and air can be drawn in simultaneously.



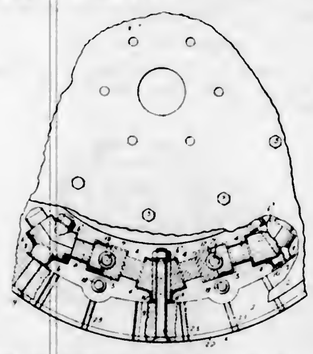
1,384,899. NUMBERING DEVICE FOR WRAPPING-MACHINES. ANDREW C. KAPPES, Chicago, Ill., assignor to William Wrigley Jr. Company, Chicago, Ill., a Corporation of West Virginia. Filed May 28, 1920. Serial No. 384,857. 8 Claims. (Cl. 101—21.)

1. In a wrapping machine, the combination with means for advancing a continuous strip of paraffined wrapping material, and cutting mechanism for cutting said strip into sheets of predetermined lengths, of a numbering device comprising a heated impression member located adjacent the path of said strip, and a member operatively connected with said cutting mechanism to bring said strip into contact with said impression member, its operation being



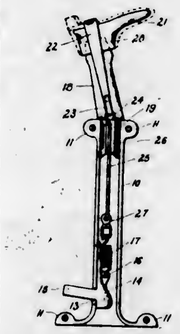
synchronized with said cutting mechanism to produce an impression in the paraffin on each sheet.

1,384,900. CLOCK-CASE. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 24, 1921. Serial No. 455,069. 6 Claims. (Cl. 58—54.)



6. A clock-case including a pair of rings, a tubular spacing member adapted to freely engage said rings and means for rigidly supporting a clock works within and between said rings in a manner to lock said case parts together.

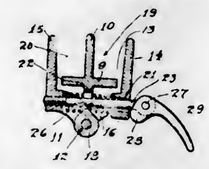
1,384,901. RESILIENT WHEEL. WILLIS W. KRAUTSCH, Coffeyville, Kans. Filed Feb. 6, 1919. Serial No. 275,293. 1 Claim. (Cl. 152—53.)



A vehicle wheel consisting of a rim, a hub, tubular spoke members secured to said hub and having outer tapered split terminals, internal nuts in said tubular spoke members, companion spoke members having their inner ends threaded into said tubular spoke members, compression nuts threaded upon the split terminals of the tubular spoke members to cause said terminals to grip the companion spoke members, and means yieldably connecting the outer ends of the companion spoke members to the rim.

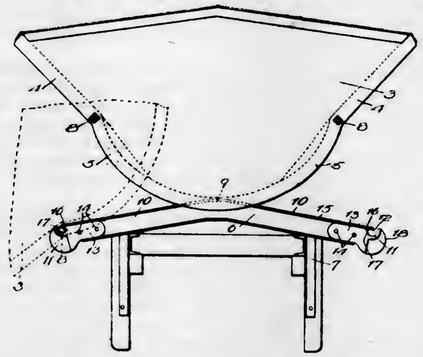
1,384,902. AUTOMOBILE-WHEEL. JOHN L. KUNZ, Milwaukee, Wis. Filed Sept. 16, 1918. Serial No. 254,299 14 Claims. (Cl. 152—28.)

2. A resilient wheel, including the combination with the body portion and rim portion of an annular series of non metallic resilient straight members, having oblique end faces in pressure contact with each other, and rigidly coupled to the rim, each section being secured to the wheel body at points intermediate to the points of connection with the rim.



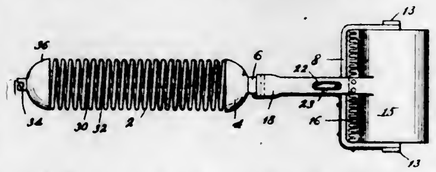
1,384,903. SHOEMAKER'S JACK. GASPARD LAPORTE, Pawtucket, and OCTAVE LAPORTE, Centerville, R. I. Filed Oct. 29, 1919. Serial No. 334,205. 1 Claim. (Cl. 12—123.)

A shoemaker's jack comprising a tubular standard, an extension member having a trunnion at its lower end rotatably mounted in said standard, a last mounted on the upper end of said extension, said trunnion being provided with longitudinally-disposed recesses in opposite sides thereof, a foot treadle, said standard being provided with a retaining notch to receive said treadle, a strap looped over said last, a U-shaped connection member extending through said recesses, a spring and a swivel interposed between said treadle and said connection-member, and means for binding said trunnion in adjusted position.



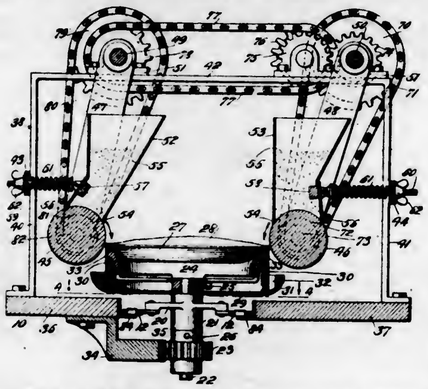
1,384,904. GUIDE AND POSITION-GRIP FOR SLIDING VEHICLE-WINDOWS. ALBERT E. LATTIMORE, San Francisco, Calif. Filed May 26, 1920. Serial No. 384,369. 4 Claims. (Cl. 292—55.)

1. A guide and position stop for sliding vehicle windows, comprising a pair of spaced guide walls movable one relatively to the other, a fixed dividing wall disposed between said guide walls for dividing the space therebetween into a pair of guide channels open at their top and opposite ends and through each of which is adapted to slide the lower edge of a vehicle window frame, means for mounting the dividing wall in position on a vehicle, a fulcrum connecting the lower ends of said guide walls beneath said



dividing wall, a shouldered adjusting screw threaded into one of said guide walls with the shoulder contacting with the other and adapted for rotation to vary the transverse area of said channels to clamp the windows in their adjusted position therein and spring means surrounding said adjusting screw and contacting with the arms to separate the same on the release of the screw.

1,384,905. RAIL CONSTRUCTION FOR ROLLING HOPPERS. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Company, Chicago, Ill. Filed July 28, 1920. Serial No. 399,520. 3 Claims. (Cl. 298—10.)

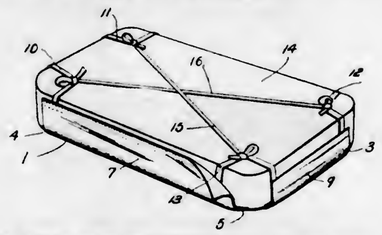


1. In a device of the character described, the combination of a rail, a hopper adapted to roll on said rail from charge carrying to discharge position, coöperating pivot members on said rail and hopper comprising a pin and a socket portion in which said pin is adapted to pivot, and an overhanging guard to hold said pin in said socket when said hopper reaches its limiting dumping position.

1,384,906. SAFETY HAIR-STRAIGHTENING DEVICE. EDWIN S. LEE, Kansas City, Mo. Filed Sept. 4, 1920. Serial No. 408,187. 5 Claims. (Cl. 219—21.)

1. A device of the character described consisting of a roller, a shaft upon which said roller is journaled, a handle associated with said roller and the shaft, and a comb associated with said handle and partly surrounding the periphery of the roller.

1,384,907. PIE-CRUST-TRIMMING MACHINE. JOHN J. LINDEN, Jersey City, N. J., assignor to Benjamin B. Vander Veer, New York, N. Y. Filed Dec. 31, 1920. Serial No. 434,205. 12 Claims. (Cl. 107—1.)

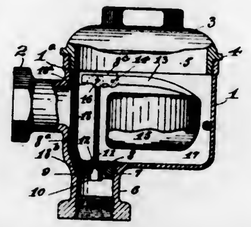


1. In a machine of the character described, a support for a pie-tin, means for effecting the travel of said support along a fixed path, means for rotating said support about its vertical axis during the travel thereof, a roller at one side of the line of travel of said support and means for rotating said roller downwardly against the edge of the pie-tin during the travel and rotation of said support, for trimming the pie-crust.

7. In a machine of the character described, a support for a pie-tin, rollers at opposite sides of said tin for engaging the same and trimming the pie-crust, means for rotating said support to carry the edge of said tin on a circular path against said rollers, and means for rotating said rollers on their longitudinal axes in a direction toward each other and downwardly against opposite edges of the pie-tin during the rotation of said tin.

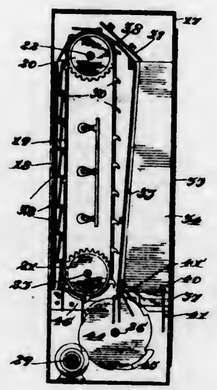
12. In a machine of the character described, a pair of endless conveyer chains having and carrying a series of independent supports for pie-tins mounted to rotate on their vertical axes, means for effecting the travel of said conveyer, means for successively rotating said supports during a portion of the travel thereof, circular open-top troughs carried with said supports and extending outwardly beyond the sides of the same to receive the pie-crust trimmings, rollers at the sides of the line of travel of said supports and having outwardly diverging surfaces at their forward or entrance ends, and means for rotating said rollers on their longitudinal axes in a direction toward each other and downwardly against opposite edges of the pie-tins during the travel and rotation of the successive supports between them, for trimming the pie-crust.

1,384,908. SLIP-ON COVER. PAUL M. LOCKWOOD, Kansas City, Mo. Filed Apr. 22, 1920. Serial No. 375,713. 2 Claims. (Cl. 155—182.)



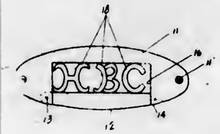
1. A slip-on-cover for cushions comprising a sheet having drop portions and closed loops connecting adjacent drop portions adapted to engage under the corners of the cushion.

1,384,909. ART OF HALOGENATING HYDROCARBON COMPOUNDS. CHAUNCEY C. LOOMIS, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Nov. 8, 1917. Serial No. 200,871. 6 Claims. (Cl. 23—24.)



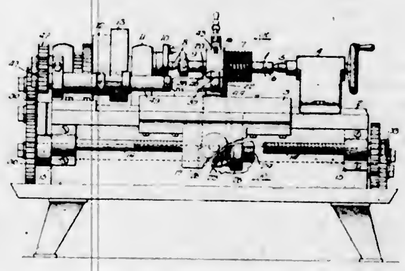
1. The improvement in the art of halogenating toluene and its homologues and substitution products in the side-chain, which comprises subjecting the same to the action of a halogen in the presence of an alkali-metal carbonate.

1,384,910. TRAP. JAMES J. MCDONALD, Cleveland, Ohio. Filed Oct. 6, 1919. Serial No. 328,747. 3 Claims. (Cl. 137—113.)



1. In a device of the character set forth, the combination of a casing, and a threaded closure cap in the top thereof, said casing having an inlet connection and provided with an outlet connection in the bottom thereof having at its upper end an outwardly flaring seat, a valve-seat fitting provided with a complementary flared surface engaging the flared seat of the outlet connection and having an upwardly extending valve seat and an aperture communicating with said seat and extending through the top thereof, a valve in said fitting having a stem extending through said aperture, said valve-seat fitting provided with an upwardly extending arm adapted for engagement with the closure cap, an inward projection on said arm near the top thereof, a lever fulcrumed on said projection, one arm of said lever pivotally connected with the valve stem, and a float fixed to and depending from the opposite arm of said lever.

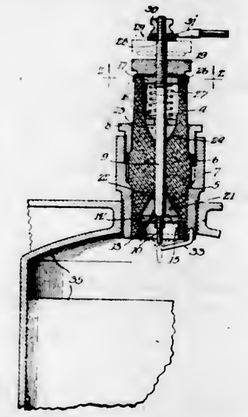
1,384,911. SIGN. ARCHIBALD D. MCKELLAR, Chicago, Ill. Filed Aug. 28, 1917. Serial No. 188,671. 6 Claims. (Cl. 40—36.)



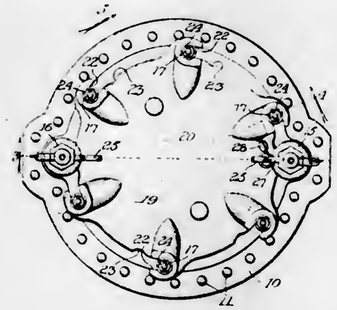
1. A sign comprising a case; a carrier removably mounted in said case and adapted and arranged to contain a complete set of sign members; manually operable members for locking said carrier in said case: a traveling conveyer arranged to exhibit said sign members; means for withdrawing sign members from said carrier, and operatively connecting them with said conveyer; and means for withdrawing said sign members from said conveyer and discharging them into said carrier, substantially as described.

1,384,912. INDICATING-PLATE. NORA E. MCMAHON, Columbia, Tenn. Filed May 8, 1920. Serial No. 379,780. 2 Claims. (Cl. 40—140.)

1. As a new article of manufacture, a monogram plate comprising a frame having one side thereof pivotally mounted at one end for ready separation from the opposite side of said frame, said opposite sides of said frame being provided with transversely registering pockets; and indicating members having projections at opposite ends arranged to seat in said pockets, whereby said indicating members are separately and independently supported in said frame, substantially as described.



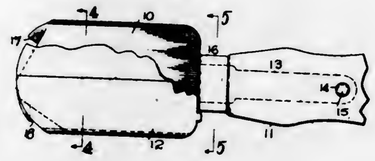
1,384,913. SCREW CUTTING AND RELIEVING MACHINE. CARL G. OLSON and NIKOLA TRBOJEVICH, Chicago, Ill., assignors to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1919. Serial No. 307,082. 15 Claims. (Cl. 10—102.)



9. In a machine tool adapted to generate threads upon a cylindrical blank, the combination of a work holder adapted to rotate the blank, a multiple tooth cutter resembling a gear wheel, a carriage wherein the cutter is mounted, a feed screw for causing the carriage to travel, a gear wheel parallel to the cutter and rigidly fastened to it and having a diameter substantially equal to its diameter, and a non-traveling member engaged by said gear wheel and arranged parallel to the axis of the work, said non-traveling member having projections adapted to engage the teeth of the gear wheel whereby said gear wheel is caused to roll along said nontraveling member by the travel of the carriage.

1,384,914. SPARK-PLUG. WILLIAM P. ORSINGER, Chicago, Ill. Filed Oct. 18, 1919. Serial No. 331,653. 9 Claims. (Cl. 123—169.)

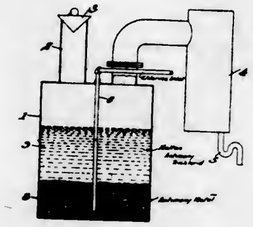
1. In combination, a spark plug having a reciprocating electrode, and a device serving in one position for normally holding said electrode a predetermined distance from the stationary electrode, said device, when moved to its alternate position on said electrode permitting said electrode to be reciprocated by the suction and compression of the engine.



1,384,915. RECEPTACLE. OSTRANDER J. PARKS, River Forest, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Dec. 15, 1919. Serial No. 345,097. 2 Claims. (Cl. 220—55.)

1. The combination with a receptacle containing an opening, of closure means therefor comprising a cover and shouldered members on the tank, the shoulder portions of which are vertically adjustable toward and away from the tank, said cover being adapted to be rotated at said opening and provided at intervals, at its marginal portion, with radially-extending thickened portions which are spaced from the body of the cover and extend beyond the edge thereof with their upper surfaces raised above the plane of the cover and which with the latter form circumferentially-extending recesses which extend in the same direction, and each presenting, by reason of said radially-extending portions and the adjacent portions of said body portion, a pair of surfaces spaced apart and adapted, in one position of said cover, to interlock with said shoulder portions and limit outward movement of said cover, but be out of interlocked relation with said shoulder portions when rotated to another position of said cover, adapting the cover to be bodily removed from the tank.

1,384,916. GAGE-KNIFE. ORIGENE J. PAQUETTE, Southbridge, Mass., assignor to The Stephen Richard Company, Inc., a Corporation of Massachusetts. Filed May 26, 1920. Serial No. 384,481. 5 Claims. (Cl. 30—20.)

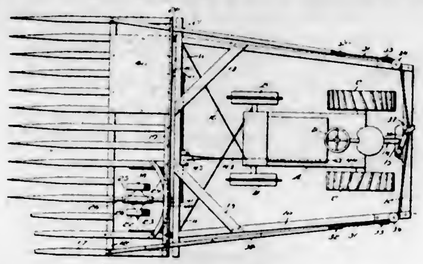


1. A gage knife comprising a handle, a flat blade fixed to said handle and having an undercut hook-like cutting portion, and a sheath fitting said blade and through which said cutting portion extends a predetermined distance.

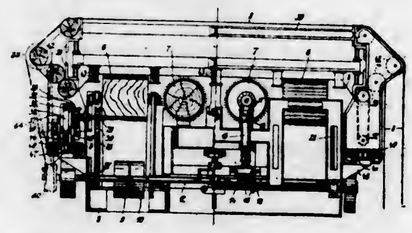
1,384,917. STAINLESS PASTE. DELLE M. PHILLIPS, Long Beach, Calif. Filed Aug. 21, 1920. Serial No. 405,056. 9 Claims. (Cl. 87—17.)

9. A paste consisting of the following ingredients having the following proportions:—

Water	One pint.
Rice flour	One-half pound.
Corn starch	One-quarter pound.
Gum arabic	One-eighth ounce.
Aluminum sulfate	One-quarter ounce.
Glycerin	One-half dram.
Oil of cloves	One-quarter dram.
Oil of cinnamon	One-quarter dram.



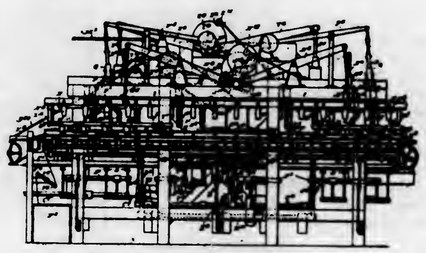
1,384,918. PROCESS OF MAKING ANHYDROUS ANTIMONY TRICHLORID. OLIVER C. RALSTON, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1920. Serial No. 402,621. 3 Claims. (Cl. 23—10.)



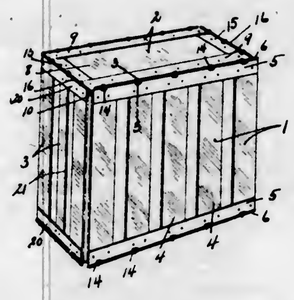
1. Process of making anhydrous antimony trichlorid consisting in reacting with gaseous chlorin upon antimony metal submerged beneath a molten bath of anhydrous antimony trichlorid.

1,384,919. MOTOR-DRIVEN BUCK-RAKE. EARL W. REED, Sunnyside, Wash. Filed Apr. 27, 1920. Serial No. 376,899. 11 Claims. (Cl. 56—27.)

1. In a rake, a wheeled rake head, a frame rearwardly of said head and pivotally connected thereto, the frame being supported in substantially horizontal position and having an open center, and a tractor located in the open center of said frame, having detachable connection therewith, and means on the frame and connected with the head to vary the disposition of said head and frame relative to each other, hangers for the wheels of said head, and means for adjusting the hangers to permit the guiding of the head.

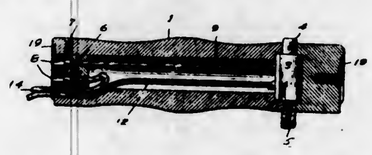


1,384,920. MACHINE FOR RAISING NAP ON FABRICS. JULES REGOUT, Jr., Maastricht, Netherlands. Filed July 23, 1919. Serial No. 312,867. 5 Claims. (Cl. 26—4.)



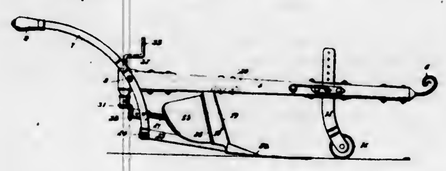
1. A machine for raising nap on fabrics, comprising a fixed frame, a traveling carriage movable to and fro on said frame, a plurality of raising rollers and driving means for the same mounted in said frame, some of the rollers being adjustable in height, rollers for guiding the fabric through the machine, said rollers being mounted on the traveling carriage, means for deriving the reciprocating motion of the carriage from the driving mechanism for the raising rollers, and means for converting the reciprocating motion of the carriage into a rotary motion for rotating the guiding rollers for the fabric.

1,384,921. MACHINE FOR FORMING AND WRAPPING SMALL PACKAGES OF BUTTER. WILLIAM O. REW, Eureka, Calif. Filed Feb. 18, 1920. Serial No. 359,630. 27 Claims. (Cl. 93—2.)



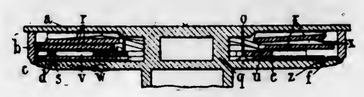
1. A plastic material package forming machine embodying means for dividing a plastic material into a plurality of uniform sections, means for uniformly separating the several sections from each other, and means for simultaneously wrapping the several separated sections.

1,384,922. COLLAPSIBLE CRATE. EDWARD L. RUPRACHT, West Monroe, N. Y. Filed Oct. 8, 1920. Serial No. 415,520. 2 Claims. (Cl. 217—12.)



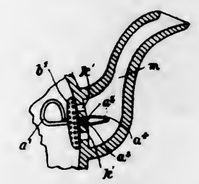
1. A collapsible crate including two sections, each having metallic reinforcing members at their edges, one of said metallic reinforcing members formed with a bead having a series of perforations, a wire extending through said bead, and having U-shaped clamping parts projecting through said perforations, the other of said metallic reinforcing members formed with a series of perforations through which clamping parts are extended and return bent to secure the parts together.

1,384,923. HANDLE FOR SADIRONS. JOHN J. SCHILDER, San Francisco, Calif. Filed Aug. 29, 1919. Serial No. 321,241. 2 Claims. (Cl. 219—25.)



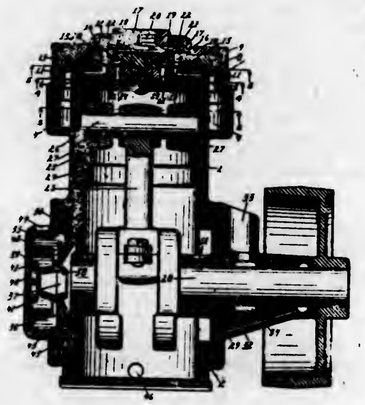
1. An article of manufacture comprising a detachable hollow handle; an electric switch mounted within the handle and having operating buttons extending beyond the surface of said handle; a contact plug mounted in one end of the handle and electrically connected to the switch; a second contact plug electrically connected to the first mentioned plug and the switch and adapted for connection to the terminals of an eleteric sad iron; and means for detachably securing said handle to a sad iron to replace a handle un-provided with current controlling means.

1,384,924. DOUBLE-MOLDBOARD PLOW. MIKEL SCHULTZ, Kaylor, Pa. Filed July 15, 1920. Serial No. 396,542. 1 Claim. (Cl. 97—26.)



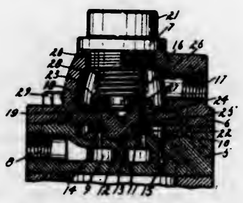
In a double mold board plow of the class described, a horizontal beam, a combined double stationary mold board and standard rigid with and extending downwardly from the intermediate portion of the beam, oppositely curved mold board wings hinged to the rear edges of the combined mold board and standard for a lateral swinging movement, a vertical crank shaft journaled in and extending through the rear end of said beam, a crank handle on the upper end of said crank shaft above the beam, a substantially horizontal screw arranged longitudinally beneath the beam and having its rear end geared to the lower end of said crank shaft, a nut threaded upon said screw and having flexible connections with said wings, said flexible connections each including a link pivoted to the nut and to one adjacent wing, a pair of plow handles secured against the opposite sides of the beam and extending above and below the latter, said screw being journaled at its forward end in the combined mold board and standard, and a swiveled bearing for the rear end portion of said screw carried by and mounted between the lower portions of said handles beneath the beam.

1,384,925. EXPANSIBLE CIRCULAR TABLE. JOSEF SEILER, Liegnitz, Germany. Filed Mar. 29, 1920. Serial No. 369,783. 3 Claims. (Cl. 45—9.)



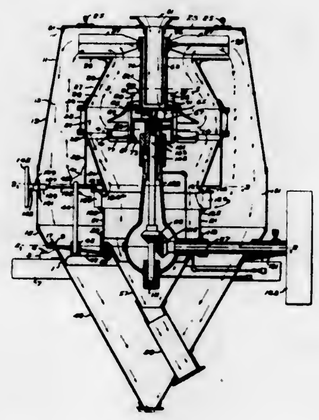
1. In an expansible circular table, the combination of a central support or pedestal, a stationary circular table top supported thereon, rigid arms extending from said support in the form of a cross, a rotatable rim having spiral grooves formed in its inner periphery in which grooves the ends of the said arms are slidably engaged, a plurality of enlarging plates which are normally retained within the rim under the stationary table top and are adapted to be moved outward to form an annulus around the periphery of the said stationary table top, a carrier-arm for each enlarging plate, a rotatable ring on which all the said carrier-arms bear and to which each of the said arms is coupled, and means for automatically tilting the said enlarging plates, when they are being moved inward, to cause them to take up automatically under the stationary table top positions in which they overlap each other like the leaves of a folded fan.

1,384,926. STRAINER FOR TEAPOTS. JOHN BEALBY SMITH, Stamford Hill, London, England. Filed May 18, 1920. Serial No. 382,322. 4 Claims. (Cl. 53—3.)



1. In a strainer for tea pots, a perforated disk, a spring wire closed loop on one side of said disk, shoulders upon the loop adapted to engage in a perforation in the tea pot, a pointed end to said loop to facilitate engagement with the perforation in the tea pot, a handle upon the other side of said disk, said handle being connected with said loop, so that said handle and said loop form together a rigid element whereby when inserting the strainer in the tea pot, the perforation in the tea pot for receiving the pointed end of the loop may be located by the sense of touch.

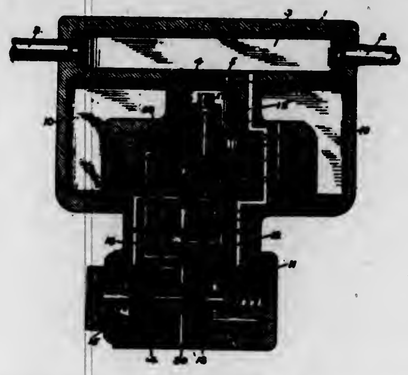
1,384,927. VACUUM-PUMP. KARL D. SMITH, Battle Creek, Mich., assignor to Union Steam Pump Company, Battle Creek, Mich. Filed Sept. 7, 1915. Serial No. 49,274. 27 Claims. (Cl. 230—34.)



1. In a structure of the class described, the combination of a cylinder having an annular intake passage at its outer end provided with discharge openings at the end of the cylinder, a cylinder head comprising an inner plate-like head member having an annular inlet valve seat on its outer face and a plurality of radially disposed inlet passages communicating with said discharge openings of said intake passage and opening into said valve seat, and a plurality of cylinder ports grouped within said inlet passages, an intermediate plate-like head member having an annular discharge valve seat on its outer face and an annular recess in its inner face constituting an inlet valve chamber into which said cylinder ports open, said intermediate head member being also provided with discharge ports opening into said discharge valve seat, an outer head member having a recess in its inner face constituting a discharge valve chamber, said chamber being provided with a discharge opening, annular disk-like valves arranged in said valve chambers to coact with said valve seats, the diameters of said valves being such as to permit a limited lateral movement on their seats and the passage of air around and through the valves, and coiled seating springs for said valves, said intermediate and outer head members being provided with bore-like seats for said springs alined with said valves.

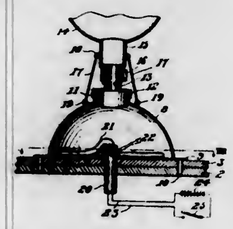
1,384,928. PUMP. KARL D. SMITH, Battle Creek, Mich., assignor to Union Steam Pump Company, Battle Creek, Mich. Filed Mar. 6, 1917. Serial No. 152,810. 2 Claims. (Cl. 230—34.)

1. In a structure of the class described, the combination with a cylinder, of a head therefor comprising a pair of superimposed head members, the inner head member being provided with an inlet passage, an annular inlet chamber, an inlet valve chamber in its outer face provided with an annular valve seat, a plurality of inlet ports opening into said valve seat, and a plurality of cylinder ports opening to said inlet valve chamber, the superimposed head member constituting the top of said inlet valve chamber and being provided with a stem disposed centrally of said inlet valve seat and with a discharge valve chamber and discharge passage therefor and having an annular discharge valve seat and a plurality of discharge ports opening into said inlet valve chamber and said discharge valve seat, annular disk-like valves disposed on said seats, a cap for said superimposed head member provided with a stem disposed centrally of said discharge valve seat, a coiled spring disposed on said stem on said cap to seat said discharge valve, and a seating spring for said inlet valve.



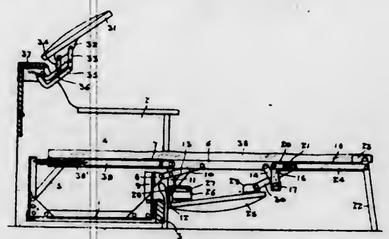
1,384,929. AIR-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1919. Serial No. 319,646. 16 Claims. (Cl. 83—40.)

1. A separator for grading materials comprising, in combination, outer and inner chambers, a fan for producing an air circuit passing upward through the inner chamber and downward through the outer chamber, a vertical shaft mounted in said inner chamber; a rotary distributer on said shaft having a table to receive materials to be graded, an annular member to receive the materials from said table and deliver the same into the path of the air current rising in the inner chamber, said table and annular member being relatively adjustable to promote efficient distribution of materials of varying character, and means between the table and annular member to prevent the materials from escaping inward therebetween.



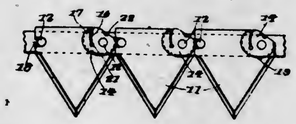
1,384,930. BRAKE-PIPE VENT-VALVE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1920. Serial No. 405,014. 4 Claims. (Cl. 303—82.)

1. In a fluid pressure brake, the combination with a brake pipe, a piston subject to the opposing pressures of the brake pipe and a chamber adapted to be charged from the brake pipe, and means operated by said piston for venting fluid from the brake pipe, of means operated upon increasing the brake pipe pressure to effect the release of



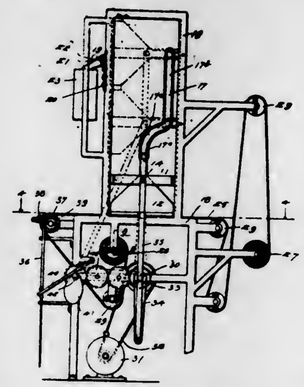
the brakes for preventing leakage of fluid from the brake pipe past the piston to said chamber.

1,384,931. SHIP-RAISING DEVICE. JOSEPH VERCHAK, Nutter Fort, W. Va. Filed Feb. 2, 1921. Serial No. 441,962. 3 Claims. (Cl. 114—68.)



1. A ship raising device comprising in combination with a ship, a plurality of box casings secured to the deck of the ship, each casing including a hinged cover, a receptacle within the casing, a normally deflated bag in communication with said receptacle, a gas producing wick within the receptacle and electrical means for igniting the wick.

1,384,932. FOLDING BED. THOMAS WHISTANCE-SMITH, Mount Dennis, Ontario, Canada. Filed Jan. 11, 1919. Serial No. 270,726. 2 Claims. (Cl. 5—48.)

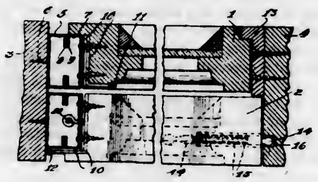


1. In a folding bed, a seat body, a rigid frame secured in said seat body having uprights at the forward side, a folding frame formed in three sections, the inner section being pivotally supported from the back portion of the rigid frame on a swinging pivotal support, the intermediate section having rigid bars pivotally connected to the front uprights of said rigid frame, link members pivotally connecting the adjacent ends of the inner and intermediate sections, said rigid bars extending downwardly from the intermediate section from the point of its pivotal connection with the link members, a seat having brackets at the inward side formed with longitudinal slots, said slots being engaged by the outward ends of the downwardly extending rigid bars from the intermediate section in sliding contact, an outer section pivotally secured to the intermediate section, legs supporting the outer end of said outer section, and link members pivotally connected to the inward ends of the outer section and extending beneath the intermediate section and pivotally connected to the seat and adapted upon the folding of the folding frame to slide the seat on its supports.

1,384,933. REMOVABLE BLADE FOR CUTTER-BARS. CHARLES B. WHITMOYER, Muncy, Pa. Filed Dec. 10, 1920. Serial No. 429,700. 5 Claims. (Cl. 56—300.)

1. The combination with a cutter bar of a headed member carried by the bar, a removable cutter blade having a recess for receiving said headed member, and a resilient rotatable locking means carried by the bar and arranged to frictionally engage the other side of the blade to maintain the blade in engagement with said headed member.

1,384,934. BLOCK-PRINTING MACHINE FOR FABRICS. HENRI GABRIEL EDOUARD AGIER, New York, N. Y. Filed Oct. 23, 1920. Serial No. 418,996. 7 Claims. (Cl. 101—295.)



1. A fabric printing machine having a vertical guide frame, a follower or carrier reciprocably mounted in said frame, a tilting head fulcrumed for oscillatory movement upon the follower or carrier and carrying a printing block, color distributing means located at one side of the path of movement of the follower or carrier, supply and receiving drums for the fabric, and means for maintaining a prescribed area of the fabric in the path of movement of the printing block.

1,384,935. WINDOW CONSTRUCTION. GEORGE S. BENJAMIN, Detroit, Mich. Filed July 24, 1920. Serial No. 398,759. 1 Claim. (Cl. 20—49.)

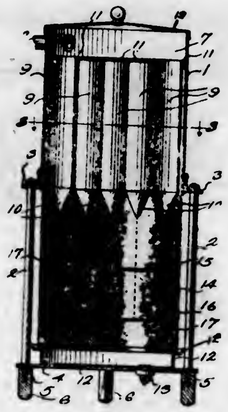
In a window construction, the combination with a frame having a window opening, of a channel member ver-

tically extended upon said frame within said opening and having its edges flanged toward each other, a complementary channel member having its edges flanged toward each

other and return-bent to slidably embrace said flanges of the first mentioned channel member, and a sash hinged to sliding channel member.

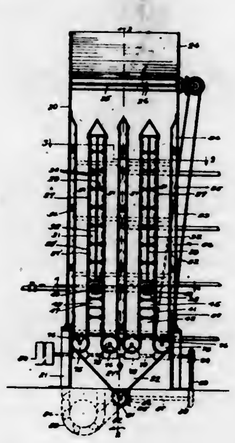
1,384,936. TOOTHBRUSH. JAMES HARVEY BOWMAN, Honolulu, Hawaii. Filed Nov. 19, 1920. Serial No. 425,217. 2 Claims. (Cl. 15—39.)

1. The method of making a tooth brush comprising the division, by means of perforated lines, of a strip of paper into a plurality of substantially equal portions, the folding of said portions over one another along said perforated lines so as to form a block and the piercing of said block through said portions by a pin having a handle thereon.



1,384,937. TOBACCO-BOX. HECTOR E. BRUNELLE, Manchester, N. H. Filed Dec. 2, 1919. Serial No. 341,873. 1 Claim. (Cl. 206—56.)

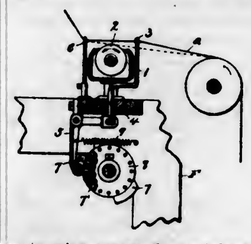
A tobacco box including a receptacle having an opening in opposite walls adjacent their upper ends, a follower slidably mounted in the receptacle and having openings adjacent its end and a groove in its under face connecting said last named opening, a cord extending through one of the first named openings and having one end tied in a knot to prevent said cord from being pulled through said first opening, said cord passing through said second named openings and resting in the groove and passed through one of the first named openings, and a catch carried by the receptacle to engage the free end of the cord.



1,384,938. LIQUID COOLING AND AERATING DEVICE. CALVIN D. CRANE, Dayton, Ohio. Filed July 18, 1917. Serial No. 181,274. 11 Claims. (Cl. 261—111.)

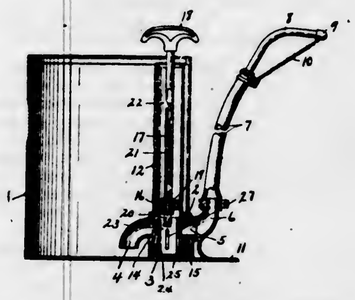
2. In an aerator of the character described, a receiver, a supply reservoir located in separate spaced relation above the receiver having a discharge orifice for the fluid to be aerated, a perforate inclosure intermediate the supply reservoir and the receiver within which the liquid is discharged, and a substantially flat baffle plate within the

perforate inclosure intercepting the liquid in its passage from the reservoir to the receiver.



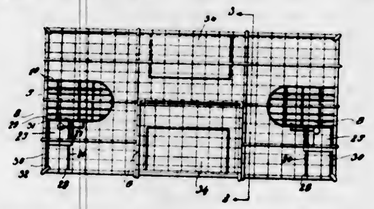
1,384,939. PROCESS OF AND APPARATUS FOR DISTILLING OCOTILLO AND THE LIKE. SAMUEL M. DARLING, Washington, D. C. Filed Feb. 21, 1919. Serial No. 278,470. 8 Claims. (Cl. 203—6.)

7. The herein described process of distilling ocotillo and the like, which consists in subjecting the same to the action of heat, whereby a carbonized residue is produced, collecting the gases distilled, passing said gases through a condenser and returning the uncondensed gases to the heated mass at the point of highest temperature.



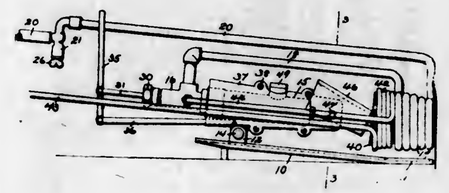
1,384,940. APPARATUS FOR COLORING OR PRINTING THREAD. HOWARD P. DENISON, Syracuse, N. Y. Filed Feb. 28, 1918. Serial No. 219,710. 5 Claims. (Cl. 91—12.01.)

1. In an apparatus for coloring yarn, thread or the like, means for moving the yarn longitudinally, a rotary absorbent member adjacent the yarn, means for applying die to said rotary member, and means for intermittently



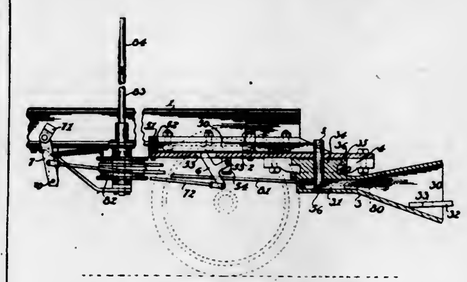
causing the yarn to wipe across the periphery of said rotary member, without interrupting the longitudinal movement of said yarn.

1,384,941. GREASE-GUN. ARZENO J. DILLEY, Muir, Mich. Filed July 2, 1919. Serial No. 308,190. 6 Claims. (Cl. 221—80.)



1. In a grease gun a piston cylinder having an inlet and an outlet, a piston movable therein, a sleeve valve controlling said inlet and said outlet, said valve connected to the piston for movement axially therewith to alternately open and close said inlet and said outlet.

1,384,942. TRAP. ALLEN DIXON, Nashville, Tenn., assignor of one-half to William N. Sanders, Nashville, Tenn. Filed Oct. 4, 1920. Serial No. 414,549. 1 Claim. (Cl. 43—66.)

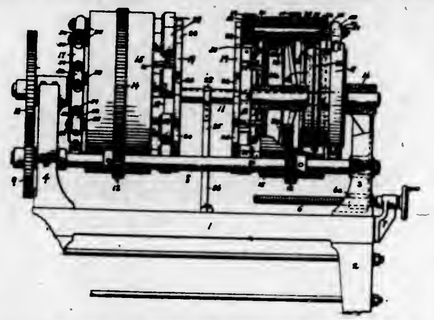


A trap comprising a cage having an entrance opening in each end, an entrance hood disposed over each of said openings and extending inwardly of the case, a bearing rod extending laterally of the bottom of the hood, a tread-plate, said plate having a pair of wires extending longitudinally thereof and looped around said rod for movably connecting the tread-plate thereto, a weight wire extending longitudinally and centrally of the tread-plate and then laterally through one side of the hood, a weight on the end of said weight wire, and means for preventing operation of the tread-plate from within the cage.

1,384,943. OIL-BURNER. THOMAS B. FERGUSON, Newark, N. J., assignor to Ferguson Forge Engineering Co., a Corporation of New Jersey. Filed Dec. 6, 1919. Serial No. 342,944. 6 Claims. (Cl. 158—56.)

6. An oil burner comprising an elongated nozzle, an elongated inner nozzle, the two nozzles being spaced apart to provide an annular chamber, a fitting in the rear of the nozzle having a passage therein communicating with the annular chamber, feeding means connected with the said passage, said feeding means including a vaporizing coil, said fitting having a passage for steam, a feeding means for conducting steam to the passage, said feeding means including a coil adjacent to the vaporizing coil, the major portion of the inner nozzle being exposed to the heat of the fuel in the chamber, each nozzle having an orifice, the orifices being substantially in line, a stem passing through the fixture of the inner nozzle and having a pin on its forward end adapted to be projected outward through the alined orifices, and means on the outer end of the stem for manipulating it.

1,384,944. AUTOMATIC SWIVEL TRAILER-COUPLING. JOHN R. FLOOD, Everett, Wash. Filed Feb. 16, 1920. Serial No. 359,117. 5 Claims. (Cl. 213—67.)



1. A trailer coupling for tractor vehicles comprising a funnel shaped coupling member pivoted to swing horizontally and provided at its pivot axis with a coupling pin, lines attached to said swinging member and a controlling drum located distant therefrom to which said lines are connected.

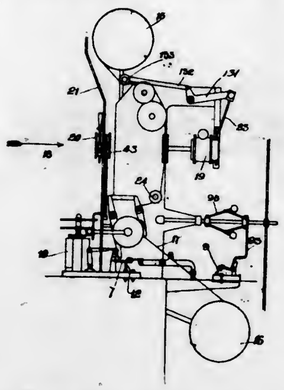
1,384,945. MACHINE FOR REDUCING THE ENDS OF CONTAINER-BODIES. BEN K. FORD, Oak Park, Ill., assignor to Fibre Can Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1920. Serial No. 421,136. 9 Claims. (Cl. 93—55.)

9. In a machine for reducing the diameters of the ends of container bodies, the combination of a holder for the bodies, a cup-shaped head movable relative toward and from the holder, means to rotate the head relative to the

body, means to cause the body to enter the head, the open end of the head being of two internal diameters, a roller

within the head, and means to press the roller against the container body within the head.

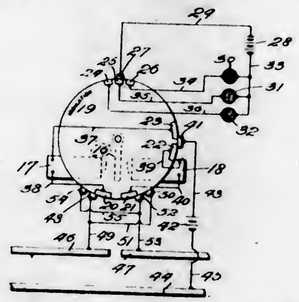
1,384,946. COMPOSITE MOTOR-FUEL. JOHN PRESTON FOSTER, Paia, Hawaii. Filed Nov. 29, 1920. Serial No. 426,987. 4 Claims. (Cl. 44—9.)



1. A motor fuel comprising an admixture of alcohol, ether and anilin.

2. A motor fuel comprising an admixture of ethyl alcohol, ethyl ether and anilin.

3. A motor fuel comprising an admixture of alcohol, ether, kerosene and anilin.



4. A motor fuel comprising an admixture of the following compounds in substantially the proportions, by volume, indicated: alcohol 63%, ether 34%, kerosene 2% and anilin 1%.

1,384,947. AUTOMATIC SAFETY CONTROL FOR CINEMATOGRAPH AND LIKE MACHINES. ROY MARCUS GEYER, Picture Palace, Mussoorie, India. Filed May 28, 1919. Serial No. 300,460. 12 Claims. (Cl. 88—17.)

1. A cinematograph projecting machine comprising a safety shutter, locking means normally keeping said shutter closed, a governor associated with the driving means of the machine, an electrically operated device for releasing said locking means, a switch operated by said governor when the machine reaches a safe speed, said switch being in the circuit of said electrically operated device, an operating member for said shutter, a switch associated with said member, said switch being located in a circuit the closing of which starts the driving means, said switch being closed by the initial movement of the operating member, further movement of the operating member being prevented by said locking means which prevents the shutter and the operating member from being moved until said locking means have been released by the electrically operated device.

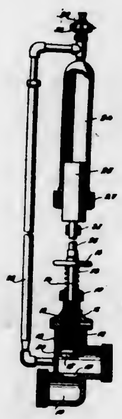
1,384,948. RELAY. GEORGE R. GUILD, U. S. Army, assignor of one-half to C. T. Payton, St. Louis, Mo. Filed Sept. 29, 1919. Serial No. 327,067. 5 Claims. (Cl. 246—256.)

1. The combination with a railway track having a continuous rail and a broken or open rail, of a relay including a pair of solenoids, each of which is connected in series with one of the sections of the broken or open rail and with the continuous rail, an armature pivotally mounted between said solenoids and adapted to be attracted thereby when they are energized, and rotatable means adjacent to the armature for cutting one of said solenoids out of circuit when the other solenoid has been energized to attract the armature.

2. The combination with a railway track having a continuous rail and a broken or open rail, of a relay including a pair of solenoids, each of which is connected in series with one of the sections of the broken or open rail and with the continuous rail, an armature pivotally mounted between said solenoids and adapted to be attracted thereby when they are energized, means for cutting one of said solenoids out of circuit when the other solenoid has been energized to attract the armature, a plurality of signal lamp circuits, a member positioned above the armature and movable therewith, and means on said member for closing one of said lamp circuits depending on the position of said member.

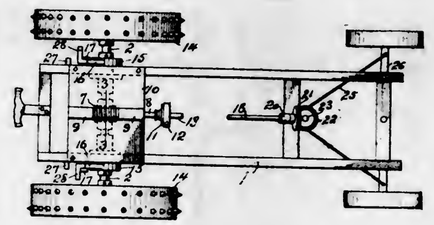
3. The combination with a section of railway track having a continuous rail and an open or broken rail, of a solenoid in circuit with said continuous rail and one of the sections of the broken rail, a second solenoid in circuit with the continuous rail and the other section of the broken rail, an armature pivotally mounted between said solenoids and adapted to be actuated upon the closing of either one of the circuits in which the solenoids are located, a plurality of signal lamp circuits, and means adjacent to the armature and controlled thereby for closing one of said lamp circuits upon the closing of the circuits in which the solenoids are located.

4. The combination with a section of railway track having a continuous rail and an open or broken rail, of a solenoid in circuit with said continuous rail and one of the sections of the broken rail, a second solenoid in circuit with the continuous rail and the other section of the broken rail, an armature pivotally mounted between said solenoids and adapted to be actuated upon the closing of either one of the circuits in which the solenoids are located, a disk provided with contacts adjacent to and movable with said armature, and a plurality of lamp circuits provided with a contact which is adapted to be engaged by the contacts on the member carried by the armature.



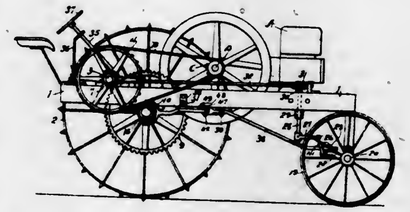
5. The combination with a section of railway track having a continuous rail and an open or broken rail, of a pair of solenoids, each of which is in circuit with the continuous rail and one of the sections of the open or broken rail, a relatively stationary contact member in said circuits, a pivotally mounted armature adapted to be attracted by said solenoids, a disk adjacent to said armature, contact members carried by said member and adapted to engage the relatively stationary contact member to close the circuits in which it is located, a plurality of signal lamp circuits, and means for closing one of said lamp circuits when either circuit between the continuous rail and the sections of the broken rail is closed.

1,384,949. PERPETUAL AUTOMOBILE LICENSE-PLATE. RUDD HARDESTY, Denver, Colo. Filed Oct. 10, 1918. Serial No. 257,549. 2 Claims. (Cl. 40—63.)



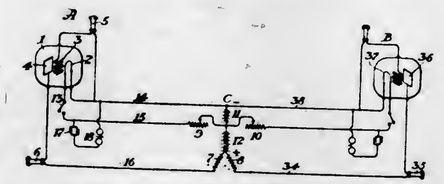
2. A permanent license plate in combination with a year plate and interchangeable means to coöperate with said year plate to indicate different classifications of the object licensed, said interchangeable means being removably held in fixed relation to said year plate and holding said permanent and year plates in fixed position.

1,384,950. AUTOMATIC VALVE. EDWARD W. HARPER, Savannah, Ga., assignor of one-third to Clarence H. Kelly, Savannah, Ga. Filed Sept. 8, 1920. Serial No. 408,845. 2 Claims. (Cl. 137—35.)



1. An anti-freezing device comprising a water controlling valve, a casing in which water is adapted to freeze, said valve having a sliding sleeve, the stem of the valve being threadedly engaged through the sleeve for manual opening and closing, a spring for holding the valve normally open and the sleeve in elevated position, and means in the said casing and connected with the valve stem for automatically moving the valve into closed position upon expansion in the casing due to freezing.

1,384,951. TRACTOR. HILLIS A. HARRAH, Pomona, Kans., assignor of one-half to Lizzie T. Leimbach, Rosedale, Kans. Filed Feb. 23, 1918. Serial No. 218,612. 8 Claims. (Cl. 180—17.)



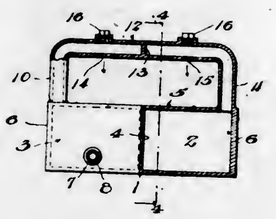
1. In a tractor having two rotary driving members, differential driving mechanism connecting said members, and two traction wheels respectively driven by said members, the combination with one of said driving members, of automatically actuated means for holding the last named member from turning backwardly, but which in the operative position permits it to turn forwardly.

1,384,952. TRACTOR. HILLIS A. HARRAH, Kansas City, Mo., assignor of one-half to Lizzie T. Leimbach, Rosedale, Kans. Filed Feb. 13, 1919. Serial No. 276,701. 1 Claim. (Cl. 180—18.)

In a tractor, a rotary axle, two traction wheels independently rotatable thereon, two clutches for respectively locking said wheels to said axle, two springs for respectively forcing said clutches to the locking position, a carrying steering wheel, steering means for turning said wheel to the right and left, a lever oscillatable by said steering means, two levers for respectively releasing said clutches, and two bars pivoted to said lever and respectively slidably and pivotally connected to said two levers so as to swing the same one independently of the other.

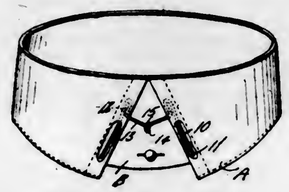
1,384,953. VACUUM ELECTRIC APPARATUS. PETER COOPER HEWITT, Ringwood Manor, N. J. Filed June 27, 1916. Serial No. 106,122. 10 Claims. (Cl. 179—70.)

9. In a system of distribution, the combination with a plurality of electric devices, each device having a plurality of terminals, of a common source of current connected to like terminals in each of said devices, a trans-



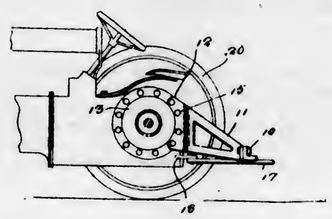
former in the current path of said devices, and an electric wave generator connected to a terminal in one of said devices and affecting the path between the terminals connected to the common source of current.

1,384,954. JEWELER'S TORCH. SAM W. HOKE, Palisade, N. J. Filed Feb. 20, 1920. Serial No. 360,045. 1 Claim. (Cl. 158—27.4.)



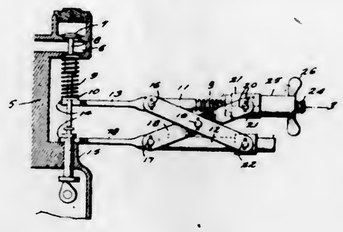
In a jeweler's torch of the character designated, in combination, a bifistulous ejector section, a needle valve controlling the admission of fuel gas thereto, a needle valve controlling the admission of oxygen thereto, the stem of the fuel gas control needle valve being formed with a screw thread of steeper pitch than that on the stem of the oxygen control needle valve, both valve stems being formed with radially protuberant finger rests, a constrictive nozzle connected with said ejector section and formed with a convergently contracted discharge port, and an oxygen jet in alinement with said convergently contracted discharge port and communicating with said oxygen controlling valve, for the purpose described.

1,384,955. LIQUID AND GASEOUS FUEL BURNER. FRED HOWLAND, Nogales, Ariz. Filed Dec. 30, 1919. Serial No. 348,281. 3 Claims. (Cl. 158—66.)



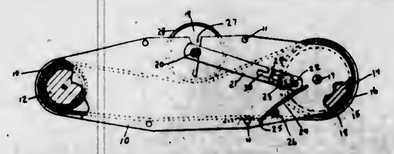
2. A single piece, cast fuel burner comprising a retort fashioned with a transverse interior partition forming separated chambers and upright, integral gas pipes rising from said retort and communicating with the chambers, an integral horizontal pipe section parallel with the retort and joining said gas pipes, an integral transverse partition in the horizontal section, there being nozzle openings in said horizontal section at the sides of the partition, and fuel supply pipes to said chambers.

1,384,956. COLLAR FASTENER AND SUPPORTER. GEORGE J. HUDSON, Dallas, Tex. Filed Mar. 29, 1921. Serial No. 456,553. 4 Claims. (Cl. 24—220.)



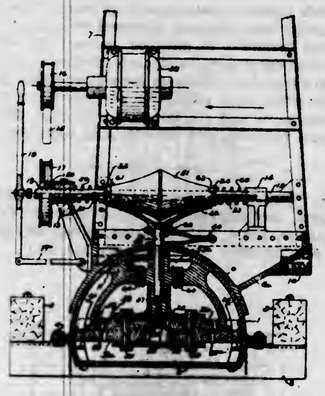
1. In a collar supporter, a pair of members each comprising a staff with a blunt point and having a clamping loop at its upper end, a laterally extending arm carried by each loop, and means for fastening the arms together.

1,384,957. SAFETY DEVICE FOR TRACTORS. ROY D. JEFFRIES, Granada, Minn. Filed Jan. 10, 1920. Serial No. 350,591. 2 Claims. (Cl. 213—67.)



1. A safety attachment for tractors having a transverse check bar or beam, forwardly convergent braces provided at their front ends with parallel wings having openings for engagement by the cap screws of a gear casing and a hitch connected with the center of said check bar or beam.

1,384,958. TOOL FOR COMPRESSING VALVE-SPRINGS. HARLAN S. JILLSON, Turners Falls, Mass. Filed May 22, 1919, Serial No. 298,936. Renewed Dec. 15, 1920. Serial No. 430,997. 2 Claims. (Cl. 29—86.3.)

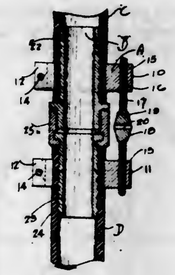


1. A tool of the character described, comprising a pair of rods, one rod having a screw-threaded portion, a rotatable operating sleeve having screw-threaded engagement with the screw-threaded portion and provided with an annular recess, a collar rotatable within the recess, a link pivotally connected with one rod and with the collar, a second link pivotally connected with the rods and crossing the first-named link, and means to pivotally connect the links.

1,384,959. WOOD-GRAINER. EDWARD JOLLIFFE, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,404. 9 Claims. (Cl. 41—5.5.)

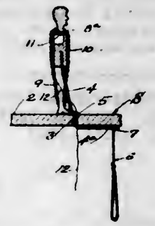
1. A graining device comprising a frame, an endless belt traveling on rollers mounted in said frame, lever arms pivoted on said frame, an idler pivoted on said arms, and resilient means mounted on said frame and pressing against the ends of said arms to keep the belt taut by means of said idler.

1,384,960. DERRICK. JOHN W. KITTREDGE, Akron, Ohio. Filed May 15, 1918. Serial No. 234,597. 11 Claims. (Cl. 212—68.)



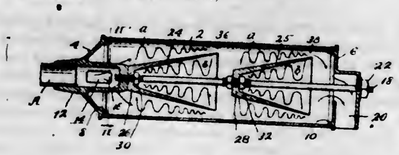
1. A machine comprising a base member, an upper member mounted thereon, a boom, connecting means from the upper member to the boom adapted to support the boom, a positive drive connection between the two members adapted to turn the upper member on the base member, a source of power, a power transmission from the said source of power to the said positive drive connection, a friction drive in the said power transmission, a variable speed mechanism in the said friction drive and a reversing mechanism in the said friction drive.

1,384,961. LAMP-SECURING MEANS. HARRY KLEIN, Freeport, N. Y. Filed Nov. 3, 1919. Serial No. 335,313. 12 Claims. (Cl. 176—31.)



1. In a device of the class described, a socket, a lamp having the neck thereof arranged eccentrically to the axis of the lamp to provide a space at one side of said neck and between the latter and the socket, and a locking device arranged in said space.

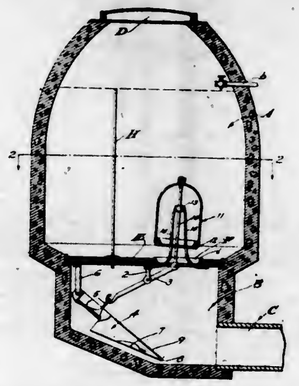
1,384,962. CLAMP UNIT FOR HOSE CONNECTIONS AND PIPE CONNECTIONS. BEAT KUHNE, Lewistown, Mont. Filed Dec. 22, 1919. Serial No. 346,312. 1 Claim. (Cl. 285—129.)



In a hose coupling, a pair of collars having a split formed therein, the terminals of the collars having outwardly projecting ears, means adjustably connecting the ears of each collar together, outwardly extending lugs formed on each of the collars diametrically opposite to the ears, the lugs having alined bores formed therein, and adjustable means for engaging the bores for connecting the collars together.

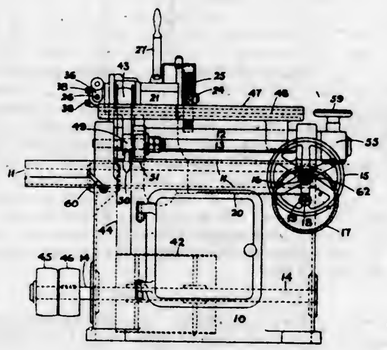
1,384,963. AMUSEMENT DEVICE. CHARLES P. LA BATT, Santa Monica, Calif. Filed Mar. 16, 1920. Serial No. 366,357. 3 Claims. (Cl. 46—40.)

1. In an amusement device the combination with a table provided in its top with a slot, of a manikin adapted to be positioned on said table top, said manikin being provided with movable parts, a substantially rigid member depending from said manikin and adapted to extend through the slot so that said manikin can be moved over the table along said slot from a point beneath the table top, projections on said manipulating member whereby the same and the manikin may be maintained in a vertical position, and flexible connections extending from the movable parts of the manikin downwardly through the slot in the table.



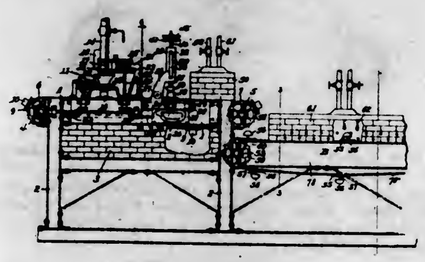
1,384,964. SOUND-MODIFIER. HERBERT LEGGETT, Kansas City, Mo. Filed Apr. 13, 1920. Serial No. 373,654. 5 Claims. (Cl. 137—160.)

1. In a device of the character described, a shell, heads removably secured to the ends of said shell and provided respectively with inlet and outlet ports for the passage of exhaust gases, and a conical sound modifier arranged with-



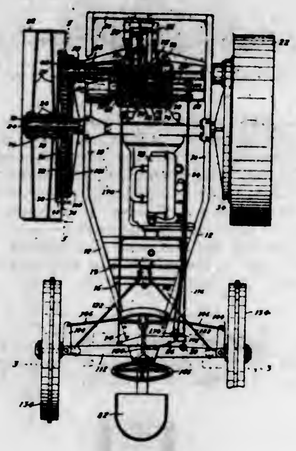
in the shell and supported at its reduced end only leaving its enlarged end free to vibrate from impact of the exhaust gases passing through the shell.

1,384,965. APPARATUS FOR DISCHARGING LIQUID. JOHN LUCKENBACH, Los Angeles, Calif. Filed Dec. 6, 1920. Serial No. 428,697. 6 Claims. (Cl. 182—4.)



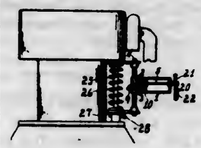
1. A liquid discharge apparatus comprising a liquid receptacle having a discharge port, a valve for said port, a compound lever entirely positioned below the discharge port including an actuating bucket adapted to open said valve when the relative weight of water within said bucket overbalances the relative weight of said valve.

1,384,966. GRINDING-MACHINE. THOMAS LUMSDEN, Gateshead, England. Filed Feb. 25, 1920. Serial No. 361,220. 5 Claims. (Cl. 51—100.)



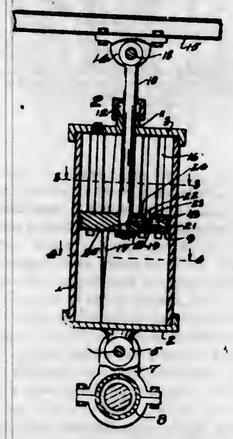
1. A grinding machine comprising a bed, parallel guide rods carried thereby, a swinging arm pivotally mounted on one of said guide rods, a grinding wheel and a pointer carried by said swinging arm, means for rotating said grinding wheel, means for laterally adjusting said swinging arm, a work table carrying both the blank to be ground and a former, said work table being mounted on another of said guide rods, resilient means normally keeping the grinding wheel away from the blank to be ground, and means for manually swinging the grinding wheel into contact with the blank and holding it there during the grinding operation against the resistance of said resilient means.

1,384,967. APPARATUS FOR THE MANUFACTURE OF GLASSWARE. WILLIAM H. MCSWAIN, Moundsville, W. Va. Filed Nov. 29, 1919. Serial No. 341,506. 8 Claims. (Cl. 49—1.)



7. An apparatus for the manufacture of pressed articles of glassware, comprising a platform, an endless carrier arranged for continuous travel over said platform, a plurality of molds borne by said carrier at regular intervals, a press disposed over the path of travel of said molds, said press being arranged to advance successively with said molds throughout a definite distance, means actuated during forward travel of said press for reciprocating the plunger of the latter with respect to an underlying mold for shaping the ware, and a glazing oven through which said molds travel following the ware-shaping operation.

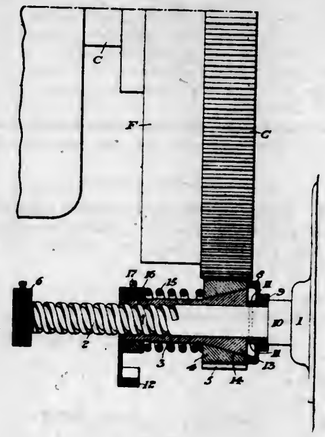
1,384,968. TRACTOR. LAURITZ F. NIELSEN, Minneapolis, Minn., assignor to The Allied Tractors Company, Minneapolis, Minn., a Corporation. Filed May 26, 1919. Serial No. 299,692. 5 Claims. (Cl. 74—29.)



1. In a tractor the combination of a stationary shaft, driving wheels rotatably mounted on said shaft, cup shaped members mounted for yielding movement on the hubs of said driving wheels, pairs of lugs on the outside of said cup-shaped members, cushioning means between said pairs of lugs, pairs of rigid members attached at their outer ends to the rims of said driving wheels and yieldingly connected at their inner ends through said cushioning means with said cup shaped members, and means for driving said cup shaped members.

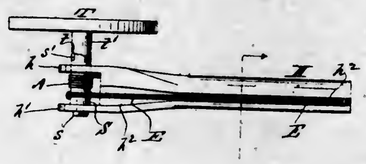
1,384,969. VALVE-LIFTER. TERUYOSHI OTAUKA, Oakland, Calif. Filed Dec. 1, 1919. Serial No. 341,744. 5 Claims. (Cl. 29—86.3.)

1. A valve lifter including a frame, a shaft journaled in said frame, a right thread and a left thread on said shaft, two pairs of jaws, one jaw of each pair engaging a thread on said shaft, the other jaws being each pivoted to one of said thread engaging jaws, and means for rotating said screw.



1,384,970. SHOCK-ABSORBER. CHARLES RUDY, Los Angeles, Calif. Filed Mar. 22, 1920. Serial No. 367,801. 4 Claims. (Cl. 188—88.)

1. A shock absorber including a cylinder, a piston mounted to reciprocate in said cylinder, means for connecting said cylinder and said piston to suitable points of the automobile; a valve in said piston for opening and permitting the cushioning medium to pass through the piston when the piston moves in one direction; means for permitting at first a small amount of the cushioning medium to pass the piston when it moves to a predetermined point in the opposite direction; and means for permitting a greater amount of said cushioning medium to pass the piston when the piston moves in said opposite direction beyond said predetermined point.

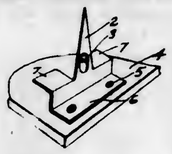


1,384,971. STARTER FOR ENGINES. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Dec. 30, 1919. Serial No. 348,356. 4 Claims. (Cl. 74—7.)

1. In an engine starter of the type including an electric starting motor, a shaft driven thereby, a screw element rotated by said shaft, an endwise shiftable screw element and a pinion associated therewith, adapted to be shifted endwise to move the pinion into and out of engagement with a gear for starting the engine according as said first named screw element rotates faster or slower than said pinion, and, in combination with said parts, and mounted on said driven shaft, a friction element connected for rotary drive and endwise shift by said shiftable screw-threaded element, a friction element on said pinion engaged by the latter, a thrust spring for normally maintaining said friction elements in frictional engagement sufficient for driving the pinion at speed required for starting the engine, and a stop for preventing further endwise shift of the pinion after it comes into full engagement

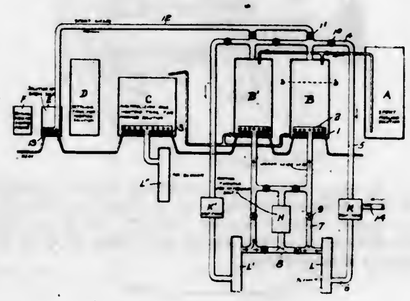
with the gear wheel while permitting further endwise shift of said endwise shiftable screw element and the friction element carried thereby, whereby the latter may screw endwise to permit slip of said pinion after its engagement with said stop.

1,384,972. DEVICE FOR SPINNING TOPS, &c. AUGUST E. SANDSTROM, New York, N. Y. Filed May 13, 1920. Serial No. 380,968. 1 Claim. (Cl. 46—32.)



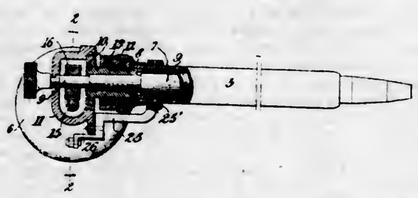
The combination of a rotatable top having an under stem formed with coupling cam shoulders and a spinning peg at its lower extremity, and a spinning device comprising a handle having a bifurcated end and formed with a longitudinal side groove, a rotatable spindle mounted on the bifurcated end of said handle and formed at its upper extremity with cam coupling shoulders for temporary engagement with those on the top stem, and also formed with an axial socket for the reception of the spinning peg on the top stem, a retractile elastic resilient ligament attached at one extremity to said spindle and to the handle at its other extremity, and positioned mainly in the aforesaid longitudinal groove in the side of the handle, and a flexible actuating ligament attached to said spindle and partially wound therearound and by means of which the aforesaid elastic resilient ligament may be stretched and wound around the said rotatable spindle, as and for the purpose set forth.

1,384,973. CARPET-RUG NEEDLE. ALTA M. SCHMUCK, Pasadena, Calif. Filed Dec. 23, 1919. Serial No. 346,972. 2 Claims. (Cl. 139—5.)



1. A strip tying device comprising a plate forming a support and having a tapering needle portion medially of

one edge thereof, said needle portion having an aperture therethrough, and the portions of said edge at each side of

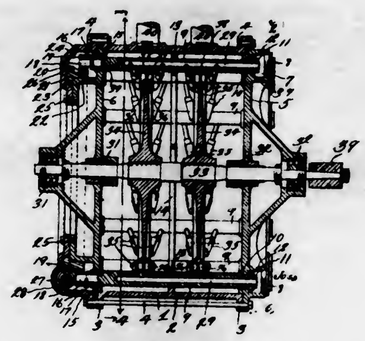


said needle being angularly bent relative to said needle and said plate in alinement with the lower edge of said aperture.

1,384,974. PROCESS OF RECLAIMING SPENT PICKLING SOLUTIONS. JOSEPH A. SHAW, Pittsburgh, Pa. Filed May 19, 1920. Serial No. 382,579. 7 Claims. (Cl. 23—13.)

1. The method herein described of performing upon a spent pickling solution containing sulfate of iron a reclaiming operation, which consists in intimately mingling with the spent solution a gaseous body containing a higher oxid of nitrogen, and in subsequently recovering from the gaseous body spent in the performance of the preceding step its nitrogen ingredient by intimately mingling it with a salt capable of reacting with and retaining oxids of nitrogen.

1,384,975. DENTAL-ENGINE HAND-TOOL. WILLIAM GENTRY SHELTON, New York, N. Y. Filed Oct. 6, 1917. Serial No. 195,028. 6 Claims. (Cl. 32—15.)



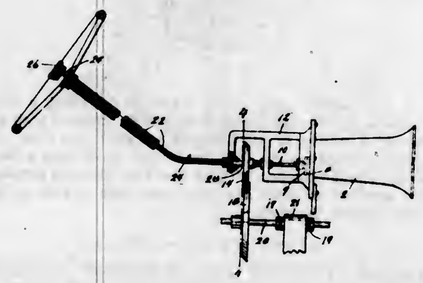
1. In a device of the character described, the combination of a dental hand-piece, adapted to carry a tool, a motor, said hand-piece and motor being formed as a portable unit, and means controlling the operation of said motor comprising a finger-actuated sleeve rotatable around said dental hand-piece.

3. In a device of the character described, the combination of a dental hand-piece, adapted to carry a tool, a motor, said hand-piece and motor being formed as a portable unit, and means controlling the operation of said motor comprising a finger-actuated sleeve rotatable around said dental hand-piece, said motor having its center of gravity below the axis of said hand-piece.

6. In a device of the character specified the combination with a tool spindle and a finger grip surrounding the same, a motor casing dependent from the rear end of the spindle and having its center of gravity well below the axis of said spindle, a switch for controlling the motor, and an actuator for such switch operatively connected with the finger gripping device.

1,384,976. REVERSIBLE TURBINE-ENGINE. JOSEPH SHOWALTERBAUGH, Gary, Ind. Filed Nov. 27, 1920. Serial No. 426,740. 9 Claims. (Cl. 253—73.)

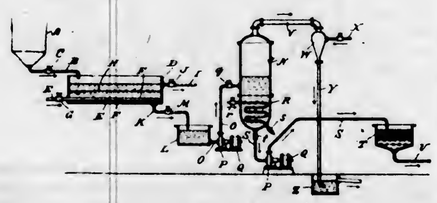
1. A turbine engine comprising a casing having rotatably mounted therein a turbine wheel having pockets in its side, a rockable shaft rockably mounted in the casing adjacent the periphery of the turbine wheel and provided with a steam supply chamber, a steam projecting nozzle carried by said rockable shaft and disposed substantially tangential to the pockets and means for rocking the shaft for reversing the position of the nozzle when it is desired to reverse the direction of rotation of the turbine wheel.



2. The combination with a turbine engine comprising a casing having rotatably mounted therein a turbine with pockets in its sides adjacent its periphery, of a rockable chambered shaft rockable in the casing and adjacent the periphery of the wheel, spaced steam projecting nozzles carried by the shaft and disposed on each side of the wheel and substantially tangential in relation to the pockets and means for rocking the shaft for reversing the tangential position of the nozzles.

3. The combination with a turbine engine comprising a casing having rotatably mounted therein a turbine wheel with pockets in its sides adjacent its periphery, of a rockable shaft having a steam supplying chamber, said shaft being disposed adjacent the periphery of the turbine wheel and provided with spaced nozzles disposed to each side of the wheel and tangentially disposed in relation to the wheel pockets, and means for reversing the tangential position of the nozzles by rocking the shaft when it is desired to reverse the direction of rotation of the turbine wheel.

4. The combination with a turbine engine comprising a casing having rotatably mounted therein a plurality of turbine wheels with pockets in their sides adjacent their peripheries, of a plurality of rockable shafts rockably mounted in the casing and having steam supplying chambers therein, one end of said chambers being in communication with a steam manifold, spaced nozzles carried by the rockable shafts and disposed on each side of the turbine wheels and substantially tangentially disposed in relation to the pockets, said nozzles being in communication with the chambers of the rockable shafts, and means for simultaneously reversing the tangential positions of the nozzles for reversing the direction of rotation of the turbine wheels.



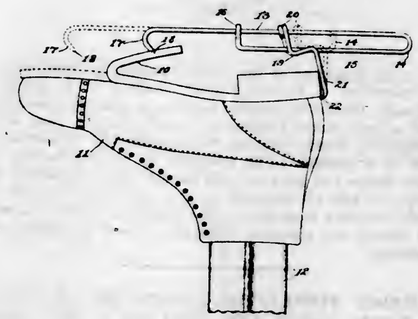
5. The combination with a turbine engine comprising a casing having rotatably mounted therein a plurality of turbine wheels with pockets in their sides adjacent their peripheries, of a plurality of rotatable shafts rockably mounted in the casing adjacent the peripheries of the turbine wheels and provided with steam supply chambers in communication with a steam manifold, nozzles carried by said rockable shafts and disposed to project steam tangentially into the pockets of the wheels, gears carried by one end of said shafts, said gears meshing with a gear ring and means for rotating said gear ring for simultaneously reversing the positions of the nozzles.

1,384,977. DIAPHRAGM-HORN-OPERATING MEANS. ANTHONY B. SILVIA, Haverhill, Mass. Filed Feb. 28, 1921. Serial No. 448,540. 9 Claims. (Cl. 116—59.)

1. In combination with the diaphragm of a signaling horn, a rotatably mounted striker-shaft axially movable into and out of operative relation with said diaphragm, means for normally holding said shaft in an inoperative position, a friction wheel on said shaft, a power driven shaft having a friction wheel thereon arranged to be engaged by the wheel of said striker shaft as the latter is moved to its operative position and manually operated means for moving said striker shaft toward the diaphragm, to cause operative engagement of said wheels and of said shaft with the diaphragm.

1,384,978. PROCESS FOR RECLAIMING SLUDGE ACID IN PETROLEUM-REFINING. WALTER H. SIMONSON, Brooklyn, N. Y., and OTTO MANTIUS, Englewood, N. J. Filed Nov. 19, 1920. Serial No. 425,162. 5 Claims. (Cl. 23—1.)

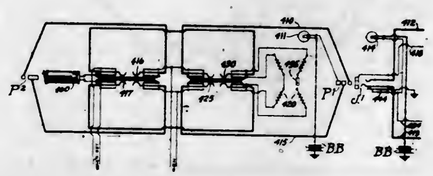
1. The process for reclaiming sludge acid in petroleum refining which consists in concentrating the weak acid by subjecting it to a temperature sufficiently high to vaporize the water but low enough to prevent the combustion of organic matter, and then drawing off the acid and filtering it.



2. The process for reclaiming sludge acid in petroleum refining which consists in concentrating the weak acid by boiling the same at a temperature lower than could be done at atmospheric pressure, and then drawing off the acid.

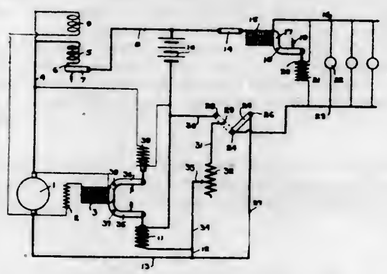
3. The process for reclaiming sludge acid in petroleum refining which consists in concentrating the weak acid by heating the acid to a temperature approximately from 270 to 290° F. under less than atmospheric pressure thus causing the water to vaporize, and then drawing off the acid.

4. The process for reclaiming sludge acid which consists in concentrating the acid, by boiling in a partial vacuum, and then withdrawing the product.



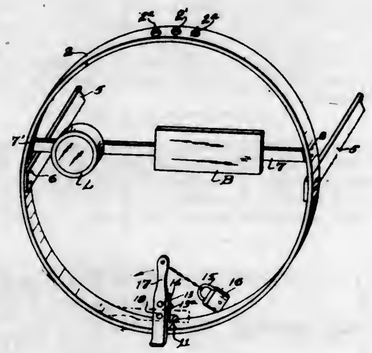
5. The process for reclaiming sludge acid which consists in concentrating the acid by causing the same to boil in a partial vacuum through the application of indirect heat and then withdrawing the product.

1,384,979. HOLDER FOR SOLES. JAMES A. STRANGE, Ellensburg, Wash. Filed July 6, 1920. Serial No. 394,330. 2 Claims. (Cl. 12—103.)



1. A holder for soles of foot wearing apparel comprising a longitudinal rod, a sole engaging hook disposed at one end of said longitudinal rod, the opposite end of said longitudinal rod being bent downwardly upon itself to form a parallel rod, said parallel rod terminating in a transverse loop rigidly encircling said longitudinal rod, and a heel engaging member slidably mounted on said longitudinal rod.

1,384,980. TELEPHONE-EXCHANGE SYSTEM. ARTHUR C. STUART, Cleveland, Ohio, assignor, by mesne assignments, to James R. Garfield, trustee, Cleveland, Ohio. Filed Nov. 11, 1912. Serial No. 730,752. Renewed May 3, 1921. Serial No. 466,530. 39 Claims. (Cl. 179—27.)

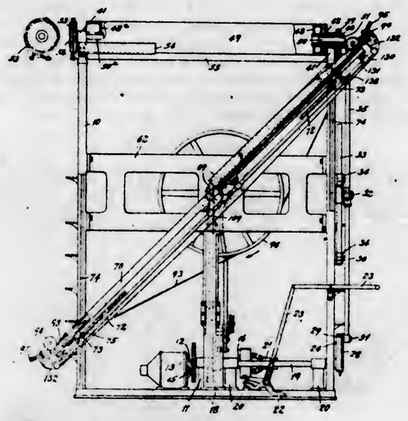


1. In a telephone exchange system, the combination of an operator's position, a signal at said position, wanted subscribers' lines, means for establishing a connection from said position to a wanted line comprising a selector and a connector switch, a single test relay associated with said connector switch, means for operating said relay in case the wanted line is busy, intermittent means associated with said connector switch, said intermittent means being connected immediately through the contacts of said relay to cause the intermittent operation of said signal.

1,384,981. ELECTRICAL SYSTEM. WILLIAM I. THOMSON, Newark, N. J., assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Dec. 14, 1916. Serial No. 136,929. 7 Claims. (Cl. 171—313.)

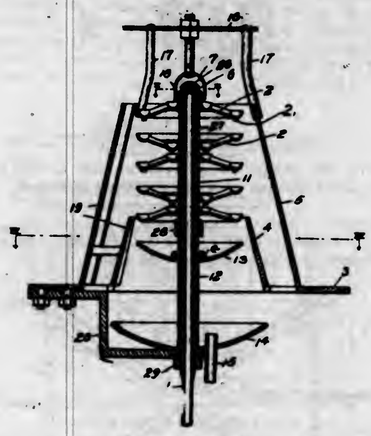
1. In apparatus of the class described, in combination, a generator, a storage battery adapted to be charged thereby, regulating apparatus for said generator comprising a coil, lamps adapted to receive current from said generator, means adapted to alternatively connect said coil in a position to be traversed by current flowing to said lamps and that to said battery or in a position in which it will be traversed by the current to the battery only, and free from that to the lamps and means adapted to change the standard of action of said regulating apparatus.

1,384,982. TIRE-CARRIER-LOCKING DEVICE. HARRY WALKER, Anaheim, Calif. Filed Feb. 16, 1920. Serial No. 359,087. 1 Claim. (Cl. 224—29.)



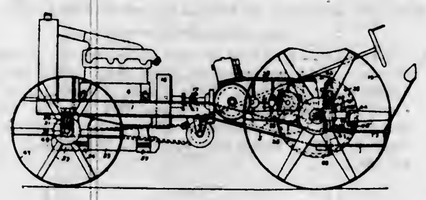
The herein described automobile tire carrier and lock comprising a ring, a strap transversely arranged upon the inner face of said ring and rigidly fastened thereto, the inner end of said strap terminating in an outwardly turned flange that overlies and extends beyond the inner edge of the ring, the inner end of said strap terminating in an inwardly projecting tongue, the outer face of which lies in the same plane with the outer edge of the ring, a locking lever fulcrumed upon said tongue and arranged on the outer face thereof, said tongue and lever being provided with perforations that are adapted to register when the lever is shifted into a position coincident with said tongue, the outer end of said lever being adapted to extend beyond the periphery of the ring when said lever is in alinement with said tongue, a stop projecting outwardly from the tongue to limit the swinging movement of the lever in one direction and means having a part adapted to pass through the perforations in the tongue and lever to lock said parts to each other.

1,384,983. SAFETY-CATCH. ASHBEL T. WALL, Providence, R. I. Filed Mar. 9, 1921. Serial No. 450,992. 3 Claims. (Cl. 24—157.)



2. In a safety catch of the character described, a base, a shank, parallel forwardly directed ears integral with the shank, a pintle in the ears, a straight lever on the pintle, a head on the free end of the lever, and a beak on the shank provided with an inwardly directed terminal slot adapted to guide the lever and with a hole at the inner end of the slot.

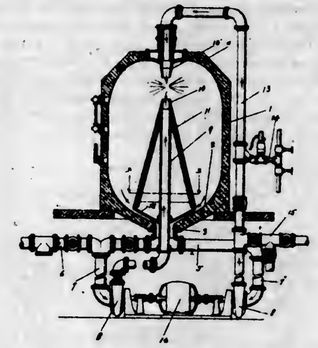
1,384,984. CUTTING AND STRIPPING MACHINE. JULIUS WRONSE, New York, N. Y., assignor to Henry Spadone and Walter W. Spadone, New York, N. Y., a Copartnership doing business as Spadone Machine Co. Filed May 21, 1920. Serial No. 383,030. 12 Claims. (Cl. 164—73.)



1. In an apparatus of the kind described an independent auxiliary frame, means thereon for rotatably supporting a roll of tacky fabric with sheeting between its convolutions, rotatable supports for carrying a receiving roll upon which said sheeting is wound, a pair of feed rolls journaled on said frame in driving connection with each other, means whereby said feed rolls are operatively connected with said receiving roll, driven mechanism operatively connected with said feed rolls whereby the latter and said receiving roll are actuated to draw the fabric from said roll and to coincidentally strip the sheeting therefrom, driving mechanism and means including a friction heel and a friction disk whereby said driving and driven mechanisms are operatively connected and whereby the speed of the latter may be varied.

1,384,985. LIQUID-FUEL BURNER. JAMES B. ANDERSON, Shaler township, Allegheny county, JAMES B. GARNER, Pittsburgh, and GEORGE A. SHANER, Butler, Pa. Filed Sept. 15, 1920. Serial No. 410,463. 12 Claims. (Cl. 158—91.)

6. In a liquid-fuel burner, means for causing a stream of oil to flow by gravity in divided branches to and fro across a stream of air ascending between the branches, the surface of the flowing stream being exposed to the air.



1,384,986. MOTOR-TRACTOR. JOSEPH BAMFORD and CYRIL JOSEPH BAMFORD, Uttoxeter, England. Filed Aug. 13, 1918. Serial No. 249,621. 4 Claims. (Cl. 180—41.)

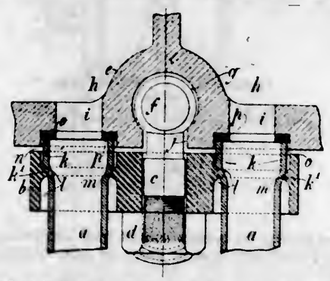
1. In a tractor of the class described, the combination of a frame including side members having their front and rear ends in different horizontal planes, a transmission shaft journaled on said frame in a horizontal plane above the front ends of said side members, a pair of radial arms independently pivoted on said transmission shaft and adapted to extend below the axial center of said shaft, a stub axle carried by each of said arms, a wheel mounted for rotation on each of said axles, and driving means between said transmission shaft and said wheels.

1,384,987. PAPER-STOCK-TREATING MACHINE. MILTON C. J. BILLINGHAM, Kalamazoo, Mich. Filed Apr. 23, 1920. Serial No. 376,058. 11 Claims. (Cl. 92—20.)

1. In a stock treating machine, the combination of a vertically disposed cylindrical tank having an internally concave bottom with a central discharge opening therein and an internally curved top, pumps having their intakes connected to said tank discharge, a discharge pipe for one of said pumps provided with a nozzle and disposed vertically in said tank and centrally through said discharge opening thereof with its nozzle near the upper end of the tank, a discharge pipe for the other pump provided with a nozzle disposed vertically and centrally through the top of the tank, said nozzles being in alinement and spaced so that the streams therefrom impinge, and a conical deflector mounted on the first mentioned discharge

pipe and having its bottom spaced from the bottom of the tank to permit the flow of stock to said tank discharge opening.

1,384,988. FISHING-TOOL. FREDERICK M. BRAMBLEY, Brea, Calif. Filed Mar. 30, 1920. Serial No. 369,848. 3 Claims. (Cl. 294—102.)



1. In a fishing tool for rods having annular shoulders formed thereon, a hollow tubing provided with an inwardly extending lip, said tubing arranged to be positioned over the rod with said lip below a shoulder of said rod; a slip within said tubing and adapted to move downwardly between said rod and said tubing for laterally moving said rod eccentrically to said tubing until its shoulder rests upon the lip of said tubing for retaining said rod within said tubing, the surface of said slip next to said rod conforming to the curvature of said rod when the latter is in retained eccentric position, the top surface of which slip is inclined downwardly toward that portion of the body of the slip that contacts with the inner surface of the tubing; and a compression spring bearing on said inclined top surface.

1,384,989. MEANS FOR ATTACHING TUBES TO HEADERS, CHAMBERS, AND THE LIKE. HERBERT PAINE BRAY, Pinner, England. Filed May 25, 1920. Serial No. 384,240. 2 Claims. (Cl. 285—29.)

2. In combination, a block having a central passageway, a fluid container having a slot in the wall but out of

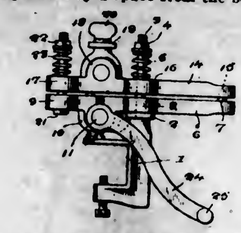
communication with the fluid space, said slot being substantially circular in cross section, a second slot extending longitudinally with the first slot and opening thereinto but having a width less than the diameter of the first slot, a plurality of apertures in the wall of the container at each side of the slots, tubes having expanded ends received within the apertures, said block having perforations for receiving said tubes, a seat provided intermediate the ends of each perforation against which seat the rounded face of the expanded tube end may bear, said seat being circular and of less diameter than the perfora-

tion, and a bolt passed through the central passageway of the block with its head engaged in the first slot and its shank loosely fitting the second slot, said head being substantially barrel-shaped whereby the block may swing relative to the container about two axes at right angles to each other, the bolt holding the block to the container and the tube ends spacing the inner face of the block from the outer side of the container, so that the tubes can move relatively to both the block and container and independently of the block while the block can move relatively to the container independently of the tubes under the influences of expansion and contraction.

1,384,990. PLANT STIMULANTS AND FERTILIZERS. JAMES R. CAMPBELL, Scottdale, Pa. Filed May 22, 1915. Serial No. 29,887. 10 Claims. (Cl. 71—9.)

1. A plant stimulant and fertilizer containing precipitate derived from neutralized mine water, and a filler of calcareous material.

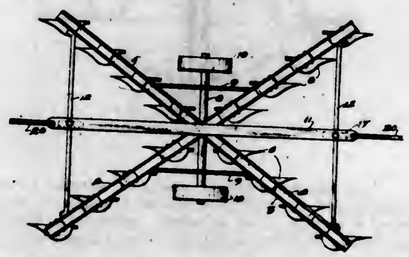
2. A plant stimulant and fertilizer consisting of from 20 to 50 per cent. precipitate derived from neutralized mine water, and 80 to 50 per cent. calcareous material.



3. A plant stimulant and fertilizer consisting of 20 per cent. precipitate derived from neutralized mine water, and 80 per cent. calcite.

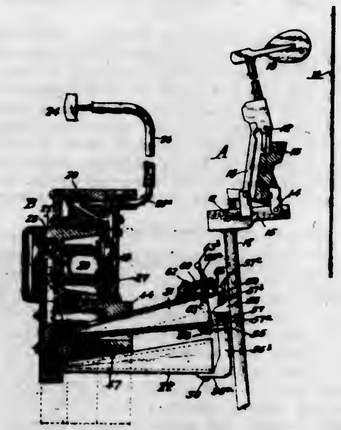
4. A fertilizer derived from acid mine water and consisting of at least 20 per cent. precipitate from the water, and a filler of calcareous material.

5. A plant stimulant and fertilizer composed of a precipitate derived from neutralized mine water and containing an iron salt, and a filler of calcareous material.



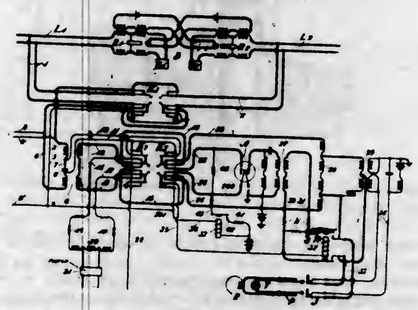
1,384,991. MEAT-TENDERING MACHINE. ALFONZO F. COMBS, Wilkesboro, N. C. Filed Mar. 9, 1921. Serial No. 450,908. 1 Claim. (Cl. 17—29.)

In a meat tendering machine, the combination of clamps having upwardly extending threaded pins, a clamp-connecting cross bar receiving said pins, bearing members on said cross bar and removably receiving said pins and having forward apertured portions and intermediate bearing portions, bearing members on the first-named bearing members and removably receiving said pins and also having forward apertured portions and intermediate bearing portions, nuts mounted on the upper portions of the pins, springs surrounding said pins between the nuts and the adjacent bearing members, bolts connecting the forward portions of the bearing members and equipped with nuts, springs on said bolts and between said nuts and the adjacent bearing members, an upper cross bar on and detachably connected to the bearing portions of the second-named bearing members, tendering rolls having shafts disposed in the bearing portions of the bearing members, said shafts being geared together, the inner ends of said rolls being separated by a space from the bearing members



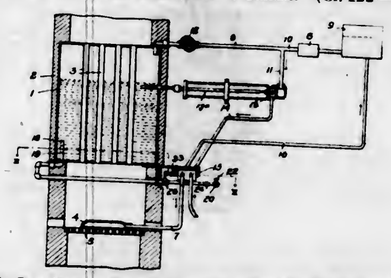
opposite the same, and a crank on one of the shafts through the medium of which the shaft is turned.

1,384,992. CANTALIVER-PLOW. MICHAEL J. CORRIGAN, Calipatria, Calif. Filed Oct. 11, 1920. Serial No. 416,266. 1 Claim. (Cl. 97—50.)



An earth working implement comprising a wheel support, a frame comprising cross members tiltably mounted upon said support at the intersection of said members and having the latter extending in opposite directions from the axis of said support, and earth working elements carried by said frame and arranged to engage the earth when the implement is moving in opposite directions.

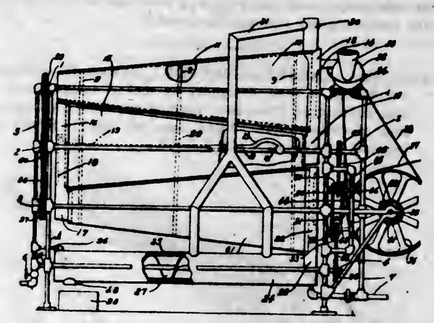
1,384,993. PLAYER-PIANO. STANLEY L. FISHER, Chester, Conn., assignor to The Pratt Read Player Action Company, Deep River, Conn., a Corporation of Connecticut. Original application filed Apr. 24, 1918, Serial No. 230,417. Divided and this application filed Aug. 4, 1919. Serial No. 315,208. 28 Claims. (Cl. 84—68.)



28. A striker arm, for attachment to the movable leaf of a striker pneumatic, comprising a portion for engagement with the pneumatic and an integral upwardly extending portion contacting directly with a part of a piano action unit.

1,384,994. TELEPHONE REPEATER EQUIPMENT. CHARLES S. DEMAREST, New York, ALVA B. CLARK, Brooklyn, N. Y., and GEORGE CRISSON, Hoboken, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 16, 1919. Serial No. 290,382. 7 Claims. (Cl. 179—170.)

3. A transmission circuit including lines interconnected by repeater apparatus, means to balance said lines, operator's equipment of low impedance, means to bridge said equipment across one of said lines, and an autotransformer associated with said bridge for increasing the impedance of said equipment sufficiently to prevent appreciable unbalance of said line.

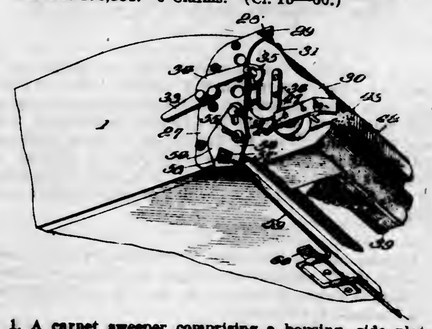


1,384,995. THERMOSTATIC CONTROL FOR STEAM-GENERATORS. CHRIS FRIES, Perth Amboy, N. J., and HENRY W. FISHER, Huguenot Park, N. Y. Filed Sept. 2, 1919. Serial No. 320,986. 3 Claims. (Cl. 122—448.)

1. In steam generating apparatus, the combination of a boiler, a water tank, a conduit leading from tank to boiler, a by-pass leading from said conduit back to the tank again, a valve in said by-pass, a fluid-fuel burner beneath said boiler, a supply pipe leading from said burner, a valve in said fluid supply pipe, a conduit leading from said boiler above said burner, means whereby in response to thermal expansion of said conduit, the valve in said water by-pass and the valve in said fluid-fuel supply-pipe are successively operated, and means for circulating water through the water system defined, substantially as described.

1,384,996. DRIER. PABLO GONZÁLEZ GARZA, San Antonio, Tex. Filed Apr. 30, 1920. Serial No. 377,837. 3 Claims. (Cl. 34—5.)

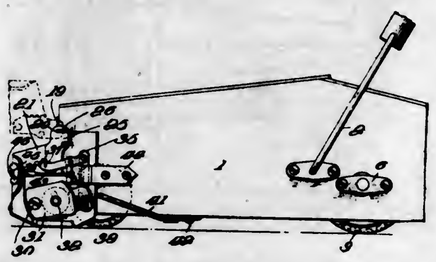
2. A drying apparatus of the class described including superposed oppositely arranged tapered drums, means for rotating the drums, a stationary delivering head at the large end of each drum for directing material into the small end of the next adjoining drum thereunder, a drain pipe in communication with a portion of the shaft of each of the drums, means revoluble with the shaft and drum for removing condensed moisture from the deliver-



ing heads and directing it into the drain pipe, means for scattering saturated material broadcast within one of the drums, and a vapor outlet flue extending from said drum.

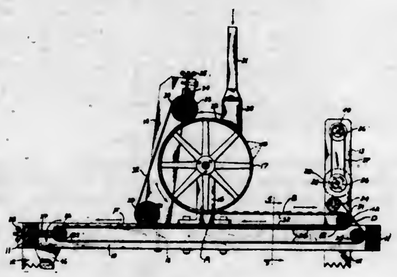
1,384,997. CARPET-SWEEPER. JAMES H. GRAHAM and EVERETT C. MUDICK, Torrington, Conn., assignors, by mesne assignments, to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed June 5, 1917. Serial No. 172,879. 5 Claims. (Cl. 15—60.)

1. A carpet sweeper comprising a housing having supporting means journaled therein, bars supported outside of and at the ends of said housing, a bail pivoted to said bars and projecting into said housing, a rotatable brush shaft passing through said housing ends and detachably carried by said bail outside of said housing, and means located within said housing for adjusting said bail to raise or lower said brush shaft.



1,384,998. SUCTION CARPET-CLEANER. JAMES H. GRAHAM, Torrington, Conn., assignor, by mesne assignments, to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Aug. 16, 1917. Serial No. 186,551. 6 Claims. (Cl. 15—60.)

1. A carpet sweeper comprising a housing, side plates attached to said housing, a brush carrying nozzle pivoted



to one of said plates, a lever pivoted to said plates, a second hooked lever pivoted to said lever, a stud carried by said nozzle and engageable by said hooked lever to hold the nozzle tightly against the housing.
